Patrick Henry and Henry Clay were both born in Hanover county, Virginia; the places of their nativity being only a few miles distant from each other. The venerable form of Clay is bowing beneath the weight of years, and his clarion voice will be heard no more, or seldom, if at all, in the halls of debate. We can speak of him historically, free from the bias of party; we can judge of him as an orator with somewhat of the impartiality of posterity; that posterity will, without doubt, assign to him among American orators a place second to Henry alone, if second to any. Nature gave to him all the gifts in her power, to which he has added by assiduous culture. Like Henry his enthusiasm is deep; his spirit noble. He is social, warm-hearted, sanguine, and of a dauntless courage. Better read in men than books, he has yet knowledge of the latter sufficient to enable him to lead in assemblies full of learned men. In the present century, the greatest names in American oratory are Clay and Webster. They need fear no comparison with transatlantic models. Clay is more brilliant, more diffuse, more enthusiastic, and better calculated than Webster to sway the masses. The latter is graver in his manner, more philosophic in his method, more precise in his diction. Clay impresses more when he speaks—Webster when he is read. The influence of the former is more dependent upon his manner—the latter is as solid in his attainments as his native hills. Preston and Webster are antipodes in oratory. Preston is poetical, florid, fanciful. Webster is Doric, thoroughly Doric. When the one speaks, the idea of beauty is ever present to the mind; when the other, the impression of power is always received. When deeply roused, as when beset by able and unscrupulous adversaries, he seems to be the impersonation of logic set on fire. The English aptly compare him, when speaking, to a steam-engine at work. His reply to Hayne was the greatest single effort ever made in the United States Senate. It is to be classed with the greatest triumphs of eloquence, with the oration of Demosthenes on the Crown, with Cicero's orations against Cataline, and with Sheridan's speech on the Begum Charge. Edward Everett and Rufus Choate are living orators, of whom, though neither are in political life, not only New England, but the whole country may be proud. The former is perhaps the most thorough rhetorician of our public speakers. All his productions evidence high classical attainments, and the most refined taste. His style has less strength than Webster's, but more of grace and beauty. Choate in the character of his eloquence, is not unlike the celebrated Fisher Ames. He possesses much learning, a rich imagination,

and a highly poetic diction. When speaking, the whole man appears permeated with feeling—tremulous with emotion. Though our nation is but of yesterday, our orators favorably compare with those of the Old World. In addition to those already mentioned, we can boast among the dead, a Wickham, a Barry, the brilliant and sarcastic Randolph, the chivalric and poetic Prentiss, full of the most impassioned eloquence, the learned Legaré, and the logical Wright. Among the adopted sons of the United States, who hold a high rank in oratory, may be mentioned Alexander Hamilton, clear in style and forcible in argument, thoroughly exhausting whatever he touched—Thomas Addis Emmet, a man of deep feeling, sound judgment, and a persuasive manner—and Soulé, glowing with all the fervor of the sunny South, and possessing the grace and vivacity of his native France. Of the many other living orators of America, whether in or out of our National Legislature, the limits of a single essay do not permit me to treat. Our courts of law, and our pulpits, often resound with the truest eloquence. Oratory is an art not easily acquired; it demands, and is worthy of the deepest study. Does any one aspire for excellence in it? Let him "scorn delights and live laborious days." Our country presents a noble field for the display of popular eloquence. In times past, it has enabled the patriot to rescue his country from pressing danger: in the future it may foil other Catalines, and hold up to public scorn a Hastings or a Verres.

Washington, March, 1852.

THE FOREST BURIAL.

BY REV. SIDNEY DYER.

Rest thee, lov'd one we have laid thee,
Where the wildwood maketh sighs,
Tears perfume the bed we made thee,
Where the wither'd foliage lies;
Far away from native dwelling,
We must chaunt thy requiem;
Few the hearts with sadness swelling,
Few will join the fun'ral hymn.

On the morrow we must leave thee,
Lonely in the woodland grave,
Where the vine a tomb shall weave thee,
Creeping where the branches wave;
All thy love let nature breathe it,
When the vernal hours return,
Write thy name with flowers and wreaths it
Round thy holy forest urn.

Scenes Beyond the Western Border.

WRITTEN ON THE PRAIRIE.

BY A CAPTAIN OF U. S. DRAGOONS.

June 8th. The excessive fatigue of yesterday's interesting march,—the mournful and wild dreams, and the storm of the bivouac, having all passed away with the night, the sun—bright as a broad gleam of unlooked-for Hope—casts almost a dazzling beauty upon the narrow valley. Nature, as if in the freak of a most smiling mood, has here assembled in the desert, the admired features of her favorite regions: the contrast is delightful at meeting; painful at parting.

Thus, wander where we will, man is at best,

"A pendulum betwixt a smile and a tear."

But sometimes our frail mechanism goes wrong; the tear is a shower—a deluge; and the smile but an evanescent bow of hope alone.

Leaving then only too early the most sparkling and rich foliage, the white cliffs and the crystal streamlet of this romantic glen—which some wretch has named "Ash Hollow," we were soon monotonously clanking our rusty sabres over the flat sands of the *Northern Platte*,—this twin offspring of mountain and homely plain. But truth to tell, just here, for fourteen miles, which we marched to-day, this bank of the river is broken into hill and ravine: the white sand scarce shaded by weeds; and the bluffs, near by, deeply washed by rains, were wild and desolate; and there were cliffs of marly rock; and one of indurated clay, under which we marched, was honeycombed by thousands of swallows, which swarmed like bees, and twittered over our heads.

We passed also two gravel beds of streams, now dry, that were positive *ridges*; and actually, on one side, marked by a slight margin of grass, without a bank!

Amid all the arid desolation, as usual, were some beautiful and delicate flowers; honeysuckles, and the white and fragrant bloom of mosses. I thought they redeemed and softened it—as sometimes Pity the desolation of heart.

It was the fate of a melancholy buffalo,—whether misused and misanthropic,—shunning the vulgar herd, or exiled, as an old and hardened sinner, to this solitude, to encounter us here; and it was the unhappy destiny of a very Nimrod amongst us, defiant of scorching sun and sand, oblivious that no centaur, he rode a hapless horse, and taking to his eyes the "sales" of this ancient beast, to give him impetuous chase. The bull truly fled with a lean and hungry speed, but followed, like a manifest destiny the beaten track,

careless of all evasion, right on—on! Seduced, perhaps, by this facility, my friend, the Nimrod, pursued thus mile after mile, straight on!—disappearing at times, to be marked again by the shining sand he ever scattered to the air; and finally we saw that he had fired, and the chase disappeared. This unerring and deadly shot after so long and pertinacious a pursuit, gave him credit with us all; until at last, we came up; and there surely lay the bull: but, strange to say, no scrutiny could discover a wound!—and soon the marvel was, how he had lived so long; he had only closed a long-standing mortgage to the crows;—the ardent hunter was not there to dispute possession! He had suddenly become interested in some undiscoverable object which happened to lay far from the road.

June 9. The country is rather less wild in appearance, and the bottom smoother; but there is still much bare sand; limestone rock occurred in the dry bed of a wide water course.

The pest of a light dust-bearing breeze from behind may be noticed, as giving a color to one's thoughts, as well as linen; although, in truth, both are habitually checkered. Pity it is, that petty annoyances muddy so much the current of our lives.

"'Tis the vile daily drop on drop that wears
The soul out (like the stone) with petty cares."

Happy his philosophy, who weighs them as dust in the balance! For my part I manage generally to laugh at material troubles; for those that attack the soul, I commend as a remedy such a chase as another friend of mine took this morning. He was following at the heels of a small herd of buffalo with that reckless rush, to which in glad excitement we then abandon ourselves, when a great bull, just before him, popped into a gully; the horse plunged on him, sending his rider sprawling, but with accuracy between the bull's horns! The first of this interesting group to recover his legs, was the horse, which ran off with alacrity several miles. Next the bull rose, and shook himself, very much with the astonished air, I imagine, of the lassoed Kentuckian who "liked to know how that was done." Meanwhile my friend is on his back at the bull's feet. I once threw a bone at such a beast, who "smarting with his wounds grown cold," reared up and brought down both hoofs with a precision and force, that mashed it to powder! The bull, perhaps, took the affair for a practical joke and giving the gentleman one good look—which he will remember—with great good nature ran off. Had he been wounded, or distressed and enraged by the chase, he had killed him!

We met here a number of boats laden with buffalo robes; and although drawing but eight

inches of water, they had been some two months descending the hundred miles from Fort Laramie; the hardy boatmen, who are also the trappers, hunters, &c., of the Fur Company, spending perhaps half the time in the water. Only for a short season in favorable years, is the river navigable at all. This attempt was now abandoned; and wagons and carts had been sent for to transport their party back to the Fort!

These men, called *Engagés*, are generally French creoles—and form a small class as distinct in character from any other, as is the sailor from his fellow bipeds who dwell upon shore. But with, if possible, less of forecast, he somewhat resembles the said sailor—isolated on the prairie desert, as the other on the sea. He has a patient and submissive obedience, with a seeming utter carelessness of privations, such as would drive a seaman to mutiny; with the same reckless abandon to some transient and coarse enjoyments, he is a hardy and light-hearted child of nature—of nature in her wildest simplicity: and in these, her solitudes, he receives a step-mother's care, and battles with a stout heart against her most wintry moods. He resembles the Indian, too, and is generally of kindred blood; he possesses his perseverance, his instinctive sagacity, and his superstition. A very Gascon, he has the French cheerful facility of accommodation to his fated exigencies, and lightens all by an invincible and contagious mirth. He is handsome, athletic, active; dresses chiefly in buckskin; wears a sash and knife; lives precariously, generally on flesh alone; is happy when his pipe is lit; and when he cannot smoke, sings a song. He is armed and vigilant while at his severest labors.

He joyously spends his ten dollars a month in alcohol, tobacco, coffee and sugar, and in gaudy presents to some half-breed belle; paying the most incredible prices for these extravagant luxuries.

June 10. The nights are cold; the mornings warm, until about 9 o'clock, when a breeze springs up, ending generally in a very disagreeable gale. We came in sight early this morning of the "Courthouse," a hill, or immense mound, which strongly resembles such a building, with wings; it rests imposingly on a bluff; the sides are near a cream color, with apparently, a black roof. The country is much smoother and pleasanter, and we passed to-day a tributary to the Platte, some sixty yards wide, and resembling it in its characteristics. Our camp is on the river, and without wood fuel. The Courthouse appears a half mile off; in reality it is four or five. We come in sight to-day, also, of the Chimney Rock, at a distance of thirty miles; it had the appearance of a tall post seen a mile off.

These celebrated formations seem the frames of lofty hills, which the elements have wasted away; they seem formed of marl, or a conglomerate to which the sand gives the character of mortar. I discovered to-day the most beautiful species of cactus I have ever seen; it is a single sphere resting on the surface of the ground; the inner leaves of the flower have the most delicate shades of pink and flesh color, and the outer a pale lilac. A small and delicate species of ground-squirrel abounds: it is remarkable for cheerful and exquisitely musical notes; resembling, but clearer and pleasanter than any bird's.

Those of us with any anatomical pretensions, are in a regular puzzle over a skeleton head of a small quadruped, which was found here; it seems totally deficient in holes or sockets for eyes: the verdict is, I believe, that it is a non-descript.

I. F. "And how do you like 'A Glimmering Light on Mesmerism,' which I perceive you have been reading?"

C. "It shows a research quite extraordinary for a soldier—generally exposed to much literary privation; his enquiring and sceptical mind has been excited and puzzled by the strange developments, or pretensions of this magical philosophy."

I. F. "In our day the deep searcher of the Unknown, the wonderful,—the occult in science, or religion, fears not persecution, but rather neglect; he cannot interest the public mind; it is the mechanical age, and the greatest triumphs of science are the most practical: it is the age of steam."

C. "Only too true! Other works of genius are scarcely recognized: poetry is as dead as astrology: life is exhausted, and the mind overpowered by the accumulation of facts."

I. F. "Poets have turned Cosmogonists; and the arcana of nature present the only field for speculative science; and there truly is infinite room for observation and study, to form synthetic solutions of these mysteries, now the dreams of 'our philosophy.'"

C. "But even science is at fault—philosophy at a discount. The public mind is occupied with the therism of demagogues and infidels, who abandoning themselves to licentious speculations on human destiny, attract multitudes of fanatical followers, whose minds they bewilder, and whose morals they debase."

I. F. "What you say can scarcely apply beyond those hotbeds of vice and folly—the great cities; their immense command of the press, which taxes all the powers of steam, should not deceive you by its clamor—as it does themselves—as to their real magnitude and importance to the world. Can you not from the

bosom of these unknown solitudes—from this virgin soil, contribute to this cosmical science, still so barren of results?"

C. "Undoubtedly there is much opportunity; but after all, the soldier, no matter what his taste or cultivation, must, to succeed, devote himself to his profession. But my eyes are open; perhaps I have at times, recognized something new. For instance, the slightest culture—the mere accidental stirring of the soil in these barren regions, excites new growths; about the gardens and fields of our remote outposts, spring up weeds, shrubs, bushes and trees, far away from any the like. From this fact, extensively observed, I infer that the earth every where contains the germs of growths suited to the climate; that these germs or principles of vegetable life are a part or property of soils, lying dormant, in some cases for ages, ready for an exciting cause and the proper time to be developed for the use of man, or other animal."

I. F. "It is new to me; but I have heard that the plantain and Jamestown-weed have followed the footsteps of the pioneers of our continent,—making their progress from ocean to ocean."

C. "And it is true, so far as I have had opportunity to observe; and I have heard the same asserted of the partridge and bee; and certainly with a colour of truth; but a very great obstacle of science is an impatient proneness to theory, leading to a hasty assumption of doubtful facts. It would now be easy and comfortable to assume that my guard and sentinels are vigilant; nevertheless, by your leave, I shall as philosophically as possible, betake myself to its investigation."

I. F. "But a last word—you should fail not to note in your diary, however dryly, all natural phenomena; they may come in play, and serve another if not yourself—*au revoir!*"

June 11th.—We marched ten miles over the smooth level, and turned to the river for water. While there, I sketched on my knee a striking view, including the chimney rock, still in front of us. Mounting my horse and riding on at the signals, immediately the scenery which I had admired, faded from thought and memory: there had been rain in the night; and the rare atmosphere and the heat of the bright morning, gave rise to a soft and varying mirage, which was thrown, like a gauze veil, with a charming grace and exquisite illusion, upon scenery of strange beauty: truly—

"At airy distance with majestic motion."

Although as indescribable as the dream structures of uncontrolled fancy, the ever varying and fantastic beauties seen this day, leave a vivid

impression; and I attempt faithfully, though feebly, to paint them; for they must surprise, if they give not pleasure.

On the left and front, was the continuous hill range of infinite variety of shape,—the wild sport of the elements—and of colouring too: the white and yellow marl and sand; the green grass; the dark blue cedars on the tops of mound and cliff; and the moving procession of shadows from the light mist clouds; for the life and grace of motion pervaded every element of the scene. On the left, the square bluffs were like the Hudson palisades, with here and there a pilaster of silvery white; right in front, stood the lofty white chimney rock, like the pharos of a prairie sea; beyond, were white cliffs with green domes; broken in places into cones and pyramids; still further, but towering, was a majestic mound, in the shape of our National Capitol; more to the right, and looming afar over river and plain, was "Scott's Bluff," a Nebraska Gibraltar, surmounted by a colossal fortress and a royal castle, it jutted on the water; thus sharply defining from the pale blue horizon, of the unbounded river beyond, a vast bright bay, reaching fifteen miles, nearly to our feet.

We are moving on: a mile is passed; the pillar seems no nearer; Gibraltar has now its vast sides shaded a beautiful blue; but a low bank of cloud from the right extends before it like a belt. We move on: the palisades seem to advance and retire; to rise; to darken, and shine again like silver! Another mile: Gibraltar sinks; the cloud increases and grows black. A mile on, and this cloud has suddenly become a prairie hill close by! rising from the river flats, (as I never saw one before,) extending to the water, which it actually overhangs seventy feet! Refraction cannot now flatten and obscure it, and show us—as it did—the mirage sea with its lovely shore beyond; and, joining that in front, make it an island, or suspended cloud. Gibraltar is eclipsed; but to the left, now is seen a bright river, flowing amid groves, into a great city: noble buildings are there; turretted cathedrals; colossal ruins: certainly we shall soon be at its gates! A mile on: the mound is now behind; the mirage river has vanished; the city fades from view; but the mountain fortress looms again, far round the bright waters of the bay; mighty bulwarks now appear; bastions and turrets; all of bright colours: the summits positively swarm with guards and sentinels! Can they possibly be cedars? Is it near and real, or very distant? Where are we! The mountains are in masquerade and mazy motion! Cannot the expanded eye detect phantasma? Is it the common earth? What magic is here, to new-fashion the solid hills into fantastic forms! Do fairy fingers weave

the shining mists into robes of air-born grace and beauty—which the sun illumines, but not elucidates!

It is the simple truth. I know now, that the vast bay was not river alone; but not how great a part was mirage: and that strange mound, which, though so close, at first appeared not, and was then mistaken for a cloud!

But we move on: the pillar of pole rock is at length passed—a mile to our left—grand, solemn, stern—like a monument to Time—the silent desert record. Still on! Yonder to the left, a vast palace appears; it is no ruin, the roof and chimneys stand; a near hill had hid it. And now, we gradually ascend a smooth plain to a great elevation; and scenery grand and beautiful without illusion opens to view; there is an amphitheatre of five miles extent; a semi-circle ends near our left at the “capitol;” every variety of shape and colour, too, which the earth contains, seems assembled round: there is evidently a titanic brick-kiln, with no particle of verdure; pyramids; white hills, with domes of green; cliffs crowned with funeral cedars: in front—majestic Gibraltar, far distant still—strangely coloured grey, and blue, and white; and above all, the top of Laramie Mountain—ninety miles away! Just then, an antelope was chased, far through the amphitheatre.

We begin to descend toward the river, as dark clouds gather; and we discover beyond it, the white lodges of a great band of the Sioux; the master-spirits and terror of the plains; their horses—a numerous herd—are grazing in the meadows. We hasten to a camp-ground at the water edge; for the wind rises, and thunders reverberate; our tents are raised just as vivid lightning sends the first big drops pattering to the earth. The Indians are now mounted and shouting; and with their robes and long hair streaming in the gale, dash fearlessly into the broad waters of the river which look black and threatening with the shadows of the storm.

This day, whose light has shed such wondrous beauty on these wild scenes, is nearly done; and, the exhilarating thunder-shower over, I cast my looks around, eager to enjoy some glories more; and, lo! a shining pillar, far away among the clouds! All the outer world is lost in misty shadow, save this prairie pharos: of all the visible earth, the sun shines *only there*! It stands a pillar of silvery light amid the dark shadows of cloud and rain, and coming night. And now it fades to gray, and appears mysterious; and phantom-like, amid the solemn clouds.

Night.—In the silent camp the friends are lounging in the mouth of a tent looking out upon the starlight.

I. F. “This is a memorable day; and we might

pass here, perhaps, a hundred times, without being greatly struck with the scenery, which the elements seem to have combined to adorn for our delight; but it must be the most picturesque on the river. I see you have been making copious notes?”

C. “Yes: do you apprehend that any effort of enthusiasm can add embellishment to the subject?”

I. F. “I must confess, not. There are natural beauties; such as the colouring of sky and cloud, which painter or poet scarce dare attempt to express; nevertheless, there may be in the effort an ill done—an apparent straining for effect, which may deceive a reader into the suspicion of exaggeration.”

C. “This ‘Scott’s Bluff’ is a wonderful mountain; we are miles off yet, (we saw it at fifty,) and to the last moment of light, there was the same chameleon change of colouring; the guards and sentinels still!”

I. F. “One view of it, I am told, resembles strongly some picture of Sterling Castle.”

C. “In the excitement of the visit of the Sioux men and women—did you see the ‘Chimney Rock’ suddenly reappear?”

I. F. “Admirable! A lofty pillar of fire amid the dark clouds! its base was hidden by distance; but I was as much struck by the sunset, or rather with the strangeness of its apparent renewal after almost darkness, which the clouds must have occasioned, when they broke away—but it was at the North—what a startling but calm beauty and splendour of colouring appeared; and how long it lasted!”

C. “I saw it all; there were still dark clouds at the North-west, when the sun went down.”

I. F. “Our friends, the Sioux, the Oglollah and Brulé bands, came in with the thunder-storm, with a fine, indeed startling effect; but for the women, I should have imagined they were dashing through the river to attack us. I was delighted with their fearless and hearty bearing; but the contrast of the men and women is painful.”

C. “The Sioux are rather my favorites: their freedom and power have imparted to the warriors—the men—some gentlemanly qualities: they are cleanly, dignified and graceful in manner; brave, proud and independent in bearing and deed. Their misfortune, their deep stain—the law of barbarism—is their treatment of women; they apply to them the brute law of the stronger! Woman, the martyr! who rises only, and rises ever, as mind feeding upon knowledge, ascends to the throne of humanity! Oh! how powerful is education with its first impressions; how strong the harness of association and habit—

despotic *mental* habit, which chains the very soul!"

I. F. "Truly these squaws bear the mark; bright-eyed as some of them are, a few only seem really to *have* souls. But, do I understand you, that you esteem woman equal, or superior to her mate?"

C. "I have made that ever a question to myself. We say, Nature has given her an inferior part to play; that is, has assigned to her duties, which we chose to call inferior: but there, she actively exhibits beautiful and high qualities, which we seldom possess and under-rate; how magnanimous is their patience, their self-denial and devotion! They are *different from men*. How generally in society, with the audacious, but seldom denied claim to civilization, do men, (alas! uneducated,) like savages, look upon them and treat them as drudges; laborers in their service and ministers to their pleasure. And what ever saves them from this common treatment, and the real degradation which it inevitably entails?"

I. F. "Religion?"

C. "Religion, truly, elevates mankind; but, compared to women, how very few men indeed are religious. It is a proof of her naturally superior refinement; and doubtless her recompense for many ills; but it exaggerates her virtues to a humble resignation, of which the obtuse and hard hearts of men only take advantage. No! the remedy is the appreciating refinement of mental culture, delicacy of taste, a high sentiment of the Beautiful—in a word, the spirit of Poetry! How palpably did the providential Romance of an otherwise barbarous age—of chivalry—rescue her from slavery and place her so near her proper level!"

I. F. "All must observe that the noblest, and in general the most eminent men, evince the highest regard for women; that a profound and deferential respect for them is the first characteristic of a perfect gentleman: but would you, like the knights of old, convert love into worship; do you advocate the blind devotion which led to violence and bloodshed?"

C. "No: you mistake a concomitant for a cause; the redeeming virtue of those ages was this romantic devotion, but tinged of course, with prevailing rudeness and crime. Love, always powerful, was ennobled and purified by martial Romance; and thus allied, was successful against barbarism. Worn out by change, Romance is gone; but Poetry, its vital element, is left; and its refined spirit alone can save love from materialism and degradation, and elevate its objects, so that man can bow with respectful devotion. I view woman as born superior; and often nobly sacrificing herself for our sake; the

minister to, and our only hope for happiness. Striving always to make us more worthy of ourselves, and of her. How apt is vain man to undervalue those powers and qualities which he possesses not, or cannot understand. Rude workmen despise the physical weakness, or the untutored hands of the student, who, ennobled by science, pities the lowliness of their mental estate. Woman generally lacks that mathematical element, which in man, makes him often a little superior to some admirable machines; but she possesses instead, intuitively, certain delicate and refined perceptions, which to my mind are the 'impress of divinity.' We admit her mind develops more rapidly than ours, and call it precociousness; we choose to forget that this superiority lasts while she is receiving the education, which we cruelly stint. She is our superior in those qualities of our cultivated nature, which are so high, that the mass not only possess them not, but do not recognize them; but this is only the case when our physical advantage is forgotten in the poetical refinement of a just appreciation,—the homage which will make, if it do not find her worthy. Ah! at humble distance, with all my soul, I have sought to study and understand some of these pure and beautiful natures, whose beauty was a subtle essence—a divine revelation through features that charmed not vulgar souls; a beauty that inspired a poetic—a pure and lasting worship at its altar. How earnestly then should woman cultivate and encourage, by every means, this romantic devotion, which is so essential to place and sustain them in their proper sphere. They have to combat in the world the sneers, the vices, the sensuality of fallen natures; but man's loss of their just appreciation, is a sure step towards degradation and crime, which involves poor woman too. All honor, then, to Poetry—the aspiring effort to admire, to develop, to praise the Beautiful,—the Noble,—the Grand."

I. F. "There are noble minds, who would pronounce much of that extravagant—too double-refined for any application."

C. "And there are ingrained conventional prejudices, which warp the views of the highest natures."

I. F. "You believe, then, that human happiness is to be found in some reformed and higher state of civilization? Have I not heard you envy the fate of some of these red sons of nature—some wild chieftain—with two or three slavish wives!"

C. "I might envy his freedom from factitious laws—the tyranny and fanaticism of society. But as for 'human happiness'—ha! ha!—suffer me to laugh, I pray you, (if you will not call *that* happiness.) Happiness would be the in-

fraction of an immutable law ; that all sin is certainly not more inevitable, than that all should be unhappy; those who suffer as little as they enjoy, have a calmness which may deceive. I prefer at times to disturb the philosopher's equilibrium, and to brave his fated reactions for the joy which for a moment sublimates both soul and sense. Strange, that laughter, man's lowest attribute, is distinctive; while the smile, which seems borrowed from Heaven, and which can confer rapturous joy, if not happiness, is shared, I think, in a slight degree by brutes."

I. F. "Heaven help you of your mood! I give it up."

C. "My mood? I was never in a more sober mood; I feel as cool and practical as any down-trodden woman."

I. F. "Then your antitheses are rather overpowering!"

C. "Yes, he that will follow where truth may lead, may ever startle; I am still at my theme. I attack this semi-civilization, which halts when woman is only no longer like these brutish squaws; and with the help of the faithful drudge herself, builds up a conventional system which defies the powers of human reason; nay, with an infernal perversity, resists the very light of heaven. But it is a law that we ever seek happiness. And it is this free desert air alone, that emboldens me in the search, to question the dogmas which society holds so precious.

'But let me quit man's work, again to read
His Maker's spread around me.' "

I. F. "Nay, I go; luck to your prairie philosophy. It is the hour of rest. May your dreams be—rational!"

My old friend has been patient to-night; but I trembled lest he should discover the verses, at which his coming surprised me! And with all his prosaic affectation, he had nearly forestalled them by his tribute to the close of this day, which indeed might, all together, have inspired a buffalo. And if so afraid of his ridicule, how shall I venture to record them? Well, three verses may be overlooked, as it is a first offence.

The sun set in clouds;—but this glorious day
Parts not in gloom; the thick veil is riven—
And river and sky in lovely array,
Are radiant now with the light of heaven.

Like an aurora, or the flashing trace
Of an angel's flight, to the utmost north
The glory shines: unwilling to deface
The Beautiful, Night hovers o'er the earth.

Gently the chamelion colors fade,—
Slowly ascending to the zenith's height:—
'Till lingering darkness buries all in shade,
And light and beauty bid the world good night.

Notices of New Works.

THE HOWADJI IN SYRIA. By GEORGE WILLIAM CURTIS, author of "*Nile Notes*." New York: Harper & Brothers, Publishers. 1852.

The Howadji improves very much upon acquaintance. When we last travelled in his company along the banks lotus-bearing Nile, he made himself vastly agreeable at times, but talked too much after the manner of Tennyson, in the most sublimated vein of that poet, to please us entirely.

Amid the arid solitudes of the Syrian Desert, however, his reflections are charming. And when he reaches the hallowed localities of Jerusalem, his strain alternates most pleasantly between song and sermon. As a specimen of his playful writing, we quote his sketch of a Cockney with whom he fell in, one Frende, who is described as—

"A good English Quaker youth, who had burst out of England, celibacy, and the drab propriety of Quakerism, at one leap; and now in the most brilliant of blue body-coats, with brass buttons, flaming waistcoats, and other glories untold, was making his bridal tour in the East.

"Frende's plans of life were original. He had not travelled in England, had scarcely been to London, never upon the Continent; but, like Verde, had shipped himself and bride directly from Southampton to Alexandria. He did every thing in the East, that every body else did. You had but to hunt up some impossible place in the Guide-book, and suggest it to Frende—and he departed the next morning to explore it. It struck me with surprise, that on such occasions, his alacrity was in the degree of his anticipation of damp, slimy places; but I soon learned the reason. When the East was accomplished, he proposed to visit and explore America, and then return to the strict privacy of English country life.

"I soon learned the reason why he visited damp places with ardor. He had what my French friend Gœpe calls *une spécialité*, and that was a passion for reptiles. It seemed to be only a sense of duty to that department of zoology which had brought him to the East.

"One day upon the Nile, he had invited Verde Giovane, with whom he had a mysterious affinity, to visit his boat, and after dinner, Frende assured him, with trembling delight, that he had found a new species of ichneumon, which, it seems, he pronounced as if spelled aitchneumon.

"Verde, whose mind had been confused by the Greek and other architectural names in Egypt, fancied it was a new kind of temple, and remembering one name of learned sound and meaning not to be surpassed, he asked with the anxiety of an antiquary—

"'Has it a propylon?'

"'An ichneumon,' whispered Frende excitedly.

"'Oh, yes, yes,' replied Verde vaguely.

"'Would you like to see it?' demanded Frende, tartly, rather hurt at the lack of enthusiasm for ichneumons.

"Verde answered at random, for he had no clue to an idea in the matter; and Frende, touched by his indifference, declined to show it, merely remarking that he "had him in a box."

"'Good heavens!' said Verde, and rapidly took leave.

"'Gunning,' cried he to his companion, as he ran breathless into the cabin of his own boat, 'Gunning, Frende has H. Newman in a box!'

"Nor was it until Gunning explored the mystery by questioning Frende, that he discovered there was no unhappy Mr. Newman boxed up on Frende's boat.

"Frende had a fine career upon the desert. When he approached Mount Sinai, his dragoman shouted and raised his finger. Frende beckoned to him.

"'Achmet,' said he, 'ten piastres for the first scorpion from Sinai.'

"Whenever he alighted, either for lunching or encamping, he drew out a large jar of specimens preserved in spirits, ran rapidly about the space for a long distance beyond the spot, and turning over all the promising stones he consigned to the jar whatever reptiles, worms, little snakes, scorpions, bugs, or beetles rewarded his search. When it was too late to find more, he ran back to the tent, drank his tea, read a chapter in the Bible, and went to bed. In the morning, he devoted all the time of preparation for departure to the interests of science, and during the day's march, his contemplation of the precious jar was only interrupted by searching glances over the desert, to detect any signs of zoological promise in stones or shrubs.

"This evening, in Jerusalem, I was telling the story of our day's ride in the valleys to the younger Miss Duck, and dwelt somewhat elaborately and fervently upon the beauty of Siloam in the rich afternoon light, with Jerusalem towering above. I was even attempting some poetical reminiscences from Byron, Bishop Heber, and Tasso, when Frende, who had been attending very patiently, ventured to interrupt my romance and quotations, exclaiming—

"'Beautiful, my dear sir, truly beautiful; I seem to see Siloam. Pray, did you, anywhere on the damp wall, observe a new species of the centipede?'"

By way of offset to this, we give a passage of graver import—

"Jerusalem stands upon the point of the long reach of table-land over which we had approached it, as upon a promontory.

"The ravines between the city and the adjacent hills are the valleys of Jehosaphat and Hinnom. The Mount of Olives is the highest of these adjacent hills, and commands Jerusalem. It is crowned by a convent, deserted now, and at its foot, toward the city, on the shore of the brook Kedron, is the Garden of Gethsemane—a small, white walled inclosure of old olives.

"There are no roads about the city. It is not accessible for carriages, nor would its narrow streets permit them to pass. This profound silence characterizes all the Eastern cities, in which wheels do not roar, nor steam shriek, and invests them, by contrast, with a wonderful charm. The ways that lead to the gates of Jerusalem, are horse-paths, like dry water-courses. No dwellings cluster about the city, except the village of Siloam, a town of "*bad people*," a group of gray stone houses on the steep side of the deepest part of the valley of Jehosaphat. In that valley also is the tomb of Absalom, a clumsy structure, but one of the most conspicuous objects outside the walls, and the graves of the Jews covered with flat slabs, the great number of which crowded together, seems to pave parts of the valley. Pools and fountains are there also, sacred in all Christian memories.

"Toward the south-east from the city, the mountain lines are depressed, and the eye escapes to the dim vastness of the Moab Mountains, brooding over the Dead Sea. From the Mount of Olives you see the Dead Sea, dark, and misty, and solemn, like Swiss lakes seen from mountains among mountains. The hillsides around the city are desolate. But in the valley bottoms, on the soil that has washed from the hills, are olive groves, and in the

largest and fairest stands a ruin, of no great antiquity, but picturesque and graceful among the trees. This ruin, and the mossy greenness and fresh foliage around the pool where "the waters of Siloam go softly," are the only objects which are romantic rather than grave, in the melancholy landscape.

"These are the features of the bright and arid, but still melancholy, landscape. It lies hushed in awe and desolation: and sad as itself, are the feelings with which you regard it.

"One only figure is in your mind, but remembering him and all his personal and traditional relations with the city, the single pure romance which flashes across the gravity of its history, returns to you as you gaze. Looking wistfully from the walls, you hear again, as under the olive-trees in the mountains, the barbaric clang of the Crusaders' army. Listen, and listen long. The finest strain you hear, is not the clash of arms or the peal of trumpets. The hush of this modern noon is filled with the murmurous sound of chanted psalms, and along the olive valleys toward Mount Olivet, you see the slow procession of the Christian host, not with banners, but with crosses, to-day, pouring on in sacred pomp, singing hymns, and the hearts of Saracens within the walls are chilled by that strange battle-cry.

"Night and silence follow. Under the Syrian stars, this motley host, driven by fierce religious fury from the whole civilized world, kneels in its camp around Jerusalem, singing and praising God. The holy sound dies while we listen, and the clash of arms arises, with the sun, upon the air.

"Jerusalem bleeds rivers of blood, that flow down the steep mountain sides, and a roar more terrible than the raging sea curdles the hot silence of noon. The clash of arms dies with the sun, upon the air. No Muezzin at twilight calls to pray. But in the Court of the Temple, ten thousand of his faith lie slain, and the advancing Crusaders ride, to their horses' bellies, in blood. It is the 15th of July, 1099, and that evening Jerusalem is, for the first time, properly a Christian city.

"But once more, while we yet stand lost in these memories of the city, an odor, as of rose-water, sweetens the air. The Christian bells have ceased ringing suddenly. A long procession files from the gates, and voices of the Muezzin again vibrate through the city. It is Salah-eddeen, Sultan of the Saracens, who is purifying the mosque of Omar, who is melting the Christian bells, and dragging the Christian Cross through the mire; but who, receiving the Christian prisoners with gracious courtesy, repays their sanguinary madness with oriental generosity, sending them away loaded with presents, and retaining in the city the military friars of St. John, to nurse the sick.

"Thus bold and defined, like its landscape, are your first emotions in Jerusalem.

"But while you stand and see the last pomp of its history, pitching its phantom camp around the city, the sun is setting. The bare landscape fades away. Around you are domes and roofs, and beyond the walls you see the convent of the Mount of Olives. Thoughts more solemn than these romantic dreams, throw their long shadows across your mind, even as the shadows of the minarets fall upon the silent city. Again you see the waving of palm boughs, and a faint cry of hosanna trembles in the twilight. Again that figure rides slowly in at the golden gate, and you hear the voice—'Daughter of Zion, behold thy King cometh unto thee, meek, and sitting upon an ass.'"

From these two quotations the reader may derive a just idea of the merits of the "*Howadji in Syria*."

The work is for sale in Richmond by A. Morris.

THE PRINCIPLES OF COURTESY: With Hints and Observations on Manners and Habits. By George Winfred Hervey. New York: Harper & Brothers. 1852.

This book will not be received, we fear, with the favor it deserves. With many excellent people, a just detestation of mere formalism runs into the extreme of rudeness, and there is an affectation of the blunt in manners that is quite as insincere as the opposite characteristic. Mr. Hervey will be set down by some well-meaning but inconsiderate readers of his "Principles of Courtesy," as one who overlooks the genuine manifestations of true religion in regarding the external behaviour. This will be doing him great injustice. There are persons we know, with whom form is all in all,—who, forgetting to practise the simple duties of piety, are uniformly proper in their demeanor and frigidly scrupulous of appearances,—who, accustomed to luxurious pews in Gothic churches, could never

Kneel down remote upon the simple sod
And sue, in *forma pauperis*, to God—

and who follow a cold, heartless system of religious etiquette which

Sets to soft music the harmonious sigh
And robes sweet friendship in a Brussels lace.

But while religion is brought into contempt by such hypocritical gentility, it suffers on the other hand from a disregard, on the part of some professing Christians, of the ordinary conventionalities of life. We see no reason why a Christian should not be a gentleman; on the contrary, we do not think the change of heart can be really effected, without inducing that regard for the feelings of others, which is seen in the gentleman alone. Mr. Hervey's book has some excellent hints on this subject, and if these were acted on, we think the world would see more of the "beauty of holiness."

The book may be found at the bookstore of A. Morris.

AN EXPOSITION OF SOME OF THE LAWS OF THE LATIN GRAMMAR. By Gessner Harrison, M. D. Professor of Ancient Languages in the University of Virginia. New York: Harper & Brothers. 1852.

In younger and happier days it was our lot to sit under the instructions of Dr. Harrison, when the original of the present volume, privately done into pamphlet form, under the modest title of "The Printed Notes," was a text-book of his class. And though we did not master, as we should have done, all the abstruse philological learning it contained, we yet acquired a sufficient knowledge of the work to justify us in considering it quite as able, though it was certainly as unattractive, as the more ponderous volumes of Weissenborn and Krueger. These "learned Thebans" and our friend Dr. Harrison, following in their wake, have pursued a less popular mode of instructing the youthful mind in the matter of the verbs, that was adopted by the grammarian who taught how

U, us and *rus* are formed from *um*,
All other parts from *re* do come,

yet we are persuaded that the German method is the more philosophical and correct. We therefore rejoice that Dr. Harrison has found the time to amplify "the Printed Notes" and bring forward so satisfactory a treatise as the present Grammar. It will prove useful to

the classes of other colleges, extend his well-merited fame and redound to the credit of our State University.

It may be obtained of A. Morris.

PENCILLINGS BY THE WAY: Written during some years of Residence and Travel in Europe. By N. PARKER WILLIS. New York: Charles Scribner, 145, Nassau Street. 1852.

Some years ago, we recollect to have read these Pencillings, fresh from the hand of the author, with great interest and delight. A delicious *couleur de rose* tinted the descriptions of the Orient which assimilated with our ideal of the spots visited, while a certain air of not unpleasant exaggeration was thrown over the incidents of the whole tour. At that time the transatlantic pilgrimage had not been overdone by book-makers, and Lord Byron still played the magnificent *cicerone* to the tourist, in the Spenserian stanzas of Childe Harold. Subsequently, we have had better books of travel than the Pencillings, books giving more truthful and life-like accounts of what lies beyond our Eastern horizon. But while other journalizers have thus avoided the superlatives of Mr. Willis, and even formed juster conceptions of the genius of the Old World, we must say that they have also, with few exceptions, failed to invest their narratives with so much of poetic interest. No book that we can recall—saving Eothen alone, that wonderful prose poem—is so charming as this, in the field of Eastern romance. The portion of the Pencillings which relates to England, deals overmuch in "Dukes, Marquises, Earls, Viscounts and Barons," but this may be pardoned. We welcome this new and beautiful edition of a favorite volume.

For sale by Nash & Woodhouse and A. Morris.

THE WORKS OF P. VIRGILIUS MARO, with an Interlinear Translation, &c., &c. By LEVI HART AND V. R. OSBORN. Philadelphia: Thomas, Cowperthwait & Co. 1852.

A capital book for a gentleman, whose Latin is somewhat rusty, to have at his elbow, if he would occasionally revive "the unutterable grief" of Æneas and read again the sad story of Troy—but a rather mischievous companion for the lazy school boy who has just begun to construe hexameters. The Interlinear translation seems to us very faithfully executed, and the arrangement of the original text, in the natural order of construction, will render the book useful for easy reference. The publishers have done themselves great credit by the clear typography and acceptable form of the volume.

It is for sale by Harrold & Murray.

AN ODD VOLUME OF FACTS AND FICTIONS, IN PROSE AND VERSE. By Julia Mayo Cabell. Richmond: Nash & Woodhouse. 1852. J. W. Culley, Printer.

The contents of this volume are as various as they are interesting. As the title-page tells us, they consist of 'Facts and Fictions in Prose and Verse.' Of the prose there are three sketches of remarkable Virginia women—formerly published in the Messenger under the caption of "Home Annals"—a long correspondence from Paris in years gone by, several tales and some reminiscences of European travel. Of the verse, we have ballads, monodies, enigmas, charades and epigrams. We mention this variety of subjects as proof of the versatility of Mrs. Cabell, who writes with sufficient grace upon any theme she touches. There is much to commend in this 'Odd Volume' intrinsically, but surely if there were no other rea-

son why its publication should be applauded by the press, the noble purpose to which the proceeds of the work are to be devoted, would be enough in itself to call forth our praise. Mrs. Cabell designs to set apart these proceeds to the commencement of a Fund for the Establishment of a Work House in the city of Richmond. We hope and believe the edition will be disposed of at an early day.

The book may be found at the store of the publishers.

LILLIAN AND OTHER POEMS. By WINTHROP MACKWORTH PRAED. Now First Collected. Redfield, Clinton Hall, New York. 1852.

It is strange that the exquisite verses of Praed should be so lightly esteemed by his own countrymen as never to have been collected and published in England. Few of the smaller poets of the day, have written more charmingly, and far inferior volumes to this have been issued in splendid form by the London bibliopoles and lauded in the Reviews. The poetical characteristics of Praed are a brilliant fancy, a playful humor, rare delicacy of sentiment and a versification almost perfect. He wants that power to rouse and to excite, that mastery over the deeper chords of the human heart, which we demand in the true poet, using the word in its loftiest sense. The public are indebted to Dr. Griswold for the compilation of the present volume, which he prefaces with a graceful sketch of the author.

For sale by J. W. Randolph.

PYNNSHURST: His Wanderings and Ways of Thinking. By Donald Macleod. By Douglas Macleod. New York: Charles Scribner. 1852.

There are many good things scattered here and there in this volume—some agreeable telling of ancient legends, a few fair translations of German ballads and occasional happy delineations of nature—but there bear so large a disproportion to the quantity of dull writing, the forced wit, and affected conceits it contains, that we doubt whether one ought to thank Mr. Macleod for having written it. The very fiction of Pynshurst is as shallow an artifice as could be imagined, and that gentleman's "ways of thinking" are, by no means, ways of pleasantness to the reader. The arrangement of the work is obviously imitated from "Ik Marvel"—whose "Fresh Gleanings," had doubtless inspired the writer to attempt a similar counterpart to the Sentimental Journey of Sterne. But he has made a bad copy of a copy, and has failed either in catching the delicate humor and touching pathos of the model, or the airy grace and uniform vivacity of the unconscious imitator. Mr. Macleod can do better than this, or if he cannot he will never rise to a very high rank in letters. The work is beautifully printed and can be obtained of A. Morris and Nash & Woodhouse.

A BOOK FOR A CORNER, By Leigh Hunt. New York. George P. Putnam. 1852.

Another and very pleasant volume of the Semi-Monthly Library. It consists of choice selections from favorite writers, made by the discriminating hand of Leigh Hunt, which are prefaced by a sort of Essay on Compilations by the Editor himself. It is just one of those little books which prove such delightful companions for summer travel, to be read on the deck of a steamboat, or between the stations on a railway through an uninteresting tract of country.

James Monroe & Company of Boston have recently issued some very good books. *The Philippias of Demosthenes*, edited by Professor M. J. Smead of William and Mary College, has been published several months, long enough to have elicited the warmest encomiums from the best scholars of the country. We surely need not add the tribute of our own high appreciation of Prof. Smead's labors. *Companions of My Solitude*, by the author of "*Friends in Council*," is the title of a work which was received with great favor in England, and which we are glad to see reprinted here. The author, who seems to be the gentlest and most philosophical of reformers, addresses himself to the consideration of one of the gravest maladies that afflicts society on both sides of the Atlantic, with a delicacy and tact that we have rarely seen equalled. The style of his reflections is very pleasing, and the discussion of a painful subject is relieved by occasional cheery descriptions of country rambles. A new work in *English Synonyms* is an acceptable addition to the Library, and a compendium of anecdotes relating to Washington makes another agreeable volume, which should be read especially by the young.

All these works can be obtained of A. Morris.

From Henry C. Baird of Philadelphia, we have received a package of valuable works relating to the Mechanic Art, to which department of book making this enterprising publisher seems to have especially devoted himself. The most considerable of these is *Norris's Handbook for Locomotive Engineers and Machinists*, containing a large amount of reliable information with regard to the construction of Railway Engines. *Elwood's Grain Tables*, *A Treatise on a Box of Instruments*, *The Assayer's Guide*, by Oscar M. Leiber, late Geologist of Mississippi, and *The Paper Hanger's Guide*, are the titles of the rest of these works, and each will be found a most valuable *vaude merum* for persons engaged in the particular branches of mechanical labor to which it refers.

All these works can be supplied by J. W. Randolph.

A new edition of the Waverley Novels has been commenced by Lippincott, Grambo & Co., of which the first part is now before us embracing the novel of Waverley. Two of the novels are to make a volume, which is to be sold at the moderate price of One Dollar—and the complete edition will be offered for Twelve Dollars. It will have a great sale as the cheapest well printed edition ever offered in America.

The present number can be found at Morris's bookstore.

THE INGOLDSBY LEGENDS; or Mirth and Marvels. By Thomas Ingoldsby, Esq. (The Rev. Richard Harris Barham.) First Series. New York: D. Appleton & Company, 200 Broadway. 1852.

These humorous papers were published twelve years ago in England, and met with great success, and it seems remarkable, that no publishing house in this country should have re-printed them sooner. We have them now in the clear typography and gay red muslin cover of Appleton's Popular Library, of which excellent series, it is by no means the least attractive volume. Ingoldsby enjoys a reputation quite peculiar to himself—that of being able to rhyme to the most intractable and unmusical words and syllables, and it would not be safe to bet on his finding a similar sound for the termination of any line that could be written. With this dexterous command of verse he unites a rare humor and great wealth of illustration, so that *The Ingoldsby Legends*, in which he displays all these characteristics, will be found a delightful companion. Nash & Woodhouse have it for sale.

NO. 7.

Notes and Commentaries, on a Voyage to China.

CHAPTER VIII.

Cape Frio; Vicinity of Rio de Janeiro; Putting the best foot foremost; Green leaves; Life at sea; A reason for going to sea; Military strength of the entrance of Rio de Janeiro; Anecdote of Commodore Jacob Jones; Send a boat to the Admiral; Reasons for creating the grade of Admiral; Wash-day.

Just before break of day, on the 2nd of May, 1848, the land was descried. A lofty bluff arose from the sea; a fleece of white clouds enveloped the summit, completely obscuring the light-house upon it, while a line of foam was seen lashing its base. The light-house, the guide and mark of the sea-tossed mariner, not being visible, led us to doubt for a time, that we had made what sailors call "a good land fall;" but the lapse of a few minutes brought day-light, and with it came the pleasing assurance, we were opposite to Cape Frio, the site of one of the first European settlement in Brazil. As the sun rose, we pursued our course along the mountainous shore towards our port. The wind freshened somewhat as the day advanced. The prospects around and before us were animating; by four o'clock, P. M., the land in the neighborhood of the city of St. Sebastian became defined.

How joyously the heart throbs on approaching land after fifty days spent at sea for the first time; particularly if the heart be yet untouched by worldly care, and the land be beneath the radiance of a tropic sun. From the moment the indistinct looming up of the shore is descried, Hope flings her mantle over the mind, and Memory sleeps; the eye is earnestly directed forward towards the opening prospect, clothed in the bright colors of historical recollection, or in the brighter hues of a creative fancy. The feeling in regard to distant lands and people, which is commonly entertained from childhood up to adult age, is about to be gratified; the senses are aroused, and the merest trifle, which elsewhere would pass unheeded, assumes importance: we pity the apathy of the old voyagers and seamen, who find little to interest them, beyond the manœuvring of the ship or veering of the wind. But the

charm of novelty, delightful as it, passes away, and in a few years we may learn to meet strange lands without emotion; yet the foreign land beheld first, will long remain a bright spot in memory.

Between Cape Frio and the harbor of Rio de Janeiro, the coast tends nearly east and west; and we enter the beautiful bay steering towards the north. About ten miles from its entrance, are several small islands: those seen first are to the left or westward, and the most conspicuous of these are Round Island, (Ilha Redonda,) and Smooth Island, (Ilha Raza.) On the latter is an excellent light-house, with a revolving light, bright and red, which cannot be easily mistaken. Three small islands subsequently appear, named Comprida, Palmas and Cagada; and on the right, or eastward, the Ilha do Pai, (Father Island,) and Ilha de Mai, (Mother Island,) are seen not far from the land. But these islands are the least attractive part of the scene; for the elevated peaks of Tejuco, Gavia and Corcovado, and the land intervening between them, are so arranged as to present the profile of a supine man, of course of the most gigantic dimensions. The feet of this profile, which is several miles in length, are represented by the Pão de Assucar, or Sugar Loaf, a conical, muller-shaped piece of darkened granite, said to be 900 feet from the base to its apex. The nose is prodigious, and is familiarly known as "Lord Hood's Nose," whether in compliment or derision of that feature of his lordship's face, neither history nor tradition informs us. "If the old fellow were once to give a snort," quietly remarked a sailor to his companion, as the two were contemplating the land, "he would blow us clean out of water!"

The Sugar Loaf is on the west side of the entrance of the bay; but on the right, or eastern side, is the Ponta de Pão Torta, or False Sugar Loaf, which may be distinguished by its smaller size and different inclination or dip of its strata. At a distance of ten miles, the whole surface of the land is bleak and barren in its aspect: here and there, leaping through dark ravines, may be seen a waterfall, glittering like silver under the rays of the sun.

During the day, the crew was employed in putting the ship in a tidy, holy-day dress, that she might appear to strangers "with her best foot foremost," that is, in truth, lead them to believe the vessel is superior in all respects to the reali-

ty, which, in the present instance, is perhaps unnecessary. Acting out this maxim, "put the best foot foremost," occasionally leads to deception. But—we were all gay, and pointing out the prominent points in the landscape, and endeavoring "to make out," that is, distinguish the nation or rig of the several vessels, which, like our own, were steering for the port. Every mind seemed excited, either by hope or curiosity; every new point as it opened upon us, gave pleasure for the time, and all were cheerful. That placid condition of the spirit commonly induced by the long continued monotony of sea-life, was now broken; a sort of moral exhilaration had succeeded it.

Just before sunset, we were so near as to descry the shipping in the harbor, and some of the prominent buildings of the city. Our glasses assured us, that the U. S. frigate *Brandywine*, wearing the broad pennant of the Commodore of the Brazil station, and the U. S. steamer *Allegany*, were in port: we attempted, by the usual signals, to inform them that the *Plymouth* was arriving, but the day was too far spent; they could not distinguish our colors; the wind failed, and an adverse tide met us.

"The glare of noon is past; a darker hue
The ethereal sky assumes. The source of light
Begins to wane, and verging into night,
Majestically bids the world adieu!
Oh! even in thy decline thou art glorious still.
The landscape fades, but still the raptured eye
Rests on thy beauteous robe of every dye,
As slow thou sett'st behind the western hill.
Peace to the wretch whose lips thy beams inspire
To utter vows unholy—he who lifts
To thee the adoring eye for all his gifts,
And heaps thine altars with unhallow'd fire—
Yet, could I worship any God but one,
Methinks my God should be yon setting sun."

The ship was anchored about a mile from Fort Santa Cruz; the twilight was spent in gazing on the beautiful tints left upon the clouds by the setting sun. In the lap of the mountain, rising in the rear of the fort, were a few solitary palm trees, which were objects of admiration, especially for young gentlemen from the north. At night, the lighthouse on *Ilha Raza*, the illumination of the shore in the harbor, by the long line of lights in the city, and the sky magnificently brilliant in moon and stars, attracted attention; although in view of these signs, that we had passed from the solitude of the ocean, to social relations with the world, the influence of the calm night hushed all into silent contemplation. Thought was busy: but the stillness was broken only by an occasional, low-toned exclamation of admiration.

The impressions made on a young mind by the first sight of a foreign land, and that land in the tropic regions of the earth, cannot be described;

they endure for years, and memory always calls them back with pleasure. Let the young, then, drink in such impressions, and be filled with them, for it comes not to the travelled, or to those whose minds have been faded by the cares and pursuits of advancing life. The writer first gazed on this region of the globe more than twenty years ago; and now, for the seventh time, he reviews the scene; he finds those early impressions still fresh; familiarity, which dulls the perception to beauties as well as to defects, has not impaired this picture in any of its details.

The morning brought a calm and glassy sea, reflecting the rays of a scorching sun. A boat had been sent on shore to the *Praia de Fora* for sand to scour the decks; the men found it convenient to bring off some oranges, found growing in the vicinity. The sight of the fruit, and the green leaves and twigs of the orange trees, seemed to give pleasure to all on board. Do you not perceive in this the unpleasantness of sea-life! How small is the circumstance, a few green leaves and twigs; yet, it is enough to produce pleasure, because it contrasts so strongly with whatever meets the eye on board. The sight of a handful of green leaves, when trees are daily before us, produces no impression; but, let nothing of nature except skies and ocean be presented to the eye for two long months, and then a fresh orange and a large handful of green leaves excite more admiration than a conservatory of flowers which one visits every day. The sky and ocean, in tempest or in calm, are too grand to engage the sympathies, the affections of ordinary men, and call forth that tender admiration which expands over the smaller objects in nature. Who would feel happy in monotonous companionship with a star, be it ever so bright! There must be some approach to equality between man and the objects of his regard, if they are to produce him pleasure or joy; for his self-love must be fed with a notion that his comprehension of these objects, if inanimate, is creditable to him; but what man is vain enough to fancy he can understand and associate with a star, and receive and reciprocate affection.

Many are driven to sea by the *res angustæ domi*; an indefinite love of adventure leads many to embark who are ignorant of the truth, of the reality of living at sea. There is no one act which is habitual, for man's comfort, health or pleasure, which cannot be more effectually, more successfully performed on shore than on a ship. Yet poets, under the insane *nivus* peculiar to their brains, or spiritually induced for the time, rave in such manner as to lead the ignorant to suppose that those afloat are really occupying positions in the world that all brave men should desire. But let the truth be told; yet, not for the

exclusive purpose "to shame" any one; and all reasonable men who have affections for home, will tell you that at sea their repose is necessarily on a harder and narrower bed, in constant motion, and in a limited supply of air; food is coarser, imperfectly cooked, defective in quality, sometimes deficient in quantity, and the external relations, sea and sky, which change their aspect temporarily only, are monotonous. A fellow-passenger from the West, declared he had "lived among the Indians, camped out in the woods, and believed he had suffered hardships, and experienced as great discomforts in living as any man under any circumstances, but this life at sea, is worse than anything on the shore I can conceive of. There is not a single instant of repose, or a source of comfort or consolation, except in the hope and prospect of one day getting on shore." The dulness of sea life is proverbial. Genius prompts all manner of devices to create interest; floating chips, a passing dolphin, or a fish, the spout of a whale at a distance, or the squeak of a pig, will rouse a whole ship's company. Still, the poet sings:

"How blest the life the sailor leads,
From clime to clime still ranging;
For to the storm the calm succeeds,
The scene delights by changing!"
Then, laugh at the gale,
With a full flowing sail;
When landsmen look pale never heed 'em,
But toss off a glass,
To some favorite lass!
To America, Commerce and Freedom."

There is a wild sort of wanderer on board, who has read a good deal of poetry and fiction, with little profit; he has earned for himself among the officers, the soubriquet of Shakspeare. He is a captain of the mizentop. He solicited the place of coxswain to one of the cutters, on the ground that one of the chief objects he had in view in going to sea, was to visit foreign countries, and make notes on the manners and customs of the people, for future use. He urged that if he was coxswain of a boat, frequently visiting the shore while in port, he would have a much nearer view of the people, and he would obtain much better and more correct notions in regard to them. How intense must be the desire to see the world, when it induces a man to take the station of an ordinary seaman in a man-of-war; and to take the office of steering a boat between the ship and the shore, in the hope to get a little nearer to the object of his curiosity. How many of our ships' companies are doomed, like the marines, to "see the world only out of the main deck ports."

But it is well there are those always in the world who love to deceive, to cajole themselves

into the notion that there is indescribable pleasure in privation, in hard beds, scanty and irregular sleep, defective, deficient, or badly prepared food, and continued exposure to the risk of being drowned; that grog and tobacco are bodily luxuries land lubbers know nothing about. Restraint of mind and body is a part of the treatment at sea, especially in ships of war; but still, "lob-scouse," pork and beans, hard salted beef, with a short allowance of fresh water, stand preëminent in the eyes of some respectable men. It is well, I repeat, that the indefinite love of adventure which belongs to some of us, is not quenched by the inconveniences which sea-life brings to all classes of sea-faring people, that gave to the world Columbus, Pinzon, Cabral, Vasco de Gama, Magellan, and hundreds of others, who have sought fame upon the trackless waste of waters. To this passion Spain and Portugal, and England and Holland, are in a measure indebted for their greatness. Therefore, let us cherish a love of the sea amongst our people, and at the same time, endeavor to ameliorate the condition of "those who go down to the sea in ships." As a first step to this end, let the habitual use of intoxicating drinks be abolished in our men-of-war, from the cabin to the forecabin, and thus follow an example set to all employed in merchant ships. Grog in its various forms, is a fruitful source of injustice, crime and misery; almost all the punishments inflicted on board of men of war, can be traced directly or indirectly to this article, being too freely used, either by men or officers, or by both.

The entrance of the harbor of Rio de Janeiro, is admirably defended by the strong fortress of Santa Cruz on one side, and the fortress of San João and smaller forts around the base of the Sugar Loaf, on the other. A brave mind directing a sufficient number of skilful gunners in these forts, might render this passage very perilous, if not impossible, to a hostile ship, which must necessarily pass within a half mile of more than a hundred guns, placed beyond the reach of her shot; a ship's guns could scarcely be sufficiently elevated to be very destructive to her assailants stationed, as they must be here, many feet above the level of the sea. Should a vessel pass Santa Cruz, she would meet resistance within the bay from the forteleza do Pico, forteleza de Boa Viagem, forteleza Gravata, three well placed forts on the eastern-shore; and the forteleza de Lage and forteleza de Villegaignon, which occupy central positions in the harbor, and beyond them, nearer to the city, is the fortress on the Ilha das Cobras. In the possession of courageous garrisons, a force afloat would find it difficult to conquer the forts of Rio de Janeiro: in a word, the city of St. Sebastian is a strong military posi-

tion, and is physically well prepared for defence, *provided the forts be in good condition.*

But why should I tell you, or any American, that the harbor of Rio de Janeiro is capable of great military endurance? It is to be presumed we shall never have occasion to assail this port; but stories have been told about threatening to destroy this city with a single frigate; and you might believe there was foundation for such idle assertion, if you did not know that more than a hundred guns could be simultaneously opposed to any such quixotic enterprize. Rio de Janeiro is not like those ports in Mexico, which "might be taken by a revolving pistol mounted on a skiff, if her commander were cool," if I may borrow the words of an esteemed messmate.

In this connection, I draw upon an old note book, and record here, an anecdote of the late brave, just, intelligent, and good Commodore Jacob Jones: In November, 1826, the Brandywine, bearing the broad pennant of Commodore Jones, stopped at Rio de Janeiro on her way to the Pacific Ocean. At the time, war existed between Brazil and Buenos Ayres, and to keep the enemy in ignorance that a fleet was preparing in the harbor of Rio de Janeiro, to attack a Buenos Ayean Squadron, under command of Commodore Brown, said to be cruising off the port, the Emperor of Brazil, Don Pedro I, had laid an embargo on all vessels, to continue until the 23d day of November, 1826. On the morning of the 15th, at daylight, the Brandywine was unmoored, and towed by the boats of the American and foreign men-of-war in the harbor, from the usual anchorage to the vicinity of fort Santa Cruz, in order to be certain of clearing the port with the usually very light land breeze, early the next day. Just before the ship anchored again, a Brazilian officer came on board, bearing several papers in his hands; he announced in a very excited tone and manner, that the guns of Santa Cruz would be opened upon the ship, if she persisted in her attempt to leave the harbor. The reply was such as might have been anticipated by all who knew Jacob Jones. He turned to the first-lieutenant, and said, in the presence of the Brazilian officer, in a perfectly quiet but decided tone, "Clear the ship for action, sir, and double shot the guns." He then said to the Brazilian, "Tell your master, sir, that by the order of my Government, I am bound to the Pacific Ocean, and I shall proceed to sea to-morrow, unless prevented by a superior force." To obviate error, a letter of this tenor, addressed to the Emperor, was immediately prepared, and placed in the hands of the officer, who saw that the ship was in readiness for immediate action before he left her.

It was not supposed at that time, that the frigate Brandywine could seriously injure the fort, but

the Commodore designed, in the event of being fired at, to return a broadside or two, and then strike his colors, if he could not get beyond the reach of the guns of fort Santa Cruz without damage. In the course of the afternoon, he visited our Charge d'Affaires (Mr. Raguot,) from whom he received a reply from the Emperor, that the embargo was not intended to be applied to vessels of the American squadron, and that the frigate Brandywine was free to depart at any time; but the Emperor requested that Commodore Jones would do him the favor to remain in port twenty-four hours. The Commodore rejoined, that if his Majesty *requested*, he would remain three days.

It is not to warn our Commodores of their capacity to resist attacks, that I mention the forts and guns of Brazil; but because this port is a depôt of commerce, and the Brazilians are consumers of American products. In the year 1844-'5, they purchased from us \$1,083,318 worth of flour, and \$830,926 worth of our manufactured cotton, which, with some other items, increased the aggregate to \$2,837,950, nearly three millions of dollars. This sum of money, in cash or in goods, the product of Brazil, was distributed amongst many classes of our fellow-citizens: farmers, millers, merchants, clerks, porters, coopers, carpenters, shipwrights and sailors, all had an interest in the sales of American property in Brazil, and it is only polite to presume they are a little curious to hear something about their customers.

The morning drum-beat saluted the display of our flag at the peak. Signals were made, and answered; the Brandywine communicated an order—"Send a boat to the Admiral!" Yes, that is literally the order; I am not mistaken—"Send a boat to the Admiral!"

When the code of signals was devised, and from that time till the present, the Navy has desired and expected to see established the grade of Admiral; it is recorded in the signal books, printed twenty or more years ago, but up to this day, the Navy has still this object to hope for. The signal officers not unfrequently find a sneer or a smile to accompany their report that "the Commodore signalizes,—send a boat to the Admiral!" This assumption of the title of Admiral, by the signal book or its authors, was very much on the principles of diplomacy adopted by the waiter of a restaurant, who, on serving a guest with eggs, helped himself to a pinch of salt from the table, "thinking," as he said, when asked why he had taken it, "that somebody might give him an egg, and if so, then he would want salt for it." Why should the egg be wanting for the salt? Why does the government

hesitate to create the office of Admiral in the Navy of the United States ?

The office of Admiral has not been created for the Navy of the United States, because there is a popular prejudice against the name, the title : ignorant people seem to think it would be "ape-ing" England to call any officer in the American Navy, Admiral. They seem to think only of the name, and regard it simply as an honorary distinction, which is contrary to the spirit of our institutions. A member of Congress once said in private conversation, "I am willing to vote for the office, but first get us some other name for it than Admiral : call them Navy Governors !" "Sea-Governors !" replied the interlocutor, "will not be appropriate. You may devise a better designation, one which will not be offensive to democratic ears of either party. The general term "Sea-officers" is used in the Navy, and "Sea-Captain" is recognized in the merchant marine : now extend the application, and you may have Admirals, under the name of "Sea-Generals," Vice-Admirals, as "Sea-Major-Generals," Rear Admirals, as Sea-Brigadier Generals ; but how Post Captains would fancy, to be styled, "Sea-Colonels" and "Sea-Lieutenant-Colonels," and Commanders to be "Sea-Majors," is questionable, although it is possible the lieutenants would not object to be called "Sea-Captains," nor the passed-midshipmen, "Sea-lieutenants." This nomenclature would not be entirely new ; both the Spaniards and Portuguese designated the officer who discharged the duties of Admiral, as the Sea-General—General do Mar—General de la Mar. The people do not understand the question ; the representatives of the people are unable to explain to their constituents that an Admiral in the Navy is equivalent to a General in an Army ; the word Admiral means a General who commands military seamen ; and to descend to detail, he might add, a sloop-of-war is equal to a battalion, a frigate equal to a regiment, and a ship-of-the-line, to a brigade. Now, if we should assemble a floating army, (commonly called a fleet,) composed of many battalions (sloops-of-war,) frigates (regiments,) and ships-of-the-line (brigades,) and desire to place this *floating* army under the command of one officer, what should be his title ? We have followed all other nations in using the title of commander and captain for officers of the Navy commanding single ships, and in courtesy, we have given the name of Commodore to a Captain, while commanding two or more vessels, technically called a squadron, a detachment of a fleet, and a pliant courtesy continues the title, and hence the saying, "once a Commodore, always a Commodore." We have in our Navy, by law, only two grades of commanding

officers ; the grade of "Commanders," formerly called "Masters Commandant," who command vessels carrying twenty-four guns, and under this number, and the grade of Captains, formerly called "post-captains," who command ships carrying more than twenty-four guns. When our Navy was small, and its services were rendered chiefly in single ships, these grades were enough ; but now when the navy has increased in the number of its ships, and many are brought to act in concert to achieve one object, as in the Gulf of Mexico before Vera Cruz, there seems to be propriety in giving to the Navy a grade of officers adapted to the nature of the duties required of it. In Military communities, seniority of commission alone is not sufficient to enable an officer to discharge efficiently, the duties of a Commander-in-Chief. The unhappy personal contention and difficulty which existed so long between the late Commodores Perry and Elliot, it is suggested, were due to the fact that these two gallant officers were of the same grade, in the famous battle of Lake Erie. A Commander-in-Chief should be of a grade superior to that of any subordinate to him, and answer to a different title ; for it is not well that one who has once commanded in chief, should be exposed to serve afterwards, subordinate to any one who may be commanding in chief for the first time. Military and Naval technicalities have been settled by the practice of the nations of Europe, which we imitate in many things ; to refuse to employ these technical names because they are employed by the English, is to be more fastidious than wise. It may be urged that the title of Captain is enough, because custom vests the chief command in the senior ; the same argument would be equally cogent if it were urged that the grade and title of lieutenant is enough, because, in the absence of a higher grade, the senior lieutenant commands ; and to go still further, in the absence of a higher grade, the senior, passed-midshipman or midshipman, would command, and therefore, it might be contended, the grade and title of midshipman is enough for the Navy of the United States, which should be organized on the severest principles of republican simplicity. But why not apply argument of the same character to the Army, and send 20,000 men into the field under the senior officer of the grade, and name of lieutenant, or captain ? Winfield Scott and Zachary Taylor, were not braver soldiers, nor better, nor more scientific leaders, in consequence of being entitled General Scott and General Taylor, than they would have been, had they lead our armies to the field under the name and style of captain. Our fellow citizens are too familiar with what is proper in military affairs on shore, not to know the signification of the titles of major, colo-

nel, general, &c.; these several titles are freely applied to citizens who never "set a squadron in the field," or even directed a single company on drill. Against these titles, there is no popular prejudice. The nation would not send an army of even four or five thousand men into the field under the command of an officer of the grade and name of Captain, or of Major, or even of Colonel; every body would consent that even this small army required a Major General, and one or two Brigadier Generals. The prejudice of ignorance of masses of men who have power, is wonderful in its effects; intelligent politicians seldom venture to run counter to any popular prejudice even among democrats, and rarely attempt to enlighten the ignorant at the risk of popularity at the polls.

Whether the Navy has become so large as to require the creation of higher grades in it, I am not now to argue or even express an opinion; but, if higher grades be necessary, it is hoped, legislators will not fail to act because the word Admiral is not familiar to their constituents. If these latter be Roman Catholics, or protestant Episcopalians, let their representatives remind them of the numerous grades of officers which form a Church, as The Queen, Head of the Church and Defender of the Faith; Archbishops; Bishops; Archdeacons; Deacons; Vicars; Priests; Rectors; Curates. &c., &c.; and remind them that it might be difficult to organize an Episcopal or Roman Church, and find new and appropriate names for its various officers, different from those now employed in Europe. It would be as difficult to make some other word mean Admiral, as it would to make some other word mean Bishop or Archbishop in the opinion of the parties interested. But let us drop the dispute about words, names. If we require a Navy, let it be as efficient and as complete in all its appointments as our means will permit, that it may secure for our commerce throughout the world a profitable respect. If we were totally without a Navy, "our commerce would be a prey to the wanton intermeddlings of all nations at war with each other; who, having nothing to fear from us, would, with little scruple or remorse, supply their wants by depredations on our property, as often as it fell in their way. The rights of neutrality will only be respected, when they are defended by an adequate power. A nation, despicable by its weakness, forfeits even the privilege of being neutral."*

Individuals are bound to observe the conventional customs of the society in which they may live at the peril of contempt or disrespect; like individuals, nations must observe the conven-

tional opinions of the family of nations, or suffer for their eccentricity, as any nation would surely suffer, if it presumed to exist without being at the expense of maintaining both an Army and Navy of some kind; and these should have, in semblance at least, too much strength to invite aggression.

The Navy of England for 1848, consisted of 43,000 men; with nearly as much commerce, that of the United States, at the same time, was 8,500, or about one-fifth.

"The Brandywine, sir," remarked a very young midshipman, "is a great deal bigger ship than this, and must have more men and boats than we have, and I do not see the sense of taking away a boat's crew from us, just at the very time we want every man to work ship, going into port."

"Do you presume, youngster, to criticise the orders of the Commodore; take care, sir, or you'll be hauled up for disrespect to your superior officer."

"I say we do want every man to work ship; if we don't, why does the master-at-arms send up on deck all the servants; steerage, and ward-room and cabin boys, cooks and all, when all hands are called to bring ship to anchor? I wonder how they manage to anchor merchant ships; in proportion, they have not quarter as many men as we have!"

I might have told the midshipman, the Commodore fully understands the necessity (or desire) to be strongly manned on bringing ship into port; but by using our boat to row four miles against the tide, he presumes he will receive private letters from home, as well as official communications, at least an hour earlier, because to obtain the letter bag by his boat, she must pass over double the distance to come to our vessel and return, and of course occupy double the time. Besides, an exhibition of power is supposed to contribute to the preservation of discipline, no matter if it do wear the aspect of using official authority for personal gratification. It might be asked, why should a Commodore, in command of the United States Fleet, serving on the coast of Brazil, have power to exact obedience, in small matters, from a ship on her way to the East Indies? This power is necessary, perhaps, to meet great emergencies; it may be possibly abused to gratify personal vanity in the Commodore, or "Admiral," as the "signal book" writes it.

The boat has gone to the "Admiral" with his letter bag. All is in repose. Conjecture is busy; but most minds are wondering when the sea-breeze—sometimes called, from its supposed healthful influence, "the Doctor"—will begin. Possibly not, till one or two o'clock in the afternoon; it is very irregular; on some days, it fails

*Alexander Hamilton—The Federalist.

entirely, or is so light that it will not enable a ship to pick her way through the eddies and currents to the anchorage. But there comes a boat with an American flag; it proved to be the gig of the gay commander of the U. S. ship — from Callao, bound to New York. He brought us news of the change in the French government; the King gone to England a fugitive; and his throne usurped by a mad poet and a half dozen equally sapient coadjutors. But what was quite as interesting to our vanity, the gallant Captain assured us that the "Mexican war or rather, the conquest of California, had raised American character-stock abroad fifty per cent; that the John Bulls admit now we are a great people, and no mistake!"

About one o'clock, P. M., a breath came from sea-ward, the tide was propitious, and the anchor was hove up, sail made: we passed gently between the forts, and were in the harbor of Rio de Janeiro; but about four o'clock, P. M., the wind failed, and the ship was anchored at least three miles from the city,

The next morning at day light, "all hands to scrub hammocks and bags," was shouted through the ship by the boatswain's mates, and the operation was immediately commenced. Every man spread out his hammock, free from its clews, on the deck, well soaped and sprinkled it with sand, and then spent some twenty minutes upon his knees, scrubbing with a hard hand brush. Clothes' bags and duck frocks were in turn submitted to a similar process, and at the end of an hour, they were secured to lines and hoisted up to the ends of the yards to dry. Washing-day is commonly appointed by the Commodore's order, and it is usual to see all the ships of a squadron in port, bedecked at the same time during the morning, with the washed clothes and hammocks of their crews. Lines are stretched from the end of the jib-boom to the spanker-boom, and supported at the extremities of the lower yards, and from these lines the hammocks and bags are suspended, while clothes are hung from lines stretched between the fore and main shrouds. Wash-day is over before breakfast; ironing is never thought of. There is something very striking and agreeable in the aspect of ships of war lying in a calm harbor, with the white hammocks hung up to dry, in the manner indicated. The scene has always conveyed to my mind a sign of cleanliness and comfort, and of contentment on board.

Soon after dinner, the washed clothes were "piped down," and the sea-breeze coming fresh into the harbor, the ship was again got underway and moored at the usual anchorage of men-of-war off Rat Island.

CHAPTER IX.

Harbor of Rio de Janeiro; Sugar Loaf; Gavia; Corcovado; Praia do Flamingo; The concealed waters: Aborigines of Rio de Janeiro; Respectability of the Portuguese.

Let us glance round this celebrated bay of Rio de Janeiro. It is somewhat pear shaped, the small end of the pear representing the entrance; its diameters are about twenty miles, more or less, but the surface of the water is broken by several islands; the shores of the harbor are thrown into coves and bays, and points and highlands and headlands. The back ground is formed by irregular mountains of considerable height, so that not more than five miles from the ocean, we float in a great basin, bounded by picturesque mountain scenery, clothed in the luxuriant vegetation of the tropics.

Observe the peaks on the south western side of the anchorage. First, the dark cove of granite at the entrance, called the Pão d'Assucar, or Sugar Loaf, said to be 900 feet high: immediately after passing this remarkable rock, we open the beautiful bay of Botofogo; and beyond it might be seen a truncated peak, presenting a square surface resembling a ship's topsail at a distance, and, therefore, called "Gavia," standing 1700 feet above the level of the sea. To the northward of it is another peak of the same height, called "Tejuco," and between the two is the often named peak of "Corcovado," which is 2,380 feet high. Near the base of Tejuco is a pretty country, and a chalybeate spring which may be reached from the city in an omnibus; invalids in the town who require a cooler atmosphere than is sometimes found there, resort to Tejuco. The very pinnacle of Corcovado is accessible on the back of a mule or a horse; and from its summit, more than 2,000 feet high, a view of land and sea may be had worth the toil of ascent. To the north, the mountain range, blue in the distance, is 600 feet high, and to the north and east is broken into fantastic peaks, which have been compared to the pipes of an organ, and this fancied resemblance has given the name to the range—os Orgãos—the Organ Mountains.

Now drop the eye from the pinnacle to the base of the mountains, to the western limits of the waters of the harbor. Between the Sugar Loaf and a bold headland is the entrance of Botofogo bay, whose shore is lined by "quintas," or "chacras," or "villas," the country residences of men of business. When unexpectedly brought to view for the first time, a beholder from the temperate zone might fancy that the scenery of some gorgeous, dramatic temple had been cen-

verted into substantial things, for all is so light, so gay, so happy, that it seems rather a poetic scene than a real natural view. The bay of Botofogo charmed the earliest European visitors; between the base of the Sugar Loaf, and the Hill of San João,* the first settlement of Rio de Janeiro had its site; it was founded by Estacio de Sa in 1567, and was called *Villa Velha*—Old Town,—but not a vestige of it now remains.

Next to the headland of Botofogo is a long strip of beach, on whose white sand the sea rolls; and behind it are dwelling houses and gardens, and that section of the City called Catete. This beach is known as the *Praia do Flamingo*. To the north it is interrupted by a broken point of land, about a hundred feet high, on which is placed a small white church dedicated to Nossa Senhora da Gloria. Between the Gloria church and the next point of land to the north, called "Ponta Calabouça," is a shallow cove, fronting a long row of one story white buildings; the southern end of this beach is called *Praia das Freiras*, and at the northern, the *Praia Santa Luzia*.

Between Ponta Calabouça, (once fortified, and still the site of the convent of St. Sebastian,) and the Ilha das Cobras is another cove, which forms the chief water-front of Rio de Janeiro.

The island of Cobras is about twenty yards from the land; it is covered by a fortress, and is a depot of naval stores. Over its western end may be seen, crowning a high hill, the convent of San Bento, a Benedictine establishment of considerable wealth, begun in 1596; and near its eastern extremity is a celebrated rock, called *ilha dos ratos*, rat island. Navigators, who visit this port, select this spot to make observations to determine the rate of their chronometers, although the longitude of the rock itself has not been certainly ascertained. But over the Ponta Calabouça, rising above the convent-pile of St. Sebastian, may be seen the newly finished dome of the first Astronomical Observatory, established in Brazil, which is built on the walls of the temple begun by the ancient jesuits on the Morro do Castello; it is under direction of some of the professors of the Military school, and subject to the War department of the imperial government.† The church of St. Sebastian was founded in 1567, in commemoration of a decisive victory gained by Salvador Correa de Sa over the French under Villigaignon, and the aboriginal tribe of Tamoyos, their allies, on the 20th of January of that year, which is the day marked by religious observances in honor of St. Sebastian, after whom the city of Rio de Janeiro was

first named by the Portuguese founders. The Astronomical instruments will soon be mounted, and the longitude of Rat Island will be accurately determined. Already the meridian of Rio de Janeiro is made the longitudinal zero for measuring the extent of the empire by Brazilians. (See Appendix—Description of Brazil.) The island of Cobras then is a remarkable point; it separates the anchorage of merchant ships, which is to the north, from that occupied by ships of war. To the north we see Ilha do Governador—Governor's island—which is eight or nine miles in length, constituting a part of the rich domain of the Benedictine order in Brazil, with numerous islets, and a broad sheet of water lost in the distance: to the east we have a series of coves and headlands, and a thriving village now called the city of Nictheroy, stretched along a beach named Praia Grande. Near to it is the village of San Domingo, where foreigners sought for Madame Constant to purchase "Dolces"—sweetmeats, among which limes may be set down as the most popular.

On these various and numerous points are dwellings, or forts, or churches, or convents, nestled in shrubbery, or shaded by palms and bananas; and as far as eye can see, it may detect white country houses perched, in the valleys, on prominent knolls, and in contrast with the green and naturally picturesque scenery around on every hand.

" 'tis a wondrous sight to see,
What heaven hath done for this delicious land."

A little more than three centuries since, all these hills and valleys and mountains were the free heritage of the children of the soil. They wandered over the land and thought it theirs, and where they had their homes they resisted the aggression of their neighbors, and acknowledged no masters. The people who inhabited the country around this bay constituted a warlike tribe, called Tupinambas. They wore ornaments suspended through artificial holes in their lips and cheeks, as our ladies now ornament their ears, (but more delicately to be sure,) their bodies were tattooed or painted, not the faces, and a crown of feathers and collar of conch shells, constituted the high costume on great occasions. Still, they were not always fierce; sometimes they were hospitable to strangers, and they seemed to have loved their wives and children. They were close observers of nature; like the North American Indians, they bestowed significant names on places. The bay of Rio de Janeiro the learned Tupinambas called Ganabara, or Nictheroy, which being translated, is "the concealed waters." These, with the lands, were given to the throne of Portugal by a gen-

* Dennis. Abreu, Compendio da Historia da Brazil.

† Annuario politico.

ernus Pope of Rome; his generosity like that of frequent modern instances in a small way, cost him nothing, for he could not take the country himself, and therefore he gave it in fee simple to those who thought they could possess it in defiance of natural ownership by the aborigines. The Tupi and Ambas, as well as almost all the littoral inhabitants of Brazil at the time of the discovery, have been sacrificed, *nominally*, to please our Lord and Saviour Jesus Christ, but in fact to the cupidity, lust and cruelty of European adventurers, who were ever ready to make religion the cloak and excuse for murder and robbery. Have the hearts of men changed much since those days of exemplary piety, or has intelligence become too generally diffused to permit officers of religion to domineer over the consciences and rights of men. Would a pope in this century dare to give away a newly discovered country to any throne; even Wilkes's new continent is safe from papal generosity. But it is well that the old names, Ganabara and Niebtherny, have been changed; for these are no longer "concealed waters;" the shores are no longer solitary and silent; a dreary solitude amidst such scenery would almost inspire fear; but that has disappeared and vanished with the aborigines: not one of those who once wandered on these shores by moonlight, or sped lightly over the "concealed waters" in his canoe, breathing love to his Fayaway, or seeking to surprise his foe, is left. A lapse of three hundred years, and what a change!

The waters of the harbor are cut by hundreds of keels; merchant ships from almost all countries, followed up by their respective men-of-war, as pilot-fishes, being most harmless, are said to precede sharks; boats moving under tall latine sails, or rowed by half-naked negroes, are scattered in various directions, and small black steamers are puffing and splashing between the cities of Rio de Janeiro and Praia Grande.—city of Niebtherny—and Botosogo, neighboring centres of population. Place two hundred thousand actors on this stage, amidst the scenery I have indicated, and imagination will create beauties and positions to delight even fastidious lovers of both the simple and the dramatic in nature.

There is a history or a tradition connected with almost every point I have named. Let us run back a few centuries. Like most of the Anglo-Saxon race living in this year, 1848, I fear you entertain, if not a contemptuous, certainly not a very respectful opinion of the Portuguese, or of any of the blood. Portugal has ceased to be a prominent nation; she has ceased to act, and is in fact nationally dead, and the existing generations—young America, if not young England—pass by every thing that is of Portu-

guese origin, except Port wine, and even that, it is supposed of late years, is improved by baptism in London. If we cannot respect the Portuguese for what they are, possibly we may respect them for what they have done in times past; they once constituted a highly respectable nation; but from too much pride, ambition, or glory in her people; or perhaps from being too easily successful in her enterprises, Portugal has fallen into national senility and weakness. Her commerce, her manufactures, her agriculture, attract little attention; her science and her literature are now so unimportant to the rest of the world, it has become a very general opinion, that there is nothing in the Portuguese language to compensate for the toil of its acquisition.* One no more thinks a knowledge of Portuguese, or Dutch, is necessary to a polite education than the Quéchuá of Peru, or the Hawaiian tongue of the Sandwich islands. Both Holland and Portugal are unfortunate in their languages, which strangers find to be harsh and disagreeable; but to their credit it can be said, Brazilians and Portuguese, and Hollanders too, when educated, are taught to converse fluently in French—which is more than can be said of our diplomatic agents at all foreign courts. Elpino complains, in one of his odes of the fashion in Lisbon to study French to the neglect of the Portuguese, by the *pettits maitres* of his time—

"Não fallão

Já nossos moços Portuguez, só parlão
Ou Linguas estrangeiras, que mal sabem,
Ou hum Dialecto informe, nunca ouvido,
De Portuguez e de Francez meado."—p. 78, tom. 1.

Indeed, it has been my duty more than once to explain to otherwise well educated Anglo-Saxons, that Dutchmen and Germans speak distinct languages; that a Hollander cannot understand a German or be understood by him. Do not suppose that these remarks are prompted altogether by circumstances or events connected with my present associations.

Monuments of Portuguese glory stand prominently on almost every chart or map of any portion of the southern hemisphere, in the Portuguese names borne by islands, capes, coasts, towns or cities; but neither these names, nor those of the Albuquerque, of Vasco de Gama, who led the way round the Cape of Good Hope; of Magellan, whose starry clouds attract the gaze of the southern voyager, whose vessel was the first to cir-

* Vide, Poesias de Elpino Duriense—tomo 1, p. 68—71. Lisboa, 1812.

Da Grega e da Latina.

cumnavigate the earth; nor "*Oe Lusitadas*," the epic of Camoens; nor the poesias of Antonio Ferreira have been enough to secure respectful consideration for the Portuguese by Anglo-Saxons of the present day. Whether in Europe, Africa, India, China, or Brazil, members of the mass of the Anglo-Saxon race, when visiting Portuguese settlements, speak of the inhabitants among themselves under the name of *Daygoes*, "*Diegos*" that is,—Jimmies, somewhat contemptuously used, as the epithet "*Yankee*," or "*Jonathan*," was once freely applied to all Americans by the English:—the term *Yankee* is not now very frequently employed in that sense. I am sometimes reminded of the grave opinion of an American sailor, that every man who does not speak English, might be safely hung as a pirate. "Sir," said Jack, who had seized a poor Spanish countryman on suspicion, when piracies were frequent near the island of Cuba—"Sir," said he, respectfully touching his hat to his commanding officer, "he can't speak English: what better evidence do you want that he's a bloody pirate?"

Thou art with Me in my Nightly Dreams.

Thou'rt with me in my nightly dreams—
The dear, long reveries of the day,
Their shadowy shapes and dewy light,
Have passed from brain and heart away;
They're gone—as birds of summer wing
A hurried flight at winter's chill,
To find in distant, genial climes
Perfume and warmth and music still.

Yet gentler, fay-like visions float
To dreamy music, round my couch—
And the darkly-buried Past upsprings
Living and glowing at their touch.
High, silvery clouds their censers raise;
All sweets the Past once held for me,
(Sweets that have changed to wormwood since,)
They bring me love and hope and thee!

Thee! not as at our parting seen—
In friendly guise, that mocked the while,
And mien so free—thou could'st not dream
Of the heart that broke beneath thy smile!
But with deep eyes, all lit with love—
Such tremulous, mysterious gleam,
As shimmers through the lucent wave
Of an Indian, diamond-bedded stream.

I know but Love, as round my hand,
I feel thy warm, soft fingers twine:
Love quivers in the full rich lip
That passionately lights on mine.
Some half formed words of tenderness
Are breathed—not spoken in my ear;
My heart lies moveless, lest its throb
Should drown one note of sounds so dear.

Why should'st thou come? on this cold heart
Why fall spring showers of Memory's rain,
The young blooms smiling from the earth
The frost will soon cut down again—
The frost that thou didst leave—though night
Show here and there a verdant spot,
The day will find but blackened wastes—
Ruins to tell where *thou art not*!

MAY.

SKETCHES.

I.

THE EVIL EYE.

Chrysostom, in his 12th homily on the 1st Epistle to the Corinthians, delivered somewhere about the year 380 of the Christian era, mentions several superstitious practices as prevalent at that time among the Christians of Antioch, no less than among their heathen neighbours. One of these was the practice of anointing the forehead of a new-born infant with mud or sediment taken from the bath, for the purpose of averting the influence of the *evil eye*.

A remedy for the effects of the evil eye, much in vogue among the Jews of Barbary at the present day, is composed (among other ingredients,) of seven burning coals taken from the oven, which are slaked in water from the bath in which the women bathe. This is stated in the 9th chapter of Borrow's *Gypsies of Spain*, a book published in 1842.

The bath referred to by Chrysostom, likewise, was in all probability that of the women; for he says it was the women,—"*nurses, or maid servants*,"—who thus anointed the child's forehead.

II.

REMARKS ON A PASSAGE IN CICERO.

In the 4th letter of the 4th book of Cicero's *Epistolæ ad Familiares*, an account is given of the proceedings in the senate touching the recall of Marcellus from banishment. Cæsar had consented to the recall, upon the general intercession of the senate. "*Itaque*," (proceeds Cicero,) "*cum omnes ante me rogati gratias Cæsari egissent, præter Volcatium. (is enim, si eo loco esset, negavit se facturum fuisse,) ego rogatus mutavi meum consilium.*" These words of Cicero are thus translated by Melmoth: "All the senators who had been asked their opinion before me, severally returned their acknowledgments to Cæsar, except Volcatus, who declared that he

would not have made them, even if he had been in the place of Marcellus himself. But when it came to my turn, I instantly changed a resolution which I had long formed." And, in a note, Melmoth adds: "Probably the person here mentioned is Lucius Volcatius Tullus, who was consul in the year 687. The noble spirit which he showed upon this occasion, in scorning to thank Cæsar for what the usurper ought to have had no power to bestow, was worthy of the best ages of the republic: and though Cicero speaks of it without the least approbation, it was the only circumstance in this business that merited his applause."

It will be observed that the only difficulty lies in the words, *is enim, si eo loco esset, negavit se facturum fuisse*; of which the literal version is, "for he declared that if he were in that place, he would not have done it." Melmoth, concurring with all the commentators, (except perhaps Ernesti,) considers the expression "in that place," as equivalent to "in the place of Marcellus." But there are several grounds for thinking that such an interpretation is wrong; that Volcatius was opposed to the recall of Marcellus; and that what he declared was, that if he were in Cæsar's place, he would not have acted as Cæsar had done, in consenting to that measure. 1st. It is highly improbable that if Volcatius was a friend of Marcellus, and had united with the other senators in supplicating Cæsar for his recall, he would have been guilty of conduct so ungrateful and insulting to Cæsar, as that which Melmoth attributes to him; to say nothing of the peril of provoking the resentment of a man whose power was absolute over the Roman empire, and over the life and fortunes of every individual within its bounds. 2ndly. The question propounded to the senators, and to Volcatius among the rest, (propounded too by Cæsar himself, as the presiding officer of the senate,) was not whether acknowledgments should be made to Cæsar for consenting to the recall of Marcellus; but whether Marcellus should or should not be recalled. For the recall was to be the act of the senate, in form at least, however it might depend in reality upon the will of Cæsar. To the question, *Shall Marcellus be recalled?* Volcatius, if opposed to the measure, would reply in the negative, and might well be supposed to add the remark, that if he had been in Cæsar's place, he would not have consented, as Cæsar had done, to have Marcellus recalled. But to the question so propounded, a remark from Volcatius, that he would not have made acknowledgments to Cæsar even if he had been in the place of Marcellus himself, would plainly have been irrelevant: since we must suppose that when asked, *Shall Marcellus be recalled?*

Volcatius, if a friend of Marcellus, would respond in the affirmative; and the declaration which Melmoth ascribes to him could only have been appended to that response in some such mode as this—"To the question, *Shall Marcellus be recalled?* I answer, yes. But I give you no thanks for permitting him to be recalled; and I would not have done so, even if I had been in the place of Marcellus himself." 3rdly. A person named Volcatius was an officer in Cæsar's army, during both the Gallic and the Civil war; see Cæsar's Commentaries, *De Bello Gallico* VI, 29. *De Bello Civili* III, 52. And during the same year in which Marcellus was recalled, a person named Volcatius held the office, or at least exercised the functions, of *prætor urbanus*, as appears from the 14th letter of the 13th book of these same epistles; and this was doubtless by the appointment of Cæsar himself, as Melmoth admits. There was, then, at least one Volcatius who was an adherent of Cæsar, and almost by necessary consequence an enemy of Marcellus: and there is nothing to show that it was a different Volcatius who voted on the question of recalling Marcellus from exile. If the person who voted was Cæsar's adherent, Melmoth's interpretation of what Cicero represents him as declaring on that occasion must be wrong.

Ernesti, in the historical index to his edition of Cicero, says, respecting the Volcatius mentioned in the letter under consideration, "*M. Marcello offensus, Cæsari non agit gratias, eo restituto.*" From this it may be inferred that Ernesti understood the passage as we have explained it.

III.

THE DELUGE OF OGYGES, AND THE COMET OF 1680.

Censorinus, in the 21st chapter of his treatise *De Die Natali*, following (no doubt) the chronology of Varro, places the deluge of Ogyges, which Varro calls the *first* deluge, 1600 years before the first olympiad; that is, 2,376 years before the christian era. According to the Hebrew chronology of the bible, the deluge of Noah occurred 2,349 years before the christian era. The difference between the two periods is only 27 years; a difference so inconsiderable, that Cuvier deems it scarcely possible the two computations should not refer to one and the same event under different names. See his *Revolutions of the Surface of the Globe*, (p. 108—109, of the translation published in Philadelphia in 1831.)

Another computation makes the deluge of Ogyges precede the first olympiad by only 1,020

years, and consequently places it only 1.796 years before Christ. The authorities for this computation are referred to by Cuvier in the place cited above.

An astronomical phenomenon of a most extraordinary nature, the detail of which, as given by Varro, has been preserved in Varro's own words by Saint Augustine in the 8th chapter of the 21st book of his work *De Civitate Dei*, is likewise referred to the same eventful period, the reign of Ogyges. The passage of Varro is as follows; "A wonderful prodigy took place in the sky For in that most noble star of Venus, which Plautus calls *Vesperugo*, Homer *Hesperus*, styling it *most beautiful*, Castor writes that so great a prodigy took place, that it changed its colour, magnitude, figure, course: which neither before nor afterwards so befell. Adrastus of Cyzicus, and Dion of Neapolis, illustrious astronomers, said that this happened in the reign of Ogyges." (*In cælo mirabile exstitit portentum. Nam in stella Veneris nobilissima, quam Plautus Vesperuginem, Homerus Hesperon appellat, pulcherrimam digens, Castor scribit tantum portentum exstitisse, ut mutaret colorem, magnitudinem, figuram, cursum: quod factum ita neque antea nec postea sit. Hoc factum Ogyge rege dicebant Adrastus Cyzicenus et Dion Neapolites, mathematici nobiles.*)

Gibbon's remarks upon the comet, which appeared in the fifth year of the reign of Justinian, may be suitably subjoined. In the 43rd chapter of his *Decline and Fall of the Roman Empire*, he writes thus:

"In the narrow space of history and fable, one and the same comet is already found to have revisited the earth in seven equal revolutions of five hundred and seventy-five years. The *first*, which ascends beyond the christian era one thousand seven hundred and sixty-seven years, is coeval with Ogyges, the father of Grecian antiquity. And this appearance explains the tradition which Varro has preserved, that under his reign the planet Venus changed her colour, size, figure, and course; a prodigy without example either in past or succeeding ages. The *second* visit, in the year eleven hundred and ninety-three, is darkly implied in the fable of Electra, the seventh of the Pleiads, who have been reduced to six since the time of the Trojan war. That nymph, the wife of Dardanus, was unable to support the ruin of her country: she abandoned the dances of her sister orbs, fled from the zodiac to the north pole, and obtained, from her dishevelled locks, the name of the comet. The *third* period expires in the year six hundred and eighteen, a date that exactly agrees with the tremendous comet of the Sybil, and perhaps of Pliny, which arose in the west two generations

before the reign of Cyrus. The *fourth* apparition, forty-four years before the birth of Christ, is of all others the most splendid and important. After the death of Cæsar, a long-haired star was conspicuous to Rome and to the nations, during the games which were exhibited by young Octavian, in honor of Venus and his uncle. The vulgar opinion, that it conveyed to heaven the divine soul of the dictator, was cherished and consecrated by the piety of a statesman: while his secret superstition referred the comet to the glory of his own times. The *fifth* visit has already been ascribed to the fifth year of Justinian, which coincides with the five hundred and thirty-first of the christian era. And it may deserve notice, that in this, as in the preceding instance, the comet was followed, though at a longer interval, by a remarkable paleness of the sun. The *sixth* return, in the year eleven hundred and six, is recorded by the chronicles of Europe and China; and in the first fervour of the crusades, the christians and mahometans might surmise, with equal reason, that it portended the destructions of the infidels. The *seventh* phenomenon, of one thousand six hundred and eighty, was presented to the eyes of an enlightened age. The philosophy of Bayle dispelled a prejudice which Milton's muse had so recently adorned, that the comet 'from its horrid hair shakes pestilence and war.' Its road in the heavens was observed with exquisite skill by Flamstead and Cassini; and the mathematical science of Bernoulli, Newton, and Halley, investigated the laws of its revolutions. At the *eighth* period, in the year two thousand two hundred and fifty five, their calculations may perhaps be verified by the astronomers of some future capital in the Siberian or American wilderness." And in a note he observes, that "Whiston, the honest, pious, visionary Whiston, had fancied, for the era of Noah's flood, a prior apparition of the same comet, which drowned the earth with its tail."

Whiston can scarcely be condemned as visionary in supposing that there had been another apparition of the same comet, prior to the first of those which Gibbon has mentioned above; however visionary he may have been in connecting it with the general deluge. The periodical time of 575 years, added to 1.767 before Christ, (the date of the first apparition recorded by Gibbon,) carries us back to the year 2342 before Christ; only seven years later than the year of the deluge, according to the Hebrew computation.

IV.

NERVOUS SYMPATHY.

Nicephorus Gregoras, a Greek writer who flourished about the year 1325 of the christian era, tells a singular story of the sympathetic affection of one part of the body from an injury inflicted on another. The passage occurs in his commentary on the treatise of Synesius concerning Dreams, (*Synesii Opera*, ed. Turnebus, Paris. 1553, p. 96—7,) and is as follows:

"I myself once saw a boy that had been wounded with an arrow in the nerve of the neck, to whom it thence befell that one of his feet became seized with a kind of torpor, and that the affection continued thenceforward incurable, so that while the other foot grew with his age, this one remained of the slenderness it then was, and of the length it then was, hanging idle and useless, and like some lifeless burthen. To those, therefore, who know not the causes and the reasons, it creates a difficulty, how the hand, being nearer, remained insensible of the injury, while the foot, which lay far off, shared in the suffering. But as many as with rational discernment contemplate the things in the world, may find many similar cases. For not all bodies are sensible of the same affection, nor all the parts of the body; but that body which is naturally adapted to suffer the affection, and that part of the body which is naturally adapted to sympathize in it; and at the fitting time, and in the fitting manner. As, of fragrance diffused through the air, neither wood is sensible, nor stone, nor even indeed the ear, nor the hand, nor the foot, but only the sense of smell; and as of melody the ear alone, and of colours the eye alone."

—

V.

REMARKS ON A PASSAGE IN CÆSAR.

When Cæsar, in his reply to the proposals of Afranius and Petreius for the surrender of their army, (*De Bello Civili*, I. 85,) says, "in se ætatis excusationem nihil valere, quod superioribus bellis probati ad obtinendos exercitus evocentur," he has been commonly supposed to be complaining that veteran soldiery had been recalled into service against him. More, whose edition of Cæsar was published in 1780, gives the following explanation of the passage: "Non licebat veterano militi, per ætatem militiae vacationem habere: sed evocabantur, modo Cæsari ea re damnum daretur. Vide c. 3. 'multi undique . . . evocantur.' Ergo ad obtinendos exercitus est, ideo ut Pompeius habere possit exercitus inte-

gros, neque careat iis, unde possint exercitus confici." And this explanation given by More is repeated by Oberlin and other subsequent editors. Duncan's English translation is unequivocally to the same effect; and the French translation in Nisard's collection of the Latin classics seems to proceed upon the same understanding of Cæsar's words. It is as follows: "c'est contre lui qu'au mépris des privilèges de l'âge, on rappelle au service des vétérans qui ont fait toutes les guerres précédentes." In my opinion, however, Cæsar refers to the veteran *generals* that had been recalled into service against him, not to the veteran soldiers. The proper and indeed the technical sense of the phrase *ad obtinendos exercitus* is, "to take the command of armies;" and More's interpretation cannot be adopted without doing violence to the words. Besides, it appears from Sallust, (*De Bello Catilinario*, cap. 59,) that Petreius, who commanded the army of the republic in the battle in which Catiline was defeated and slain, had at that time been more than thirty years engaged in military service. Cæsar, therefore, at a period fourteen years subsequent to the defeat of Catiline, might well say that veteran generals, without regard to their privilege of exemption by reason of age from further duty in war, had been recalled into service against him.

—

VI.

ST. JEROME'S DREAM.

The general subject of St. Jerome's letter to Eustochium, (*Opera*, ex *Erasmi editione*, 1537, vol. I, p. 134,) is the proper education and deportment of a christian virgin. In this letter he discourages the study of the heathen literature, and enforces his advice in that particular by the narration of what he himself, in the earlier part of his life, had suffered in a dream or vision on account of his addiction to that study. The passage is as follows:

—"For what communion is there of light with darkness? what agreement of Christ with Belial? What has Horace to do with the psalter? Maro with the gospels? Cicero with the apostles? Is not a brother scandalized if he see you recumbent in a place of idols? And although to the pure all things are pure, and nothing to be rejected which is received with thanksgiving, yet we ought not to drink at the same time the cup of Christ and the cup of devils. I will relate to you the history of my own misfortune. When, very many years ago, I had cut myself off, for the sake of the kingdom of heaven, from home, parents, sister, relations, and,

what is more difficult than all, from the use of dainty food, and was going a soldier of Christ to Jerusalem, I could not deprive myself of the library which, with the greatest zeal and labor, I had collected for myself at Rome. Accordingly, wretch that I was, I fasted, purposing presently afterwards to read Tully. After frequent vigils of the night; after tears which the recollection of past sins forced out of my inmost vitals, Plautus was taken into my hands. If at any time, coming back to myself, I began to read the prophets, the rude style was abhorrent to me; and because with my blind eyes I saw not the light, I thought it the fault not of my eyes, but of the sun. While the old serpent was so beguiling me, about the middle of lent a fever, pouring into my marrow, seized upon my exhausted body, and without any intermission, (a thing that may itself be incredible to tell,) so fed upon my unfortunate members, that I scarcely held my bones together. Meanwhile preparations are made for my funeral; and the vital flame of the soul, the whole body now becoming cold, was just fluttering in the breast, which alone retained a slight degree of warmth, when, suddenly carried away in spirit, I am dragged to the tribunal of the judge, where such was the light, and such the dazzling glare from the brightness of those who stood around, that, cast forward upon the ground, I did not dare to look up. Being interrogated about my quality, I answered that I was a christian. Thereupon he who presided says, 'Thou liest; thou art a disciple of Cicero, not of Christ. For where thy treasure is, there is your heart also.' I was immediately struck dumb, and amid the stripes, (for he had ordered me to be beaten,) I was yet more tormented by the fire of conscience, reflecting with myself upon that verse. But in hell who shall confess to thee? I began nevertheless to cry out, and wailing to say, 'Have mercy upon me, O Lord, have mercy upon me!' This voice resounded amid the scourging. At length those who stood by, prostrating themselves at the feet of the president, besought that he would grant pardon to my youth, and accord to my error a place of repentance; exacting punishment thereafter, if I should at any time read books of heathen literature. I, who, straitened in a peril so great, would have been willing to promise even more important things, began to swear solemnly, and, calling his name to witness, to say, 'Lord, if I ever have secular books in my possession, if I ever read them, then have I denied thee.' Dismissed upon my oath in these words, I return to the upper world, and, to the wonder of all, open my eyes, which were bathed in such a flood of tears, that by my distress I caused belief even in the incredulous. Nor, indeed, was

that any sleep, or vain dream, with which we are often deluded. Witness that tribunal before which I lay; witness that stern judgment which I feared, (so may it never happen to me to fall into the like trial,) that I had my shoulders livid with bruises, that I felt the pain of the blows after my sleep, and that I thenceforth read divine compositions with such zeal as I had never shown in reading human."

Subsequently, in his controversy with Rufinus, Jerome appears to have been much pestered about this vision by his adversary, who charged him with the commission of perjury and sacrilege in violating his promise to abstain from the study of the Gentile literature. To this charge he makes the following reply, (vol. II, p. 208—209.)

"He objects to me perjury mixed with sacrilege, because, in the book wherein I speak to one that was to be trained up as a virgin of Christ, I made, while sleeping, a promise before the tribunal of the judge, that I would never give application to secular literature, and have nevertheless sometimes remembered that condemned learning."—"I said that I would not read secular literature thenceforth: it is a promise for the future, not an abolition of past memory. And how, you will say, do you retain what you have not re-perused for so long a time? If again I shall reply anything out of ancient books, and say, 'Of such importance is habit in tender age,' [*Adeo in teneris consuescere multum est*—Virgil. Georgic. II. 272;] while I controvert, I incur the crime, and in bringing forward testimony for myself, I am convicted by the very means whereby I am defended. I must now, forsooth, by a long discourse, make out that which the consciousness of every one proves. Who of us does not remember his infancy? I, at least, (that I may move laughter in you, a man most austere, and that you may at last imitate Crassus, whom Lucilius asserts to have laughed once during his life,)—I, at least, remember that once, when a boy, I ran about through the servants' rooms, passed the day in sports, as a holiday, and was dragged away captive from my grandmother's bosom to the angry Orbilius.* And that you may be still more astounded, I now, with a head white and partly bald, often appear to myself in sleep a curly haired boy, and, having put on my gown, to be declaiming some trifling disputation before the master of rhetoric: and when I have awakened, I congratulate myself on being delivered from the perils of speaking. Believe me,

*The name which Jerome here gives to his own schoolmaster belongs properly to the schoolmaster of Horace, who describes him as *the hard-flogging*, (*plagosum*): "as indeed," says Erasmus in his note, "almost all of them are."

infancy remembers many things to the life. If you had learned letters, the cask of your little wit would have the odor of that with which it had once been imbued. The purple dye of wool no waters wash away. Even asses and brute animals, on a route however long, know the stopping-places the second time. Do you wonder if I have not forgotten the Latin literature, when you learned the Greek without a master?"—"These things would I say, if I had promised anything while awake. But now, (a novel kind of impudence,) he objects to me my dream. Would that the celebrity of this place, and the assembly of saints from the whole world, might permit me to read even the divine scriptures! so far am I from having leisure to meditate upon extraneous things. However, since he makes a dream the ground of crimination, let him hear the declarations of the prophets, that dreams are not to be believed: because neither does a dream's adultery lead me to hell, nor its crown of martyrdom lift me to heaven. How often have I seen myself dead, and laid in the sepulchre! how often flying above the earth, and passing mountains and seas by swimming in the air! Let him then constrain me to be no longer alive, or to have wings by my sides, because my mind has been often deluded by those vain images. How many, that during sleep are rich, on opening their eyes are suddenly beggars! The thirsty drink of rivers, and, on waking up, are burning with parched throats."

Erasmus observes, that in this defence, which treats the vision as a mere dream, Jerome appears to contradict what he had said on the subject in his letter to Eustochium.

The remarkable part of St. Jerome's story is the statement that, on awaking, his shoulders exhibited the livid marks of the flagellation he had undergone. But in that particular the dream of the saint has had parallels by no means rare in more recent times. The following cases are selected from an article on *Nightmare*, first published in the Dublin University Magazine, and reprinted in Littell's Living Age for the first quarter of the year 1845.

"Lillbopp, a writer every way worthy of credit, says: 'A certain person saw a spectre lay hold of him, and, after the same was vanished, he yet felt, in the part so laid hold of, a pain which lasted many days. In other such cases also have swellings and other marks of lesion been observed.'

"The nun Emerich, from her youth up very sickly and devout, had already before entering the cloister a vision of one who, in the form of a shining youth, offered for her choice a wreath of flowers in the left hand, and a crown of thorns

in the right. She grasped at the latter, pressed it with fervour on her head, but on coming to herself, felt, round the whole head, a violent pain, which was accompanied with bleeding." (This is one of several cases which the writer of the article says had recently attracted much attention in the Tyrol.)

"The reader doubtless knows the story of the lady whose lover came to her bedside at midnight, and made known to her that he had in that hour been waylaid and murdered by a rival. The lady desired some sign which should certify her next morning that what she had seen in the night was no dream; whereupon the apparition laid its fingers upon her wrist. She felt as if branded in the place with a hot iron. The next morning the marks of the fingers appeared as if burnt into her flesh; and this mark she bore to the day of her death, so that she was obliged to wear a black velvet arm band, to hide the ghastly token from curious eyes."

If it be supposed that St. Jerome has given a faithful detail of the occurrences represented in his vision, and that, immediately afterwards, his shoulders did actually exhibit livid marks, such as a severe flagellation might have left upon them, different modes of explanation will probably be adopted by different persons. Some may believe that the vision was miraculous, and that its transactions, the flagellation included, were real, though supernatural. Others may conclude that the natural power of the imagination, when highly stimulated, is sufficient to produce visible marks and lesions upon the body, and that, under the excitement of fever, it actually did produce such an effect in the case of St. Jerome. To this class of persons there will perhaps be nothing incredible in the following story, related in the same article from which some quotations have already been made.

"On the entry of the French into Moscow, and during the desperate attempt made by some lingering inhabitants of the 'sacred city' to defend the Kremlin, a French soldier, being hard pressed by a Cossack, was, after a running fight of the length of a street or so, driven into a certain blind alley, or court without thoroughfare, and here stood at bay. A citizen, who had turned into this same alley to avoid meeting the combatants, and now could not get out, fell at the sight of the conflict into an ecstasy of fear, and stood there charmed, beholding all as it were in a dreadful waking dream, or state of nightmare. When the Frenchman in his turn had driven the Cossack out of the alley, and the citizen, somewhat recovered from his panic, had got to his own house, there were found on his arms and other parts of his body bleeding gashes, such as he had seen given and received, so that he stood

in need of surgical help, and kept his bed some days."

It is not necessary, however, to adopt either of the explanations above suggested of St. Jerome's dream. If a lesion or discoloration of the surface of the body, occurring or developed during sleep, be in itself such as physical causes might produce, it need not be referred to a supernatural origin, merely because the dreaming fancy of the sleeper has represented some supernatural agency as producing it. For it is a frequent and well known, though not the less a very remarkable phenomenon of dreaming, that an impression upon the senses of a sleeper, not sufficiently vivid or powerful to awaken him, may give rise to a dream representing a long and connected series of occurrences, among which some imaginary cause of that sensible impression itself may be so introduced as to occupy a seemingly appropriate and necessary place in the series. Now the livid and bruised appearance of St. Jerome's shoulders might in reality be no more than a physical effect of his illness; for, if it be not very common, it is at least not impossible, that the shoulders of a person emaciated by violent and long continued fever should, from the pressure and friction of the couch against the inflamed surface, become chafed and discoloured. And the sensation of pain thence resulting, mingled, in St. Jerome's case, with the stings of conscience for his excessive devotion to the study of the Pagan literature, might probably enough, during his fevered and uneasy slumber, give rise to such a dream as he has recorded; while the discoloration and bruised state of his shoulders, perhaps discovered or noticed for the first time on his awakening, would appear to stamp the occurrences of his dream with the most imposing character of reality.

VII.

MARCUS CORNELIUS FRONTO.

"Up to a recent period no work of Fronto was known to be in existence, with the exception of a corrupt and worthless tract, entitled *De Differentiis Vocabulorum*, and a very few short fragments scattered over the pages of Aulus Gellius and other Latin grammarians. But about the year 1814, Angelo Mai found that the sheets of a palimpsest in the Ambrosian library, which had formerly belonged to the famous monastery of St. Columba at Bobbio, containing a translation of a portion of the acts of the first council of Chalcedon, had been made up from ancient MSS. of Symmachus, of Pliny the younger, and especially of Fronto; and that the original writing was still partially legible. In this manner a considerable number of letters which had passed

between the orator, Antoninus Pius, M. Aurelius, L. Verus, and various friends, together with some short essays, were recovered and published at Milan in 1815, in a disordered and mutilated condition indeed, as was to be expected under the circumstances of the case, but still sufficiently perfect to convey a very clear idea of the nature and value of the pieces when entire. But the discovery did not end here, for upon the removal of Mai to Rome, he detected in the Vatican another portion of the acts of the same council of Chalcedon, also a palimpsest, breaking off very nearly at the point where the codex mentioned above commenced, evidently written at the same period by the same hand, and proved to have been once the property of the same monastery, thus unquestionably forming the first part or volume of that very MS. of which the Ambrosian library possessed the second, and in part consisting of leaves of parchment which had, in the first instance, exhibited the epistles of Fronto. From this source upwards of a hundred new letters were obtained, and these too in better order than the first. An improved edition, containing these important additions and alterations, appeared at Rome in 1823.

"The announcement that a lost treasure, such as the works of Fronto were supposed to be, had been regained, excited intense interest among scholars; but their anticipations were miserably disappointed. The compositions in question are so inconceivably tame and vapid in style, and relate to matters so trivial, (we may almost say childish,) that it would be impossible to point out any production of classical antiquity, of equal extent, from which so little that is agreeable or instructive can be gleaned. We find a series of short communications, pleasing indeed, in so far as they show the kindly connection which subsisted throughout life between an amiable preceptor and his imperial pupils, but relating almost exclusively to the most ordinary domestic occurrences, totally destitute of attraction either in form or substance." "The precise date of Fronto's death is not recorded, but the latest of his epistles belongs to the year A. D. 166." (Smith's Dictionary of Greek and Roman Biography and Mythology, vol. II. p. 184.)

We think that the character above assigned to these compositions is perfectly just. Perhaps the least uninteresting of the whole series is Fronto's reply to a short letter of condolence from Marcus Aurelius upon the death of his grandson. Of this, so far as it has been preserved, we give a translation, from the edition of Armand Cassin, published at Paris in 1830, (vol. II. p. 160.)

"Fronto to Antoninus Augustus.

"Fortune has tried me throughout my whole

life with many sorrows of this kind. For, to omit others of my griefs, I lost five children under the most unfortunate circumstances of time: for I lost the whole five in such a manner that each was always my only child; suffering such a succession of total bereavements, that a son was never born to me except when totally bereaved. Thus I always lost my children without any solace remaining, and with grief yet recent begot them. But I supported with greater fortitude those sorrows by which I myself was alone afflicted. For my mind, bracing itself against grief; opposed as if in single combat, one to one, equal to equal, resisted with success. But now sorrow is multiplied upon sorrow, and I cannot bear the accumulation of my distresses. I waste. I melt away with the tears of my Victorinus. Often also do I expostulate with the immortal gods, and address the fates in angry complaint. That Victorinus, a man of the greatest piety, gentleness, truth, innocence, in short most eminent in all the best accomplishments, should be afflicted with the most distressing death of a son,—was this in any manner equitable or just? If things are governed by Providence, was this provided rightly? If all human affairs are decreed by fate, should this have been decreed by fate? Shall there be then no difference of fortunes between good men and bad? Is there no distinction with the gods, none with the fates, from what sort of man a son may be taken away? Some guilty and accursed mortal, who might better have remained unborn himself, brings up children in safety, and at his death leaves them surviving: Victorinus, a man of holy character, of whose sort it were best for the public that as many as possible should be produced, is deprived of his dearest son. In the name of evil, what sort of Providence is it which provides so unjustly? They say that the fates are so called from *pronouncing*: is this to pronounce rightly? But the poets assign distaffs and threads to the fates: certainly no woolspinner could ever be so perverse and ignorant, as to spin a hard or knotty woof for the gown of the master, but a fine and light one for that of the slave. That good men should be visited with grief, and the bad enjoy prosperity in their domestic affairs, I deem to be neither in measure nor in weight the task of the spinning fates. Unless perchance another sort of error makes sport of us, and we, in our ignorance of things, covet, as if they were good, those which are evil, and on the other hand, instead of the evil, hate those which are good; while death, which to all appears grievous, really brings cessation of labors and anxieties and calamities, and transfers us, liberated from the wretched bonds of the body, to regions tranquil and pleasant and filled

with all things good, and to the assemblies of souls. This I would more readily believe to be true, than that all human things are governed either by none at all, or by an unjust Providence. But if death is for men a just subject of congratulation, rather than of lamentation; in proportion as each one has attained it earlier in life, is he to be esteemed happier and more acceptable to the gods; being sooner freed from the evils of the body, sooner called forth to enter upon the honors of the free soul. Yet this, though it be true, is of little concern to us, who pine for those we have lost: nor does the immortality of souls at all console us, who, while we live, are deprived of those who are dearest to us. We seek that bearing, voice, form, free breath: we mourn the miserable appearance of the dead, the close-shut mouth, the upturned eyes, the color completely destroyed. If it be ever so certain that souls are immortal, this will be to philosophers a theme for dissertation, not to parents a cure for regret. But however those matters are ordered by the divine power, they will at least bring by no means a long anxiety to me, to whom death is so near at hand. From this time forth, even my sweetest grandson, whom I myself am rearing in my bosom, even he it is that more and more lacerates and tortures my feelings. For in his face I contemplate him who is lost: I imagine the copy of his countenance; I represent to my mind the same sound of voice. This picture my grief fancies to itself. But not knowing the countenance of the dead, while I conjecture its probable resemblance, I undergo torture. My daughter will be wise: she will acquiesce in the soothings of her husband, the best of all the men that are: he will console her, by weeping together with her, together sighing, together speaking, together keeping silence. I, her old father, should unworthily console her; for worthier would it have been that I myself had died before. Nor could any strains of poets, or precepts of the wise, accomplish so much towards calming the grief and soothing the distress of my daughter, as the voice of her husband, proceeding from that most dear and most united breast. Me, however, my age consoles, now almost finished, and near to death. And when that shall arrive, whether that time be in the night or the day, I shall salute the heavens in departing, and solemnly declare what in my conscience I know: That in the long space of my life, there has been nothing committed by me, which could bring disgrace, or reproach, or criminality: that in the course of my existence, there has been on my part no act of avarice, none of perfidy; and that there have been performed, on the contrary, many liberal acts, many friendly, many of faithfulness, many

of firmness, oftentimes even with peril of my life. I have lived in the utmost harmony with my excellent brother, in whose attainment of the highest honours, through your father's goodness, I rejoice, and whom I see enjoying, through your friendship, perfect quiet and security. The honours which I myself attained, I never sought by unworthy means. I have applied myself to the care of my mind, rather than of my body. I have preferred the pursuits of learning to the advancement of my private fortune. I have rather chosen to be poor, than to be assisted with the means of any person; in short, to want, rather than to ask. I have never been prodigal in expense, though that is sometimes a necessary means of gain. Truth I have constantly spoken, truth I have willingly heard. I have deemed it better to be neglected, than to flatter; to be silent, than to feign; to be a seldom-visiting friend, than an often-visiting sycophant. I have sought few things, not deserved few. What I could, I have afforded to every one according to my means. To the deserving, I have rendered assistance promptly; to the undeserving, boldly. Nor has any one, by proving ungrateful, rendered me less disposed to impart with readiness whatever benefits I could. Nor have I ever been offended with the ungrateful.

"I was long and grievously sick, my dearest Marcus. Then I was afflicted with the most deplorable calamities: I lost my wife; I lost my grandson most miserably in Germany; I lost our Decimanus. If I were of iron, I could not write more at such a time. I have sent you a book that you may regard as in lieu of all."

The French editor well observes upon that part of the foregoing letter which speaks of the fates as spinners, that Fronto's bad taste there triumphs over his distress. But undoubtedly the most striking trait which the letter develops is that spirit of proud confidence, almost of defiance, with which, in the prospect of death, the writer reposes upon the recollection of his own merits and virtue. To such a man the doctrines of the christian religion, humiliating as they are to the pride of the human heart, must necessarily have been supremely unacceptable. Accordingly it is not surprising that the catalogue of the early opponents of christianity should present the name of a Fronto, and that Cornelius Fronto the rhetorician, the preceptor of Marcus Aurelius and Lucius Verus, should be indicated by highly probable circumstances as the man. Minucius Felix, whose apology for christianity was written in the early part of the third century, cites, from the treatise of Fronto against the christians, a passage containing the charge and pretended detail of one of those practices of revolting depravity, by which, according to

the stories at that time current among the vulgar multitude of the pagans, christianity was rendered an abomination in the sight of earth and heaven. What else the work contained we know not, for it has perished. We may safely conclude, however, that a controversial work of an author sufficiently prejudiced or unscrupulous to adopt and reiterate a vulgar calumny, so malignant and improbable as that to which we have referred, could not have possessed any qualities that should render its destruction a subject of just regret.

DESULTORIA.

BY THOMAS WILLIS LANE.

WOMEN'S VOWS.

Like sweet dreams on cheerless pillow
Which shall never come to pass,
Like a bubble on a billow,
Or a legend upon glass—
Like fair tracery in snow
Which the first sun melts away,
Or the lights that come and go
With the dancing water's play—
Like a sparkle on the brim
Of a cup of perfect love,
Or short snatches of a hymn
Faintly borne us from above;
Like a name writ in the sand
To vanish with the tide,
The short grasp of friendship's hand,
Or the first blush of a bride—
Like a leaf upon a wave,
Or a cloud in summer's sky;
Like a violet on a grave,
Soon to fall, and fade, and die—
Like to everything that's false,
Or like anything that's fair,
As—the pleasure of a waltz,
Or—a castle in the air,
Are the vows that women take,
Are the promises they make,
Made alas! but to be broken,
Broken oft, as soon as spoken!

DEFIANCE !

Though the star of my fate is declining,
Though hope and though love now are set,
Yet this heart shall ne'er know repining,
Its fate shall in silence be met.

Sink down fickle orbs to your waning,
Wrap the sky, oh! ye clouds! in your pall,
Nor murmur, nor sigh, nor complaining,
Shall tell that I watched for your fall.

Though faded is every sweet vision,
And false every golden young dream,
Yet, yet, while I smile in derision,
My brow with contentment shall beam.

Sorrow's turbulent flood may surround me,
And my bark wildly flee from its harm,
But the waves that roar hoarsely around me
Shall bear back no cry of alarm.

And they who have recklessly driven
The iron that pierceth my soul,
Shall know not that iron hath riven
My world, from its centre to pole.

Yet never again shall reliance
Be put in fate, fortune, or friend,
But the might of a reckless defiance
Shall break what it ne'er sought to bend.

Fierce hunter! and hounds! I defy ye—
Come ye swiftest, ye longest of breath,
On the wings of the wind I'll sweep by ye,
Ye ne'er shall be "in at the death!"

CUPID VS. MINERVA.

TO M——.

While poring o'er the musty page
Of some old Greek or Latin sage,
Thy image flits athwart my brain,
And though I frown, with smiling train
The fairy comes to charm again.

When Ovid treats of some fair girl
With dark brown hair, and teeth of pearl,
I can't help picturing to myself
A lightsome, laughing, witching elf,
That's marvellously like—*thyself*.

The wonders of Astronomy
Possess no glorious charms for me;
Pray, what care I for stars or skies,
When fancy paints a pair of eyes
In whose clear depths more brightness lies.

Botanic studies all in vain
Would wreath me in their flowery chain,
The fairest rose that drinks the dew,
Can ne'er compare with those dear two
That in thy blooming cheeks we view.

I've sought to reach the chemist's skill,
To "analyze," "resolve," "distil,"
But all the art I yet have found,
Serves but to make, (when they are bound,)
Of two plain "simples" one "compound."

Then tell me not of learned lore—
Be thou my book—o'er thee I'll pore;
Thine eyes for lamps shall brightly burn,
While I th' unsullied leaves will turn,
And daily some sweet lesson learn.

Savannah, Ga.

Essay on the Slow Progress of Mankind.

More than forty centuries have elapsed since the children of Noah began to re-people the earth, and yet the earth is not filled with inhabitants. More than 2,500 years ago, populous and wealthy empires had already flourished in China, India, Western Asia and Egypt. By that time, arts and sciences had made considerable progress, cities of unparalleled magnificence had been built, and other stupendous works of human labor constructed, which have been wonders of the world through all succeeding ages. Since that ancient period of civilization, the progress of mankind has been exceedingly slow. We may reasonably doubt whether the population of the earth has doubled itself in thirty centuries. The useful arts have advanced as slowly as the numbers of mankind. In China, that immense hive of human beings, the mind has been at a dead stand-still during a thousand years and more. At a certain stage of its progress, it was boxed up and moulded in a shape, and with dimensions, from which it has never varied since. In Hindostan there has been a retrogression; the ancient books of that country exhibit evidence of scientific attainments far above those of the modern Hindoos. In the other once flourishing seats of oriental civilization, we see but the ruins of ancient greatness. Broken columns and heaps of rubbish, mark the spots where once stood the splendid capitals of nations; the wild Arab pastures his flock on lands that once teemed with the fruits of agriculture; and silence reigns over wide spaces, which once resounded with the hum of busy multitudes.

Westward the star of empire takes its way;

yet westward of Babylonia, of Palestine, of Syria, of Asia Minor, of Egypt and of Greece,—all in ruins,—we find north western Africa sunk under Mahometan rule; and papal Rome in papal Italy, once the populous centre of the Roman empire,—oh, how fallen!—and Spain, paralyzed by the same deadly influence, less populous and wealthy than she was in former ages. Northwestern Europe and the Russian empire have made some progress. Middle and southern Africa is no less barbarous than formerly. America has advanced under European colonization; but if we except our United States, we may doubt whether the continent is now as populous as it was when those ruined cities flourished, whose monuments are found overgrown with forests. There are signs too in the great valley of the Mississippi, that a numerous pop-

ulation once dwelt where the wild Indians afterwards had their hunting grounds.

The nations that now take the lead in human affairs emerged from barbarism but a few centuries ago, and it is only since the Reformation of religion in the 16th century, that the arts and sciences have flourished amongst them, and a new impulse has been given to the human mind, an impulse on which the world seems now to depend for the spread of civilization and the general improvement of the human race.

The present number of mankind cannot be estimated with any degree of exactness. Learned geographers differ in their estimates by two or three hundred millions. With the exception of some European and American States, no certain data exist among the nations and tribes of mankind, upon which even a conjecture approximately true can be founded. The general tendency has been to over-estimate the population of countries imperfectly known. Avoiding extremes, I shall assume that in round numbers, Asia (including Japan) contains 400,000,000, Europe 200,000,000, Africa 60,000,000, America 50,000,000, the Asiatic, Australian and Polynesian islands 10,000,000;—making a total of 720,000,000 for the present population of the globe.

The space of habitable land on the earth within the temperate and torrid zones.—excluding the barren deserts of Asia and Africa,—is about 40,000,000 of square miles. The average population of the habitable land is therefore about eighteen to the square mile. But the inhabitants of the earth are most unequally distributed over its surface. Not less than two-thirds of the whole number live upon one-tenth of the land in China, India and western Europe. No less remarkable is the fact, that the basins of three American rivers—the Amazon, the Orinoco, and the Mississippi—which contain fertile land enough to sustain the whole population of the earth, had not, until lately, as many as 2,000,000 of inhabitants. Obviously, therefore, the earth is yet far, very far, from being replenished with inhabitants. Ten times the present number could easily draw subsistence from its soil, and yet continue to increase from generation to generation.

Why is it that with so abundant resources, mankind have made so little progress? Why have they failed so signally, after so many ages, to replenish and subdue the earth? It is not from the want of physical capacity to increase and multiply according to the Creator's primitive command. With health, competence and peace, the human race can easily double their number four times in a century. By doubling only three times in a century, the population of

Great Britain and Ireland, supposing it to have been 6,000,000 in 1607, when Virginia was first settled, would by this time have amounted to more than 1,000,000,000—enough to have colonized and improved all the waste and thinly peopled lands of the earth.

This shows, also, that the rude barbarity of the tribes who occupy so much of the best land in the world, affords no sufficient explanation of the backward state of mankind. Why should not the barbarous tribes have ere now been civilized, either by their own genius and energy, or by the influence of civilized nations? Or if they obstinately adhered to their barbarism, why have not the multiplying millions of civilized communities spread agriculture, manufactures and commerce over the wildernesses left unimproved by roaming savages? What has been done in the United States, might have been done many centuries ago over all the uncultivated regions of the globe.

Ignorance and vice are the general drawbacks on the prosperity of mankind; but to give a useful explanation of the matter, it is necessary to describe specifically those social evils springing from ignorance and vice, by which the progress of mankind has been most effectually retarded. They are, 1st. War; 2nd. Useless Consumers; 3rd. Luxury; and 4th. Popular Ignorance.

1. The frequent and destructive wars of mankind have been a chief cause of their slow progress. The evils of war are various, and each one has disastrous influence on population and wealth. First, the loss of human life in battles, sieges, and massacres, and by the famines and pestilences that follow in the bloody train of war. Secondly, the devastation committed by warring hosts, in cities, villages and fields, and by armed ships on the ocean and its coasts. The march of a great army through an enemy's country, is often like the course of a furious tornado. If the land is like the garden of Eden before them, it is a desolate wilderness behind them. Their course may be traced by smoking ruins, wasted fields and starving families. In one month they will destroy the labors of an age. Thirdly, the abstraction of many able-bodied men from productive industry, that they may exert their strength and ingenuity in the work of killing and devastation. Fourthly, the application of much labor and capital to the support of armies and navies, not only in war, but in peace. Vast amounts are yearly expended to feed and clothe the military, to supply them with tents, horses, carriages, camp utensils, and barracks,—to furnish them with arms and ammunition; to build fortresses, ships, navy yards and docks,—besides innumerable smaller items, which make the military expenditures of every country far exceed those of

the civil administration, however needlessly extravagant these may be. Who can estimate the cost of military and naval establishments in Europe during the last sixty years of bloody war and of armed peace? Enough probably to have maintained in comfort 10,000,000 of families employed in the arts of peace. The pressure of these expenses is felt by all the families of civilized nations, in the form of heavy taxes, which absorb a large portion of the means of living, and check the increase of population. And, Fifthly, war always corrupts the morals of society, by letting loose the worst passions of human nature; familiarizing the public mind with scenes of blood, carnage and rapine,—withdrawing attention from the arts of peace and the exercise of benevolence and justice; and setting the multitude mad after glory and conquering chieftains, and filling them with triumphant joy at the report of a victory—that is, a scene of human butchery and countless agonies, which, if coolly contemplated, would fill a benevolent heart with inexpressible horror. These things harden the heart, and lead to innumerable acts of oppression, cruelty, and injustice in society. Those too who have had a few years training in the school of war, are apt to be addicted to vices from which they are seldom recovered after they return to the occupations of peace.

2. Society is burdened with useless consumers, men and women, who live upon the products of industry without contributing to production, or rendering service to the community. Such are most of the nobility and privileged orders of Europe, and the wealthy of all countries, who live idly upon their revenues, and do nothing for the general welfare. However honestly they may have acquired their incomes, yet so long as they possess health and capability of usefulness, but live idly for their own pleasure, they are drones of society, consuming the fruits of labor without contributing in any way to the resources or the improvement of mankind. There are other classes of idlers—idle priests, idle monks, idle parasites and idle beggars. In the same category we put all the rogues, swindlers, gamblers, quacks, pottifoggers, triflers, and all others who gain a base living by ministering to the vices and follies of mankind. These all live upon the products of labor, but produce nothing useful. Were they all compelled to labor in some useful occupation, the annual products of industry would be greatly augmented, and many more families might be supported. Let me not be understood to mean, that all should exercise manual industry. A portion of every civilized and flourishing community, must necessarily be engaged in occupations not directly productive of material wealth. Public officers, teachers,

professional and literary men, contribute indirectly to production; and even those whose business it is to afford innocent amusement, are not to be wholly condemned as useless members of society.

3. Luxury is one of the chief obstacles to the progress of mankind. It has ruined many nations once mighty and prosperous. By luxury I do not mean every thing fine and precious, every elegance of life, every thing adapted to gratify a refined taste. The apostle John well defines it as “The lust of the flesh, the lust of the eye, and the pride of life.” The laboring classes have their luxuries as well as the rich. In this country they spend much of their labor to get tobacco, intoxicating liquors, and sundry other articles which gratify only a depraved taste or a childish vanity. Coffee has become a universal luxury among us. It contributes nothing to the enjoyment of laboring people, especially in the country. Why should the farmer, who can supply his family cheaply with delicious milk and rich nourishing soups, feed them with such costly, thin and nerve-shaking potations, as coffee from the West Indies and tea from China? The taste for coffee, like that for tobacco, is acquired, not natural. Yet because the rich people and the town’s people drink coffee, the countryman who has but one shirt must have his bitter decoction of *burnt* coffee twice a day! But if the poor waste much of their earnings on tobacco, whiskey, coffee and—dogs;—much more do the rich consume upon their lusts what might be put to a far better use. It is the envied privilege of the wealthy to spend most of their income according to their choice. They may either lay it out in costly wines and pleasure carriages,—or they may expend it in draining marshes, making railroads or endowing schools. In either case they give employment to laborers, but with very different results. When the wines and the carriages are consumed, nothing is added to the public resources; the same number of laborers may be employed to supply more wine and carriages, but that is all. On the other hand, after laborers have been employed to convert a pestilential marsh into a fruitful field, and to cheapen transportation by means of a railroad,—here is a permanent addition to the resources of mankind; and when a school is permanently endowed, here is a new fund for the mental improvement of society.

Commonly men apply capital to productive undertakings for the sake of gain. He who drains a marsh, or builds a bridge, expects to increase his income by the outlay, and regards no other result. If he spends money on luxuries, such as Turkey carpets, India shawls, and French mirrors, he aims to gratify his vanity, and to derive

pleasure from the possession of what few can afford to buy. In both cases the motive is purely selfish. Hence the political economists tell us, that the unproductive consumption of wealth, as in the case just mentioned, is for *pleasure*, whilst productive consumption, as in the other case, is solely for *profit*, in the hope of future pleasure, to reward the self-denial exercised in opening a new source of income. But may not an enlightened and benevolent mind derive as exquisite and as durable a pleasure from an enterprise of public utility, as another does from all the pomp and parade and sensuality of fashionable luxury? Generally, the most profitable investments of capital, are the most beneficial to the public, where material products are in view:—but then the ultimate, rather than the immediate, profits should be considered, and the benefits to mankind as well as the private emolument of the capitalist.

Political economists tell us, that luxury is necessary to stimulate industry, and to keep production within the limits of consumption. It is true, that while the passionate desire for the gratification of sense and vanity, prevails amongst men, many will labor for luxuries, who would not labor for more rational enjoyments; and that if all labored for the necessities of existence, more would be produced than could be consumed. But why run from the one extreme to the other? Is not human nature capable of feeling and appreciating nobler motives to exertion, than the desire of sensual indulgence and vain display? And in the course of human improvement, may not these motives come to operate as generally and as forcibly, as the selfish and low desire of luxurious indulgence now operates to stimulate the industry of mankind? May we not hope that human reason and sentiment, under the influence of Christian principle, will in the course of time be so improved, as to make vain, sensual luxury a disgrace, and correct the abuses of wealth by which so much of the labor of mankind is wasted?

4. Finally, we may enumerate popular ignorance, or the generally rude, uncultivated state of the human mind, as one of the chief drawbacks on the progress of society and the increase of mankind. To say nothing of the savage condition of so many tribes of men,

Whose souls proud science never taught to stray
Far as the solar walk or milky way;

how deeply sunk in ignorance are yet the laboring millions of the most civilized nations? Never, I suppose, in this present state of being, can the masses of mankind rise to intellectual refinement, any more than they can attain to wealth and ease. The poor who depend on daily labor for

their living, are precluded, generally, from high attainments in science and literature. But there is a degree of intellectual and moral culture attainable by all, that would render them far wiser and better than they are. Ignorance—intellectual and moral—is the mother of superstition, idleness, sensuality, unprofitable and misdirected labor, loss of property, loss of health, bad education of children, low and destructive vices, bad government, and a thousand other evils that check the prosperity of mankind. When all shall receive that degree of mental culture which their station in life may permit, it is evident that the average wisdom of mankind will be far above what it now is, even among civilized nations, the labors of mankind will be more judiciously conducted, and so will the government of nations; there will be less imposture, less superstition, less idleness and vice—more improvement in arts and sciences, and more of every thing conducive to the prosperity of man.

—

It may gratify a reasonable curiosity—perhaps it may also suggest some useful reflections—to form an estimate, however vague and uncertain, of the number of human beings which the earth will be able to sustain, if its resources shall ever be fully developed and improved.

Food is the primary, but not the only, want of mankind. Clothing, shelter, tools, machinery, trade, and all the necessary institutions and appurtenances of civilized society are indispensable, not only to comfortable living, but to the production of food by large quantities. The earth will not yield a large increase without labor, and labor will not be productive without the use of implements and of natural agents. Hence it is evident that the labor of a part of mankind must supply the whole with food. Many must be engaged in manufactures, commerce, government, professional pursuits, &c. Allowance must be made for all these in our estimates. Part of the soil must always be appropriated to the production of materials for clothing, and other things which are not food. Due allowance being made for these things, we may take food as the basis of our estimate. The more food, with the necessary proportion of other things, the earth can yield, the more inhabitants it can sustain.

Both water and land produce food for mankind. The vegetable products of the soil can be multiplied by industry; but the inhabitants of the waters need no human care; they increase and multiply of themselves; their numbers are infinite, and cannot be much reduced by all man can do. The most useful kinds are astonishingly prolific. One mother fish of the cod, herring,

&c., will lay eggs enough in one season to produce hundreds of thousands, or even millions of young; and should only one in a thousand of them come to maturity, all the fish eaters of the ocean and the land, the human race included, might live upon them without diminishing their numbers. It is remarkable that the polar regions, where few vegetables can grow, afford sustenance in all their waters to countless millions of fishes of the best kinds, the salmon, the cod, the herring, the shad, and various others, which offer themselves annually to the fisherman's nets and hooks by coming into the shallow waters of coasts and rivers to spawn. They are, like the sands of the sea-shore, innumerable. They fill the waters. The seas, bays, rivers and banks of every northern coast are alive with them. Yet these are but a small part of the living creatures that inhabit the watery world, 150,000,000 square miles in extent, and perhaps more than a mile in average depth. Every cubic mile contains a million of cubic rods, and every cubic rod of sea breeds living creatures. Shell fish line the bottom; gony tribes swim above them, and soft mollescent animals float in every part, and creeping things abound in the ooze below, and wriggle about through all the waters both deep and shallow. So almost every river lake, pond, ditch and streamlet, may nourish food for man. The ditch that waters a meadow, may be at the same time a nursery of eels. The pond that gathers water for irrigation or for mills, is also a habitation for useful animals. Such is the natural fecundity of the earth, that wheresoever the sun warms, the waters moisten, and the air penetrates—there is organic life developed in every possible form of animal and vegetable; the living feed on the dead; and man profits by them all; for although he cannot feed on them all directly, he can indirectly by eating the eaters.

Here we may observe that the greater part of mankind are actuated by superstition, or fancy, or custom, to reject much of the wholesome food which nature produces. The Hindoos and Buddhists of eastern Asia abstain from animal food, from a superstitious notion that all animals have immortal souls. Mahometans reject the hog; Englishmen loathe the frog; all Christian nations refuse to eat dog, and rat, and serpent, and fifty other things, which Indians, Chinese, and the negro nations know to be good food. Much of our distinction of meats is founded on no dictates of reason. Why eat hog, and feel disgust at dog and rat? Why should a hopping bull-frog be less palatable than a crawling turtle? or a scaly snake than a slimy eel? I mean not that all animals are good food for man. I agree with Achille Murat, who is said to have made experiments, while living in Florida, on the fit-

ness of different animals to serve as food. He wished to ascertain how much of our likes and dislikes in this particular was founded on reason. He dismissed all prejudice, and tried all sorts with philosophical impartiality. Rattlesnake soup he found to be excellent; owl soup to be only tolerable; but—turkey-buzzard soup he had to give up as “not good.”

Although the waters are an inexhaustible storehouse of food for man, and one to which he can always resort in time of need, the soil is the chief resource for the supply of human wants. It produces an immense variety of grains, roots, tree fruits, salads, and other nourishing substances, besides timber, fuel, and grass for cattle. Fowls and birds also derive most of their sustenance from the land. The universal food which we use, is but a modification of vegetable matter. Beef is but corn and fodder reorganized. Vegetables being therefore the basis of all our sustenance, the capacity of the soil to produce food is measured by the quantity of nutritious vegetables which it can be made to produce for man and beast. What is the utmost quantity that may grow at once upon an acre of land, cannot be exactly determined; but we can assign a limit beyond which it is physically impossible for nature and art combined to enlarge a crop. Sixty bushels of wheat, and twice that quantity of Indian corn, may possibly be grown upon one acre, but the double of these quantities we may pronounce to be impossible, so long as the present constitution of nature continues. But within the limits which nature imposes, the quantity of vegetable products will depend, 1st. On the extent and qualities of the soil; 2nd. On the climate; 3rd. On the supply of moisture; 4th. On the kind and quality of the vegetables cultivated; and 5th. On the culture bestowed upon them.

I. The fertile land of the earth can be extended and improved. Much land can be gained from the sea-tides and the inundations of rivers, as Holland and the lower valley of the Po have been by dikes and embankments. Much of the richest land in the world now consists of useless swamps, bogs, and inundated river lowgrounds. All these may be reclaimed and converted into fields of exuberant fertility. Bare rocks may be covered with soil, as the island of Malta has been by soil imported from Italy. Steep mountain sides may be rendered arable by walls and terraces. Poor soils may be enriched. Hard clays may be loosened, and loose sands may be compacted, by admixture. The earth has abundance of fertilizing materials to enrich all its lands to the utmost. The sea is an inexhaustible storehouse of manures. Its fish, its weeds and its fat ooze, can be employed to fertilize

all the lands of maritime countries. The vast accumulation of vegetable matter and *humus* in the valleys and beds of rivers and of swamps, are sufficient to enrich all the poorer soils of the highlands from which the rains and currents have swept them. In many places there is a superfluous depth of rich loam, which may be pared off and carried upon the poor lands of the neighborhood. The yearly product of vegetable and animal manure, now for the most part wasted, can be saved and applied, so as to improve the soil which produces it. The earth abounds in mineral and fossil manures, lime, gypsum, salt, coal, shell marl, potassa, (in crumbling rocks,) and other substances, by a judicious use of which soils are improved. Concentrated manures, such as guano, are furnished by nature, and may hereafter be cheaply manufactured. As plants receive a part of their nutriment from the atmosphere, the soil on which they grow becomes naturally richer every year, when the yearly product is returned to the soil. Thus wild lands are enriched by themselves, where the vegetable matter is not carried off by the winds and waters.

By all these means, the whole face of the earth may in time be rendered as fruitful as the richest and best cultivated lands now are. To effect this will require an immensity of human labor, but not more than mankind can apply in a long course of ages. What may not the steady industry of mankind accomplish? If Egypt could build the pyramids and hew out the catacombs, and China could raise a huge wall 1,200 miles long,—all in the days of antiquity;—then every nation can gradually enrich its soil, and convert its whole territory into a fruitful garden. Let them study the arts of peace, and turn the hands that are now idle, or employed only in raising pernicious luxuries, or in military service, to works of utility, and a few centuries will suffice to fill the earth with a thriving and happy population.

Europe now maintains nearly 3,000,000 of men directly or indirectly employed in military affairs, and as many more who render no service to the community, but live idly, and many of them dishonestly. If all these were employed in improving the resources of the country, in less than a century not a barren spot would be left in the temperate regions of Europe, and the population would be quadrupled. So might all the 40,000,000 of square miles of habitable land on the globe be improved in a few centuries. Every country might be intersected throughout by canals and railroads, to facilitate commerce, and distribute, not only the products of the soil, but the means of its fertilization.

2. Climate, as all know, has great influence

on vegetation. A certain degree and continuance of heat are essential to the growth and maturity of plants. But it is remarkable, how plants adapt themselves to peculiarities of climate. In the northern regions, where the summers are short, six or eight weeks are sufficient to mature crops which in warmer latitudes require three or four months. By slow degrees, yet surely, many useful plants of the warmer latitudes will be acclimated in those farther north. In the torrid zone two or three crops can be yearly gathered from the same ground; and up to the middle of the temperate zone, a succession of crops of certain kinds may be produced in one season, as in Virginia and Kentucky I have seen potatoes succeeded by cabbages or turnips, and early peas by the same, or by other crops. Thus, by keeping the vegetative powers of nature in constant action, the quantity of produce can be greatly augmented, and by a judicious rotation of crops, and the application of the manures produced on the land, the soil will be improved rather than impoverished by constant cropping. The degree of heat necessary to mature some crops may, in climates rather too cool for them, be produced to some extent by artificial means. In England peaches are ripened by planting the trees on the southern sides of walls. So by means of green houses and glass covers of seed beds, vegetation may be hastened in the spring, and many plants reared in climates naturally too cold for them. How far this system of artificial heat may be ultimately carried, we cannot foresee; but certainly to a degree that will considerably increase the vegetable products of cool climates.

3. Moisture is no less essential to vegetation than warmth. Different plants require different degrees of it; but to all a regulated supply is necessary to the largest increase and highest perfection of the crop. Nature rarely affords that regulated supply. But human art and industry can do much to correct the excesses and deficiencies of nature. Wet lands can be drained, and dry lands can be irrigated. Rivers, brooks, and fountains can by means of dams, elevating machinery, and canals, be made to water the adjacent lands. Where rains fall at any season of the year, the superfluous waters can be collected in reservoirs, and distributed, when wanted, over lands both high and low. Even in those dry climates, as that of Peru, where it seldom or never rains, much land can be irrigated, either by streams descending from high mountains, or by wells that reach the subterranean waters. Sulpicius Severus, a Christian writer of the 4th century, mentions a hermit of the Egyptian desert, where no rain falls,—who watered his garden out of a well 1,000 feet deep. He employed

an ox with a wheel machine. to draw the water, and fed him on the produce of his labor. Not only Severus, but many writers of modern times have remarked that in hot climates, the sands, otherwise utterly barren, are fertilized by water alone, and produce large crops with no other manure. By means of deep wells, many districts of dry barren land, may be rendered in a great measure fruitful. This laborious way of fertilizing lands will, I suppose, be extensively adopted only in the last stage of agricultural improvement, after more favored lands have been fully occupied and cultivated. It is possible that many thousands of square miles of torrid deserts, now uninhabitable for the want of water, may yet, before the end of the world, be rendered fruitful by tapping the veins of water that permeate the interior of the earth, and fill all its pores and cavities from pole to pole.

In climates subject to summer droughts, the increase of product resulting from irrigation is often more than the half: where the droughts are of long continuance, and the climate is very warm, irrigation will produce an exuberant crop, where unassisted nature would scarcely allow the seed to vegetate, or at least would bring no summer crop to perfection.

Yet it is remarkable, that some plants will grow in the driest soil and climate, while others grow in the water, and need only to keep their heads out in order to thrive in the liquid element that would kill those of different kinds. Thus has a bountiful Providence made every part of the earth capable of some useful product.

4. The last remark shows how much depends on the kind of plant cultivated in a particular soil and climate. Some kinds of plants yield much more nutriment on a given space than others. On good land, Indian corn yields more than wheat; beets and potatoes more than Indian corn; and on inferior soils peas will yield more than other crops. In tropical countries, certain plants, such as the manisc, yields four or five times as much nutriment to the acre, as the grains cultivated among us. But the banana tree is said by Humboldt to afford 133 times as much nutritive substance as wheat on an equal space of ground, and forty-four times as much as potatoes. The annual product is stated to be no less than 160,000 pounds of nutritious fruit to the acre, and that with no extraordinary amount of labor. At this rate an acre of land would supply 160 persons with nourishment, allowing 1000 pounds a year to each individual. Supposing one-fourth of a tract of land to be cultivated in bananas, and the rest in other crops, an immense number of people could live comfortably in a small country whose climate

and soil were adapted to this and other tropical productions.

By a proper selection of seed and skilful cultivation, all agricultural products are improved. The large luscious apples of our orchards are the offspring of the wild crab, which not even a pig will eat. The large mealy potato that bursts the ground with its exuberant growth, originated from the small, insipid tuber growing wild in the Peruvian Andes. How far cultivated vegetables may yet be improved, we cannot tell; but it is well known that by a careful selection of seed for a series of years, some farmers have doubled their crop of Indian corn from a given quantity of land. Domestic animals are also susceptible of improvement, by skilful breeding. Thus human reason and industry can improve and multiply all the useful products of nature to an extent unknown. As yet mankind have generally exercised little of their reason and their industry in this way. Here and there among civilized nations a few individuals have studied agricultural improvements with minds sufficiently enlightened by the lessons of science and of experience. The results of their labors have been so beneficial as to prove the possibility of accomplishing as much in this department of industry, as in the mechanic arts by means of labor-saving machines.

5. Lastly, deep and assiduous cultivation is known to have a wonderful effect on the fertility of land and the quantity of its product. Very little land has yet been thoroughly cultivated. In Belgium much of the soil has been periodically turned over with the spade to the depth of one and a half or two feet, with great increase of fertility. Land that is perfectly and deeply tilled affords much more nutriment to plants, than soil of the same quality, cultivated in the usual shallow and slovenly manner. Frequent stirring of the ground during the growth of the crop, and the perfect extirpation of weeds, add greatly to the product. Crops now usually sown broadcast, if drilled and cultivated in this manner, would be much more productive.

By all these five means would the products of the soil be indefinitely augmented, and the population of the world might be manifold greater than it has ever yet been. We cannot even approximately determine how many millions of human beings the earth may ultimately sustain, when all its resources shall be fully developed. But we may form some idea of the average quantity of food which the soils of the earth might be made to produce, and the number of persons who could subsist upon this product. In warm climates there is no doubt that human industry can make "every rood maintain its man,"

wherever a supply of moisture can be obtained. Rich soils will do much more than this, where two successive crops can be produced in a year, and yet a sufficient allowance be made for accidental failures. In temperate climates, where 100 bushels of Indian corn or 300 bushels of potatoes can be made on an acre, still every rood of cultivated land will "maintain its man." But in the colder half of the temperate zone, the produce of the waters must be added to the produce of the land to sustain so large a number. Where much animal food is reared on the soil, fewer men can be sustained. But it is a mistaken notion, that animal food is necessary to give the human constitution its full vigor and development. The Irishmen, who live on the potato, are as strong and healthy as beef-eaters. Much is due to climate, and much to a regular and sufficient supply of nutritious food. Among savages, it is generally a feast or a famine; and among the poverty-stricken millions of India and China, and some Christian countries too, a full stomach must be atoned for by a fast,—not because mother earth refuses to reward the laborer, but because oppression stints his means of production and robs him of the half of his produce, to pamper idle luxury and feed destructive war.

It is not extravagant to estimate the capacity of the earth, in the highest state of possible improvement, as sufficient to sustain the average number of 640 persons, including children, upon a square mile of land, that is, one person to the acre; which on the forty millions of square miles of habitable land, would make a total of 25,600 millions of human beings on the globe. Such is the fecundity of nature in the water and on the land, and so much can the labor of mankind effect in a course of ages to multiply the fruits of the soil, that I might even double the above estimate without transcending what might be accomplished within twenty centuries, if mankind were honest, industrious and peacefully disposed. But alas! so selfish, so vain, so instigated by demoniac passions, are the great majority of our fallen race—and so do they corrupt and abuse even the heaven-descended religion which would correct their follies and their vices; that we can have very slender hope of our remotest posterity's seeing the world so peaceful, so prosperous, so full of life and happiness.

Yet there are some symptoms of better times for the human race in the ages to come. Europe is gradually delivering herself from the ignorance, the superstition and the thralldom of the dark ages. The nations are less ready to rush into bloody and devastating wars,—less submissive to priestly and kingly despotism. The lights of science, of religious and political know-

ledge, are surely though slowly penetrating the masses of society. Commerce and the useful arts are advancing,—morals on the whole improving, though as yet in a low condition. Popular education is extending, popular rights are gaining ground; though in some countries temporarily repressed by military force. In a word, the mind of christian Europe, is acquiring activity and strength, and its progress cannot be arrested until it shall disenthral itself from the fetters of superstition and prejudice. The mental fermentation may throw up many impurities, and cause violent agitations; but it will finally work itself clear. Human reason, left free, may, like the magnetic needle, tremble and vibrate long; but it will at last settle in the meridian of truth.

It is among the Germanic—and particularly the Anglo-Saxon, nations, that the human mind is most active. The Germans, precluded, heretofore, by political despotism, from as much external activity as some other nations, have, since Luther's day, been sounding all the depths and surveying all the fields of human thought. When a more practical career shall be opened to them, they will soon rush forward in the race of improvement with intellects already qualified by ages of study.

But the Anglo-Saxon branch of the Germanic race, in Great Britain and America, having the advantages of a maritime situation and free institutions, constitute the portion of the human family on which mankind seem most to depend for their future progress. The commerce of the world is now chiefly in their hands. They are the most enterprising and the most progressive people on the earth. Besides the European part of them, they are multiplying at such a rate in our part of the world, that within two centuries from this time, they and their countrymen of the German and other races, will number no less than 1000 millions. There is room enough for such an increase on the five millions of square miles which they now occupy, or are destined to occupy, in America within the temperate and torrid zones. Let them cultivate useful knowledge, pursue the arts of peace, maintain union and equity among themselves; and, in the ordinary course of events, they will become the great civilizers of the world. Already the same race of men have extended their settlements and their rule over other shores and nations all round the world. The great Australian Islands are to be filled with them.

Africa, that dark and degraded quarter of the world, mostly inhabited by a black race of inferior intellect, seems destined to receive improvement through the same Anglo-Germanic race. The southern parts are to be filled by their colonists: and the western parts within the tropics

by colonies of the black race, trained and improved among the white men of the United States. Wicked as the slave trade has been, and degraded as the condition of this colored race is in the land of their bondage, they have nevertheless been improved both physically and morally by their residence among us. They can now be sent back to their fatherland with the arts and ideas of a civilized people, and imbued with the heavenly influence of christianity, to civilize and to christianize the barbarous tribes from whom their forefathers were so cruelly taken. Thus a wise Providence brings good out of evil.

In Eastern Asia there are influences at work or about to work, which promise to give the human mind a new start in those populous regions. India is under Anglo-Saxon rule and christian tuition, and these are gradually sapping the foundations, laid deep in antiquity, of ideas and institutions, which have paralyzed the minds and debased the morals of a people naturally ingenious.

China, that immense hive of human beings, mechanically treading in the footsteps of their fathers, has been compelled to relax her exclusiveness, and to open her ports to the commerce, and the minds of her people to the teachings, of Christendom. Japan must soon do likewise. Then will all the accessible regions of the globe be opened to the progressive enterprise, arts and influences of Europe and America. The multiplying millions of the Anglo-Germanic race, will have full scope for their activity; every ocean will swarm with their ships; every coast and island will be occupied with their establishments; their language, their science, their literature and their religion, will pervade all the kindreds and tribes of Heathendom; "many"—yes, many myriads of them—"will run to and fro, and knowledge will be increased;" until "the earth shall be filled with the knowledge of the Lord," and with the arts and institutions of civilized life. The maxims of peace and the pursuits of honest industry, will gradually gain ascendancy, until, it may be hoped, "the nations will learn war no more," but enjoy the gifts of a bountiful Providence under the peaceful reign of the Messiah. Thus may we interpret the signs of the times: but alas! when we see the selfishness, the fraud, the rapacity, the luxury, and other vices, that still prevail among us, we have to distrust our reasonings on the signs of the times, and to rely simply on the revealed purposes of Him, with whom a thousand years are as one day.

H. R.

Scenes Beyond the Western Border.

WRITTEN ON THE PRAIRIE.

BY A CAPTAIN OF U. S. DRAGOONS.

June 12th, '45.—It had been determined rather than cross the river, which deepens as we ascend without losing its quicksands, to take to the hills and turn Scott's Bluff: accordingly we this morning marched three miles still nearer to that mysterious mountain—and, without being disenchanted of its colossal ruins and phantom occupants, turned toward the left, and ascended the wild sandy hills. I anticipated a dull ride over ground as uninteresting as barren: but a new surprise was in store for us: having ascended about sixty feet, we saw before us a plain, more than a mile wide, but narrowing, winding, and walled in: the ascent was slight, it was apparently a river bottom; in fact, it was marked every where with drift, cedar logs, &c.—the thought, "can this be the Platte bottom," came intruding on us with its absurdity. Thus we continued, winding round "Gibraltar," ascending insensibly this smooth inclined plain, mile after mile, thirteen, fourteen miles! Then, before we were aware, or we hardly knew how, we found ourselves riding above, looking into a deep glen, with shade trees, cedars, shrubbery, rocks and crystal waters! And where is its outlet? no where but high up, too, on the smooth grassy plain; on which in flood times, it had cast its drift; yes, all over its twenty square miles. We had got very high up, without observing it; but to complete even a faint idea of the remarkable scenery, I must add that this singular flat valley is walled in everywhere by lofty bluffs; their gray sand, and clay, and marly sides, often vertical; their tops crowned by cedar forests. This ravine is very precipitous: our horses could with much difficulty be led down to the water; wild fruits grew luxuriantly amid its rocks and trees. It heads very near the mountain top, at a spring of icy coldness—and without exaggeration.

Thus after winding, as one might have thought, through a strange opening around Scott's Bluff, we suddenly found ourselves at the top of a mountain gap, with a vast river suddenly bursting upon us. On our right, to which we must now direct our course, far below and twelve miles off, lie the grassy meadows of Horse creek: beyond are its blue hills—then, far away above many a treeless hill and plain, rise to view the famous "Black Hills," and Laramie Mountain, their highest peak, towering at eighty miles.

We turned then to descend another plain, of

twelve miles, inclined to the Southwest; a puff of air from the West, came now and then cool and refreshing; but the reflected sunshine was literally scorching; without sensible perspiration, great blisters were burnt over our faces. It was paying dear for the avoidance of a little quicksand—so thought, doubtless, all the animals. We pitched the camp in the pleasant meadows of Horse creek, near its mouth; it is sixty yards wide, and resembles the Platte; but has clearer water. We are enjoying the rarity of good fuel, from some dead cedars.

Seeing to-day an antelope with a young fawn some three hundred yards from the column, I rode to the spot to endeavor to secure the little creature for a pet; they are famous for their fearless attachment to their young, and their skill in concealing them. This noble animal had another enemy a-field: an immense dog, greyhound and bull, came rushing to attack her; the coward expected her of course to run, but maternal instinct had conquered fear; she coolly stood her ground, until with one judicious and vigorous spring, she received him with a but that sent him rolling over and over! And he feared to repeat the attack, but followed her a little, at a respectful distance, as she leisurely moved off. Now, hundreds, perhaps, had seen the fawn there a minute before, in the open prairie; but she had hid it, so that three of us searched it for half an hour, in vain!

These antelopes are second to the buffalo in numbers: of the first, we saw none to-day, they are disappearing like the elks, which are said, however, to have migrated permanently Northward. Fifteen years ago, they were found close to Fort Leavenworth, now we have come over five hundred miles without seeing one. Can we wonder? I have felt on this march, as if still among the settlements, continually amongst emigrants with the herds; meeting one day boatmen, the next, villages of Indians: and this migration, which here, where streams or springs are so rare, must necessarily follow these great water courses, (which seem providentially disposed to lead it on,) unfortunately meets on them the great mass of the buffalo, for they too must come to the water—their day is passing.

We are now in advance of the whole emigration; two of their men are with us this evening, they speak of the great discouragement of the women, who even wish to return; and many men have been at times of the same disposition; they have lost many cattle in this first quarter of their journey. They scarcely know where they are going; and these men eagerly question our guide, who has been in Oregon, on the simplest and best known points.

I have read of small animals, marmots per-

haps, and of our squirrels, migrating in vast bodies; overcoming with patient energy but great loss, every obstacle which they blindly encounter; moving ever onward, impelled by some inscrutable instinct, or destiny.

This migration severs the ties of home and country; leaves lands of exceeding richness, which may be purchased after years of free occupancy, for a dollar and a quarter the acre, with navigable rivers throughout, and pushes on with women and children, to the dangers and exposures of an immense journey: they hardly know whither,—but that it is beyond the advantages and comforts of society. Is it a providential instinct? And was it the same that three hundred years ago impelled its many thousands of victims to the dangers and diseases of the new American world?

It must be so. Should we then admire as praiseworthy, the energies and the sacrifices of these first labourers in a great work? Or, can we, regardless of prospective results, deny them magnanimous or patriotic motives; attribute all to the wantonness of discontent,—a diseased appetite for excitement and change,—to a restless habit of vagrancy?

I hope I am not uncharitable, if I incline to this last opinion. Are we not taught to recognize in the history of man, that God shapes evil to good results?

There is a comet at the Northwest; and a sudden and violent norther threatens the overthrow of our frail habitations; and so, to lightning and thunder, we have a rattling accompaniment of mallets and tent-pins.

June 13th.—Twenty-four miles to-day, over a desert! hills and river valley equally a desert! In this last, we have seen many large cottonwoods seemingly the wrecks of a blasting tempest, mere limbless or distorted stems of trees: and others, the bleached and desolate drift of a flood.

We came over a lofty bluff almost overhanging the river, which commanded a view over vast and sternly sterile plains, breaking up at last into confused mountain spurs, and dim blue peaks beyond; but to this gloomy grandeur the river far winding amid white sands and green islands, and at the foot of many another precipitous bluff adorned with evergreens, lent an element of softening beauty.

I. F. What oppresses you? You seem in mournful harmony with these silent wastes!

C. Behold those spectral ruins of trees strangely white and gleaming in the starlight!—they are melancholy. But no—it is a day that ever, since it first gave me unhappy life, leaves its influences upon me.

I. F. Such a mood should always be resisted. How do you succeed with your diary now? We are passing remarkable scenery; most wild-picturesque; and there is always some incident.

C. What is written, may always chance to be printed, if not read: how charming then to the busy denizens of the world, whose very brains have received an artificial mould, to read such incident! Now if I could only introduce the word "dollar,"—good heavens! it was never heard here before! 'tis enough to disturb the ghosts of the grim old warriors, who, I dare say, have fallen here in defence of this narrow pass: fighting for what? at ambition's call? not, I hope, of intriguing diplomatist—better for Love, or mere excitement sake.

Whom then shall I address?—the mock sentimentalist? and begin the day: "Our slumbers this morning were gently and pleasantly dissolved by the cheerful martins, which sang a sweet reveille at the first blush of Aurora, at our uncurtained couches." Or the statist? "Not a sign of buffalo to-day; it were melancholy and easy to calculate how soon the Indians, deprived of this natural resource, and ignorant of agriculture"—but I should soon get too deep.

I. F. But this soil is devilish shallow.

C. Few will follow me pleasantly or patiently through these solitudes, 'though sometimes "pleasant places." I care not at all,—but that I feel I may fail to awaken the sympathy of any, while, like an artist retouching with kindled affection his painted thought, I linger to answer the appeal of Wasted Beauty to so rare appreciation.

I. F. This profoundly silent Desert—like a world without life—awes and stills the senses: but the soul is excited to speculations on the origin, the history—if it have one—and the destiny of these boundless wastes.

C. Or surrounds itself with the airy creations of fantasy,—or, mournfully wanders back among the dim traces of joys and sorrows gone. I address not then, the shallow or hurried worldling; but the friendly one, who in the calm intervals from worldly cares, grants me the aid of a quiet and thoughtful,—and if it may be,—a poetic mood!

Ay de Mi! Our life is a sad struggle;—our material nature with its base cravings,—its cares for animal comforts, and all the ills of the flesh, preys upon and tethers the soul, which yearns for the Beautiful, the Noble, the Exalted;—esays to soar in that sphere, whose types are the bright stars of Heaven! Or, clings to that electric chain of Love which binds humanity—and in the olden Time drew down angels!

I. F. Ay! it is a fire that consumes; and sometimes burns to ashes the hearts and hopes

of proud men, and leaves but wrecks, mournfully floating upon the dull currents of life.

C. And welcome then, the rapids and the final plunge! Yes: the struggle is ever, and leads us sorrowing to the dark portals which shut out the life beyond. *There* may this holy fire from Heaven find more happy sympathy. *Here*, amid ages of pain, it grants us but moments of felicity.

Metinks, amid those stars so refulgent with celestial light, studding the bright blue ether of this moonless summer night, a seraphic Intelligence is hovering with a pale but friendly smile, to rekindle the wasted torch of Hope!

Fond traitor! constant friend—blind guide—beautiful Hope! that leadest us wandering ever,—heartless, but living still.

Yes! Time, the inexorable,—Time the physician and the conqueror,—Time the *hopeful*, rolls on, (dragging us at his chariot wheels, wounded, suffering, unpitied,—but living still!

Ah me! We are not only chained to the rock, but galled by all the thousand links,—the petty cares of life! *Therefore*, I love best this desert wandering, where we are free of *all* tyrannies; and our wants are simple and few. Nature our beautiful mother, enthrones us on her bosom,—and to elevate our thoughts and aims, displays all her wondrous and harmonious ways and works; or, with sublime simplicity points upward to the stars!

There is nothing petty here. When we hunger, we go forth to the spirit stirring chase; when we are weary, its furred trophies give us welcome rest; and our rude beds have a starry canopy whose beauteous mysteries fix our wandering thoughts, until blessed sleep draw the curtain of oblivion.

June 15th—Near Fort Laramie.—Ten miles over desolate hill and plain brought us yesterday to the Fort, on the West side, and a mile above the mouth of the pretty little river of the same name; the water is clear and rapid: the Platte,—here about one hundred yards wide,—is not much larger, and more resembles it, than itself as found below. Fort Platte, belonging to a rival company, stands near the Confluence.

I came on in advance, and spent an hour at Fort Laramie; it is about two hundred feet square, with high walls of adobes, made of the clay and sand soil, just as it is found: the dwellings line the wall,—which is a part of them,—and have flat adobe roofs, and wooden galleries. The Fort swarmed with women and children, whose language—like their complexions—is various and mixed,—Indian, French and English; they live nearly exclusively on dried buffalo meat, for which the hunters go at least fifty miles; but they have domestic cattle.

Here, barbarism and a traditional or half civilization meet on neutral ground; but as a struggle, it is certain that the former has the best of it; although it has the disadvantage of being represented chiefly by females—both softening and impressive: but their credentials are ill-looks, dirty and revoltingly coarse habits, &c., &c.; while the male representatives of civilization have the orthodox, although questionable aids of alcohol and gun-powder, avarice, lying and lust.

The struggle is at close quarters; civilization, furnishing house and clothing; barbarism, children and fleas.

The Colonel had sent a staff officer ahead to examine the grounds, for a camp: but arrived before he had completed his labour. The rival companies anxious for the reflected importance of the military vicinity, rivalled each other in praise and misrepresentation of the merits of their respective rivers—as to grazing. The result was that the Fort Platte scale at first preponderated; and up the Platte we marched,—two miles without discovering the grass; then it struck the beam, and we passed over an immense and very steep bluff into the Laramie scale,—I mean river-bottom; where we did find good grass, and we camped, three miles above the Fort: but the extra two miles over the lofty dividing ridge was terrible work for wagon mules; and it bruised I fear fatally a pet antelope fawn, which I had in a wagon:—it lies now in a neighboring tent uttering from time to time cries and moans which are distressingly similar to those of a suffering infant; said its soldier nurse, with real pathos, “it is thinking of its mother.” I purchased another at the Fort; and a goat foster-mother.

We meet the Sioux to-morrow in council; about nine hundred warriors are expected to be present.

The weather is very cold: fires and great coats are comfortable. The dwellers here—who however lie, in emulation, give discouraging prospects of grass toward the South Pass: this staple of the country is so scarce, that our three hundred horses, moving daily, can hardly subsist. The trade of this post is principally for buffalo robes; nine thousand were lately sent off by the American Fur Company: and how many by the other company I do not know. They get about two thousand pounds of beaver skins a year.

June 16th. Colonel Kearney with an escort, and attended by the officers, rode this morning to the plain between the forts, and there met the Sioux in council. There were about twelve hundred, of both sexes: three flags on lofty staffs first caught the eye; two were our national flags,—the third was said to be of Indian design;

it was crossed diagonally by two bands, said to represent the winds; beneath were clasped hands; above, disposed in a regular curve, were nine stars; a little beyond, the people of Fort Platte had prepared chairs and benches, backed by a curtain of elk lodge-skins: and the ground was carpeted with buffalo robes; the Indians, all seated, faced us in a great semi-circle, behind which was another, of women and children, who, in fact, completed the circle, in our rear.

The Colonel made a short plain speech, which hinged on the Oregon road, which the government determined should be kept open.

Bull's Tail, the principal chief (the buffalo, be it remembered,—for this confounded name needs some apology,—carries aloft his tufted tail in combat, like a black flag!) Bull's Tail then, a gentlemanly and mild looking man, made a short and sensible reply, which promised well that the Colonel's advice would be obeyed: and turning to his warriors, addressed to them some words to increase its impression. Presents then, were placed in the centre: and the chiefs selected seven Indian “soldiers,” who receiving equal portions of every article, distributed them at their own discretion: their awards being final. I looked back over the screen at the distribution to the women, of strouding, beads, &c., which of course was very interesting: the mirrors were given, however, to the young men! Now, this unsophisticated trait, will probably be interpreted as a compliment to the women at the expense of the men; or, the reverse: it was, I think, a mere exponent of the relations of the sexes; their women work and drudge; their men are idle, and have more use for mirrors in self-adornment: just the reverse of the picture of a certain stage of civilization.

In the midst of these proceedings a squaw commenced a chant, in which she was soon joined by many women and some men, with a very fine musical effect; it was expressive of satisfaction and thanks. The Sioux,—they call themselves Dahcotahs,—are large, fine looking men; wear their hair long, and are cleanly and showy in dress; adopting our fashions when they can; a great many wear our fur cap.

Several shots were then fired from a howitzer to their great satisfaction: and the Colonel told them that at night he would send up stars to the heavens, which should “tell the Great Spirit that they had listened to his words;” meaning that some rockets would be fired. We then returned to camp.

It is still very cold; some snow is said to have fallen: the latitude is 42° 15'; altitude above the Gulf 4,470 feet: but they say that the winters are mild, with very little snow. Fort Pierre, a trading post on the Missouri, three hundred

miles distant, is the nearest point of navigation.

The emigrants are overtaking us: but to-morrow we march, leaving one company to await our return. My poor little antelope is out of pain—it is dead: and it is rather singular, the other at the Fort, was killed to-day by the kick of a horse.

June 17th. We set out this morning in a cold drizzle; about ten miles from camp, at the Warm Spring, I left the regiment to make a detour of several miles to the Platte, to examine a point which had been spoken of as suitable for a military station: the river there emerges from the most advanced spurs of the Black Hills; a little below muddy and tame, it here gushes a sparkling mountain stream from a pass which it completely occupies, between precipices of bright red sand-stone two hundred feet high—standing a little lower, over the water boiling through a still narrower passage which it has worn through a ledge of rock, I could see through the gap many loftier hills or mountains of red sand-stone, all, far and near, crowned, shaded or dotted with dark cedars; beautiful it was,—and even grand, with its wild confusion.

The squadrons marched thirty-six miles to Horseshoe creek; so far, because although they repeatedly touched the river, water and grass together, could not be found nearer. Wearily I followed them all day over this broken and desolate country; its grey sterility unrelieved by a single and mournful growth of grey artemisias. There were now and then striking views of mountain ridges, covered with cedars, which sometimes dotted them as regularly as hills of corn,—and walled with red rock precipices; and through which it was hard to believe the river passed, so utterly invisible at a little distance was any opening; but the picturesque had not tempted apparently, any unfortunate wild animal into these barren wastes.

Right pleasant then at last, it was to see down a slightly inclined and singularly smooth plain two miles wide, the camp, and horses grazing in a horse-shoe bend of a creek with green trees.

June 18th. We had a thunder shower last evening; and the stream which we found with a very little clear cold water, soon ran boldly, nearly a blood red. After some half dozen miles winding over high prairie hills, they admitted us to the river meadows; but soon confined us to a narrow pass, which we threaded pleasantly enough, through cotton-woods, willows and rose bushes; and these now generally mark its locality; and then, rather than again ascend these precipitous bluffs and remain among them for several days perhaps without grass, we forded

the river at a swift rocky place, and were near losing our beeves,—to say nothing of the drivers.

At four o'clock we discovered a narrow grassy bottom, where we gladly encamped under some fine trees; and have plenty of dry drift for fuel. It seems a settled matter now that we should have two hours of great heat at mid-day, with the other twenty-two cold and boisterous. We saw to-day a great quantity of cotton-wood sticks, which had been cut about three feet long, completely peeled of bark; no doubt by Indian horses; they might be called Nebraska corn-cobs—and are particularly scarce too.

We saw two deer, and some hares in the course of our day's wanderings; the result perhaps of some eccentricity, or misfortune: this last explains at least, the presence of a famished squaw and two children, whom we surprised hiding from us near our camp ground. Some animals have an instinctive fear of strangers, but not of their kind; does this human fear of *their* kind,—this natural mental impulse,—mark inferiority of mind to instinct? Or, that mind makes us more fearfully savage than brutes?

But to their story,—which without a word of language in common, we gathered from the language of signs; (perhaps other animals do the same;) the children, about eight years old, are the daughter and nephew of the squaw; she is an Arapaho, but married among the Arickaras; her husband with four lodges of that nation were attacked near the Missouri river by the Dahcotahs; the men were all slain, and their families made prisoners, or slaves, but she, from friendship to her native tribe, was liberated eighteen days ago; and was provided with a small pack of provisions, a dog to carry it, and a fire-steel; (now that is a scale of out-fit that would please the most stingy quartermaster, or travelling husband extant!) Her provisions being exhausted, she fell upon a military expedient,—of eating the "transportation"—generally oxen and mules with us, but the dog is quite as good; (I once knew a sergeant to stand three days before he could make up his mind to kill a favorite mule which he had ridden a thousand miles: a kind of prejudice or instinct—often the same thing—which I admire.) The dog then, was killed for food; and some of it is still on hand; and since we have fed them to an amount that would be dangerous to a white, they have returned to the dog—which is certainly well singed, but rare to a fault—usually the case with the game course. If they survive such high living, they will be sent to-morrow to Laramie, in the charge of a dragoon.

June 20th. We marched yesterday but fifteen miles; being greatly impeded by the stout artemisias, and little hillocks of rubbish washed by

overflows, or flooding rains about their roots and stems. We passed a wonderful place, apparently a great basin, near a mile through, where an adventitious mass of white clay and sand, grauitic sand-stone, trap-rock and friable conglomerates,—black, yellow and grey,—had been the sport of rain and flood; there were all shapes, mathematical and fantastical; among ruined towers and pyramids, we passed over hard smooth plains, level and inclined, of a dazzling whiteness; which, with the infernal heat and dust, had quite a dizzy and bewildering effect; there was no token, not a reminiscence there, of animal or vegetable life. If any but a dragoon or an Indian in great straits, has ever been there,—or shall ever return,—and it shall have the slightest use of a name,—that name I give and patent, “The Devil’s Adobe Yard.”

Our progress was suddenly arrested by the unfordable river, and a precipitous bluff, which was pronounced utterly impracticable for wagons: it was a nearly cubic mass of iron ore of one hundred feet dimension; but as it was necessary, we got over; and enjoyed too, a fine view of the Southern Mountains, and their majestic Laramie peak. The country began there to show a tinge of green which attracted some straggling buffaloes and antelopes: and there, we first saw a bird unknown to us, but called here we find, “sage-hens;” they are fine game, and probably a species of grouse; but they have a much longer tail, carried differently, and are so large, that we at first mistook them for turkies.

A poor fellow shot himself in the arm that afternoon, and suffered amputation.

This morning we left our surgeon and a small party to return slowly to the Fort, in care of the wounded dragoon.

We then crossed back to the South side of the river, and have had a long march; enjoying an unusual variety of scenery and incident. We were forced into the hills again, which were smooth, and found ourselves near the forest clad mountains at the South: we came down to a fine stream, with groves, (so beautiful for their rarity;) and here some buffaloes came dashing down a long slope beyond; and to the pleasure of this unlooked for change of scenery, was added the excitement of lively action; for many dashed off to the chase; the game took various directions, and ran long and with much incident; and in this vast wild amphitheatre we watched them with intense interest.

There are times thus, on the dullest march,—and in the dullest life elsewhere,—when, as by accident, a general excitement comes, as the sudden whirlwind when the sun is reigning with the calmest tyranny; delightfully refreshing, like

a shower to drooping flowers, they give our souls new spirit and power to rise from the moral drought of routine and dull material life.

But our creek had little grass; and so we ascended to high hills again, while over the mountains to the Southeast rolled dark thunder clouds, which threw a purple,—a strange and mysterious light on the wild scenery; the storm seemed to pursue us; but suddenly in a bright gleam of sunshine, we looked down upon the welcome river, and struck at last, the welcome road. But then we saw another storm, coming from the Northwest; and this gave us some dashing rain; but soon all was bright and calm again; and at length we were gladdened with the view of Deer creek, whose little forests made it doubly inviting. And on entering them we surprised two deer, which were shot as they ran. And fat deer they were, poor fellows!

It is half-past nine at night. The storms, the labours, and the excitements of the day are over; all have enjoyed the food which toil has sweetened; all have enjoyed the soothing pipe; the horses graze quietly around, at the pickets; the camp fires burn irregularly through the woods; weather-beaten troopers are grouped about them silently drying their fresh meat on little scaffolds and boughs; leafy domes supported by natural pillars which art has imitated, are illumed here and there by the fitful fire-light; some sprays of foliage now and then catch and throw back bright gleams from the solemn obscurity; the broad moon has risen and begins to silver some tree tops, which are gently stirred by the light airs, which waft over the deep azure the fleecy fragments of the shattered storm-clouds; harmonious now, is the tree-frog’s monotone; in all this is the spirit of beautiful Repose; the true harmony and economy of Nature, which at night renovates her creations by universal sleep.

Sleep hath its fearful dreams,—Night its storms,—man his passions: God over all, in all has wonderfully mingled Good and Evil.

CLOUDS.

I know not whether past the crimson zone
Of evening, sail those ships of snow and gold—
The beauteous clouds that seem to hover and fold
Their wings—like birds that having all day flown
Against the blue sky, now at set of sun
Play for a moment gaily on their soft
And burnished pinions, wide; then from aloft
Sink down below the horizon and are gone!
I know not where they fold their shining wings
In very truth; nor what far happy land
They come together in—a radiant band,
The brightest, purest of all earthly things!
But well I know that land lies broad and fair
Beyond the evening: Oh! that I were there!

PINE FORK PLANTATION:

A CHRONICLE OF OLD DAYS IN THE OLD DOMINION.

BY PEN. INGLETON, ESQ.

VIII.

WHAT MASTER COMMISSIONERS WERE LIKE IN THE YEAR
OF GRACE 1680.

Paul was received with great cordiality by the Colonel and Amy, whom he saluted with a cousinly kiss; to that young lady's unconcealed dissatisfaction however. Their night adventure furnished matter for conversation for three days or a week, and then it was dismissed.

A carping or envious critic might have said, that Paul had about him a little of the city-gentleman-in-the-country air, and that his manners were in strong, even intended contrast, with those around him. Certainly he was neither too stiff nor polite—which is as great a sin with many as the stately air—but he could not be mistaken for a Virginia-bred cavalier; and every word and gesture of this young gentleman seemed to say, "I am just from my travels—look well at me!"

The contracted limits of our tale will not permit us to relate the occurrences of each day at Pine Fork: the excursions, the pleasure-parties, the visits of neighbors;—we cannot dwell on these phases of plantation life, though a true picture of that long dead race, and their habitudes, would present many points of interest: we must proceed.

About a week after Paul's arrival, he was sitting after dinner with Jack, discussing with much gusto a bottle of old sherry which the departure of Colonel Ralph and Mistress Amy had left them to enjoy in peace and quiet, when a loud noise was heard at the great door of the hall.

Jack rose; and on going to the window, was greeted with these words, uttered in a loud and consequential tone of voice—

"I demand, in the name of his Excellency, entrance!"

The speaker was a little, fussy, red-faced man, holding a bundle of papers in his right hand, and in his left a heavy riding-whip, with which he had been thundering at the door. He was accompanied by a tall and lean gentleman, cadaverous and long necked; and their horses, which showed signs of travel, were fastened near.

"Sir, I demand entrance in the name of his lordship, the governor."

"Well, gentlemen," said Jack Purnell, "I see no difficulty."

"Hum!" said the fat commissioner.

"Hem!" said his lean companion.

And they entered the mansion, and at the young man's instance took their seats beside the table. Jack Purnell filled two bell-shaped glasses with sherry, and presented them; then as he emptied his own,

"To his Excellency's very good health gentlemen," said he.

"Hum!" said the little commissioner, as though distrustful of this sentiment from his host; and unrolling his papers, after draining with great gusto his glass, proceeded to say that he was "the master commissioner, deputed by Lord Culpeper to collect the fines or penalties exacted of every one who had countenanced that black-hearted rebel, Bacon."

One might have supposed that this characterization of the boy-hero, would have produced much irritation in the mind of Mr. Jack Purnell, whose especial admiration Bacon was, and with whom the rebel leader was distantly connected. Nevertheless, no such irritation displayed itself: on the contrary he nodded politely. The commissioner continued—"that as Colonel Ralph Purnell, of Pine Fork, according to the testimony of his own letters exhibited to his Excellency the Governor, fell under the above category, he was ordered to demand of the said Ralph Purnell, Gentleman, the sum of one hundred pieces of eight, good and lawful money, for which he was prepared to give an acquittance, then and there."

"As commissioner—certainly," said Jack with (to Paul) ominous politeness.

"A like amount of tobacco would be equally good," continued the little commissioner.

"Wait!" exclaimed Paul blandly and softly, "I am informed that the piece of eight is now worth six shillings."

"Hum!" said the commissioner. Then turning to Jack: "I speak, I presume," said he "to the son of Mr. Ralph Purnell."

Jack nodded.

"Is that gentleman himself at home?"

"He is not, sir," said Jack, with great politeness. "I will, however, manage our matters I hope to your satisfaction."

"Well sir—to business."

"Pleasure before business, however, is my maxim, sir," replied Jack with great politeness, "wetting the lips I have always observed is a great aid to discussion. How like you this wine?"

"It is old," said the little man, licking his lips, "that shape of bottle is never made now."

"You might know its age from the dust and cobwebs. But look, here is the date—1645."

And Jack filled the glasses of his guest for the third time, with a glance at Paul, which that bland young gentleman concluded not to see.

Why should we lengthen out this disgraceful proceeding on the part of the scapegrace, who occupies so much more than his proper place in our history? At half-past five in the evening the master commissioners of his Excellency, "duly empowered, etc., etc., etc.," were in a state of most unseemly elation—at six very nearly drunk. Having thus accomplished his purpose, Mr. Jack Purnell slyly abstracted the commissioner's book, wherein were written minutes of his days labors, and wrote on a white leaf in the functionary's large sprawling hand:

"Colonel Ralph Purnell of Pine Fork—paid to the commissioners his penalty of one hundred pieces of eight, this day May 15, 1680."

Then sliding it back in his pocket, the young man called for servants to bring their horses and help them to mount.

The master commissioners had totally forgotten their business, and took leave of their hosts with many bows and maudlin smiles. Their measure was not full, however, for in going through the pine forests, about a mile from the house, they were suddenly assaulted by three or four negroes, and cuffed, knocked, and half-dragged from their horses, until they were glad to escape at a gallop.

They had no sooner disappeared than the two young men appeared from their concealment in the brushwood, and bursting with laughter, threw the servants a handful of silver.

This exploit when it was known, acquired for its projectors a gratifying amount of reputation among the anti-royal inhabitants of the county: but Col. Ralph was very indignant. The day after a special messenger conveyed to Governor Culpeper the one hundred pieces of eight with an explanation—"the money not having been paid and taken afterwards by a band of Indians as the commissioners alleged."

—

IX.

MR. MUSKRAT STATES THE RESULT OF HIS REFLECTIONS.

A few days after the scene related in the last chapter, Mr. Muskrat, the trapper, was seated in his hut, at sunset, busily engaged in weaving baskets of the tall marsh flag when he perceived clearly defined against the blood red sky which seemed to threaten a storm, the figure of Lory coming onward toward his habitation.

The old man uttered a subdued "ough!" and with the Indian instinct of deception, betook himself with greater assiduity than ever to his labors, thus purposing to act surprise and pleasure on Lory's arrival with more dramatic effect:—this manœuvre was not of difficult performance

inasmuch as the young man's eyes were bent upon the ground and his listless step seemed to betoken profound thought or sadness.

When his shadow fell upon the threshold, Mr. Muskrat rose abruptly to receive him, and pressed his hands with much real affection and respect. Then pointing to a wicker chair, ornamented with the skins of deer, foxes and otters, he said in his deep guttural tones—

"The son of Red Hawk is sorrowful: let him open his breast and point his finger to the marks on his heart."

Lory sat down and resting his forehead on his hand made no reply.

Muskrat groaned—that is the only word which comes near expressing the sound, half of irritation, half of grief given forth by his old lips.

"A cloud of pine smoke has hid White Hawk from his friend," he said at last; "who has kindled the fire?"

"No one," said Lory.

"White Hawk is sorrowful."

"Sick at heart—weariness."

"Let him tell his friend:—yes, let him talk with a straight tongue."

"He has nothing to talk about," said Lory, listlessly.

Muskrat groaned again.

"If the old man speaks plain words to the White Hawk, will the White Hawk listen and not get red in the face?" he asked with so much softness, that Lory raised his head.

"Plain words? Let him speak."

"The son of Red Hawk mourns?"

"No."

"Ough! A great sachem said when the sky was black with birds, 'there is nothing to be seen;—but the words did not make it so.'

"What have I to mourn?"

"I talked of pigeons."

"Well."

"Where is the White Pigeon?"

This Lory knew well was Mr. Muskrat's name for Amy. His face flushed.

"Beware how the White Pigeon is talked of. The arrow will be turned back to the hand that shot it."

"White Hawk is a great chief, his blood has run like a river in the veins of a thousand braves: Muskrat is nobody."

"Speak."

"Muskrat is nobody," continued the old Indian, "but he has a round, red, very big heart in his breast. His heart is neither snow nor ice: it is not white."

"Speak!" repeated Lory.

"Muskrat loves White Hawk more than his own father loved him."

"Speak not of my father!"

"And why not?" said the old Indian cunningly; "he was a great Sagamore: ten tribes mourned when his life ran out of his breast."

Lory's head sank.

"What has Muskrat to say—let him speak."

"The White Pigeon," said Muskrat, emboldened, "is not white. Her heart is blacker than her feathers."

Lory sprang up and caught Muskrat by the arm, with eyes that flashed fire.

"Black! does Muskrat wish to see the color of his blood!"

"It is very old and sluggish," said the trapper. "If a knife tapped at the heart, and said 'Come out,' it would not show itself."

Lory fell back trembling.

"Amy," he murmured;—"forgive me, Muskrat: I am sick at heart."

The Indian's old wrinkled face assumed an expression of deep commiseration, and he pressed his hand upon his heart as though to still its beating.

"Did the old hound," said he, "mumble with his toothless mouth at the dove that circled in the air, and pushed back the light of morning with her snowy breast? Did the Muskrat, burrowing in the swamp-mud, look up and see spots on the bright feathers of the White Pigeon? Did he think, that because love sharpened his old eyes, he could see to the end of the world?"

"Muskrat loved the father—let him speak with a straight tongue to the son."

"Listen then," said the old Indian. "In a far country there was once a flower so white and beautiful, that no plant of the forest but loved it. But it loved chiefly, and above all, another golden flower which grew beside it; and often when the wind blew and the leaves were stirred, the beautiful white flower would turn to its companion and whisper among its leaves. They lived thus many days, and all the plants around said, 'How much the white flower loves the golden flower there at her side.' But one night the evil spirit blew into the wild wandering wind seeds of another flower, that needed but a single night to take root and grow and flourish, and rise in the fresh morning a full grown plant, all spangled over with blooms of many colors, gay and flaunting, near the little white one. These many colors were far more beautiful, the plants all said, than the little golden one's; and they said this so often, that the white flower soon began to listen to them and to turn away from the golden one, her old companion;"—

Muskrat stopped to grind his jagged teeth: his eyes blazed with hatred and malignity.

Lory was as pale as death.

"Well," he said, in a voice that could scarcely be heard.

"The white flower before long," continued Muskrat, "forgot her golden-hued friend and playmate through so many days; and thought that nothing in the wide world equalled in beauty the new many-colored plant, borne there upon the wind by the evil spirit."

"And what did the golden flower?" murmured Lory.

"The good spirit transformed them all into living things, and the golden flower struck his knife into the heart of the evil plant, and it disappeared from the earth!" cried Muskrat rising up with rage and hatred glowing in every muscle of his face.

Lory covered his brow with his hand:—large drops of sweat rolled down his livid cheeks.

"No," he murmured, "the golden flower died of despair!"

And rising from his seat, he said to Muskrat, who again crouched down and looked on him with profound commiseration and affection:

"What will be will be:—it is written on bark. Lory has heard Muskrat with open ears, and his words are not yet lost on the wind. Yet the day is spent and nothing gained."

The old Indian raised his arm.

"Let the White Hawk listen!" said he.

"I hear the thunder—a storm is coming up out of the west."

"The storm is coming—with it the lightning. If a tree stands in the way and raises its head too high, what does the lightning?"

"Go! your words are idle!" said Lory, whose bosom was still agitated by the suspicions instilled into him by Muskrat's parable.

The old man laid his hand upon his heart:—his eyes were full of tears.

"Spirit of the great Red Hawk," said he, "counsel your son!"

As though in answer to the old Indian's adjunction, a flash of lightning and a peal of thunder gleamed and boomed across the forest.

"He is answered!" exclaimed Muskrat; and thinking that no more need now be added, he was silent.

Lory looked out of the window, saw the approaching storm, and making a farewell sign to Muskrat, left the hut.

Five hundred paces from the ravine, he met Paul and Amy walking leisurely along, and engaged in earnest conversation. The Indian's eyes flashed, and a terrible expression of hatred crossed his brow. The arrow was rankling in his heart; but then he began to reason with himself. Was there any foundation for Muskrat's allegorical tale;—could Paul Hansford stand between him and Amy's affection? Could she, so good and kind, break his heart by withdrawing from him her love and giving it to another?

Just as his suspicions were at their height, and his misery consequently perfect, a sunbeam broke forth from a cloud and lit up Amy's beautiful, innocent face as with a divine halo.

"No! no!" murmured Lory; and two tears rolled down his cheeks.

X.

GUITAR AND BANJO.

As though nature desired to inspire with confidence and hope the mind of the poor Indian boy, the storm which had threatened to burst with torrents of rain, passed off to the southward with a few heavy drops, and the sun, poised on the western belt of pines, shone forth with new joy and splendor. The trees glittered with rain drops, the grass was greener and more fresh, the little rivulets danced along in the crimson sunset-light with new merriment and glee.

Amy saw Lory and beckoned to him to come and join them. The Indian slowly drew near.

"Why, Lory," said Amy, in her clear, cheerful voice, "what makes you so pale?"

"Indeed, sir, you look unwell," said Paul, blandly and with much courtesy.

Lory replied in an agitated voice that he had been a little unwell; was now better: and Amy immediately expressed great concern. A closer observer than Lory, might have observed a sly glance at Paul now and then, as she inquired with warm and affectionate solicitude after Lory's ailment; and to say the truth, that gentleman could not conceal his annoyance. He became suddenly dumb, or answered snappishly. This extraordinary circumstance may possibly be explained on the hypothesis that Mr. Paul had already been affected by the young girl's bright eyes; and in further explanation it may here be added, that Paul was a firm believer in the caprices of womankind, and could not deny that Lory had in him much to attract.

He however entirely recovered his equanimity by the time they arrived at Pine Fork, which was about twilight; and Lory—poor, simple, confiding Lory—had nearly banished every word of Mr. Muskrat's from his mind. They found there Miss Mary Jones, who having ridden out with Jack, had taken refuge there from the threatened storm. The Colonel was also seated on the portico, whose lattice-work was covered with flowery vines, and quietly smoked his long-stemmed pipe.

"Ah, there comes Paul," said Jack; "the good Paul, the excellent Paul.—St. Paul, in a word: is it really true that you have fought

against the wild beasts at Ephesus, my friend?"

"Ah, cousin Jack, still joking I see."

"Or have you only contended for ladies' favors in courtly drawing rooms? Speak up, unsophisticated Saint, and give us a little scandal."

"Mr. Purnell," said Miss May Jones, "has been plaguing me all the evening, and now, I suppose, having another object, will suffer me to drop into a little obscurity."

"Well come and talk to me, May," said Colonel Ralph, "if these fine foppish gallants amuse themselves at your expense, you shall find in me a respectful and courtly cavalier—especially if you will read me this passage from Stanley."

"Stanley!" exclaimed Paul, with polite astonishment; "is it possible, uncle Ralph, that his poems have—(reached this outlandish place, he was about to say, but added instead.)—extended the name of their author to Virginia?"

"See now! What a conceited fellow is this Paul! 'To Virginia,' forsooth, and 'is it possible,' indeed! On my honor, these dogs will make it necessary for me to repeat my favorite passage from Richard III., in order to convince them that Master William Shakespeare's works have reached this *terra incognita*."

Paul apologised gracefully. Jack challenged the old gentleman to repeat the passage in question, and on Colonel Ralph's attempt and failure, took him very seriously to task for setting young men like themselves so bad an example of deception.

"What!" said Paul, smilingly glancing over the volume of poems, "all my old favorites! I forgot to say, uncle Ralph, that I know old Tom Stanley perfectly well, and have often heard him repeat these lines here. And ah! yes! these have been arranged to music and sung with great applause."

"Do you know the air?" asked Jack.

"Why—why now—yes;—at one time,"—hesitated Mr. Paul, and making a strong effort to blush.

Of course he was importuned to play, and at last reluctantly consented, and dispatched a servant to his chamber for his guitar, with which he had already enlivened the monotony of Pine Forkian existence.

"Attend now, ladies," said Jack; "consider that Paul has been imported, or exported from London to the Colony, expressly to give us an idea of life in the great city. No simpering now, my dear fellow."

"Don't mind him, cousin Paul," said Amy, "he isn't worth attention."

Jack would have made some reply, no doubt, to this hostile manifesto on the part of his "unfeeling sister," as he was accustomed to call her, but at that moment the guitar arrived.

"If you could forget you are in the Colonies now, Paul," said he, "and imagine Amy here, instead of a very plain and ordinary looking country girl, (here the young man dodged to avoid a buffet from his sister,) if you could fancy her a Whitehall beauty with corkscrew curls, lovelock on forehead, etc., etc."—

"Oh, Mr. Purnell!" exclaimed Miss Mary.

"Don't mind him, cousin Paul," repeated Amy, "if he could play himself, he would not abuse you so."

This observation from Amy, seemed to suggest an idea to Mr. Jack Purnell. He declared his unwillingness to listen to "that ridiculous love song," and leaving the company entered the mansion just as Mr. Paul Hansford commenced. Paul's voice, naturally clear and melodious, had been highly trained: he had in fact expended much time and labor on the art of playing the guitar and accompanying the music; and the song which he now sung for the entertainment of the company, was remarkably sweet and plaintive in the words and the air. These were the words:

"When, cruel fair one, I am slain
By thy disdain,
And as a trophy of thy scorn
To some old tomb am borne,
Thy fetters must their power bequeath
To those of Death!

"But if cold earth or marble must
Conceal my dust;
Whilst hid in some dark ruin, I
Dumb and forgotten lie,
The pride of all thy victory
Will sleep with me.

"And they who would attest thy glory,
Will or forget or not believe thy story!
Then to increase their triumph let me rest,
Since by thine eyes slain! buried in thy breast!"

No sooner had this madrigal ended, and the last vibrations of the guitar died away, than the strain was taken up by that unconscionable Mr. Jack Purnell, who holding in his hands an immense banjo, and playing thereon with all the negro contortions—rolling his eyes, swaying about and patting his foot—gave utterance to a plantation song very popular at that day, and revived in these latter years with slight modifications, under the title of "Uncle Ned."

An overwhelming burst of laughter greeted this parody on Mr. Paul's performance, and Colonel Ralph declared that the banjo was infinitely the best of the two; observing further that these foreign guitars and notions were a disgrace to the rising generation.

"Now there is Lory, who plays like a master on a master instrument—a good old Virginia fiddle—violin you call it I suppose. Where's your

fiddle, Lory?" he asked of the Indian, who in an obscure corner sat silent and motionless.

"The sound has gone away from it; but Lory will speak to his father plainly. It only cries when I play, and it distresses him—me."

"The viol—fiddle I mean, Uncle Ralph," said Paul, smiling. "is certainly a finer instrument than the guitar; but then there is a softness, a melody about the guitar—when well played, of course," added Paul, with some conceit, "that is possessed by"—

"Nothing but the tamborine," observed Jack, "you are right."

"Miss Mary am I not horribly treated here!" exclaimed Paul, moving to the side of May Jones; and there until tea time that young gentleman remained, engaged in the most confidential—at times it seemed the most tender—conversation; Miss Amy Purnell having been forgotten so completely by Mr. Paul, that he was apparently unconscious of her presence. Amy lost her self-command—fretted—pouted—stole bad-humored glances at May Jones and Paul. Still they went on murmuring confidentially; and when supper was ready Paul led in May, and then as though waking to a sense of the impropriety of leaving Amy to Jack, apologised.

Amy pouted and grew angry. Lory saw the expression of her face, and murmured, "Muskrat has sharp eyes: they have seen what does not exist: he dreamed. To the Great Spirit Lory trusts all. *He is nothing.*"

XI.

HOW IN HIS WANDERINGS, HIS EXCELLENCY, LORD CULPEPER CAME TO PINE FORK PLANTATION.

After a while it seemed to Lory, that something unusual was going on at Pine Fork. All the young ladies for ten miles around would flock in on certain days, betake themselves to Amy's bedchamber, and there for hour after hour, keep up a continuous humming, as though a thousand bees were pent up and making vain efforts to issue forth. There was much sending to Jamestown for stuffs, trinkets, and a variety of little matters, used on occasions of rural celebration, (sold by Mr. William Matys of that ilk,) and everything seemed to indicate that a grand festival of some sort was on the tapis. Moreover, certain obscure allusions, (very obscure to Lory) were observed to make mistress Amy either blush or laugh, whereas it seemed to Lory that there really was nothing whatsoever in these allusions either of an embarrassing or amusing nature.

Several times Lory asked innocently for some explanation of these matters—for the Indian

was the simplest creature in the world;—and strange to say, he found himself laughed at most unmercifully. But Amy never joined in this laughter. It seemed even that many of these sallies irritated her against those who made Lory their laughing-stock: and once or twice, after gazing long and musingly on the Indian's open, ingenuous countenance, traces of tears had been discovered on her cheeks.

During all these arrangements and mysterious preparations, Mr. Paul Hansford was absent from Pine Fork; but it was currently reported that this absence was only temporary, and each day he was expected to make his appearance again.

So days passed at Pine Fork, when one evening that establishment was honored with the presence of a distinguished guest.

Colonel Ralph was perusing that same "Virginia Gazette," which at the commencement of our brief chronicle the reader has seen treated so ignominiously, when Jack putting his head in at the open window, informed him that a visitor was coming up the avenue.

"Who?" asked Colonel Ralph.

"His Excellency, sir."

"Lord Culpeper?"

"Himself."

"Then he is welcome," said the old gentleman, rising "for that heavy cloud forebodes a storm."

"To say nothing of this nice pattering," said Jack, pointing to the leaves of a large elm which glistened with rain drops.

"Where is the Governor?"

"Listen—or rather look."

In fact, the footfalls of a horse were at that moment distinctly heard, and the next moment a cavalier, covered with dust and bending in his saddle from weariness, issued at full gallop from a bend in the avenue, which had for a minute concealed him, and entering the gate, drew up with a sudden pull which threw his animal on its haunches.

"Welcome, your Excellency," said Colonel Ralph, with stately, but perfect courtesy. "Here Tom! Cato! take Lord Culpeper's horse."

"Ah!" stammered his Excellency, at sight of Jack, whose face was evidently not unknown to him, "I am—this is—Mr. Purnell, I believe!"

"Of Pine Fork, my lord—at your service, I need not assure you, wholly."

The Governor was not a man to continue embarrassed long, in whatever situation he might be placed. He bowed low, and dismounting, was marshalled through the old antler-and-weapon-hung hall, between a double line of respectful and attentive negroes, to the guest chamber.

Thence he reappeared in half an hour much renovated and refreshed, and in a few words ex-

plained how he had been hunting, had been separated from the company, lost his way, and seeing a storm coming, betaken himself to the first shelter that presented itself,—“which he was rejoiced to know was the residence of a gentleman so brave and courteous as Mr. Ralph Purnell.”

His Excellency, Lord Culpeper, was in one particular a notable man. It was well known that he took all advantages, had an eye to his own personal matters everywhere and at all times, and used this exaggerated courtesy and blandness just as he would have made use of any other agent of success. But spite of all this—spite of the fact that he was notoriously insincere, so perfect was his acting, so winning his noble and dignified amenity of manner, that once in his presence, all evil reports were forgotten, or set down as calumny. His influence, too, was not that of Governor, man in power, but simply of the individual.

That sharp-sighted, and, (in his own estimation,) incredulously hard-hearted young man, Mr. Jack Purnell, was completely deceived; and when his Excellency, with that noble and profoundly respectful amenity for which he was famous, led mistress Amy to the supper table, she too began to think that “perhaps papa had done Lord Culpeper injustice all this time.” Thus were these two young people won over by his Excellency.

Colonel Ralph was not quite so deeply impressed by his lordship's blandness—and it was evident that the Governor “laid himself out,” as we say in our time, to conciliate his host. To all Colonel Ralph replied with the same stately but perfect courtesy we mentioned: the true courtesy of the old English, (who was also the Old Virginia) gentleman, which he could and did practise toward enemies even, when those enemies were in the relation of guests to him.

After supper the household, accompanied by their guest, betook themselves to the portico to enjoy the delightful breeze of the fair June evening.

“What a noble landscape!” exclaimed his Excellency gazing on the waving hills and the glancing stream which shone in the double light of the sunset and the rising moon. “On the honor of a gentleman, sir,” he added, turning to his host, “I am almost tempted to set forth to-night, weary as I am, on my return. Romantic, you perceive, Miss Purnell!”

To his astonishment, Amy took scarcely any notice of this address. She was straining her eyes toward the end of the avenue, and in a moment a traveller rapidly approaching made his appearance. It was Paul, and in ten minutes he had drawn up, dismounted, saluted his Ex-

cellency blandly, and shook hands with the family. Amy blushed; and looked round to find if any eyes were fixed upon her. No one looked at her, and as Lory was out somewhere hunting, his quick-sighted eyes, so often bent upon her face, were not to be feared.

"You had a pleasant ride, Mr. Hansford?"

"Yes, your Excellency: very,"

"I told my dear host but now," continued the Governor, "that I felt almost a desire, weary as I am, to set forth for Jamestown."

"And I was about to reply, my lord," said Colonel Ralph, "that it would forever destroy my reputation for courtesy, were I to allow you to leave Pine Fork to-night. I cannot."

"Well, be it so. That I am heartily welcome, sir, I feel assured."

"Your lordship will always find that welcome—with all your followers."

"Are master commissioners included?" asked the Governor, with a pleasant smile.

"Ah, you have not forgotten that freak of the boys. Jack is a sad dog! a sad dog!"

"Your Excellency should have been here," said Paul blandly, thus strongly contrasting his manner with his words; "the master commissioners absolutely disgraced themselves."

"Disgraced themselves! Is it so, Mr. Purcell?"

"They were drunk," said Jack with great conciseness.

"Your Excellency would have enjoyed it rarely," said Paul.

"Enjoyed it?" asked Jack.

"Certainly. Ah! my lord, they do not know what times we had in London. You recollect when the Mohocks"—

"Bah!" said his Excellency with a warning look to Paul, "London is London, my dear sir: we are now in the Colony of Virginia."

"True," said Colonel Ralph, who understood this look perfectly; "were it England, you would have better roads."

"Which reminds me to ask you if your highways here are good after rains?"

"Why does your Excellency ask?"

"I must set out to-morrow."

"Surely you will not terminate your visit so abruptly, my lord."

"Necessity, my dear sir," said his Excellency, "a thousand matters call me."

"Well, if your visit must be so short, let it so be. At what hour in the morning will your lordship have my coach?"

"One moment, my dear host. Pardon me. I cannot cause you that inconvenience. Besides, I prefer much my horse."

"You will ride on horseback?—and on a road you have not travelled?"

"But I must have a guide: so far, my dear friend, I shall tax your kindness."

"I will be your guide," said a voice behind him, soft and measured.

The Governor turned suddenly.

"Oh, Mr. —," he stammered.

"Yes," said Lory, gravely, "I see I am not forgotten, sir."

"Forgotten, my young friend," said Lord Culpeper, resting his hand kindly on Lory's shoulder, "your's is too handsome a face to forget. I accept your kind offer with gratitude."

Lory sat down in a retired corner, to rest after his hunt, and bent his sad, happy eyes on Amy, who stood now in the moonlight. "No! no! he dreamed!" the Indian murmured.

XII.

HOW THE "PIECE OF EIGHT" WAS LOWERED TO ITS ORIGINAL VALUE, AND HOW THE PROCLAMATION WORKED.

Early on the next morning the Governor, resolutely refusing to remain longer at Pine Fork, on the ground that were he to tarry longer he would never leave it, set out with Lory for Jamestown. The old family coach with its six superb bay horses, with their long sweeping tails and sleek coats, stood at the door, but the Governor declared his preference for riding on horseback; and so they set forth—his Excellency with a profusion of bows and smiles, Lory with a long, loving look at Amy.

For on that morning, as he walked out early, he had met the young girl in the garden, and they had a very happy talk: and Amy had been so dear and kind to him—seemed even to love him better than she had before—poor Lory!—and had uttered so many soft, tender words, which echoed still in his great trusting heart! Finally she had put her little white hand in his, and smiling sweetly, said, "Come back soon, dear Lory." How kind those words! how he heard them still, and how the air seemed full of them. Poor Lory!

The Indian was aroused from his reverie by Lord Culpeper.

"We have met before," he said, glancing sideways at the young man.

"Yes," said Lory, in his mild voice, "I have again another matter, sir."

"A matter of importance?"

"To many: one above all."

"Is that one myself," asked his Excellency with a smile.

"Oh, no! but you have some concern with it certainly."

"What is it? Speak."

Lory took from his breast the letter delivered to him by Muskrat, on the day our tale commenced.

"It is found in this," he said, "Lory would have travelled from the forests to the Town, in another day, but all is done."

"May the fiend seize me!" said Lord Culpeper pleasantly, "if I can make aught sensible of this jargon."

"It is bad language," said Lory, "but it means the *Brown Otter*."

"What! the rascal who attempted to fire Jamestown, and burn us all to ashes?"

Lory's head moved affirmatively.

"Cursed Tuscarora," said the Governor, indifferently; "of course he is a dead man."

"I am a Tuscarora," said Lory proudly, and with a haughty glance.

"The devil! You a Tuscarora! Well, no offence, my young friend."

"We are poor; do not tread upon us."

"Well," said the Governor, who was somewhat wearied with this, to him, exaggerated partisanship, "you spoke of the *Otter*."

"He is a great brave."

"There is not much of the brave in him now."

"How so?" asked the Indian.

"He is ironed, and naught but bread and water is allowed him. Had he not been sentenced to be hung—reprieved now until the first day of August—he would have received the legal number of lashes to be given daily."

Lory's haughty eye flashed.

"Does the Governor of the pale faces wish to fill the Indian's head with blood!"

Lord Culpeper positively started at these indignant words.

"May all the devils seize me!" he replied, somewhat moved from his propriety, "if I recollected that you were a Tuscarora equally with *Brown Otter*. I'll not offend any man for naught, much less you, my dear friend. Come! come! we'll make up."

"Lory has not quarrelled," the Indian said, indifferently, "he is the *Brown Otter*'s friend."

"The *Otter* had better far make his peace with his only available friend, the Great Spirit."

Lory perfectly well understood that his Excellency had commenced bargaining.

"Yet the *Black Crow* was pardoned."

"True—true. But then you were so anxious for his pardon, my friend, (those furs by-the-by were magnificent!) and your *present* so movingly made; and considering again that his crime was only manslaughter"—

"The *Brown Otter* has not killed."

"He has attempted to fire."

"He was unfortunate. An evil spirit came and whispered in his ear."

"If he had succeeded where would Jamestown now be?"

"He was mad."

"Ah, you Indians are persuasive talkers;—and you wish a pardon, my dear friend, eh?" asked his Excellency.

"Yes," said Lory.

"Immediately?"

"At once."

"But remember he is sentenced—to die on the first day of August."

"He will not die," said Lory.

"Will not?" said his Excellency, affecting much amusement at the Indian's abrupt tone:—abrupt, for Lory was becoming weary, knowing from experience the certain result; "and pray why will he escape death?"

"Because the life of a poor Indian is far less than two hundred big new coins—two hundred pieces of eight."

"Two hundred?"

Lory nodded and added, "Or one hundred beaver furs."

"One hundred?"

"Good ones," said Lory.

"Hum!" quoth his Excellency.

"He is then free when the furs come?"

"Why, it is a man's life, my friend."

"A poor Indian's. Well, Lory will offer more. We offer for the *Brown Otter* two hundred and fifty pieces of eight."

"I was just thinking, my dear friend," said his Excellency, with great blandness, "that after all there were extenuating circumstances in the case of the *Otter*. I promise you to examine closely into those circumstances. As to your present I accept it, and I do not fear any failure on your part."

"The money or the furs shall reach you by a sure hand."

"I'll take it out in furs."

Lory nodded.

"The two hundred and fifty pieces of eight," he said, "each at six shillings"—

The Governor sighed.

"I am sorry, my friend," he said, "but this is no longer so. Five shillings! five shillings is hereafter the value of that coin. Miserable! it would not pass at its proclamation value. I was compelled to lower it again."

The true and only reason for Lord Culpeper's proclamation, again lowering the value of the coin to five shillings, was simply and purely the fact that his own salary was about to be paid, and he would have been compelled of course to receive the piece of eight at its fictitious overvalue. We need not follow this conversation further. The Indian knew what "examining into extenuating circumstances" meant, and his Excellency

knew that he knew it. There the subject dropped.

The matter being concluded satisfactorily, Lord Culpeper blandly turned the conversation; and so they went swiftly, side by side, on their fleet and spirited animals, toward "James City," where the inhabitants were no doubt anxiously awaiting his Excellency's return. In the minds of many the fact was not at all clear that some wandering Tuscarora had not taken a fancy to his lordship's scalp.

XIII.

THE SHIPWRECK OF A HIGH HEART.

Having piloted Lord Culpeper to a certain Mr. Jacob Randall's, where they spent the night, and from which Jamestown was visible in the distance, Lory bade the Governor farewell, and at six in the morning, set out on his return to Pine Fork.

The character of the Indian was of that fine sensitive nature, that he was for the most part sorrowful or happy without the faintest realized foundation. Was he sunk in a dreamy melancholy?—he could give no reason for it. Was he as happy as a lark in the bright morning when spurning the dull earth all heaven opens before it?—he could assign no cause for it. But, on this occasion, he knew well why his heart beat fast, and his eyes filled with happy tears: Amy had returned to her old affectionate ways, and loved him.

He could not doubt it: the whole world whispered it, or confirmed it, rather. The blue sky spreading over him in one wide unbroken canopy, lit by the first golden beams of the rising sun; the forest trees making the soft air redolent of tender leaves, and rocking on their tops a thousand singing birds; the ancient immemorial ponds that slept like islands in a sea of verdure, supporting myriads of lazy lilies, and glassing on their surfaces the old enormous pines, whose tops glowed in the beautiful morning; the bright-finned fish, that stirred the limpid water, or darted, at the Indian's approach, beneath the broad-leaved flags; the hare, that flitted across his path; the turkey, that, hidden in the copse, scarcely displaced the silence with his stilly croak; the deer, that passed at distant openings like shadows; the hawk, that fanned the blue air with his tireless wing; the crow, that flew creaking, on his black flapping pinions; the woodpecker, that was drumming near, on the dead top of some old tree, and tired of this at last, flew fighting with his fellows:—all, to Lory, were the living proofs that Amy loved him, for they seemed so happy.

The Indian was above suspicion: he could not watch, and doubt, and spy out all about the one he loved. His was one of those natures which lean blindly and passionately on an object, and will not doubt. There was something ridiculous, laughable in this blind confidence of the Indian boy; this ignorance of a fact which stared the whole (Pine Fork) world in the face, some persons will say. But there is nothing ridiculous in tragedy:—we do not laugh at Othello.

Lory rode so well, that he arrived at Pine Fork at ten o'clock at night, his pony foaming and he himself weary. Just as he reached the bottom of the long slope which led to the mansion, a black shadow rose up from the brushwood, and stood in the path. He drew his long hunting knife, and reined up, suddenly.

"White Hawk is not an owl," said the voice of Muskrat, "his eye is the eagle's."

Lory observed a tremor in the old man's voice which he could not understand.

"Muskrat has wandered from his stream," said he, "is he not afraid that harm will come to him?"

Muskrat laughed savagely.

"He has sharp claws: he will tear his enemies: let them come."

"Why are you here?"

The old Indian muttered something.

"Speak!"

Muskrat seemed to struggle with himself: at last he said:

"Let White Hawk come with Muskrat to-night: a star will fall and strike him in the big house."

"Your words are idle."

The old man laid his hand on his arm.

"Do not go to-night to the big house," he said earnestly, "I see a red pool of blood in the sky above it. Beware."

Lory smiled.

"Muskrat is hurt by the moon!" said he, "the stars have talked wrong to him. Go; the day is done, and it is time to sleep."

The old Indian seemed to struggle violently with his own thoughts: he muttered, gesticulated, pondered, then started on, looking again at Lory. At last he released the young man's arm and falling back:

"Go!" he said, in a savage and exulting voice "it is written on bark!"

Lory touched the pony with his heel, and went on silently through the shadow. At the gate he dismounted and continued his way on foot through the shrubbery. He reached the portico, and was about to pass in with the silent cat-like tread of the Indian hunter, when turning his eyes, they met a sight which made his arm fall

powerless, and sent the blood to his heart like a flood of fire.

A sort of hiss issued from his pallid lips, and he trembled like a leaf in the wind: then his face from dead pale, became crimson with passion, and drawing his knife, he bounded forward with a furious shout.

Amy started with an affrighted cry from Paul Hansford's arms, where she had lain, her head upon his breast.

The Indian uttered no distinct words: he threw himself upon Paul with his long hunting knife, and struck at his heart.

Just, however, as he reached the spot, and just as the weapon, directed with unerring precision, was about to plunge itself into the young man's bosom, the Indian's foot slipped. The consequence was, that it was buried in the wooden seat, where it remained imbedded.

Paul rose in absolute horror: Amy, with terror in every feature. Then understanding at once the whole, she threw herself between the two men, and with pallid lips and trembling limbs, muttered some incoherent words. But there was no longer any fear of Lory: the animal predominated in his nature for a moment only: his eyes no longer gleamed with rage and ferocity:—there was nothing in them but despair.

With heaving bosom and trembling lips, he bent a long fixed look upon the young girl of mingled grief and despair, placed his hand on his heart, and turned away—his brain reeling. Amy fainted; and when she had again revived, learned that he was gone. In fact, the bright-bladed knife, which remained firmly fixed in the wood-work, was the only evidence to her, that all this scene was not some wild and unnatural dream.

The Indian had retraced his steps toward the forest, his head turning round, and almost staggering in his gait. All was over for him: all was gone: what was he—where was he? He mounted his pony, he knew not how; and letting the rein fall on his neck, bent forward. The little animal, as though knowing his master's wish, set forward into the forest at full speed.

All around him seemed to the Indian at that moment, the merest phantasmagoria. Nothing was real. The tree tops seemed to swim in the moonlight which just tipped the loftiest boughs; the stars seemed so many laughing eyes, the bushes and young pines assumed the shapes of fiends, or mocking wood-demons, who, with large axes on their shoulders, were coming forward, to clutch him with their long, sharp-clawed hands, and bear him away into the depths of night.

Then his agonized brain returned to the scene he had just witnessed; and his heart was again

on fire. Amy untrue! Amy love any one but him! Amy, his hope, his love! his life! Was it not the veriest feverish dream which clung to his numbed senses and made him imagine that this thing could be real! Amy false in her words—with her soft, sweet voice: false in her looks and smiles—with those large, tender eyes, and innocent lips: false in everything; and he had so long worshipped her! The Indian's brain tottered. He could not weep: he had no tears. The fire in his heart dried up all, and seemed to scorch him.

The pony, left without guidance, had taken the cross road leading toward the hut of the trapper. Lory knew nothing of the road: he was sensible of nothing but a fire in his head, and what seemed ice upon his heart. He put his hand to his forehead, and tried to dispel what appeared to him to be a mist floating across them, and obscuring every object.

A hundred paces further, he reeled in his saddle, and overcome by vertigo, fell forward, not however, from his seat. The pony was suddenly checked by a vigorous hand, and the young man's fainting form was received by the trapper Muskrat, whose whole frame quivered with consuming rage:

"Wo, wo to them!" he groaned, "they have killed my child!"

XIV.

BEFORE THEM GO THE MERRY MINSTRELSY.

We refrain from any attempt to describe the state into which the whole household at Pine Fork were thrown by the incident just related. Mr. Paul's nerves did not recover from the shock for days; and still that gentleman was by no means deficient in the universal characteristic of cavaliers at that day—personal courage;—not in the least. Had it been a question of his willingness to repair to one of the secluded haunts provided for that purpose in London, on some fine morning, and there, sword in hand, stand face to face, in fair combat, with any one, it is certain that Mr. Paul Hansford would cheerfully have consented. That was civilized fighting, and necessary in a community where the sword was looked upon as the best, surest, and above all the most fashionable arbiter. But to be attacked by a wild Indian like his rival, (Paul had now learned all,) to defend himself from an infuriated tiger; a man who sprung upon him unawares with a long, deadly knife—ough!—this was the shock to the nerves of Mr. Paul Hansford.

Colonel Ralph said nothing: would allow no one to speak of the Indian. He felt it neces-

ry that he should, as the director of his household, suppress these tumultuous passions. Amy remained in her room for several days, Jack became uncommonly serious, and Paul was moody.

All this, however, in a few weeks, wore away, and the day drew near for Amy's marriage. At last that joyful day arrived, and all again was bright and cheerful: Amy smiling and happy, the Colonel good-humored, Mr. Paul bland, and Mr. Jack Purnell at his customary antics.

A festival, especially a wedding party, in Virginia, is a merry and hearty affair, where all are expected to act as seems fit to them, and enjoy themselves as much as possible, in every manner possible. These occasions were signalized once in a different manner, doubtless, than at present; but even to-day, when a wedding comes round in one of our old country-houses, there is much to remind you of the "good old times:"—those mythical times, which ever fly us, never are the present;—and, by the very contrast, throw you back from our own pushing, mercantile age, to former days:—days when three times as many guests were invited as the house could lodge, even when sofas, mats, and lounges were put in requisition:—when he who laughed the loudest was the worthiest man—and "strong heads," boasting of their deeds of prowess on many a well contested field, went home reeling, and could do no business for a week.

Amy's wedding was a merry one, as might have been expected. All the neighborhood for thirty miles around were present, and the noise of carriage wheels and hoofs, was, for a time, almost stunning.

The appearance of the bride at the door of her chamber, with her attendant bridesmaids, was signalized by old Rosin, as had been arranged, with merriest music. The old man stood at the entrance of the hall, which had been arranged and re-arranged day after day for the occasion, having behind him a crowd of shining faces, black as though carved from ebony, and instinct with broad-grinning joy. The group so placed, was in itself a picture—though from the English appearance of the vast antler-hung hall, (around whose ornaments of guns, and spears, and pictures, flowers were wreathed in profusion,) there was some incongruity in those ebony faces. No sooner had the bride, as we have said, made her appearance, than Rosin, holding in his powerful grasp an old fiddle, struck up a martial and triumphant tune, and nodding vigorously, with rolling eyes, and swaying gait, preceded her into the great dining room, followed by the, as yet, silent fiddlers of less note.

This was the signal, and through the crowd of white faces and stalwart forms, a thrill and a

hum ran, and spread itself—a murmur of rejoicing.

Then the bride appeared, clad in white satin, and blazing with the old family jewels. In her hair, she wore a snowy rose-bud, and the whispered commentary on every side, was that Amy had never "looked so pretty." Paul himself was radiant.

After the ceremony, came the dancing and feasting: the din of voices; the merry laughter; the rejoicing in so many ways appropriate to and customary at weddings everywhere. It is not necessary that we should describe the scene. We could not if we wished to.

Amy was going through that storm of kisses which must be endured by every bride, when she heard a visitor say:

"Where is the young Indian?"

"Why dead, of course!" was the reply.

Amy shuddered and turned round.

"Did you—say Lory was—dead?" she murmured, turning pale.

The "wedding guest" with great surprise at the young girl's emotion, replied:

"Oh, no! Only that since he was not here he could not be alive, you know, Miss Amy! They said he was very much devoted to you."

Amy turned away from the speaker. Her heart was suddenly oppressed: she felt that while she was happy, Lory was most unhappy. Paul saw her emotion, and exerted himself to dissipate it; and finally succeeded. Carried away by the mirth and joyful uproar around her, she suffered her thoughts to dwell only on the present scene. When the recollection of Lory crossed her, she banished it; and soon it did not return.

—

XV.

HAWK HOLLOW.

Heavy clouds piled up above the sunset, bethought that a storm was about to burst upon Hawk Hollow.

At the door of his cabin, the Indian Muskrat stood, or rather crouched, resting one hand on the window sill, and snuffing like a deer, the odor of the coming storm. The air became dark and close, the sun blazed behind the black clouds, and a strong, cool wind, arose and fell, and came in gusts against the tree tops, and died away in the moaning forest. Muskrat looked around him despairingly, and sank upon the rude seat at the door of his humble cabin.

Then covering his face with his hands, he gave himself up to thought, seeming to sleep. He remained long in this sombre attitude, and at

times large tears fell between his fingers, and his breast shook with sobs.

Who could tell whither that old Indian's thoughts wandered, on that stormy evening, alone in the forest there: his heart well nigh broken; his old life soon to be desolate?

So overcome by grief was he at last, that he heard not a light, hurried step upon the matted grass, and saw not the form which stood before him. A hand was laid on his shoulder. He bounded up as if a brand of fire had touched him.

Amy stood before him. Amy, very sad and pale, her eyes full of grief and terror, her hands trembling.

"I heard," she hurriedly said, "that Lory—my brother Lory was here, and very ill: where is he?"

Muskrat for a moment was overcome with rage at the sight of this young woman, who had caused, he rightly thought, all Lory's despair. Amy never stood, throughout her life, in a more perilous position. But Muskrat was worn away—exhausted; hatred and anger no longer moved him so powerfully as before. His old, stubborn heart, was well-nigh broken, and in the wreck of his affections, he cared for nothing else, was nearly deadened to all other emotion.

He finally stepped aside and allowed Amy to enter.

Stretched on a pallet, formed of bear skins, in one corner of the hut, the young girl saw the form of Lory; but so worn, and thin, and pale was his face, that she burst into a flood of passionate tears.

She hastened to him and knelt down at his side: the old Indian looking on with grim despair.

"Lory!" exclaimed Amy, in a voice interrupted by sobs, "Lory, I am here to see you; indeed, I did not know you were sick; I did not know where you were—indeed I did not. Say, do you know me, Lory. Speak to Amy, brother!"

This was his familiar name at Pine Fork, when they were children. The Indian turned his pale worn face toward her, and murmured rather than said:

"Oh, yes! Lory knows Amy very well, and loves her, very much!"

Amy sobbed.

"I did not know where you were: no one told me you were sick, Lory. Will you forgive me?"

Lory smiled and his large, dreamy eyes, filled with tears; he was so feeble.

"Yes, I have been sick," he said, "Lory thought he was strong, and brave, and grand, but he is a little child."

"He is strong and brave!" cried Muskrat, raising his old gaunt form above them at the foot of the couch, "he is a great chief! The lightning is afraid of him; it will not strike him! Go! the pale faces are deer; they wither like grass!"

Amy scarcely heard this wild outburst. She had no eyes or ears for any one, but the sick boy.

"Lory," said she, "do you forgive me? Oh! do not say you hate me; for I am so unhappy to think—"

"Forgive you, Amy," said Lory, "look! If the heaven-fire strike one of the trees now, (how the thunder rumbles!) can we be angry? Lory was unhappy; but he was weak and poor! Ah, so weak!"

"Lory, you have the purest heart, the noblest soul! Oh, forgive me for my wrongs to you—for all my carelessness and deception"—

"How it mutters!" said the Indian, dreamily, "I think I have heard my father speak before!"

Amy pressed her forehead to one of his cold hands: Lory turned at her touch.

"I have had a fever, Amy," he said. "Yes, Lory has been sick. He hunted one night, and slept on damp earth: Lory is ill, but will soon be well again."

A terrific flash of lightning gleamed across the cabin, and a roar like that of a thousand cannon, rolled through the forest: Muskrat, crouching on the other side of the Indian, raised his swarthy face, and listened with startled eyes.

"Red Hawk talks to his child," he muttered, "he is on a fair hill-top in the happy hunting grounds, and his shout is the rush of a mountain torrent! The blaze of his eye lights up the forest."

Lory placed his thin hand on the old man's brow, which was covered with a cold sweat.

"We will hunt there many happy days, Muskrat," he said, "look! the father is smiling on his child."

The old man took the thin hand and pressed it to his lips. His frame trembled, and two large tears rolled down, and fell upon Lory's arm.

Amy was sobbing as if her heart would break. The Indian's eyes were fixed dreamily upon the bright sky, which, for a moment, had rolled away its veil of clouds.

Then he turned his face gently toward the young girl.

"How beautiful," he said, "and does Amy love Lory?"

"I love you dearly, brother," said the young girl, in a voice stifled with sobs.

"Then Lory is happy;" was the Indian's reply, with a brighter look than before.

His eyes dwelt for a moment with great softness on old Muskrat, and then turning round, he bent his glances on the sky. Amy and Muskrat waited in silence : but Lory never spoke again.

Throughout that long and stormy night, the old Indian sat rocking to and fro, and groaning ; he had never for a moment dropped the young man's cold hand. At times, in the pauses of the storm, he sung monotonously some old chaunt, celebrating the prowess of his tribe ; or spoke to Lory as though he were still alive. On the next evening, he was found dead beside the body of the young Indian, whose lifeless hand he clasped even in death. To both, their love was their life.

To "Flower," on her Birthday.

Do you remember, dear, the morn
I came along the shady road
And, happy, entered the abode
So cheerful then, soon so forlorn ;—

And took my darlings to my heart
And kissed them gaily o'er and o'er,
And stood delighted at the door,
And felt, at once, as though a part

Of my own being long had been
Estranged from me, and blessed the day
I left the Lowland, far away,
And came to you, and entered in ;—

And took you to my arms again,
And laughed and acted like a child—
I scarce was more indeed—and smiled
The happy smile, that in its train

Brings long and golden hours of joy
Free from all weariness ; and then
Rambled through every wood and glen,
And ever laughed, a happy boy ?

The forest is as green once more,
The winter days are passed and gone,
The grass is flowery on the lawn,
The rose droops blooming round the door :

The tall old trees wave every bough
In happy winds, and hounteous blooms
Make the air heavy with perfumes—
And light is on my darling's brow.

Four years have flown since then, and thus
Fourteen long summer-times have gone
Since shone her beauteous birth-day dawn—
And she is doubly dear to us :

To me at least, who pull the oar
Here in the billowy sea of life,
Where all is toil and wearying strife
Who first shall reach the golden shore.

Live happy, dear, in the old home
I came to on that radiant morn,
And taste of pleasures only born
Of simple life : the days to come,

Will thus go onward happier far,
Than if amid the dapper throng
You wearied at the rattling tongue
And sickened in the wordy war :

Live happy, asking God to guide
Your footsteps, and to bless us all :
We are as withered leaves that fall
And float away upon the tide :

But none to idle chance are left—
The bright blue heaven is still above,
And prayer does much to bend the love
Of God to all of strength bereft.

Then dear, pray ever and give thanks :
Forgive and love : forget all wrong :
So shall He place you in the throng
Ranged round his throne in shining ranks !

BON GAULTIER'S BALLADS.*

BON GAULTIER is the *nom de plume* of Wm. Edmonstoune Aytoun, Esq., Editor, Professor, &c., and we suppose we shall do him no wrong in considering him as the author of both these works. The characteristics of both—of which the most prominent is a very copious and rather weak versification—are so much the same, that it is difficult to imagine them to have flowed from different pens. And if Bon Gaultier did not in fact write the poems upon which he placed the seal of his editorial *imprimatur*, they have at least proceeded from a disciple of his school, and are worthy of the adoption they have received.

Taking up these works in the order of their appearance in the world, we shall first turn our attention to the Book of Ballads. The first three of these ballads are paltry parodies of three of the most beautiful romances in Lockhart's collection. Parodies are always productions of very questionable merit. Whether puns be justly called the lowest species of wit, or not, it may certainly be said with truth, that parodies are the lowest species of poetry. They generally confess a poverty of idea, and recommend themselves only by caricaturing the ideas of others. Hence, they pay a sort of forced tribute to the

*THE BOOK OF BALLADS ; edited by Bon Gaultier : London. 1849.

LAYS OF THE SCOTTISH CAVALIERS AND OTHER POEMS. By Wm. Edmonstoune Aytoun, Editor of Blackwood's Magazine, and Professor of Rhetoric and Belles Lettres, in the University of Edinburgh. Redfield, Clinton Hall, N. Y. 1852.

merit of the original: for, unless that have achieved popularity, the parody is destitute of the reflected light, by which alone it shines. It can please only, in the same way, as the tricks of monkeys do, when they exhibit a mimicry of man: by suggesting grotesque resemblances between the dignified and the contemptible, between pathos and buffoonery, heroism and bombast—in a word, by degrading high, pure, and noble images, into their opposites, and obliging us to take that humiliating step from the sublime to the ridiculous. It must be admitted, that they are often acceptable to the public—nor do we deny that sometimes they deserve the success they meet. There have been parodies, commendable for their wit, and yet, so tempered with respect for the subjects upon which it was exercised, as to give pleasure rather than offence to those at whom its shafts were aimed. Such, for example, are the Rejected Addresses of Horace Smith. Again: a parody is sometimes a just satire upon a production, which enjoys, from the reputation of the writer, or from other causes, a place in the public esteem, to which it is in no way entitled. Here the parody does good service, in exposing vain or vicious pretensions, and holding it up to the derision of the world. "The Vision of Judgment" of Southey, in which he impiously profanes the mysteries of Heaven, and raises George the Third to its highest honors and rewards, was thus rebuked by the "Vision of Judgment" of Lord Byron, with a mingled force of truth and sarcasm seldom displayed in any work. It is not to be denied, that the latter jests too irreverently with things that should always be approached with awe: but how much less is this offence, viewed in connection with its motive, than the solemn blasphemy committed by the venal poet of Royalty. These exceptions to the general rule, which we have affirmed respecting parodies, are, however, of rare occurrence. They are commonly the result of ambitious mediocrity, too often of envy and malevolence; and we have many a time sympathized with the honest indignation of Thomas Haynes Bayley, when he resented the multiform imitations and travesties of his beautiful "I'd be a butterfly":

"I'd be a parody—made by a ninny,
On some little song with a popular tune—
Not worth a half-penny, sold for a guinea,
And sung in the Strand by the light of the moon."

To this latter class—the larger one—of poetic caricatures, these ballads of Bon Gaultier, seem to us to belong. They smack of that low ribaldry, which panders to the levelling propensities of the mob, and could not have been written by one capable of appreciating at their true worth, the exquisite Spanish ballads, which they at-

tempt to ridicule. Such an one would as soon think of painting his mistress in the garb of a fish-woman of Billingsgate, or of sending her as a Valentine, one of the vile prints, which of late years, have been displayed in the shop windows on the 14th of February.

Next, follow a series of ballads, called "American;" which are more objectionable than the preceding, inasmuch as libels upon a whole nation are more censurable than lampoons of individuals. The execution of Colt for the murder of Adams, with all its horrible accessories, is gloated over in the spirit of the miserable wretches, who crowd to witness public executions, and make a mockery and a jest of the spectacle. The most disgusting incidents in American life, such as the lynchings, the gougings, the street fights, are made the themes of song, and paraded as leading features in the society and manners of the United States. Even the stale sarcasms about "wooden nutmegs" and "Pennsylvania bonds" are raked out of the mire, and flung in the face of the reader. Statesmen, like Clay and Webster—and poets, like William Cullen Bryant,—are represented as uttering the coarsest slang, and behaving like the ruffians of St. Giles' or the Five Points. The most scurrilous descriptions and epithets, which vagabond tourists have lavished upon the people of this country, are reproduced, without the redeeming accompaniment of originality, wit, or humor. It is a waste of time to say more of these pitiful ebullitions, of national prejudice and spite, and we dismiss them.

The rest of the book consists of miscellaneous ballads: some of them flat, stupid, and commonplace; and others, redolent of the same mean malice we have so often alluded to. The most distinguished living poets of England, Macaulay, Montgomery, Tennyson, Leigh Hunt, and Bulwer, are represented as scrambling for the vacant place of Laureate; and imitations attempted of their several styles, in comparison with which, the sallies of Kunkel's Serenaders are classic and elegant. If there be any motive discernible in all this book—any design to be detected in it, it is that of defacing and defiling the reputations of literary men, who have won distinction and honor on both sides of the Atlantic. The garrets of Grub Street seem to be the sources, whence the author has derived his manners, his morals, his elocution and his wit.

But it is time to consider our hero in another light. Having done his utmost to depreciate his contemporaries, in the "Lays of the Scottish Cavaliers" he enters the lists in his own person—his name inscribed upon his banner, and the *fanfare* of his own trumpet heralding his approach. Will it be credited that after all this,

Macanlay is his model? That he has stooped to pick up his moulted feathers, and essayed with them to imitate his flight? Strange and humiliating, but nevertheless true and palpable, is the fact. In the structure of his verse, in the selection of his topics, in the contrivance of his machinery, there is, throughout a manifest and miserable effort to copy "The Lays of Ancient Rome." The maker of parodies is but a maker of parodies still, and nothing more. He has but one instinct. Whether his vein be facetious or serious, comic or heroic, his precedence is the same. He sits down before a great picture, and draws a caricature. His copy resembles the original, as a gingerbread figure of Washington might represent his immortal statue by Houdon. The grim old Douglas, the intrepid Claverhouse, the noble Montrose, suffer no less in his hands, than the literary champions of our own time.—Reversing the doom of Midas, it is his fate to transmute all the gold he touches into the basest of metals.

"Nil tetigit, quod non *deturpavit*."

We have not space to quote examples of the imitation—and the deterioration—of which we have spoken. But as a specimen of the wordy, superfluous style, in which Bon Gaultier tells a story, and his way of suiting the mode of speech to the character of the speaker, we turn to his "Edinburgh after Flodden." It begins with the arrival of a fugitive from the fatal field, and you expect, at the first line, that he is about to announce the evil tidings:

"News of battle! news of battle!

Hark! 'tis ringing down the street:

And the archways and the pavement

Bear the clang of hurrying feet.

News of battle! who hath brought it?

News of triumph? who should bring

Tidings from our noble army,

Greetings from our gallant king?

All last night we watched the beacons

Blazing on the hills afar,

Each one bearing as it kindled,

Message of the opened war." &c., &c., &c.

Such a torrent of *talk*, poured out for two pages, upon the luckless messenger, seems to have disgusted him: and when the questioners at last stop to take breath, and receive his answer, he scorns to give any. His temper was doubtless that of the Waterloo hero, the Highlander, in Hogg's admirable ballad—who thus replies to a querist of the same stamp:

"Ye are but some lawland loon,

Silly body, lawland body—

No the bluid that wore the croon,

Silly body, lawland body—

Ye'se get nocht frae her nain sell,

Silly body, lawland body—

*De'il a news to you she'll tell,
Silly body, lawland body."*

Bon Gaultier's messenger, however, preserves a rigid silence, and makes his way, attended by all the population of Edinburgh "shrieking, praying, by his side," through two pages more, until he reaches the presence of the elders, assembled in the town hall, and presided over by their Provost. Now, this Provost, (according to Mr. Aytoun) was a man not wholly unknown in Scottish history—Archibald Douglas, Earl of Angus, commonly called "Bell-the-Cat," from the following incident: James the 3d, the predecessor of the gallant king who fell at Flodden, had disgusted the nobles, by the favors which he bestowed upon certain low-born and worthless flatterers. A meeting of the nobles was secretly held, at which measures were pressed and discussed, for seizing and punishing these obnoxious favorites. All were agreed as to what ought to be done; but the question was, who should take the lead? And this was brought to an issue by Lord Gray, who re-quoted the fable of the mice that had resolved to tie a bell round the cat's neck, which should give warning of her approach, but of which no mouse was bold enough to undertake the tying. As soon as he was done speaking, up started Douglas and exclaimed, "I am he will bell the cat." He kept his word; and, with the support of his confederates, seized upon the unhappy wretches, and hung them almost in the monarch's sight. Such was the man—fearless, proud, fierce, and unrelenting—sparing of words—prompt in action—whom Mr. Aytoun introduces, making a speech of four pages to the terrified burghers of Edinburgh, in which he recommends the women to go to Church and pray for their deliverance, and exhorts the men to make ready to "meet in patience" a death which seems to be inevitable. We, by no means, disapprove the sentiments which are put into his mouth—the heroic resolve to fall amid the ruins of the city—the reliance upon God's mercy in the last hour of trial; but we are very sure that old Bell-the-Cat would have tried other means to revive the fainting courage of the city, instead of confessing the cause to be hopeless—and that he never wasted so many words upon any subject whatever, in the whole course of his life.—We give the conclusion of his death-song:

"Once more let us meet together,

Once more see each other's face;

Then like men that *need not tremble*,

Go to our appointed place.

God our Father, will not fail us

In that last tremendous hour;

If all other bulwarks crumble,

He will be our strength and tower:

Though the ramparts rock beneath us,

And the walls go crashing down,

Though the roar of conflagration
 Bellow o'er the sinking town—
 There is yet one place of shelter,
 Where the foeman cannot come,
 Where the summons never sounded
 Of the trumpet or the drum.
 There again we'll meet our children,
 Who, on Flodden's trampled sod,
 For their king and for their country
 Rendered up their souls to God.
 There shall we find rest and refuge,
 With our dear, departed brave:
 And the arches of the city
 Be our universal grave!"

To which we would suggest, as an appropriate pendant, the chorus of that spirit-stirring strain:

"Let us all be unhappy together!"

We have only one more topic to touch on.—Bon Gaultier is very indignant, that Mr. Macaulay should have done such unpardonable injustice to the memory of Claverhouse, as to call him "a soldier of distinguished courage and professional skill, but rapacious and profane, of violent temper and obdurate heart." So far from deserving such a character, it is the opinion of Mr. Aytoun, that "*John Grahame of Claverhouse*," was a gentleman, not only free of reproach in these respects, but of exemplary piety; for which he quotes the memories of Sir Ewen Cameron of Locheill, in which we are assured, that besides family worship performed regularly evening and morning, at his house, he retired to his closet at certain hours, and employed himself "in that duty." Mr. Aytoun, thinks, moreover, that all, or nearly all, the writers, who have delineated the character of his hero, have fallen into a similar error, and have filled the public mind with unfounded prejudice against him. He thinks, too, that the so called persecutions of the Covenanters were not really persecutions for religious non-conformity; but rather necessary severities, for the purpose of repressing the rebellious conduct, the rapine and murder, in which the non-conformists, as a general rule, were prone to indulge themselves. And he even goes so far as to say "that a large portion of our national annals have been most unfairly perverted, and that party strife and polemical rancour have combined to distort facts and to blacken names, for mere temporary and ephemeral purposes."

In making the charges of "rapacity" and "violence of temper," we think it probable that Macaulay may have travelled out of the record. We do not remember to have seen Claverhouse accused of extortion: and the ideal we have pictured to ourselves, from the descriptions of his character, is that of a cold, stern, relentless man, rather than one violent and passionate. But, in

the other points at issue between them, Mr. Aytoun will stand but little chance of a verdict at the hands of the reading public. The attempt which he makes, is of the same character with the effort to prove that Richard the Third was no murderer. It is an assault upon one of the firmest and most solidly built portions of the historical edifice. Whether the cement in which the stones are laid, be truth or prejudice, time has hardened the whole structure, and made it proof against much more formidable batteries, than these at the command of Bon Gaultier. To silence his fire, we think it only necessary to present the character of Claverhouse, as drawn by Sir Walter Scott in the text and notes of *Old Mortality*. Scott, who has been so belaboured by Dr. McCrie for alleged injustice to the Covenanters, may now, perhaps, be challenged, by the jealous Jacobitism of Mr. Aytoun, as a judge "deaf to all evidence in favor of one whom he has been previously taught to condemn;" and if so, it will only be one more illustration of a case that has been justly decided, to the great dissatisfaction of both the parties litigant. But to our quotations—

"This remarkable person (Claverhouse) united the seemingly inconsistent qualities of courage and cruelty, a disinterested and devoted loyalty to his prince, with a disregard of the rights of his fellow-subjects. He was the unscrupulous agent of the Scottish Privy Council, in executing the merciless severities of the government in Scotland during the reigns of Charles II. and James II.; but he redeemed his character by the zeal with which he asserted the cause of the latter monarch after the revolution, the military skill with which he supported it at the battle of Killiecrankie, and by his own death in the arms of victory.

"The gentleness and urbanity of that officer's general manners, the high and chivalrous sentiments of military devotion which he occasionally expressed, his deep and accurate insight into the human bosom, demanded at once the approbation and the wonder of those who conversed with him; while, on the other hand, his cold indifference to military violence and cruelty, seemed altogether inconsistent with the social, and even admirable, qualities which he displayed. Morton could not help, in his heart, contrasting him with Balfour of Burley; and, so deeply did the idea impress him, that he dropped a hint of it as they rode together at some distance from the troop.

"'You are right,' said Claverhouse, with a smile; 'you are very right—we are both fanatics; but there is some distinction between the fanaticism of honour, and that of dark and sullen superstition.'

" 'Yet you both shed blood without mercy or remorse,' said Morton, who could not repress his feelings.

" 'Surely,' said Claverhouse, with the same composure: 'but of what kind? There is a difference, I trust, between the blood of learned and reverend prelates and scholars, of gallant soldiers and noble gentlemen, and the red puddle that stagnates in the veins of psalm-singing mechanics and crack-brained demagogues, and sullen bores; some distinction, in short, between spilling a flask of generous wine, and dashing down a can full of base muddy ale?'"

We have brought Bon Gaultier face to face with old "Waverley" himself; an authority whom no rational man will accuse of wanting extensive and accurate information, or of indulging undue hostility towards the followers of the Stuarts. There we leave him; repeating that cruel and peculiarly Scottish sarcasm in one of Sir Walter's favorite anecdotes, where the judge says to his old antagonist at the game of chess, upon whom he had just passed sentence of death, "And now, Donald, my man, I think I've *checked ye for ance!*"

THE UNATTAINED.

BY MARGARET JUNKIN.

How often do the loftiest-soaring thoughts
That ever in our minds find nestling place,
Elate most subtly, the detaining grasp,
Language would lay upon them!

High and clear,
Through the pure ether of our silent souls,
Swells the ecstatic music,—circling still,
With fuller utterance to our inward sense,
Lower and lower, till the voice drops deep
Within our thrilling bosoms. When we haste
To seize the lark-like singer, and to frame
And fit it round with words, whose wiry bonds
Shall hold the captive fast, that other ears
May hear what we have heard,—we lift our hand,
And lo! the place is empty! We had set
Our deftly woven cage, with nicest art;
Then with exultant feeling, looked to see
The airy thing, a fluttering prisoner there,—
But find we only have the soft-lined nest,
Without its occupant.

The quick-winged thought,
Too subtle for our snare, is safe escaped;
And far above receding,—upward, on,
Through the mind's radiant atmosphere, we catch
What evermore we fail to others' sense
To render audible. Some ruffled down,
Snatched all too rudely from the silvery breast,—
Some feathers, azure-tipt, dropt from the wings
Beyond us spread, alone are left to prove
The presence of the singer in our souls!

OVID BOLUS, ESQ., ATTORNEY AT LAW AND
SOLICITOR IN CHANCERY.

A FRAGMENT.

* * * * *

And what history of that halcyon period, ranging from the year of Grace, 1835, to 1837; that golden era, when Shimplasters were the sole currency; when bank-bills were "as thick as Autumn leaves in Vallambrosa," and credit was a franchise,—what history of those times would be complete, that left out the name of Ovid Bolus? As well write the biography of Prince Hal, and forbear all mention of Falstaff. In law phrase, the thing would be a "deed without a name," and void; a most unpardonable *casus omissus*.

I cannot trace, for reasons the sequel suggests, the early history, much less the birth-place, pedigree, and juvenile associations of this worthy. Whence he or his forbears got his name or how, I don't know: but for the fact that it is to be inferred he got it in infancy, I should have thought he borrowed it: he borrowed everything else he ever had, such things as he got under the credit system only excepted: in deference, however, to the axiom, that there is *some* exception to *all* general rules, I am willing to believe that he got this much honestly, by *bona fide* gift or inheritance, and without false pretence.

I have had a hard time of it in endeavoring to assign to Bolus, his leading vice: I have given up the task in despair; but I have essayed to designate that one which gave him, in the end, most celebrity. I am aware that it is invidious to make comparisons, and to give preëminence to one over other rival qualities and gifts, where all have high claims to distinction: but, then, the stern justice of criticism, in this case, requires a discrimination, which, to be intelligible and definite, must be relative and comparative. I, therefore, take the responsibility of saying, after due reflection, that in my opinion, Bolus's reputation stood higher for lying than for any thing else: and in thus assigning preëminence to this poetic property, I do it without any desire to derogate from other brilliant characteristics belonging to the same general category, which have drawn the wondering notice of the world.

Some men are liars from interest; not because they have no regard for truth, but because they have less regard for it than for gain: some are liars from vanity, because they would rather be

well thought of by others, than have reason for thinking well of themselves: some are liars from a sort of necessity, which overbears, by the weight of temptation, the sense of virtue: some are enticed away by the beguilements of pleasure, or seduced by evil example and education. Bolus was none of these: he belonged to a higher department of the fine arts, and to a higher class of professors of this sort of Belles Lettres. Bolus was a natural liar, just as some horses are natural pacers, and some dogs natural setters. What he did in that walk, was from the irresistible promptings of instinct, and a disinterested love of art. His genius and his performances were free from the vulgar alloy of interest or temptation. Accordingly, he did not labor a lie: he lied with a relish: he lied with a coming appetite, growing with what it fed on: he lied from the delight of invention and the charm of fictitious narrative. It is true he applied his art to the practical purposes of life; but in so far did he glory the more in it; just as an ingenious machinist rejoices that his invention, while it has honored science, has also supplied a common want.

Bolus's genius for lying was encyclopediacal: it was what German criticism calls many-sided. It embraced all subjects without distinction or partiality. It was equally good upon all, "from grave to gay, from lively to severe."

Bolus's lying came from his greatness of soul and his comprehensiveness of mind. The truth was too small for him. Fact was too dry and common-place for the fervor of his genius. Besides, great as was his memory—for he even remembered the outlines of his chief lies—his invention was still larger. He had a great contempt for history and historians. He thought them tame and timid cobblers; mere tinkers on other people's wares,—simple parrots and magpies of other men's sayings or doings; borrowers of and acknowledged debtors for others' chattles, got without skill; they had no separate estate in their ideas: they were bailers of goods, which they did not pretend to hold by adverse title; buriers of talents in napkins making no usury; barren and unprofitable non-producers in the Intellectual Vineyard—*nati consumere fruges*.

He adopted a fact occasionally to start with, but, like a Sheffield razor and the crude ore, the workmanship, polish and value were all his own: a Thibet shawl could as well be credited to the insensate goat that grew the wool, as the author of a fact Bolus honored with his artistical skill, could claim to be the inventor of the story.

His experiments upon credulity, like charity, began at home. He had long torn down the partition wall between his imagination and his memory. He had long ceased to distinguish between

the impressions made upon his mind by what came from it, and what came to it: all ideas were facts to him.

Bolus's life was not a common man's life. His world was not the hard, work-day world the groundlings live in: he moved in a sphere of poetry: he lived amidst the ideal and romantic. Not that he was not practical enough, when he chose to be: by no means. He bought goods and chattles, lands and tenements, like other men; but he got them under a state of poetic illusion, and paid for them in an imaginary way. Even the titles he gave were not of the earthly sort—they were sometimes *clouded*. He gave notes, too,—how well I know it!—like other men; he paid them like himself.

How well he asserted the Spiritual over the Material! How he delighted to turn an abstract idea into concrete cash—to make a few blots of ink, representing a little thought, turn out a labor-saving machine, and bring into his pocket money which many days of hard exhausting labor would not procure! What pious joy it gave him to see the days of the good Samaritan return, and the hard hand of avarice relax its grasp on land and negroes, pork and clothes, beneath the soft speeches and kind promises of future rewards—blending in the act, the three Cardinal virtues, Faith, Hope and Charity; while, in the result, the chief of these three was *Charity*!

There was something sublime in the idea—this elevating the Spirit of man to its true and primeval dominion over things of sense and grosser matter.

It is true, that in these practical romances, Bolus was charged with a defective taste in repeating himself. The justice of the charge must be, at least, partially acknowledged: this I know from a client, to whom Ovid sold a tract of land after having sold it twice before: I cannot say, though, that his forgetting to mention this circumstance made any difference, for Bolus originally had no title.

There was nothing narrow, sectarian, or sectional, in Bolus's lying. It was on the contrary, broad and catholic. It had no respect to times or places. It was as wide, illimitable, as elastic and variable as the air he spent in giving it expression. It was a generous, gentlemanly, whole-souled faculty. It was employed often on, and in behalf of, objects and occasions of this sort, but no more; and no more zealously on these than on others of no profit to himself. He was an Egotist, but a magnificent one: he was not a liar because an egotist, but an egotist because a liar. He usually made himself the hero of the romantic exploits and adventures he narrated; but this was not so much to exalt himself as because it was more convenient to his art.

He had nothing malignant or invidious in his nature. If he exalted himself, it was seldom or never to the disparagement of others, unless, indeed, those others were merely imaginary persons, or too far off to be hurt. He would as soon lie for you as for himself. It was all the same, so there was something doing in his line of business, except in those cases in which his necessities required to be fed at your expense.

He did not confine himself to mere lingual lying: one tongue was not enough for all the business he had on hand. He acted lies as well. Indeed, sometimes his very silence was a lie. He made non-entity fib for him, and performed wondrous feats by a "masterly inactivity."

The personnel of this distinguished Votary of the Muse, was happily fitted to his art. He was strikingly handsome. There was something in his air and bearing almost princely, certainly quite distinguished. His manners were winning, his address frank, cordial and flowing. He was built after the model and structure of Bolingbroke in his youth, *American-ized* and *Hoosier-ized* a little by a "raising in," and an adaptation to the Backwoods. He was fluent but choice of diction, a little sonorous in the structure of his sentences to give effect to a voice like an organ. His countenance was open and engaging, usually sedate of expression, but capable of any modifications at the shortest notice. Add to this his intelligence, shrewdness, tact, humor, and that he was a ready debater and elegant declaimer, and had the gift of bringing out, to the fullest extent, his resources, and you may see that Ovid, in a new country, was a man apt to make no mean impression. He drew the loose population around him, as the magnet draws iron filings. He was the man for the "boys,"—then a numerous and influential class. His generous profusion and free-handed manner impressed them as the bounty of Cæsar the loading commonalty of Rome: Bolus was no niggard. He never higgled or chattered about small things. He was as free with his own money—if he ever had any of his own—as with yours. If he never paid borrowed money, he never asked payment of others. If you wished him to loan you any, he would hand you a handful without counting it: if you handed him any, you were losing time in counting it, for you never saw anything of it again: Shallow's funded debt on Falstaff were as safe an investment: this would have been an equal commerce, but, unfortunately for Bolus's friends, the proportion between his disbursements and receipts was something scant. Such a spend-thrift never made a track even in the flush times of 1836. It took as much to support him as a first class steamboat. His bills at the groceries were as long as John Q. Adam's Abolition peti-

tion, or, if pasted together, would have matched the great Chartist memorial. He would as soon treat a regiment or charter the grocery for the day, as any other way; and after the crowd had heartily drank—some of them "laying their souls in soak,"—if he did not have the money convenient—as when did he?—he would fumble in his pocket, mutter something about nothing less than a \$100 bill, and direct the score, with a lordly familiarity, to be charged to his account.

Ovid had early possessed the faculty of ubiquity. He had been born in more places than Homer. In an hour's discourse, he would, with more than the speed of Ariel, travel at every point of the compass, from Portland to San Antonio, some famous adventure always occurring just as he "rounded to," or while stationary, though he did not remain longer than to see it. He was present at every important debate in the Senate at Washington, and had heard every popular speaker on the hustings, at the bar and in the pulpit, in the United States. He had been concerned in many important causes with Grymes and against Mazereau in New Orleans, and had borne no small share in the fierce forensic battles, which, with singular luck, he and Grymes always won in the courts of the Crescent City. And such frolics as they had when they laid aside their heavy armor, after the heat and burden of the day! Such gambling! A negro *ante* and twenty on the call, was moderate playing. What lots of "Ethiopian captives" and other plunder he raked down vexed Arithmetic to count and credulity to believe; and, had it not been for Bolus's generosity in giving "the boys" a chance to win back *by doubling off on the high hand*, there is no knowing what changes of owners would not have occurred in the Rapides or on the German Coast.

The Florida war and the Texas Revolution, had each furnished a brilliant theatre for Ovid's chivalrous emprise. Jack Hays and he were great chums. Jack and he had many a hearty laugh over the odd trick of Ovid, in lassoing a Camanche Chief, while galloping a stolen horse bare-backed, up the San Saba hills. But he had the rig on Jack again, when he made him charge on a brood of about twenty Camanches, who had got into a mot of timber in the prairies, and were shooting their arrows from the covert, Ovid, with a six-barrelled rifle, taking them on the wing as Jack rode in and flushed them!

It was an affecting story and feelingly told, that of his and Jim Bowie's rescuing an American girl from the Apaches, and returning her to her parents in St. Louis; and it would have been still more tender, had it not been for the unfortunate necessity Bolus was under of shooting a brace of gay lieutenants on the border, one frosty morn-

ing, before breakfast, back of the fort, for taking unbecoming liberties with the fair damosel, the spoil of his bow and spear.

But the girls Ovid courted, and the miraculous adventures he had met with in love beggared by the comparison, all the fortune of war had done for him. Old Nugent's daughter, Sallie, was his narrowest escape. Sallie was accomplished to the romantic extent of two ocean steamers, and four blocks of buildings in Boston, separated only from immediate "perception and permanency," by the contingency of old Nugent's recovering from a confirmed dropsy, for which he had been twice ineffectually tapped. The day was set—the presents made—*enperle* of course—the guests invited: the old Sea Captain insisted on Bolus's setting his negroes free, and taking five thousand dollars a piece for the loss. Bolus's love for the "peculiar institution" wouldn't stand it. Rather than submit to such degradation, Ovid broke off the match, and left Sallie broken-hearted; a disease from which she did not recover until about six months afterwards, when she ran off with the mate of her father's ship, the Sea Serpent, in the Rio trade.

Gossip and personal anecdote were the especial subjects of Ovid's elocution. He was intimate with all the notabilities of the political circles. He was a privileged visitor of the political green-room. He was admitted back into the laboratory where the political thunder was manufactured, and into the office where the magnetic wires were worked. He knew the origin of every party question and movement, and had a finger in every pie the party cooks of Tammany baked for the body politic.

One thing in Ovid I can never forgive. This was his coming it over poor Ben O. I don't object to it on the score of the swindle. That was to have been expected. But swindling Ben was degrading the dignity of the art. True, it illustrated the universality of his science, but it lowered it to a beggarly process of mean deception. There was no skill in it. It was little better than crude larceny. A child could have done it; it had as well been done to a child. It was like catching a cow with a lariat, or setting a steel trap for a pet pig. True, Bolus had nearly practised out of custom. He had worn his art threadbare. Men, who could afford to be cheated, had all been worked up or been scared away. Besides, Ford couldn't be put off. He talked of money in a most ominous connection with blood. The thing could be settled by a bill of exchange. Ben's name was unfortunately good—the amount some \$1,600. Ben had a fine tract of land in S—r. He has not got it now. Bolus only gave Ben one wrench—that was enough. Ben never breathed easy afterwards. All the V's and

X's of ten years' hard practice, went in that penful of ink. Fie! Bolus, Monroe Edwards wouldn't have done that. He would sooner have sunk down to the level of some honest calling for a living, than have put his profession to so mean a shift. I can conceive of but one extenuation: Bolus was on the lift for Texas, and the desire was natural to qualify himself for citizenship.

The genius of Bolus, strong in its unassisted strength, yet gleamed out more brilliantly under the genial influence of "the rosy." With boon companions and "reaming suata," it was worth while to hear him of a winter evening. He could "gild the palpable and the familiar, with golden exhalations of the dawn." The most common place objects became dignified. There was a history to the commonplace articles about him: that book was given him by Mr. Van Buren—the walking stick was a present from Gen. Jackson: the thrice-watered Monongahela, just drawn from the grocery hard by, was the last of a distillation of 1825, smuggled in from Ireland, and presented to him by a friend in New Orleans, on easy terms with the collector: the cigars, not too fragrant, were of a box sent him by a schoolmate from Cuba, in 1834—before he visited the Island. And talking of Cuba—he had met with an adventure there, the impression of which never could be effaced from his mind. He had gone, at the instance of Don Carlos y Cubanos, (an intimate classmate in a Kentucky Catholic College,) whose life he had saved from a mob in Louisville, at the imminent risk of his own. The Don had a sister of blooming sixteen, the least of whose charms was two or three coffee plantations, some hundreds of slaves, and a suitable garnish of doubloons, accumulated during her minority, in the hands of her uncle and guardian, the Captain General. All went well with the young lovers—for such, of course, they were—until Bolus, with his usual frank indiscretion, in a conversation with the Priest, avowed himself a Protestant. Then came trouble. Every effort was made to convert him: but Bolus's faith resisted the eloquent tongue of the Priest, and the more eloquent eyes of Donna Isabella. The brother pleaded the old friendship—urged a seeming and formal conformity—the Captain General urged the case like a politician—the Señorita like a warm and devoted woman. All would not do. The Captain General forbade his longer sojourn on the Island. Bolus took leave of the fair Señorita: the parting interview held in the orange bower, was affecting: Donna Isabella, with dishevelled hair, threw herself at his feet: the tears streamed from her eyes: in liquid tones, broken by grief, she implored him to relent,—reminded him of her love, of her trust in him, and of the consequences—now not much longer to be

concealed—of that love and trust; ("though I protest," Bolus would say, "I don't know what she meant exactly by *that*.") "Gentlemen," Bolus continued, "I confess to the weakness—I wavered—but then my eyes happened to fall on the breast-pin with a lock of my mother's hair—I recovered my courage: I shook her gently from me. I felt my last hold on earth was loosened—my last hope of peace destroyed. Since that hour, my life has been a burden. Yes, gentlemen, you see before you a broken man—a martyr to his Religion. But, away with these melancholy thoughts: boys, pass around the jorum." And wiping his eyes, he drowned the wasting sorrow in a long draught of the poteen; and, being much refreshed, was able to carry the burden on a little further,—*videlicet*, to the next lie.

It must not be supposed that Bolus was destitute of the tame virtue of prudence—or that this was confined to the avoidance of the improvident habit of squandering his money in paying old debts. He took reasonably good care of his person. He avoided all unnecessary exposures, chiefly from a patriotic sense, probably, of continuing his good offices to his country. His recklessness was, for the most part, lingual. To hear him talk, one might suppose he held his carcass merely for a target to try guns and knives upon; or that the business of his life was to draw men up to ten paces or less, for sheer improvement in marksmanship. Such exploits as he had gone through with, dwarfed the heroes of romance to very pigmy and sneaking proportions. Pistol at the Bridge when he bluffed at honest Fluellen, might have envied the swash-buckler airs, Ovid would sometimes put on. But I never could exactly identify the place he had laid out for his burying ground. Indeed, I had occasion to know that he had declined to understand several not very ambiguous hints, upon which he might, with as good a grace as Othello, have spoken, not to mention one or two pressing invitations which his modesty led him to refuse. I do not know that the base sense of fear had any thing to do with these declinations: possibly he might have thought he had done his share of fighting, and did not wish to monopolise: or his principles forbade it—I mean those which opposed his paying a debt: knowing he could not cheat that inexorable creditor, Death, out of his claim, he did the next thing to it; which was to delay and shirk payment as long as possible.

It remains to add a word of criticism on this great Ly-ric artist.

In lying, Bolus was not only a successful, but he was a very able practitioner. Like every other eminent artist, he brought all his faculties to bear upon his art. Though quick of perception and prompt of invention, he did not trust himself to

the inspirations of his genius for *improvising* a lie, when he could well premeditate one. He deliberately built up the substantial masonry, relying upon the occasion and its accessories, chiefly for embellishment and collateral supports: as Burke excogitated the more solid parts of his great speeches, and left unprepared only the illustrations and fancy-work.

Bolus's manner was, like every truly great man's, his own. It was excellent. He did not come blushing up to a lie, as some otherwise very passable liars do, as if he were making a mean compromise between his guilty passion or morbid vanity, and a struggling conscience. Bolus had long since settled all disputes with *his* conscience. He and it were on very good terms—at least, if there was no affection between the couple, there was no fuss in the family; or, if there were any scenes or angry passages, they were reserved for strict privacy and never got out. My own opinion is, that he was as destitute of the article as an ostrich. Thus he came to his work bravely, cheerfully and composedly. The delights of composition, invention and narration, did not fluster his style or agitate his delivery. He knew how, in the tumult of passion, to assume the "temperance to give it smoothness." A lie never ran away with him, as it is apt to do with young performers: he could always manage and guide it; and to have seen him fairly mounted, would have given you some idea of the polished elegance of D'Orsay, and the superb *menage* of Murat. There is a tone and manner of narration differing from those used in delivering ideas just conceived; just as there is a difference between the sound of the voice in reading and in speaking. Bolus knew this, and practised on it. When he was narrating, he put the facts in order, and seemed to speak them out of his memory; but not formally, or as if by rote. He would stop himself to correct a date; recollect he was wrong—he was *that* year at the White Sulphur or Saratoga, &c.: having got the date right, the names of persons present would be incorrect, &c.; and these he corrected in turn. A stranger hearing him, would have feared the marriug of a good story by too fastidious a conscientiousness in the narrator.

His zeal in pursuit of a lie under difficulties, was remarkable. The society around him—if such it could be called—was hardly fitted, without some previous preparation, for an immediate introduction to Almack's or the classic precincts of Gore House. The manners of the nation were rather plain than ornate, and candor rather than polish, predominated in their conversation. Bolus had need of some forbearance to withstand the interruptions and cross-examinations, with which his revelations were sometimes re-

ceived. But he possessed this in a remarkably degree. I recollect, on one occasion, when he was giving an account of a providential escape he was signally favored with, (when boarded by a pirate off the Isle of Pines, and he plead masonry, and gave a sign he had got out of the Disclosures of Morgan,) Tom Johnson interrupted him to say that he had heard *that* before, (which was more than Bolus had ever done.) B. immediately rejoined, that he had, he believed, given him, Tom, a *running* sketch of the incident. "Rather," said Tom, "I think, a *lying* sketch." Bolus scarcely smiled, as he replied, that Tom was a wag, and couldn't help turning the most serious things into jests; and went on with his usual brilliancy, to finish the narrative. Bolus did not overcrowd his canvass. His figures were never confused, and the subordinates and accessories did not withdraw attention from the main and substantive lie. He never squandered his lies profusely: thinking, with the poet, that "bounteous, not prodigal, is kind Nature's hand," he kept the golden mean between penuriousness and prodigality; never stingy of his lies, he was not wasteful of them, but was rather fore-handed than pushed, or embarrassed, having, usually, fictitious stock to be freshly put on 'change, when he wished to "make a raise." In most of his fables, he inculcated but a single leading idea; but contrived to make the several facts of the narrative fall in very gracefully with the principal scheme.

The rock on which many promising young liars, who might otherwise have risen to merited distinction, have split, is vanity: this marplot vice betrays itself in the exultation manifested on the occasion of a decided hit, an exultation too inordinate for mere recital, and which betrays authorship; and to betray authorship, in the present barbaric, moral and intellectual condition of the world is fatal. True, there seems to be some inconsistency here. Dickens and Bulwer can do as much lying, for money too, as they choose, and no one blame them, any more than they would blame a lawyer regularly *fee'd* to do it; but let any man, gifted with the same genius, try his hand at it, not deliberately and in writing, but merely orally, and ugly names are given him, and he is proscribed! Bolus heroically suppressed exultation over the victories his lies achieved.

Alas! for the beautiful things of Earth, its flowers—its sunsets—its lovely girls—its lies—brief and fleeting are their date. Lying is a very delicate accomplishment. It must be tenderly cared for, and jealously guarded. It must not be overworked. Bolus forgot this salutary caution. The people found out his art. However dull the commons are as to other matters, they

get sharp enough, after a while, to whatever concerns their bread and butter. Bolus not having confined his art to political matters, sounded, at last, the depths, and explored the limits of popular credulity. The denizens of this degenerate age, had not the disinterestedness of Prince Hal, who "cared not how many fed at his cost:" they got tired, at last, of promises to pay. The credit system, common before as pump water, adhering, like the elective franchise to every voter, began to take the worldly wisdom of Falstaff's mercer, and ask security; and security liked something more substantial than plausible promises. In this forlorn condition of the country, returning to its savage state, and abandoning the refinements of a ripe, Anglo Saxon civilization for the sordid safety of Mexican or Chinese modes of traffic; deserting the sweet simplicity of its ancient truthfulness and the poetic illusions of Augustus Tomlinson, for the vulgar saws of poor Richard—Bolus, with a sigh like that breathed out by his great prototype after his apostrophe to London, gathered up, one bright, moonlight night, his articles of value, shook the dust from his feet, and departed from a land unworthy of his longer sojourn. With that delicate consideration for the feelings of his friends, which, like the politeness of Charles II., never forsook him, he spared them the pain of a parting interview. He left no greetings of kindness; no messages of love: nor did he ask assurances of their lively remembrance. It was quite unnecessary. In every house he had left an autograph, in every ledger a souvenir. They will never forget him. Their connection with him will be ever regarded as

—"The greenest spot
In memory's waste."—

Poor Ben, whom he had honored with the last marks of his confidence, can scarcely speak of him to this day, without tears in his eyes. Far away towards the setting sun he hid him, until at last, with a hermit's disgust at the degradation of the world, like Ignatius turned monk, he pitched his tabernacle amidst the smiling prairie that sleep in vernal beauty, in the shadow of the San Saba mountains. There let his mighty genius rest. It has earned repose. We leave Themistocles to his voluntary exile.

I like your German singers well,
But hate them too, and for this reason,
Although they always sing in time,
They often sing quite out of season.

Good

MY RIVER RHINE.

I shall not see my river Rhine!

Not any one of all its towers—
Its ruins wreathed with ivy and vine—
Its old time beauteous with flowers!

Much less the thought of Phidian Greece
The home of vanished magic, fills
My heart about to faint and cease;
Would only that the sunny hills

Of that imperial river, fair
With purple grapes, could rise for me—
And I could breathe the enchanted air
Rippling its breast from the far sea!

From boyhood I have longed and dreamed
That such a blessing should be mine!
I could not die away it seemed,
Before I saw my river Rhine!

My Rhine with every beauty graced—
My Rhine in spirit loved so long!
Dear Rhine! on which my heart would waste
Its fragrance in a flood of song!

I did but dream!—the orange light
Of eve faints on the slender pines
Of my own West—I go from sight:
Die out poor heart! die out weak lines!

I shall not see it! O my Rhine
So long my heart's dream, loved so long!
Could I but, dying, make thee mine
With passionate tears and floods of song!
L. I. L.

JOHN FOSTER.

BY WILLIAM E. SCREVEN, ESQ.

Author of "Christianity and its Relations to Poetry and Philosophy."

Few names are more revered by men of thought than that of John Foster. His works have done more for the development of character, in proportion to their extent, than those of any other essayist. He came, it is true, at a time when the essay was about to be exchanged for other forms of composition, but it is not too much to say that he gave it new dignity and purpose, and wielded it with a power which far surpassed even the illustrious men who preceded him. Although the writings of Addison, Johnson, and the essayists of their school, convey many a useful and instructive lesson, yet their predominant effect is that of elegant entertainment.

It is otherwise with the essays of Foster. They are written for the purpose of mental and moral

discipline, and that purpose is accomplished, to a degree that ceases to be wonderful, only when we consider the aptness of illustration, and depth and power of thought, by which they are so strongly distinguished.

The object of this article is not, however, to estimate the intellectual excellencies of our author, or his productions. That has been repeatedly and ably done. It is rather to vindicate his moral and religious character from some very harsh views, which have been presented in relation to it, by Mr. Gilfillan, in his second Gallery of Literary Portraits. We would further premise, that we do not hold Foster's religious creed, and therefore do not write as a sectarian. We simply believe that he has been represented, in some respects, harshly and unjustly, and wish to enter into a calm examination of the charges preferred against him.

Mr. Gilfillan has reviewed our author both intellectually and morally. The intellectual estimate of his genius is candid and just. Every discriminating admirer of Foster's works will find in that portion of the review an appreciative tribute to his insight and enlarged understanding. It is, however, far otherwise when the reviewer passes to the consideration of his religious character. He seems to have forgotten candor and charity, and first assuming a most unfavorable position, he is led on, as it were, in wanton sport, to conclusions that are as fallacious as they are ungenerous. We believe the memory of a good and great man, one who, while he lived, was a benefactor to his kind, and who, though dead, still speaks to them instinctively in the strong and stirring language of his works, should not be assailed, under any professions of partial admiration, without a word being uttered in his defence.

The charge brought against the great essayist, by his reviewer, is, that he regarded the existence of moral evil in the world, with the despair of moral cowardice; that he looked upon the present system of things with impotent fear and hatred, and, finally, that he surrendered his mind to the gloomy doctrine of fanaticism.

Setting forth with this allegation, the reviewer has proceeded, with a degree of conceit, and careless indiscriminating reasoning, unworthy of himself and his subject, until he has drawn a picture that can be regarded only with abhorrence. If John Foster were the man he is thus represented to have been, he must have been either an idiot or a fiend, from whom every sane man must turn with pity or horror. The truth, however, is, that he was neither the one, nor the other, but a man of noble faculties and noble principles, challenging our admiration not only for his intellectual powers, but also for the

...purity and majestic uprightness of his moral nature.

A conclusive refutation of the charge preferred against Foster is furnished by his life. However thick and intricate may be the net-work of error, which a plausible pen can weave around the purest character, a simple recital of the incontrovertible facts of daily practical life, will sweep away the fallacious fabric as the sun dispels the morning clouds. What then does the life of our author teach, as to the nature of those sentiments and opinions, of which it was the natural outbirth, and therefore the infallible index? Was it the life of a fatalist, or of a moral coward? Was it the life of a man who could fold his arms in criminal indolence, averring that moral evil was invincible to human efforts, and therefore he would not stir, but leave the work of purification and amelioration to the Supreme Being? It was far otherwise. From the time that he first took the vows of religion, until his death, John Foster was a steadfast, faithful and indefatigable laborer in the vineyard of humanity. In one form or another he was always to be found struggling with evil, and acquitting himself like a man in the cause of human progress. An unfortunate style of delivery, which he could not overcome, rendered him almost useless in the pulpit. He therefore retired into private life, but his vigorous pen was still employed in battling not only for religious truth, but also for political rights. He never gave a production to the public, which was not an earnest and effective effort to advance mankind in the march of improvement. His four principal essays will live as long as the language in which they are written, and will continue to develop and improve the character of men to remotest time. Many have read Foster's pages with a flushed cheek and compressed lip, and risen from their perusal with the germ of a new nature formed in their hearts, and many others will do the same in coming generations. Not in the external world of sense will the triumphs of his genius be immediately visible, but they will be wrought in the still depths of the heart, where the imperial Will resides: And they will come forth in many a form of outward action, which are not less the effect of his works because they proceed from them indirectly, and through the medium of subsequent purposes. Many a gigantic scheme, and noble enterprise, will spring from minds which received their first concentration and consolidation of purpose from the "Essay on Decision of Character," and the "Essay on the Epithet Romantic" will regulate many a wayward will and impart a judicious course of action. Yes, Foster was a great and successful worker against that moral evil, to which it has been charged on him that

he succumbed with the abject despair of moral cowardice.

Nor was it only in the world of philosophical ethics, that he battled against evil, where it existed in the form of error: in the religious field also, where it assumed the darker character of sin, he fought the fight of the true soldier, and won a wreath of imperishable laurels.

In short, it was the peculiar character of the man, that, while with a keen observation, and a heart full of sensibility, he saw and deplored the existence of that baneful thing which curses the nature and condition of man, he was always engaged in lending his remarkable powers to its diminution and final destruction.

How idle and absurd is it then, in the face of these facts, to attempt to hand over such a man to the contempt of mankind as a prodigy of pusillanimity! It is true, that Foster used many expressions which betokened his sense of the dreadful extent, tenacious hold, and hardy character of moral evil, but who has not heard the most assiduous and even successful combatants for truth, in moments of weary, but transient despondency, utter the same sentiments?

Mr. Gilfillan seems to be peculiarly amused that our author, in a review of Chalmers' *Astronomical Discourses*, manifests his sorrow that snow had been discovered in the planet Mars. He proceeds in a rhapsody on the purity, beauty, and harmlessness of snow, and inquires what there is in such a substance to excite the fears of Foster. Nothing, assuredly, in the substance itself. Doubtless, the essayist was as able to appreciate the pure and beautiful snow, as well as every other charm of nature, with as much zest as his flippant critic. The grave solicitude he expressed was occasioned by the fact that it was a proof of the existence of physical evil on another planet. Whatever skepticism Mr. Gilfillan may entertain, concerning the connection of physical and moral evil, Foster at least was persuaded that the good and wise Creator never permitted the former to approach, except as the just consequence of the latter. Therefore, his serious and noble mind could not contemplate the revelations of the telescope without emotions of anxiety. No one fears the motion of the grass as it waves in the breeze, but when it bends before an approaching whirlwind, any rational mind will view it with anxiety, as the index of coming desolation.

Mr. Gilfillan finally proceeds to the absurd length of classing Foster and Byron in very nearly the same school of skepticism. A strange term, indeed, to be applied to one who had devoted his life, and all the energies of life, to the extinction of skeptical error! And why is this? Because Foster, in a career full of labor and expe-

rience, and rich in the fruits of an observation peculiarly piercing and extensive, deplored the sinfulness of mankind, and the suffering consequent upon it. A comparison of the lives of the men, so unjustly classed together, is sufficient to show the folly and indiscriminating absurdity of the classification.

These lives, however, are too well known to make it necessary for us to enter into such a comparison at this time. Suffice it to say, that the poet, with all his brilliant powers and qualities, lived in habitual carelessness with respect to religion and eternity; though, perhaps, leaving some hope in his last moments, that the awful realities of another world were not met with a mind unprepared for them. No sense of duty pressed upon him, during the active portion of his career, to subdue error and sin, and to reconcile man to God and truth. On the contrary, many of his works seem almost devoted to the purpose of nursing in the human heart, feelings of daring blasphemy against God, and impatient hatred and opposition to that system of things which God has instituted in this world.

On the other hand, behold the great essayist, consecrating himself to the cause of truth, always employing his abilities in that noble conflict in some form or other, devoutly recognizing the sovereignty of God, the atonement of Christ, the possibility of man's salvation, and the duty resting on all, and therefore on himself, to advance the interests of that kingdom, which will spread over the whole earth, with "healing on its wings" for every human woe, and which will have no end.

Foster recognized all this with firm and devout conviction, and acted upon his belief practically, in a manner that has made him illustrious as a benefactor to his race, and placed him as a bright star in the intellectual and moral firmament. Yet these are the men who are classed together, as taking the same despairing view of the present system of things! Mr. Gilfillan has lost sight of Foster's entire life and writings, and fastened on a few despondent expressions, which in old age were used, almost confidentially, in his 'Journal and Correspondence,' chiefly in view of the little which seems to be accomplished by human efforts in ameliorating the spiritual condition of mankind.

To make more apparent the habitual carelessness with which Mr. Gilfillan writes, even on such subjects as the one under consideration, we will mention one very glaring contradiction respecting Foster.

In his first "Literary Gallery," speaking of the famous discourse on Indian Idolatry, he commends its author for acknowledging to the mighty pagan systems the possession of a certain sub-

limity, and poetic interest, even while he hurled all the thunder of his logic and tremendous sarcasm against its gross and profane errors. In the second "Literary Gallery," he eats his own words one by one, and without any allusion to the former tribute to Foster's liberality, apparently having forgotten it, condemns him for being "slow to admit any degree of interest, or of poetry, or of grandeur in those colossal faiths, which have ruled for ages the great majority of mankind." It is impossible to conceive a case of more glaring and palpable self-contradiction.

Mr. Gilfillan proceeds to admit that, after all he has said, it may seem paradoxical to assert, that Foster was an amiable man; yet declares that he was undoubtedly so, if the universal testimony of those who knew him is to be believed. The truth is, that it would not only seem, but really be, paradoxical, if what had been said were true; but what had been said, being a tissue of absurdity and false reasoning, and therefore not true, the amiability of the essayist is not at all paradoxical.

According to the reviewer, Foster was, as to his intellect, able and great; as to his religious character a cross between a fool and a fiend; and as to his domestic life a pure and amiable man. Verily, this does seem paradoxical!—so much so, that a man of Mr. Gilfillan's sense and ability should have doubted the compatibility of such elements, and sifted the matter more thoroughly before he drew his conclusions. Had he done so, properly, he would have found no incompatibility, and therefore no paradox. He would have found that John Foster was not only an able and an amiable man, but that, also, in his religious character, he was an enlightened, liberal, and laborious christian.

We have attempted to offer a sacrifice upon the sacred altar of John Foster's memory. In doing so, we are actuated by mingled motives of admiration and gratitude for that serious and noble man, who, after an upright and noble life, has joined a band of spirits kindred to his own in a higher sphere. We cannot see him treated with what we suppose to be injustice, without saying that in his defence which he cannot now say for himself, and, perhaps, would not care to say, if he could. To Mr. Gilfillan's estimate of his intellectual merits, and domestic life, as we have before said, we do not object, or, if we do, it is too slightly to deserve notice. That estimate is high-toned and appreciative. But this commendable spirit vanishes entirely when he comes to speak of our author's religious character. This branch of his review is founded upon the grossest want of discrimination, and is disgraced by an air of levity, and affected smart-

ness, which sits very ungracefully on a foundation of bad logic.

Nor are the same faults wanting in many other reviews he has given to the public, but, being concealed beneath the plausibilities of an eloquent style, they frequently escape observation. Our present object, however, is accomplished, and we leave the subject with our readers, trusting, that even if their verdict is against us, they may be induced to resort to the useful works of Foster, and decide the question for themselves.

Notices of New Works.

HISTORY OF THE UNITED STATES, *From the Discovery of the American Continent.* By George Bancroft. Vol. IV. Boston: Little, Brown and Company. 1852.

We have read this volume with very great delight. It seems to us a model of historical composition. The style is admirably adapted to the story, and the reader finds, for the first time, the incidents of our colonial existence presented to him in the vivid and glowing colors that belong to them. Indeed, for pictorial effects, we think this volume far the most successful that Mr. Bancroft has yet published. Many of the passages which refer to events of peculiar interest, have the air of eloquent descriptions of some grand historical paintings. The figures stand out boldly—the light and shade is managed with rare skill—the accessories too are not wanting:—the future artist who would acquire fame for the delineation of national events, has only to follow with his brush the pen of the historian, and his canvass will be rich with the life and character of the past.

Mr. Bancroft introduces, for the first time, in this volume, that remarkable personage, around whom the whole action of the coming revolution is to have its movement as the man of the age, the hero of the most important struggle of modern times. In the following extract, we see George Washington, at twenty-one, going out upon that perilous mission to the Delaware Indians, in which all the elements of his character—his patient endurance of hardships, his humanity, his extraordinary foresight—were conspicuously displayed:—

“In the middle of November, with an interpreter and four attendants, and Christopher Gist as a guide, he left Will’s Creek, and following the Indian trace through forest solitudes, gloomy with the fallen leaves and solemn sadness of late autumn. across mountains, rocky ravines, and streams, through sleet and snows, he rode in nine days to the fork of the Ohio. How lonely was the spot, where, so long unbecked of men, the rapid Alleghany met nearly at right angles ‘the deep and still water’ of the Monongahela! At once Washington foresaw the destiny of the place. ‘I spent some time,’ said he, ‘in viewing the rivers;’ ‘the land in the Fork has the absolute command of both.’ ‘The flat, well-timbered land all around the point lies very convenient for building.’ After creating in imagination a fortress and a city, he and his party swam their horses across the Alleghany, and wrapt

their blankets around them for the night, on its north-west bank.

“From the Fork the chief of the Delawares conducted Washington through rich alluvial fields to the pleasing valley at Logstown. There deserters from Louisiana discoursed of the route from New Orleans to Quebec, by way of the Wabash and the Maumee, and of a detachment from the lower province on its way to meet the French troops from Lake Erie, while Washington held close colloquy with the half-king; the one anxious to gain the west as a part of the territory of the ancient dominion, the other to preserve it for the red-men. ‘We are brothers,’ said the half-king in council; ‘we are one people; I will send back the French speechbelt, and will make the Shawnees and the Delawares do the same.’

“On the night of the twenty-ninth of November, the council-fire was kindled; an aged orator was selected to address the French; the speech which he was to deliver was debated and rehearsed; it was agreed that unless the French would heed this third warning to quit the land, the Delawares would also be their enemies; and a very large string of black and white wampum was sent to the Six Nations as a prayer for aid.

“After these preparations, the party of Washington, attended by the half-king, and envoys of the Delawares, moved onwards to the post of the French at Venango. The officers there avowed the purpose of taking possession of the Ohio, and they mingled the praises of La Salle with boasts of their forts at Le Boeuf and Erie, at Niagara, Toronto and Frontenac. ‘The English,’ said they, ‘can raise two men to our one; but they are too dilatory to prevent any enterprise of ours.’ The Delawares were intimidated or debauched; but the half-king clung to Washington like a brother, and delivered up his belt as he had promised.

“The rains of December had swollen the creeks. The messengers could pass them only by felling trees for bridges. Thus they proceeded, now killing a buck and now a bear, delayed by excessive rains and snow, by mire and swamps, while Washington’s quick eye discerned all the richness of the meadows.

“At Waterford, the limit of his journey, he found Fort Le Boeuf defended by cannon. Around it stood the barracks of the soldiers, rude log-cabins, roofed with bark. Fifty birch-bark canoes, and one hundred and seventy boats of pine were already prepared for the descent of the river, and materials were collected for building more. The commander, Gardeur de St. Pierre, an officer of integrity and experience, and for his dauntless courage both feared and beloved by the Red-Men, refused to discuss questions of right. ‘I am here,’ said he, ‘by the orders of my general, to which I shall conform with exactness and resolution.’ And he avowed his purpose of seizing every Englishman within the Ohio Valley. France was resolved on possessing the great territory which her missionaries and travellers had revealed to the world.

“Breaking away from courtesies, Washington hastened homewards to Virginia. The rapid current of French Creek dashed his party against rocks; in shallow places they waded, the water congealing on their clothes: where the ice had lodged in the bend of the rivers, they carried their canoe across the neck. At Venango, they found their horses, but so weak, the travellers went still on foot, heedless of the storm. The cold increased very fast, the paths grew ‘worse by a deep snow continually freezing.’ Impatient to get back with his despatches, the young envoy, wrapping himself in an Indian dress, with gun in hand and pack on his back, the day after Christmas quitted the usual path, and, with Gist for his sole companion, by aid of the compass, steered the secret way across the country for the Fork. An Indian, who

had lain in wait for him, fired at him from not fifteen steps' distance, but, missing him, became his prisoner. 'I would have killed him,' wrote Gist, 'but Washington forbade.' Dismissing their captive at night, they walked about half a mile, then kindled a fire, fixed their course by the compass, and continued travelling all night, and all the next day, till quite dark. Not till then did the weary wanderers 'think themselves safe enough to sleep,' and they encamped, with no shelter but the leafless forest tree.

"On reaching the Alleghany, with one poor hatchet and a whole day's work, a raft was constructed and launched. But, before they were half over the river, they were caught in the running ice, expecting every moment to be crushed, unable to reach either shore. Putting out the setting-pole to stop the raft, Washington was jerked into the deep water, and saved himself only by grasping at the raft-logs. They were obliged to make for an island. There lay Washington, imprisoned by the elements; but the late December night was intensely cold, and in the morning he found the river frozen. Not till he reached Gist's settlement, in January, 1754, were his toils lightened."

We all know the issue of this adventurous journey, how the young commissioner brought back an accurate account of the condition of affairs in the Lake country, and how the most energetic measures were taken in consequence. It is no part of our purpose to pursue the upward military career of Washington in Mr. Bancroft's pages, for we are but endeavoring to quote such portions of his narrative as will impress our readers with a just idea of the whole, but we may declare that no where else is that career to be found drawn so strongly in a few, clear and rapid lines. We subjoin the concluding sentences of the sketch of Braddock's defeat, an action of which no American can read without trembling for the fate of Washington, marked out, as he was, by the rifle of the savage foe. Mr. Bancroft says:

"Of eighty-six officers, twenty-six were killed—among them, Sir Peter Halkett—and thirty-seven were wounded, including Gage and other field officers. Of the men, one half were killed or wounded. Braddock braved every danger. His secretary was shot dead; both his English aids were disabled early in the engagement, leaving the American alone to distribute his orders. 'I expected every moment,' said one whose eye was on Washington, 'to see him fall.' Nothing but the superintending care of Providence could have saved him. An Indian chief—I suppose a Shawnee—singled him out with his rifle, and bade others of his warriors do the same. Two horses were killed under him; four balls penetrated his coat. 'Some potent Manitou guards his life,' exclaimed the savage. 'Death,' wrote Washington, 'was levelling my companions on every side of me; but, by the all-powerful dispensations of Providence, I have been protected.' 'To the public,' said Davis, a learned Divine, in the following month, 'I point out that heroic youth, Colonel Washington, whom I cannot but hope Providence has preserved in so signal a manner for some important service to his country.' 'Who is Mr. Washington?' asked Lord Halifax a few months later. 'I know nothing of him,' he added, 'but that they say he behaved in Braddock's action as bravely as if he really loved the whistling of bullets.'

Such was the critical commencement of that wondrous course of splendid achievement, and temperance in victory, which leaves the lives of all other heroes, ancient or modern, in the distance.

One other passage in detached portions have we marked out for quotation, in introducing which a single word

must be said of the dark and guilty story to which it relates. The episode of the Acadian banishment stands happily without a parallel for cruelty in American annals. It is sweetly told in the hexameters of Mr. Longfellow's *Evangeline*, and nothing more affecting ever found a chronicler in a poet. Mr. Bancroft narrates it with fervor and sympathy:—

"At last after repeated conquests and restorations, the treaty of Utrecht conceded Acadia, or Nova Scotia, to Great Britain. Yet the name of Annapolis, the presence of a feeble English garrison, and the emigration of hardly five or six English families, were nearly all that marked the supremacy of England. The old inhabitants remained on the soil which they had subdued, hardly conscious that they had changed their sovereign. They still loved the language and the usages of their forefathers, and their religion was graven upon their soils. They promised submission to England; but such was the love with which France had inspired them, they would not fight against its standard or renounce its name. Though conquered, they were French neutrals.

"For nearly forty years from the peace of Utrecht they had been forgotten or neglected, and had prospered in their seclusion. No tax-gatherer counted their folds, no magistrate dwelt in their hamlets. The parish priest made their records and regulated successions. Their little disputes were settled among themselves, with scarcely an instance of an appeal to English authority at Annapolis. The pastures were covered with their herds and flocks; and dikes, raised by extraordinary efforts of social industry, shut out the rivers and the tide from alluvial marshes of exuberant fertility. The meadows, thus reclaimed, were covered by richest grasses, or fields of wheat, that yielded fifty and thirty fold at the harvest. Their houses were built in clusters, neatly constructed and comfortably furnished, and around them all kinds of domestic fowls abounded. With the spinning-wheel and the loom, their women made, of flax from their own fields, of fleeces from their own flock, coarse but sufficient clothing. The few foreign luxuries that were coveted could be obtained from Annapolis or Louisburg, in return for furs, or wheat, or cattle.

"Thus were the Acadians happy in their neutrality and in the abundance which they drew from their native land. They formed, as it were, one great family. Their morals were of unaffected purity. Love was sanctified and calmed by the universal custom of early marriages. The neighbors of the community would assist the new couple to raise their cottage, while the wilderness offered land. Their numbers increased, and the colony, which had begun only as the trading station of a company, with a monopoly of the fur trade, counted, perhaps, sixteen or seventeen thousand inhabitants."

Mr. Bancroft proceeds to inform us what resulted from the sudden change of masters over this colony—how the feelings of a simple and unoffending peasantry were disregarded by the British soldiers—how their property was taken from them without pretence of right—how they were constrained in matters of conscience and religion, and how meekly they submitted to all these outrages.

"The Acadians cowered before their masters, hoping forbearance: willing to take an oath of fealty to England; in their single-mindedness and sincerity, refusing to pledge themselves to bear arms against France. The English were masters of the sea, were undisputed lords of the country, and could exercise clemency without apprehension. Not a whisper gave a warning of their purpose, till it was ripe for execution.

"But it had been 'determined upon' after the ancient

device of Oriental despotism, that the French inhabitants of Acadia should be carried away into captivity to other parts of the British dominions.

* * * * *

"France remembered the descendants of her sons in the hour of their affliction, and asked that they might have time to remove from the peninsula with their effects, leaving their lands to the English; but the answer of the British minister claimed them as useful subjects, and refused them the liberty of transmigration.

"The inhabitants of Minas and the adjacent country pleaded with the British officers for the restitution of their boats and their guns, promising fidelity, if they could but retain their liberties, and declaring that not the want of arms, but their conscience, should engage them not to revolt. 'The memorial,' said Lawrence in council, 'is highly arrogant, insidious and insulting.' The memorialists, at his summons, came submissively to Halifax. 'You want your canoes for carrying provisions to the enemy,' said he to them, though he knew no enemy was left in their vicinity. 'Guns are no part of your goods,' he continued, 'as by the laws of England all Roman Catholics are restricted from having arms, and are subject to penalties if arms are found in their houses. It is not the language of British subjects to talk of terms with the crown, or capitulate about their fidelity and allegiance. What excuse can you make for your presumption in treating this government with such indignity as to expound to them the nature of fidelity? Manifest your obedience by immediately taking the oath of allegiance in the common form before the Council.'

"The deputies replied that they should do as the generality of the inhabitants should determine; and they merely entreated leave to return home and consult the body of their people. They next day the unhappy men, foreseeing the sorrows that menaced them, offered to swear allegiance unconditionally; but they were told that by a clause in a British statute, persons who have once refused the oaths cannot be afterwards permitted to take them, but are to be considered as Popish Recusants; and as such they were imprisoned."

The fiat, it seems, had gone forth—*Delenda est Carthago*—the savage masters would rule. What follows is the saddest tale Mr. Bancroft's task as historian could require him to recount. It is merely a recital of the forcible expulsion:—

"To hunt them into the net was impracticable; artifice was therefore resorted to. By a general proclamation, on one and the same day, the scarcely conscious victims, 'both old men and young men, as well as all the lads of ten years of age,' were peremptorily ordered to assemble at their respective posts. On the appointed fifth of September, they obeyed. At Grand Pré, for example, four hundred and eighteen unarmed men came together. They were marched into the church, and its avenues were closed, when Winslow, the American commander, placed himself in their centre, and spoke:—'You are convened together to manifest to you His Majesty's final resolution to the French inhabitants of this his province. Your lands and tenements, cattle of all kinds, and live stock of all sorts, are to be removed from this his province. I am through His Majesty's goodness, directed to allow you liberty to carry off your money and household goods, as many as you can, without discommoding the vessels you go in.' And he then declared them the king's prisoners. Their wives and families shared their lot; their sons, five hundred and twenty-seven in number, their daughters, five hundred and seventy-six; in the whole, women and babes and old men and children all included, nineteen hundred

and twenty-three souls. The blow was sudden; they had left home but for the morning, and they never were to return. Their cattle were to stay unfed in the stalls, their fires to die out on their hearths. They had for that first day even no food for themselves or their children, and were compelled to beg for bread.

The tenth of September was the day for the embarkation of a part of the exiles. They were drawn up six deep, and the young men, one hundred and sixty-one in number, were ordered to march first on board the vessel. They could leave their farms and cottages, the shady rocks on which they had reclined, their herds and their garners; but nature yearned within them, and they would not be separated from their parents. Yet of what avail was the frenzied despair of the unarmed youth? They had not one weapon; the bayonet drove them to obey; and they marched slowly and heavily from the chapel to the shore, between women and children, who, kneeling, prayed for blessings on their heads, they themselves weeping, and praying, and singing hymns. The seniors went next; the wives and children must wait till other transport vessels arrived. The delay had its horrors. The wretched people left behind were kept together near the sea, without proper food or raiment, or shelter, till other ships came to take them away; and December with its appalling cold had struck the shivering, half-clad, broken-hearted sufferers before the last of them were removed. 'The embarkation of the inhabitants goes on but slowly,' wrote Monckton, from Fort Cumberland, near which he had burned three hamlets, 'the most part of the wives of the men we have prisoners are gone off with their children, in hopes I would not send off their husbands without them.' Their hope was vain. Near Annapolis, a hundred heads of families fled to the woods, and a party was detached on the hunt to bring them in. 'Our soldiers hate them,' wrote an officer on this occasion, 'and if they can but find a pretext to kill them, they will.' Did a prisoner seek to escape? He was shot down by the sentinel. Yet some fled to Quebec; more than three thousand had withdrawn to Miramichi, and the region south of the Rivière St. John; some found rest on the banks of the St. John and its branches; some found a lair in their native forests; some were charitably sheltered from the English in the wigwams of the savages. But seven thousand of the banished people were driven on board ships, and scattered among the English colonies, from New Hampshire to Georgia alone; one thousand and twenty to South Carolina alone. They were cast ashore without resources; having the poor-house as a shelter for their offspring, and abhorring the thought of selling themselves as laborers. Households, too, were separated: the colonial newspapers contained advertisements of members of families seeking their companions, of sons anxious to reach and relieve their parents, of mothers mourning for their children.

"The wanderers sighed for their native country; but to prevent their return, their villages, from Annapolis to the isthmus, were laid waste. Their old homes were in ruins. In the district of Minas, for instance, two hundred and fifty of their houses, and more than as many barns were consumed. The live stock which belonged to them, consisting of great numbers of horned cattle, hogs, sheep and horses, were seized as spoils and disposed of by the English officials. A beautiful and fertile tract of country was reduced to a solitude. There was none left round the ashes of the cottages of the Acadians, but the faithful watch-dog, vainly seeking the hands that fed him. The roots of forest-trees choked their orchards; the ocean broke over their neglected dikes, and desolated their meadows.

"Relentless misfortune pursued the exiles wherever they fled. Those sent to Georgia, drawn by a love for the spot where they were born as strong as that of the

captive Jews, who wept by the side of the rivers of Babylon for their own temple and land, escaped to sea in boats, and went coasting from harbor to harbor; but when they had reached New England, just as they would have set sail for their native fields, they were stopped by orders from Nova Scotia. Those who dwelt on the St. John's were torn once more from their new homes. When Canada surrendered, hatred with its worst venom pursued the fifteen hundred who remained south of the Ristigouche. Once more those who dwelt in Pennsylvania presented a humble petition to the Earl of Loudoun, then the British Commander-in-chief in America; and the cold-hearted peer, offended that the prayer was made in French, seized their five principal men, who in their own land had been persons of dignity and substance, and shipped them to England, with the request that they might be kept from ever again becoming troublesome by being consigned to service as common sailors on board ships of war."

"I know not if the annals of the human race keep the records of wounds so wantonly inflicted, so bitter and so perennial, as fell upon the French inhabitants of Acadia."

Our limits here, compel us to stop in our notice of this excellent continuation of Mr. Bancroft's History. The quotations we have given are ample to show with what spirit the author has treated the stirring subject of his labor, and to assure the reader that the subsequent volumes may be looked for with an eager expectancy.

A. Morris has this volume for sale.

THE NAPOLEON BALLADS, by *Bon Gaultier*. *The Poetical Works of Louis Napoleon*. Now First Translated into Plain English. New York: Geo. P. Putnam. 1852.

The original London Edition of this squib was published anonymously, from which fact the Literary World was inclined to doubt whether it really came from the pen of Bon Gaultier. Mr. Putnam settled the matter by a statement under signature, that he was authorized by Mr. Bogue, the London publisher, to affix the name of Bon Gaultier to the reprint, and that he, (Mr. Putnam) paid Mr. Bogue a sum equal to half the profit of the entire edition for advance proof sheets of it. For ourselves, while we condole with Mr. Putnam over his bad bargain, we cannot see how any one should hesitate as to the paternity of these Napoleon Ballads. The resemblance to the Comic Ballads is perfect. They are just as dull, as halting and as vulgar as their predecessors, and if possible more so. In the matter of poetic desecration by parody, perhaps Bon Gaultier has exceeded himself, for he undertakes to cover with ridicule, in a pointless and despicable imitation, one of the most touching passages in the *La Mémorial*—a feat about equal to enacting Harlequin in a grave-yard. That the Professor of Belles Lettres in the University of Edinburgh could stoop to such low buffoonery, fills us with astonishment.

It cannot be denied that the Prince President offers as fair a target for the shafts of satire as was ever set up before men, but this only renders the misses of Bon Gaultier the more palpable. One of his parodies we consider rather clever—that of the Raven—the best stanzas of which we quote. Louis is supposed to be sitting in a London garret, meditating upon the scarcity of his funds, when suddenly he heard a tapping, which he suspects to be the knock of a creditor at his garret-door.

Upon this I rose and hearkened—when, behold, my window darkened,
As by some opaque object which was never there before;

"Surely," said I, "there is something—clearly, too, a very rum thing,
For it's not at all a dumb thing, at the window, not the door,

I wonder whether it can be a message from the Emperore.

I never had one—not before."

Open, then, I flung the shutter—and, as sure as bread's not butter,

In there stepped a fine gilt eagle—Eagle of the Emperore;

Not a minute stay'd or stopped he—not a civil word he dropped me;

But, with mien quite free and easy, perched above my chamber door—

Perched upon a bust of Grisi just above my garret door:
Perched and grinned, and nothing more.

Then, as this strange bird kept staring at me with his eyes so glaring,

Till I'm sure there's no declaring what I felt upon that floor.

I cried unto the gilded eagle—"Who hath sent thee like a beagle,

Not, I'm sure *selon les règles*, to this twice confounded shore?

Tell me, have you brought a token from the awful Emperore?"

Quoth the Eagle, "You're a bore!"

• • • • •

"Eagle!" cried I, "what the devil? Is this kind of conduct civil,

Coming using language evil—coolly calling me a bore?
If you have come for a treat here, you'll not get an ounce of meat here."

And, in fact, I have a notion that I somehow rather swore;

But 'twas enough to make one—when, quoth the bird above the door,

"You have a great fate in store."

"Ha! what hear I?" cried I; "Eagle, do you prophesy things regal?

Do you say I shall be *égal* to the glorious Emperore?

Tell this soul with sorrow saddened, whether it will e'er be maddened

With a fate which yet it hadn't—hadn't ventured to implore?

Come here, Eagle—sit beside me;" but it muttered—
"Never more!

Here's my place above the door."

And, since then, the Eagle's sitting—never flitting—ever sitting,

Free and easy, upon Grisi, up above my palace door.

And it's ever me reminding how upon me it is binding

To pursue the system grinding—of the glorious Emperore,

And from that glorious system of the glorious Emperore,
I'll be parted—never more.

DOLLARS AND CENTS, BY AMY LOTHROP. New York. Geo. P. Putnam, 10 Park Place. 1852.

These volumes, in their literary as well as external character, much resemble the "Wide, Wide World"—that charming tale which we recommended to our readers on its first appearance, and whose popularity we at that time predicted. We attach high value to works of this description, for they present human life and human nature in the brave, hopeful view which, all who look for happiness should strive to take of it,—they show that the world is not a bed of roses, a place of sensuous enjoyment, "still from one" pleasure "to another thrown;" but a place to struggle, and endure, and win peace and assured happiness for ourselves in, by bold, hopeful, honest exertion; and they moreover teach that highest of all lessons, other than religious, that to do our duty, and suppress our evil desires and passions, is the surest means of arriving at the purest earthly joy. In the "Wide, Wide World," the theme of the book is the struggle of a child, naturally passionate and wilful, with her evil traits, and her final mastery of them. The book, as a delineation of such a character, and the vehement contest between right and wrong, in such a nature, is invaluable. We think no one could *possibly fail to be bettered by it*; and in this, we have accorded to it what seems to us the highest praise.

From the mysterious and enticing title, "Wide, Wide World," to "Dollars and Cents,"—which are such material things, and not at all mysterious, however enticing they may be—the descent is abrupt and sudden. But we think the book will be found far better than the title, (which we think horribly bad,) and in "Collingwood," the numerous,—we should rather say innumerable—readers of Miss Warner's work, will not, we think, be displeased to meet a gentleman closely related in character to "John." The struggle depicted in this book, is as old as civilization—and will impress deeply those bold and noble hearts who have passed through it, strengthened and purified. To such, and to all our readers, we commend it.

A. Morris has it for sale.

THE CHESS TOURNAMENT. A Collection of the Games Played at this Celebrated Assemblage. Illustrated by Copious Diagrams and Notes, Critical and Explanatory. By H. STAUNTON, Esq., &c., &c. London: Henry G. Bohn, York Street, Covent Garden. 1852.

This goodly volume is devoted to the proceedings of a Parliament or Congress of Chess-players, which was held in London in the summer of 1851, and the subsequent passages of skill in the ancient game of chess, which took place between the most distinguished members of that body. The author, Mr. Staunton, seems to be an enthusiast on the subject of his favorite diversion, and speaks of the triumphs achieved by some of his brother players, very much as Humboldt would speak of some grand discovery in science, effected by a fellow-laborer in the great cosmical field of inquiry. We are quite unable to share Mr. Staunton's interest in the marchings and countermarchings of mere ivory Knights and Kings, and we fear the familiarity with chess is not so general as to ensure for his well printed volume a very extended sale. We have among our readers, however, many excellent old gentlemen who are addicted to the game, and who would derive great entertainment from Mr. Staunton's account of the Tournament. To these, we commend the book, as well as to such beginners as have already possessed themselves of the "Chess Player's Com-

panion," by the same author. Like all the publications of Mr. Bohn, this volume is beautifully printed on the best paper. It has reached us through J. W. Randolph of this City, from Bangs, Brothers & Co., of New York, Bohn's special American Agents, but it may be found at all the Bookstores.

THE WORKS OF SIR THOMAS BROWNE. Edited by Simon Wilkin, F. L. S. Volumes III and IV. London: Henry G. Bohn, York Street, Covent Garden. 1852.

These two volumes complete the edition of Sir Thomas Browne, embraced in Bohn's Antiquarian Library. They contain those writings of the quaint old English philosopher upon which his fame most securely rests, the *Religio Medici*, *Christian Morals*, and that wonderful and eloquent disquisition entitled *Urn-Burial*. There is given also, what we do not recollect ever to have seen before, a very curious and delightful correspondence from which we derive some more accurate notion of Sir Thomas, in *propria persona*, than can be obtained from any other source. We rejoice over this new edition of one of the old Classic English writers, and we trust Mr. Bohn, who has already brought out Jeremy Taylor, and Milton, as a prose writer, in a fresh garb, will continue to issue such books, of which we can never have too many. Bangs, Brothers & Co., of New York, have sent us these volumes through J. W. Randolph, at whose bookstore they can be obtained.

THE ONWARD AGE: An Anniversary Poem. Recited Before the Young Men's Mercantile Library Association of Cincinnati, in Honor of its Eighteenth Anniversary. By T. BUCHANAN READ. Cincinnati: Published by the Association. 1852.

The exulting march of passing events has not, in our time, been sung in sweeter numbers than in the flowing decasyllabics of this very finished production. The author's reputation among the American votaries of the Muse has already been sufficiently established, but were this not the case, there is enough of fancy and of melodious diction in the "Onward Age," to set up any man as a poet. Witness a single extract, with which we dismiss the brochure:

Onward forever, through the darkness hurled,
With all its medley burden, swings the world—
Reels its great cycles, without thought or will,
Pierced to the center with the whirling thrill:
While Man, confused, stares up with dizzy sight,
And stumbles on through error toward the right:
His restless nature, urging like a goad,
Drives him afar, but dimly points the road—
The scanty lantern of his gathered lore
Shines round his feet, but darkens all before.

Happily for him, a surer light is given—
A ray of love that shines direct from Heaven.
Oh, what were Earth by sacred Love forgot?—
A soulless wanderer—a desert spot!—
Howling through time beneath its ban of fate,
And fighting space, with all its demon freight;
Then life would on her dusky forehead wear
The twisted horrors of Medusa's hair—
And black annihilation only be
The last great boon to all humanity!

But on forever—the celestial gem
That lit the night o'er ancient Bethlehem,
Wias its clear way with wide, increasing rays,
Till e'en the noontide brightens in its blaze.
Blest with that light, which guides along the van,
Man follows Nature's ever onward plan;
His tireless spirit, like the ocean stirred,
Rests not till God's commanding voice is heard.

Long 'ere his fleets the trackless seas explored,
Far through the glowing West his fancy soared—
In clouds prophetic round the dying day
Saw phantom landscapes beckon him away,—
The sun—the moon—and all the starry host—
Led the wide pathway to the unseen coast:—
The amber weed, long weltering through the brine,
Told Norway secrets of the tropic line;—
The eider, swinging from his northern nest,
Bore Greenland's badge upon his snowy breast:
Imagination, in its height of power,
Like Galileo on his Tuscan tower,
By science guided, gazed across the seas,
Till unknown empires wooed the Genoese.

THE ILLUSTRATED OLD ST. PAUL'S: A Tale of the Plague and the Fire. By *Wm. Harrison Ainsworth*. T. B. Peterson, 98 Chestnut street. Philadelphia.

We do not like Mr. Ainsworth; and we cannot say that "Old St. Paul's" is any improvement on that long list of bad books which boast that gentleman's paternity. "Rookwood," Mr. Ainsworth's first and best work, really had something in it—though that something was of a disagreeable character. The weird and the real, the commonplace and the supernatural, were mixed with some art, and Mr. Dick Turpin, the bold highwayman, would have found no fault with his portrait. But as in the case of "Jack Sheppard," the revolting and the melodramatic ran wild and ended by disgusting the reader. This last named work is well known to have caused the murder of a celebrated gentleman closely connected with the Duke of Wellington, and those who read it will not wonder thereat, or discredit the statement. One feels quite a revolver and bowie knife sensation on rising from its perusal.

"Crichton," Mr. Ainsworth's best novel, is the purest specimen of melodrama we have ever had the bad fortune to meet with. We are quite sure that such a farrago of trap-doors, secret passages, poisoned goblets, and impossible personages, never before issued from human brains. We despair of saying anything bad enough for "Crichton" in an artistic point of view. "Old St. Paul's," as far as we have made its acquaintance, is of the same stamp as the rest. To the readers of such works—that is, to all who revel in the delineation of "plague, pestilence," and general horrors, (set off with woodcuts)—we promise an unusual treat. But to those of simpler and less vitiated tastes,—to all who prefer sense and nature to bombast and melodrama, we would recommend a careful avoidance of this "last and best."

We are indebted for a copy of it to Messrs. West & Brother.

THE HISTORY OF THE RESTORATION OF MONARCHY IN FRANCE. By *Alphonse de Lamartine*. Volume II. New York: Harper & Brothers. 1852.

Monsieur de Lamartine is not an especial favorite with us in any walk of literature, but we have no hesitation in

saying that he is the very worst historian we have ever read. He seems to have as little regard for facts and authorities, as if to tell the truth was not an object to be aimed at in such composition. The present volume is a very excellent companion for its predecessor, and taken together they constitute about as untrustworthy and fanciful a piece of historical narrative as was ever penned by a crack-brained poet. The book is well printed by the Harpers, and may be found at the bookstore of A. Morris.

THE DAYS OF BRUCE: A Story from Scottish History. By *GRACE AGUILAR*, Author of 'Home Influence,' &c., &c. In Two Volumes. New York: D. Appleton & Company, 200 Broadway. 1852.

We have so often had occasion to commend the writings of Grace Aguilar to the readers of the Messenger, that we deem it unnecessary to pass in extended review the present posthumous publication. It is a work of fiction interwoven with the history of one of the most stirring periods in the annals of Scotland, and will be read with avidity by all who have made themselves acquainted with the peculiar abilities of the author.

It may be obtained of A. Morris.

THE LIFE AND WORKS OF ROBERT BURNS. Edited by *Robert Chambers*. Vol. II. New York: Harper & Brothers. 1852.

We are confirmed in our opinion by the second volume of this excellent work, that it will be by far the most entertaining edition of Burns ever published. The biography is all the better for having the poems embodied in it, and the poems derive an additional charm from the circumstances connected with their composition. We look with impatience for the succeeding volumes.

For sale by A. Morris.

LEXICON OF FREEMASONRY, Containing Definitions of all its communicable terms, Notices of its History, Traditions and Antiquities, and an account of all the Rites and Mysteries of the Ancient world. By *Albert G. Mackey*, M. D. From the press of Walker & James, Charleston, and for sale by all Booksellers.

The design and character of this volume are so well set forth in the title page given above, that comment from us is quite unnecessary. To the young member of the Masonic Fraternity we should consider it very especially useful, as a guide. We are glad to see so handsome a volume from the Charleston press, as it assures us that we need no longer rely upon the North to usher our books to the world in graceful and appropriate externals.

J. W. Randolph has sent it to us.

ZEPHYRS FROM ITALY AND SICILY. By *WILLIAM M. GOULD*. New York: D. Appleton and Company, 200 Broadway. 1850.

A sad interest attaches to this volume, in the fact that since its publication the author has died. We do not recollect to have seen anything from his pen before these pleasant recollections of travel, but we are justified by them in saying that in his premature death American Lit-

erature has lost one who might have become a shining ornament to it. Mr. Gould's style is somewhat florid and redundant, but the reader does not tire in his company. To such as feel an interest in the topography of the celebrated battle-fields of Napoleon, the volume will be highly interesting, as the author seems to have made a *specialité* of the Emperor's campaigns, and describes with great particularity, every such locality that he visited.

The work may be found at the bookstore of West & Brother.

ON THE STUDY OF WORDS. By RICHARD CHEVENIX TRENCH, B. D., etc., etc. Redfield, Clinton Hall, New York. 1852.

To most men, even to such as are engaged in professional study, no one branch of investigation seems so frivolous or unprofitable as, what for want of a better term we will call, *verbiology*. The students of language are therefore treated with less consideration than any other class of mental laborers. But no thinking person can read Mr. Trench's volume without being convinced of the injustice that is thus done to philologists, for he has succeeded in showing that words are things, and things too of great moment, on the proper use and employment of which, may depend much of the purpose and determination of our lives. As a historical treatise, this work of Mr. Trench possesses an interest second to few efforts of its class, following up the noble and copious English of our own day, through many revolutions and vicissitudes, conflicts and changes, to its origin in the dusky past, and stopping by the way, to descant on kindred topics of an episodic nature. We cordially commend the volume to the public. It is for sale by A. Morris.

PAPERS FROM THE QUARTERLY REVIEW. New York: D. Appleton & Company, 200 Broadway.

We recollect having marked each of these five articles, as they appeared in the Quarterly, for a second reading, which we have given them in the pages of this handsomely printed volume. Now we lay the book upon our shelves, in order that, at some fitting season, when we shall need recreation, the papers may be 'read a third time.' The paper on the "Printer's Devil," quite exhausts the subject, and bears internal evidence of having been written by Sir Francis Head. "Gastronomy and Gastronomers" is playfully learned, and the "Art of Dress" is a very curious piece of æsthetical composition. We hope the Appletons will give us further compilations from the Foreign Reviews. If selected with taste and discrimination, they would prove among the most acceptable volumes of their Popular Library. J. W. Randolph has this work for sale.

We acknowledge the receipt of the *Randolph Macon Magazine* and the *Southern Repertory and College Review*. Each of these publications comes to us from a Virginia seminary of learning—the former, as its name implies, being conducted by the students of Randolph Macon College, and the latter by the Faculty of Emory and Henry College, at Emory, in the Southwestern part of the State. The *Magazine* is highly creditable as a literary journal to the Institution with which it is connected, but it is not difficult to recognize the work of more expe-

rienced hands in the *Repertory*. It is to be expected that Professors will write better than students, and the comparison we have made is not therefore disparaging to the younger class. In the May number of the *Repertory*, our attention has been arrested by a very able article on "English Orthoepey" which would grace the pages of any review, American or foreign.

MARCO PAULO'S VOYAGES AND TRAVELS. By JACOB ABBOTT. New York: Harper & Brothers. 1852.

Of this juvenile series we have received the first two volumes, embracing the adventures of Marco Paulo in *New York City* and on the *Erie Canal*. They are embellished with numerous wood-engravings illustrating the localities, and are likely to afford great pleasure to the class of readers for whom they are designed.

A. Morris has them for sale.

Blackwood for June has been sent to us by the Richmond Agents—Messrs. Nash & Woodhouse. The disappointment occasioned by the absence of "My Novel," from the table of contents, was amply compensated by the raciness and spirit of several of its articles. Indeed, we have not seen so good a number, independently of Balwer's sweet and tearful romance, for many months past. It is worthy of the palmy days of old Christopher.

HORSE SHOE ROBINSON: A Tale of the Tory Ascendancy. By John P. Kennedy, author of "Swallow Barn." New York: George P. Putnam, 10 Park Place, 1852.

We expressed, upon the recent appearance of "Swallow Barn," the gratification afforded us by this new and handsome edition of Mr. Kennedy's works. The present volume is presented to us in a typography worthy of high literary excellence, though the form of the book is rather clumsy for convenient perusal. Mr. Putnam has remedied this to some extent, by dividing a portion of the edition into two volumes. Of "Horse Shoe Robinson," a work of fiction, we are sure we need not now speak the popularity it enjoyed seventeen years ago was not undeserved, and will be revived in full force among the present generation. As a pourtrayer of Southern life and character, as a genial and eloquent delineator of Nature "in her wild and frolic hour of infancy," and as a writer of flowing and elegant English, Mr. Kennedy is equally to be admired, and deserves a high rank in the Literature of the age.

The Harpers are about bringing to a close both the illustrated serials, which have been in course of publication by them for some months past. The last number of "London Labor and the London Poor," is filled with curious and valuable statistics, and Lossing's "Field Book of the Revolution" has reached the Southern campaign, which will render the succeeding numbers of great interest to Southern readers.

SOUTHERN LITERARY MESSENGER.

RICHMOND, AUGUST, 1852.

NO. 8.

Notes and Commentaries, on a Voyage to China.

CHAPTER X.

Sketch of Brazilian History; Name and Discovery of the Country; Founding of Rio de Janeiro; The site of the City.

Before landing, let us refresh our memories a little in the history of the foundation of the city; an outline of events connected with Brazil, generally may be gathered from the chronological table appended.

On the 22d day of April, A. D., 1500. Pedro Alvares Cabral, in command of a Portuguese squadron, descried the land in about seventeen degrees of South latitude; but not finding there a convenient harbor or port, he steered to the northward, and entered a bay, afterwards named Porto Seguro, where, on the first day of May, 1500, in the name of Dom Manuel, King of Portugal, he formally took possession of the newly discovered country, and named it *VERA CRUZ*—the new country of *Vera Cruz*.* This name for Brazil is found upon ancient maps, drawn prior to the middle of the sixteenth century; since that period, the country has been known, under its present designation. About the year 1503, two vessels returned to Portugal from Porto Seguro, laden with a wood, which from the intense brightness of its color, was called *braz*, or live coals, by the Portuguese; the name thus given to the wood, was afterwards attached to the country, which Cabral had called *Vera Cruz*.

It seems the coloring properties of the wood were accidentally discovered. An ancient voyager in the 16th century, relates, that while in the country—"we made excellent fires of this Brazil wood: I remarked, being less humid than other trees, but naturally dry, that it made very little or no smoke while burning. One day, one of our company, wishing to bleach our shirts, without suspecting any thing, put some of the ashes of this wood into the lye, which, instead of making them white, made them red, and although we hastened to wash them afterwards, we could not make them lose the color, and so we had to wear them."†

* Abreu e Lima—Historio do Brazil—Brésil par M. Ferdinand Denis.

† Denis.

It is recorded that a Spaniard, Juan Dias de Solis, visited the harbor, now called Rio de Janeiro, in the year 1515, then known by the name of Nictheroy, or Niterohy—the concealed waters; and in 1519, two Portuguese navigators, in the service of Charles I., entered this bay, and remained here from the 13th till the 27th of December; they gave it the name of *Bahia de Santa Luzia*.

About three years afterwards, King John III., of Portugal, hearing that the Spaniards settled on the Rio de la Plata were encroaching on the domains of the Portuguese, fitted out an expedition, under the command of Martim Affonso de Souza, directing that he should erect fortifications and distribute lands to those who might wish to establish themselves in the country. The squadron touched at Bahia, and, on the 30th of April, 1531, anchored in the bay of Rio de Janeiro; it remained there three months, and sailed on the 1st of August. Now, the Father Ayres de Casal says, in his *Corographia Brazilica*, that the squadron, after being refreshed at Porto Seguro, entered the bay of *Santa Luzia*, the name of which was changed to Rio de Janeiro, because they entered it on the first day of the year 1532. But, according to the Diary of Pero Lopes de Souza, it is very clear this was not the cause of the change in the name, if a change were made, because the entrance occurred on the 30th April, 1531, and not as Father Ayres supposes, on the 1st of January, 1532; at the time, the name *Rio de Janeiro* was already known, inasmuch, as Pero Lopes very simply says:—"Saturday, April 30, at four o'clock in the morning we were up with the mouth of Rio de Janeiro"—from which it must be inferred he had heard the name before he arrived.*

The deduction from all this is, that the Europeans who called this the "River of January," believed the bay was the mouth of a great river; the fact is, however, the streams which empty into it, are very small.

Of the founding of the city, I can merely relate, substantially, the statement of Gen. Abreu e Lima; he seems to be careful in his assertions, and therefore, it is probably correct.

The importance which Brazil assumed in the estimation of the Portuguese government, the natural products of a country whose wealth was exaggerated in all accounts of it, seemed to sug-

* Historio do Brazil—Abreu e Lima.

gest to all commercial and navigating people of Europe, that their flags might also float on the ocean which laved the western shores of South America. Some French cruisers had already made Bahia and Cape Frio celebrated in their country; and those places, in their opinion, should not be exclusively occupied by Portuguese. The idea of a permanent settlement in Brazil, occurred, among the first, to Nicholas Durand de Villegaignon, a Knight of Malta, and Vice Admiral of Brittany; he designed to establish here a kind of independent Sovereignty, which might be an asylum for Calvinists, whose dogmas he had adopted: his relations with Admiral Coligny, favored his views in this respect.

In imitation of Spain and Portugal, under the pretext of forming settlements in the new world, Villegaignon concealed from the Crown of France, the chief object of his ambition, and to induce Coligny to support him with all his power, he assured him of the certainty of founding in Brazil a colony of Calvinists; his art obtained for him the command of two well-armed ships, and with them, he proceeded to the bay of Nitheroy, in November 1555. The Tupinambas, who inhabited this part of Brazil, had, for a long time, trafficked with the Corsairs of Dieppe; and on this account, they joyfully received the French, supposing they had come to deliver them from the oppression with which they were threatened, by neighboring tribes of savages. On a desert island, belted by rocks on a level with the surface of the water, the Admiral disembarked; he there constructed a rude fortress, which he gave the name of Coligny, but it now bears that of its founder.

After establishing his first relations with the natives, Villegaignon took care to impress on the Crown of France, the value of his brilliant acquisition, and to ask for reinforcements; and, at the same time, he secretly asked Coligny to send out Doctors or Priests of the Calvinistic Sect. In short, a new expedition was prepared at the cost of Henry II., under the command of *Bois le Comte*, a nephew of the same Villegaignon, with a colony of French Protestants, and two Calvinist Ministers: this expedition arrived in March, 1557, at Fort Coligny, where it was received most kindly by Villegaignon. But the support and propagation of Calvinism was no longer the chief object proposed; he began to show a preference for temporal interests. The total change in the conduct and opinions of Villegaignon, at once proved to the Protestant colonists, that this Chief had disappointed the expectations of Coligny.

The zeal he had manifested for the reformed religion, was feigned: when it became his inter-

est to change his party, he let fall the masque, betraying and persecuting the Protestant colonists. This sudden change was attributed to letters from Cardinal de Lorena, which charged that he had abjured the Catholic faith. After the conspiring against his life, he became more haughty and cruel, and treated the Protestants with great severity, expelling them from the fort and from the Continent. Villegaignon did not long retain a power which he abused in the most odious manner. His means of defence being very much reduced, he resolved to return to France, (metropolis,) and obtain new aid and a successful termination of his projects. He left the fort and island, garrisoned by a hundred Frenchmen in his confidence, and on setting out, he caused a Protestant Minister, who had remained with him, to be thrown into the sea.

The disturbances which followed the death of Henry II., contravened his vast designs. Finally, as soon as his nascent colony fell into the power of the Portuguese, he renounced all his hopes in Brazil, as well as the hopes which had so long flattered his ambition; and returning to his estate in Beauvais, he died after some years, leaving an unenviable memory behind him. Ambition and religious zeal divided the most remarkable epoch of his life. Each of these sentiments served him alternately for masque; and when he ceased to play this double part, declaring himself to be opposed to Calvinism, he received the name of the *Coin of America*, from the French Protestants.

It is difficult to understand how the Court of Lisbon, jealous of its commercial advantages, should suffer four years to elapse without being disquieted by the enterprize of Villegaignon. The Jesuits at last roused the cabinet at Lisbon from lethargy by their reports, and finally brought Mendo de Sà an order to attack and expel the French from Fort Coligny; but desiring to execute this part of his instructions, he found great repugnance in the counsel of his subordinates, whose apprehensions were dissipated by Padre Nobrega, who accompanied the governor in this expedition, giving the best proof of correct judgment, in the skill with which he drew succours from S. Vicente, which decided the success of the enterprize.

Finally, Fort Coligny was taken by assault in 1560, the French escaped by flying to their ships or to the main land, where, joined by the Tamoyos, they fortified themselves again. Mendo de Sà not having sufficient force to hold the island, withdrew the artillery, demolished the works, and embarked for Santos, with the view of visiting the first and most ancient Captaincy of Brazil. During his residence there, he directed the establishment of Santo André to be trans-

ferred to Piratininga, because exposed to sudden attacks from hostile tribes. In this new locality, the colony took the name of S. Paulo, and came to be the most considerable, and most flourishing city in this part of Brazil. As the road from Santos to S. Paulo was difficult, and infested by Tamoyos, a better and safer road was opened under the direction of the Jesuit Missionaries.

On returning to S. Salvador, the governor found himself engaged against the Aymorees, who laid waste the Captaincies of Ilheos and Porto Seguro; he marched against them, beating them in various attacks, and drove them seventy leagues into the interior. Still, while Mendo de Sá obtained this triumph on one side, on the other was formed one of the most terrible confederations of savages, that ever threatened the Portuguese power in Brazil. The Tamoyos, masters of the whole country between Rio de Janeiro and S. Vicente, joined to attack the Portuguese. Successful in their first attack, they set their eyes upon S. Paulo, which would have been annihilated had not a Catechist discovered their project. The town itself was attacked, but defended by the Christian Indians, commanded by Martim Afonso, (baptismal name of the celebrated Tebyreça,) resisted, with destruction to the savages.

But, if the valor of this Chief and the zeal of the Jesuits were manifest in the successful defence of S. Paulo, on the other hand the enemy was victorious in S. Vicente, and in the Captaincy of Espirito Santo, where Ferdinando de Sá, son of the Governor, died fighting. The war was obstinately continued on the part of the Tamoyos; all the tribes united for a general attack, and the danger seemed imminent when the two Apostles of Brazil, (Nobrega and Anchieta,) full of zeal and faith, determined to risk themselves with the savages in hope of obtaining peace. In effect, after five months spent in suffering, anxiety and sacrifices of all kinds, God crowned the labors of his ministers, in a pacification which had been so difficult to obtain. The wonderful embassy of the two Missionaries was considered to have saved the Portuguese colonies.

War was not enough; another calamity pressed upon the rising colonies. Smallpox was introduced in the island of Itaparica, afterwards into S. Salvador, and extended its ravages on the northern coast: nearly thirty thousand Indians, who had been converted by the Jesuits, were rapidly carried off by the disease. This destructive contagion was followed by the slow, lingering scourge of famine; as if the atmosphere were contaminated, plants rotted, and all the productions of nature as well as men, seemed to be attacked by languor and death. The famine caused a second mortality; of eleven establishments

formed by the Jesuits, six were destroyed, either by death of the inhabitants or by their desertion in numbers; they fled to the interior, seeking an asylum from so many ills.

When the Court of Lisbon was informed that Nobrega and Anchieta had concluded a peace with the Tamoyos, it was at once determined to found a colony at Rio de Janeiro, without delay, and exclude the French altogether, who had somehow, remained masters of the post in spite of their defeat. In virtue of this resolution, the Queen Regent despatched Estacio de Sá, nephew of the Governor, with six galleons for Bahia, (1564.) where he brought an order to his uncle to aid him with all the colonial force in expelling the French from the continent. Mendo de Sá immediately assembled all his disposable force, and placed it under the command of his nephew, who sailed for Rio de Janeiro and then S. Vicente, where others joined his standard, and he obtained some small vessels, which were essential to his success.

As the preparations at S. Vicente consumed the rest of the year, 1564, Estacio de Sá could not return to Rio before the beginning of the next year, when he disembarked near the Sugar Loaf at a place now known by the name of Praia Vermelha, where his dispositions for attacking the French were made; but they being advised of his approach, repulsed him in all his attacks, and sustained the contest more than a year, in spite of the force, council, and boldness of the indefatigable missionary Nobrega. All the resources of the South being exhausted, it became necessary to ask the assistance of the Governor General; in consequence of this application, Mendo de Sá equipped a fleet, under the command of Christavão de Barros, and accompanying the reinforcement in person, he arrived at his nephew's camp on the 18th of January, 1567. The general attack was deferred until the day of St. Sebastian, on which occasion the French lost the strong fort *Uraçumiri*, not one of the Tamoyos who defended the entrenchments escaping. The conquerors would have marched against another fortress of the French, which they also would have carried by assault; but, in the first attack, Estacio de Sá received an arrow in the face, from the effects of which, he died a month afterwards. His cousin, Salvador Corrêa de Sá, who was named his successor, at once assumed the command.

Estacio de Sá was subsequently interred in the church of St. Sebastian, in which his epitaph, dated, 1585, is still seen. He was the founder of Villa-Velha, which stood on the Praia Vermelha, immediately to the West, and at the base of the Sugar Loaf. In the sixteenth and seventeenth centuries, three forts, called São-Diogo, São-Theodosio and São-João, were built adjacent

to Villa-Velha; and subsequently the fort now known as the "forte de Praia Vermelha," was constructed.*

Few French died in these two decisive actions, in which the allied Tamoyos had sustained the whole weight of the fight. When the latter succumbed, the French embarked in four vessels they had in port, and sailed for Pernambuco, where they were driven back by the Governor of the Captaincy, so that there was nothing left them but to return to Europe. Thus terminated forever in Brazil, an ephemeral power which threatened the prospects of the Portuguese colonies. Surely, if Mendo de Sá had been less loyal, if Nobrega and Anchieta had been less skilful, Rio de Janeiro, now the capital of Brazil, would have been, perhaps, a French colony. Immediately after the victory, the Governor General, in obedience to his instructions, traced on the western shores of the bay, the plan of a new city, which, after existing for two centuries, became the metropolis of Portuguese America.

Scarcely had the new city of St. Sebastian assumed a regular aspect, when Salvador Corrêa de Sá, the same who had distinguished himself in the conquest, became Governor. Created first Chief Alcalde, he was inaugurated to the office with all the formalities usual in Portugal. The Chief of the converted Indians, Martim Affonso de Souza, *alias* Ararigboia, who had distinguished himself so much in the last expeditions, was settled with his people on the other side of the bay, in the place now called San Lorenzo. In the meanwhile, there arrived at Cape Frio, four French vessels, probably the same which had been driven from Rio de Janeiro and Pernambuco; Mendo de Sá had returned to San Salvador, and only a small force remained in charge of the Governor; nevertheless, Salvador Corrêa de Sá, aided by the celebrated Ararigboia, succeeded in again expelling them, taking one vessel with heavy guns, which we used to protect the har. When the young king, Dom Sebastian heard of the noble deportment of the Brazilian Chief, Martim Affonso de Souza, he bestowed on him the "habit of Christ," and sent him presents of great value, among which, was a coat of arms, an honorable mark of appreciation and esteem.

The Jesuits, always busy in propagating the faith, had rendered great services to the Crown of Portugal, both in India and America, and for this reason, the King resolved to send to Brazil a reinforcement of these Missionaries with Dom Luiz de Vasconcellos, whom he selected to succeed Mendo de Sá, in the government of the colony. Sixty-nine Priests assembled at Lisbon,

*Dicionario Geographico, historico e descriptiro do Imperio do Brazil. Pariz, 1845.

and embarked in the fleet destined to carry the new Governor. At that period, Portugal had not sent to the West any considerable expedition; but opposed by winds and currents, it was separated and totally destroyed by two famous Corsairs, Jacques de Soria, and João Capdeville, Huguenots, from Rochelle, intent upon exterminating all Catholics who might fall into their power. The unfortunate Governor died fighting; and of the sixty-nine Missionaries, scarcely one reached his destination to relate the misfortunes and martyrdom of his companions.

Nobrega did not live to learn the fate of these new martyrs of his Order; he died about the same date in the 53d year of his age, bent with the weight of great toil and continued fatigue. Nobrega for his incessant vigilance and benefits rendered, deserves to figure honorably in the annals of Brazil, where he established a moral tone on religious foundation, and with sound policy sustained a vacillating colony; he was the true legislator of the Indians. No one ever spent his life more actively, nor more usefully for his country, and for his fellow beings.*

The site of the city of St. Sebastian or Rio de Janeiro, is a marshy plain, studded by lofty hills of granite, or rather granitic gneiss, clothed in luxuriant vegetation. At first sight, this can scarcely be supposed. The soil on the hillsides is remarkably thin, and in any climate of less moisture and temperature, would be inadequate to support the vegetable growth upon it. In the valleys, it is deeper, an alluvium being washed down the declivities by the rains, and deposited upon a thick bed of clay, which underlies nearly the whole of the district, and keeps the surface of the earth from becoming dry by natural drainage.†

When the city was commenced, on the Punta Calabouça, the vicinity was almost constantly overflowed by pools of stagnant water, which were prejudicial to the general health of the pop-

ulation. Staunton, Macartney, and other voyagers, notice this condition, and it remained until the time of Dom Pedro I., when the marsh was drained and improved. A view from the Convent of San Bento, or a ride towards the imperial residence of San Christovão will satisfy the voyager of the real nature of the topography, and lead him to suppose that there are sources of miasma enough in the neighborhood, to render the place unhealthy at certain seasons. Indeed, intermittent fevers prevail around the bay of Rio de Janeiro, especially amongst those of the population who are imperfectly nourished and sheltered, at all times; and occasionally it is severe and fatal in its effects. In 1845, there was considerable mortality and suffering on the Ilha do Governador, which was traced to extensive marshes, by Doctor João José Vieira, who was appointed by the government to investigate the subject.*

CHAPTER XI.

Hotel Faroux; Santa Theresa; Cemetery; Market; Funeral of an Infant; Hackney Coach; Suburban Residence; Sunday in Rio; Mode of Washing; The Corcovado; Comparison of Foreign Trade; Value of Commerce with the United States; Importance of the Navy to Commerce and the Country; Employment of the Navy in time of Peace. The worth of Glory to the Nation. Cost of the Navy not a criterion of its value.

May 3d. Ten years have passed since my last visit to Rio de Janeiro, and in that time, changes and improvements have been made. The depth of water has diminished at the old landing place, and there is a new slip about a hundred yards to the left of it. A building has been erected near, which is known as the Hotel Faroux, the common resort of foreign naval officers and others. It is a kind of restaurant, with the addition of lodging accommodations, such as they are.

Soon after landing, we made our way across the praça to the church, formerly known as the Igreja de la Imperatriz, and the Capella de Santa Theresa. A sacristan politely exhibited the silver altars, and the effigies of Saints, decorated in glittering robes, and a gilded sarcophagus, used for the temporary deposit of a corpse, between the time of the funeral obsequies and interment. In the private chapel of the Imperial family, is a good picture of Santa Theresa. We were shown the burial place, a hollow square, surrounded by three ranges of graves one

above another, each being large enough to receive a body. In the centre of the square are marble cenotaphs of nobles, whose ashes are preserved here. Among them is a well finished statue of a female *en chemise*, in a kneeling posture, resting on a marble cushion. The hands are clasped, and repose upon the thighs; the face is turned upwards with a prayerful expression; this figure cannot fail to attract the attention of visitors.

On returning to the Hotel Faroux, we found some of our shipmates regaling themselves on beefsteak and mushrooms, partridges, &c., which, I doubt not, after a sea-diet of nearly two months, were especially savory.

I was welcomed to my sleeping apartment by the sight of several cockroaches an inch and a half long, which, in their flight, might have been mistaken for humming birds.

May 4th. Soon after day-light, I visited the market, a hollow square paved with flag-stones, in which were spread vegetables and fruits: Lettuce, potatoes, beans, pumpkins, egg-plants, onions, cucumbers, yams, yuccas, oranges, limes, chirimoyas, (but far inferior to those of Peru,) bananas, plantains, lemons, (sweet and sour,) a variety of fishes and poultry. The venders are all negresses: and having no other measures of capacity, sell vegetables by the handful, or by count. Butchers' meats, which are of very inferior quality, being lean and tough generally, and of high price, are sold at shops in another part of the town.

May 6th. At the church of Santa Theresa today, we met the funeral of an infant of about two years of age. The body, dressed in scarlet silk, trimmed with gold lace, was borne in a half open bier. Fancy an oblong trunk with the top divided in the middle, and hinged on the sides, so that it opens to the right and left, and trimmed with silk and fringes, and a notion of this piece of funeral apparatus may be correctly drawn. There was no coffin; the dead child was gayly arrayed and reposed amidst flowers in its bier, the lids of which were open. No procession of mourners followed; only a few persons were present, and they seemed to be in no manner influenced by the dead child's presence. A Priest, in the appropriate costume or uniform of the church, holding in one hand a closed book, with a finger clasped between its leaves, while he scratched his bare head with the other, led the way, conversing with some person on a subject seemingly unconnected with his present duty. On arriving at the cemetery, the gate was closed, and the sexton declared it could not be opened, because his slave had gone off with the key. The bearers of the body, who were decently dressed male citizens, laughed at the sexton's

* Ammaréo polit. p. 46.

manifest vexation. The priest readily extricated the parties from what seemed to me a disagreeable situation: he said, "Carry the body again into the church, and I will there further recommend the soul to God."

From this little incident, may be gathered, that the people of Rio de Janeiro regard the death of young persons with sentiments widely different from those which prevail with us. There was nothing to indicate that the close of the infant's life brought deep grief to parents or friends; the outward signs were rather of rejoicing than of sorrow; it went down to the tomb in gay silks and glittering lace, amidst flowers, arranged with as much affectionate care and parental pride, as if the mother had sent her darling on a birth-day visit, to be admired on the way. There was nothing to bring sad thoughts, or provoke a sympathizing tear. I have never beheld a funeral of a child at home, without some thought of the sorrowing parents, because I could not imagine a mother parting forever from a loved infant without acute mental suffering, even in spite of the solace which protestant Christianity affords. But here there must be an influence upon the selfishness of our nature different in its effects from that, to produce a custom and a feeling relatively to the death and burial of young children, so diametrically opposite to what we regard to be natural. Shall we condemn whatever we perceive in the habits of a people, because when measured by our own, they are found to be different? I find no fault in this Brazilian custom, because I know of no absolute criterion by which to determine that it is right or wrong; but I imagine there is something in the teaching, in the education which enables Roman Catholic parents in Brazil, to bear more calmly than we can, the loss of young children.

Sunday, May 7th. About ten o'clock this morning, I went on shore with a friend, to pay a visit of invitation to a distinguished American gentleman resident here. We hired a vehicle for the day. The body hung low, on four wheels, and like a barouche, may be closed or left open at pleasure. Two very small mules were harnessed to this carriage. A coal black negro, under a glazed leather hat, which might have provoked the envy of a fireman, while his pedal extremities were hidden in the profundity of a pair of tall, stiff, leather military boots, sat upon the box. A blue frock coat with red facings and trimmings, completed the livery of our hackney coachman. Away we started, bouncing and thumping over the stones in a manner to test the strength of the turn-out, which seemed as frail and gaudy, as the carriage which, according to dramatic records, the fairies furnished to Cinderella. The jehu belabored the mules continually, and

they heeded the blows so little, that the inference was palpable; long habit had made them insensible to this kind of stimulation.

Our route was through narrow streets in the southern part of the city, and along the road to the Corcovado, a distance of about three miles.

The suburban residence of our host, like all the houses of Rio, has the ground floor arranged for the accommodation of pleasure carriages, and the occupancy of servants. The drawing rooms and family apartments are on the second floor. This house is pleasantly situated. In front, a mountain, the sides of which are very steep and clothed in a luxuriant tropical vegetation, rises several hundred feet; and at its base a tiny stream flows from the Corcovado towards the sea. The peak of the Corcovado, seemingly almost overhead, is seen to the right when looking from the drawing room towards the road. A garden of about three acres rests on the base or lap of mountain in the rear. It might, without very great impropriety be termed an orchard; oranges were scattered under the trees, as we see apples in some parts of the United States. Besides, the cinnamon, (*laurus cinnamoni*), cotton, and coffee, there were bananas and figs, and a tree called "*lucu*," bearing a cordiform, hairy pod, filled with reddish seeds of the size of peas, which are used in soups, and for this purpose, are considered equal to tomatoes. There were many flowers of various kinds, and some of them strikingly beautiful.

Our worthy entertainer received us cordially, and at once supplied us with linen jackets to wear instead of the heavily laden cloth coats, which are usually worn by naval officers, under instructions of the Secretary of the Navy, and almost always at the cost of discomfort in tropical ports. A broad cloth coat, sprinkled with dozens of heavy brass buttons, besides other ornamental badges, closed to the chin, would not be worn in preference by any gentleman of taste or discretion, while walking under the blaze of a noon-day sun, in an atmosphere warmed up to a temperature of 90°F. We appreciated this act which contributed so much to our comfort; although it did reflect somewhat on the genius of those who devised the uniform dress of the navy, we had not courage to decline the use of the jackets provided for us.

In Rio de Janeiro Sunday is not a day of rest. On our way, as we passed along the streets, we observed that masons and carpenters were at work. Twenty or more negro men and women stood in the stream in front of the house, more than half-leg deep, washing soiled linen. They first imbued it plenteously with soap, and then, as if they were venting spite upon some stone or rock on the bank, they thrashed away right and

left without regard to integrity of buttons, occasionally dipping the piece into the water. The women had their skirts tucked up so that their lower extremities stood revealed to the hips, but no more. They sang cheerfully as they battled the rocks with their master's linen; and, to judge from appearances, were as happy and free as the spectators, but we were assured they were slaves.

Looking up to the Corcovado, I am reminded of a former visit, and of the notes I made at the time:—near Rio

"There is a cliff whose high and bending head
Looks fearfully in the confined deep"

for many a mile around. It is two thousand three hundred feet high, and at one time, the Corcovado, as it is named, was the site of a Look-out, from which the approach of vessels was announced by signal. At present it is one of the sights of Rio, and is much resorted to by strangers soon after their arrival. The view is worth all the exertion it costs to reach the top; and I may remark, the toil of the excursion is much less than it is represented to be by those who have been long enough here to feel that proclivity to indolence produced by the climate.

One morning, accompanied by several officers, I landed, and after winding through several streets, began the ascent of the Corcovado, along the aqueduct. The day was cloudless, and everything was propitious for the excursion. Being full of spirits, we were capable of deriving the greatest pleasure from the beautifully romantic views that on every hand presented themselves: even a pencil guided by a skilful hand, cannot convey an adequate idea of the scenery and natural beauties seen in this ride. The air was balmy; the flowers were blooming though it was winter; bright valleys expanded below us, and above towered moss-covered rocks; and the stillness every where prevailing was only interrupted by the occasional note of a bird. Here and there we met amateur naturalists, and slaves of collectors in pursuit of insects, land shells and birds, in every part of the ascent. What exquisite pleasure many of my home-staying friends would have derived, could they have been with us; to see the endless variety of flowers, a vegetation new in almost all its forms to a northern eye, and a scenery for picturesqueness not exceeded in any part of the world.

We passed the "Casa da Agua" and continued our ride to the "Pavilion," not, however, without feeling distrust in the feet of hackney horses when riding on a narrow path, that struggled for existence between a deep precipice on one side and a wall-like rock on the other. The Pavilion is a name given to a spot where there was a rude round table, sheltered by a wooden

shed, and surrounded by a few thatched huts, tenanted by the workmen and slaves who were occupied in extending the aqueduct to receive springs which pour out their waters from a higher point of the mountain. It is shut in by rocks on almost every side and is not discovered until nearly upon it. From this point the ascent to the peak is very difficult, and on horseback, very dangerous; therefore, it is usual to complete the journey on foot.

Here we met several ladies and gentlemen of our party, who had travelled a path on the side of a deep gorge or valley opposite to that by which we had ascended. They had already begun to spread upon the round table a substantial lunch to fortify us for the task we were about to undertake. While discussing the good things before us, which had been brought from the city in baskets, on the heads of slaves, I was amused by the appearance of a negro who had charge of our horses. His pantaloons reached only to his knees, and he wore a pair of boots without soles; so that his black skin was exposed above their tops, and his toes below. Yet, like one well pleased with himself, he strutted about in discharge of the duties of his office.

Having stored a basket with flasks of water and of wine to follow us, we began the ascent, which from this point is very steep; in many places the path was obstructed by fallen trees, and in others deeply worn by heavy rains, which fall at all seasons of the year. It was mid-day, and the trees grew so thickly together as to intercept the movement of the air, which was exceedingly hot and oppressive; and we often halted as we climbed to take breath and to cool ourselves. After toiling on our way nearly a half hour, we met a party of English gentlemen descending, and asked whether we were not near our journey's end.

"Oh no," replied one, "you are not more than half way up; and after you get there, you find nothing at all—but the view, and that is tolerably fine, to be sure." And, the view being all we expected, we pushed on.

At last we came out of the thick wood upon a naked rock, which bore the marks of fire; it was the site of a house which, we were told, had been burned some years previously by a party of reckless Frenchmen. Here we encountered a breeze, fresh from the sea, which made us button up our coats, and the ladies to draw their shawls more closely about them. A few steps more brought us to the top of the Corcovado, where we stood for some moments in silent admiration. The summit of the rock is about fifty feet in diameter, and its surface has a slight inclination landward. On it were the ruins of a look-out, on which are carved many names of persons am-

bitious of notoriety: the record must be read there, for I did not transcribe it. Several iron staunchions were still standing on the verge of this bald spot; but a bridge which crosses a chasm to a projecting point of the rock, had been destroyed by fire.

The atmosphere was clear, and the eye took in a horizon of seventy miles. The bright, blue, boundless ocean rivalled the sky in color, and its expanse was dotted by a half-dozen ships, approaching the harbor under a cloud of canvass, and seemingly no bigger than their boats. Cape Frio, sixty miles distant, was distinctly visible, and the white thread of sand beach, stretching between it and the bay. The Sugar Loaf seemed a mere mole hill below us. The alleys of the Botanic Garden showed like pencil lines, and the houses along the lagoon, all of which were immediately beneath our feet, were comparable to toys. The Corcovado presents a perpendicular face towards the sea, of more than two thousand feet in height.

"Stand still—how fearful

And dizzy 'tis to cast one's eyes so low!

The crows and choughs, that wing the midway air,
Show scarce so gross as beetles.

* * * *

The fishermen that walk upon the beach,
Appear like mice; and yon tall anchoring bark,
Diminished to her cock; her cock, a buoy
Almost too small for sight. The murmuring surge
That on th' uncumbered idle pebbles chafes,
Cannot be heard so high. I'll look no more,
Lest my brain turn, and the deficient sight
Topple down headlong!"

A story was related of a young French lady, who, having been deserted by her lover, cast herself from this dizzy height. Her body was never found; it remained, it was supposed, on some inaccessible crag a prey to vultures.

We gazed an hour, and descended to the Pavilion; and thence to the city.

All the events of that delightful day recurred to my memory as I gazed upon the lofty peak from the veranda. Of most of those who formed the pic-nic party I have now no trace; but I know that several of the then lovely maidens are at present fair matrons, and that the most beautiful and the youngest of the party sleeps in an early grave. Long will her merry laugh ring on memory's ear, and the bright glance of her eye be present to the recollection of those who are still left to follow her to the world of the happy and the good.

I was aroused from a sort of reverie by the arrival of other guests, among whom were several who had long been residents, and were therefore supposed to be well informed on Brazilian affairs.

Speaking of Brazilian commerce, a gentleman stated that the number of vessels under the American flag, trading with Brazil, was more than double that of any other nation; and to prove the assertion, brought forward a report of the export trade for the year 1845, from which the following general table was deduced.

	<i>No. of Vessels.</i>	<i>No. of Tons.</i>	<i>Av. Tonnage.</i>
English,	88	22,896	260
American,	174	58,816	337
Austrian,	17	5,829	341
Belgian,	15	5,015	334
Bremen,	13	3,631	209
Danish,	40	11,831	295
Dutch,	1	352	353
French,	26	9,421	362
Hamburg,	24	7,771	323
Hanoverian,	1	195	195
National, (Brazil,)	47	8,537	181
Neapolitan,	7	2,313	330
Norway,	3	799	299
Oldenberg,	3	620	206
Portuguese,	42	11,585	275
Prussian,	2	1,266	452
Russian,	4	1,311	357
Sardinian,	26	4,679	179
Spanish,	7	1,627	232
Swedish,	43	15,373	357
Total,	583	173,867	

In the year 1845, there was imported into Brazil from the United States, flour valued at \$1,083,318, and manufactured cottons, valued at \$330,926; the total imports were valued at \$2,837,950. For the same period the value of coffee exported from Brazil to the United States, was \$4,401,269; sugar \$293,060; hides and other articles \$646,001: the aggregate value of exports to the United States is stated at \$6,084,599.

Including the value of the tonnage engaged in the trade of Brazil with the United States, the capital employed in this commerce is probably equal to ten millions of dollars.

The markets of Brazil take yearly about three millions of dollars worth of property produced by the farmers and manufacturers of the United States, an interest which extends from the seaboard to the far west, yielding more or less advantage to citizens of every vocation. The preservation and protection of this commerce is important to the whole country.

It was remarked by a merchant present, that the navy had been useful in establishing and increasing the value of the American trade with Brazil, because its existence gave confidence that commercial enterprizes would be protected by the strong arm of the government in case of attack; and the simple presence of our ships of war served to protect our merchants from aggression and many petty annoyances, to which they would be exposed, if we were without a naval force.

Another rejoined: "however true that may have been in times past for the world generally, and possibly to a very limited extent at present in some parts of the world, the position is not true now. The value of American commerce with Great Britain, with the north and the south of Europe, is far greater than of that with Brazil; but no one imagines that the presence of our ships of war in the British Channel, in the Baltic, or on the coasts of France, is requisite for the protection of that commerce. A naval force is not necessary to coerce civilized nations to treat foreign merchants and their ships with justice and propriety. The governments of civilized countries require no show of power to induce them to observe the provisions of commercial treaties and laws. The people of the United States would not quietly submit to the presence, in our ports, of the men-of-war of all nations with which they trade, if their avowed object was to overawe us into an observance of the rules of fair dealing. A suspicion of our national honesty in trade would not be tolerated for a moment; and the expression of such a suspicion, by the constant presence of a squadron of any nation on our coasts, would be received with loud tones of indignation. It is not just to conjecture that any civilized government, like that of Brazil, would be influenced in its conduct towards the merchants of the United States by the continuous presence of our men of war—that without their presence, in other words, the commerce of the United State with Brazil would diminish. Fear is not the dominant motive of the actions of civilized and intelligent people. Acquisitiveness exerts much more power. The people of Brazil are not insensible to the advantages they derive from their commerce with the United States; and even in the absence of treaties, they would perceive their interests in placing the merchants of the United States on a footing with those of the most favored nation. It is not to be presumed that they, more than other people, are prone to quarrel with their customers; they do not require our men-of-war to compel them to perceive the advantage of selling four or five million dollars worth of coffee every year, which, if Americans were driven from their ports by unkind or unjust treatment, would remain unsold, and the effect would quickly be seen in a depreciation in the value of coffee-estates and of slaves. There have been, and there are still small annoyances to traders, which are attributable to certain rules embodied in the details, or forms prescribed for the despatch of business in the custom-house, but the presence of men-of-war does not avail to induce a change. A judicious diplomatic agent would effect more

in the course of a month in this respect, than the presence of a naval force for twenty years."

"I trust the gentlemen of the navy present," he continued, "will not misconstrue my sentiments. While I contend that the presence of ships of war is not necessary to protect our commerce in civilized countries;—meaning of course countries whose governments carry on war;—I am not insensible to the great importance of a well organized naval establishment to the strength and respectability of a government. Such an establishment is essential, in spite of all that has been said by the most erudite members of the various Peace Societies, in different parts of the world,—unless we choose the exclusive policy of the Japanese, and abandon intercourse with foreign nations. But that policy will never be adopted. The influence of commerce in ameliorating the condition of mankind, by diffusing every where knowledge of the arts, of science and of religion is fully recognized; and as long as commerce is pursued, or at any rate, until all the people of the earth reach that degree of civilization which will render resort to war unnecessary to decide differences of opinion, or questions of right, military establishments both by land and sea must be maintained by nations. Strength is always respectable; to secure this kind of respectability, it is necessary to demonstrate from time to time, that strength exists; and this may be done without proceeding to extremities. When even a good natured animal exposes his teeth, men who see them are generally satisfied that he has capacity to bite, without any further demonstration, and prudently avoid provoking him to any further exhibition of his power to protect himself, or to assail others. As long as the eagle possesses talons and a strong beak, he will not be molested in his flight by hawks and buzzards; but, deprived of these organs, the noble bird might be exposed to aggression, and, being unused to avoid assailants, fall a prey, even to the "mousing owl." He requires something more than the plumage of his wings, and a far-reaching eye to maintain his position among the feathered tribes; we must leave him the instruments by which he can show his courage and his strength, or expose him to insult without power to resent it.

"A commercial nation without a navy would be as little respected, as our national bird deprived of all powers except those of flight. When we disband the navy, we must at the same time prepare to submit to encroachments on our rights, by even the weakest of foreign nations possessed of naval power. Our policy is to maintain a navy which should be in every respect efficient, without comparing its cost with that of peaceful institutions of any kind. It is unwise to reckon

"what glory costs the nation," until it is determined what a nation is worth without glory, for it must be evident to all who seriously consider the subject that a nation's glory is the common soul, the spirit of the body politic. A country indifferent to national glory, to national reputation, is no better than a man insensible to honor and indifferent to the reputation he holds in a community. Our flag, 'the star spangled banner,' is not a meaningless arrangement of colored bunting contrived to please the eye, like the arabesques of an eastern screen. It is a symbolic embodiment of liberty, and on its broad folds are emblazoned, in characters of electric light, a record of the virtues, and prowess of the whole people, which imparts increased strength to the arm, and courage to the heart of every true American who beholds it. That banner is hailed with pleasure and pride by every patriot, because it is at once a sign of individual protection and national glory. When national glory has departed, the nation will need no banner; all will be gone. Then, narrow indeed, must be the views of the statesman who can compare the value of a nation's glory with gold; to estimate it at a money value, is a first step towards rendering virtue, intelligence and power secondary to mere wealth.

"Let us suppose that the navy has cost five millions a year during the past half century, or 250,000,000 of dollars; and that, had there been no navy, this sum would be at the present time in the coffers of the government. Is there an American alive mean enough to prefer this kind and degree of national wealth, to the respect the nation has won through the naval prowess of Hull, Decatur, Stewart, Bainbridge, Perry, McDonough and others? There is not a man, worthy of the name, who would willingly exchange that portion of national glory achieved in times past by our little navy, for the privilege of boasting that the treasury of the nation contained hundreds of idle millions.

"But while I appreciate the value of a navy, I am far from believing that its existence is necessarily involved in wasteful or extravagant expenditure. A judicious economy may be carried into the navy, as well as in every other department of the government;—and I may add, I do not know that a dollar is wrongly expended in this branch of the public service. Yet, it is not clear, that the navy is as efficient and useful as it might be made in times of peace. If it can be employed only to sail along the coasts of civilized countries with which we trade, the institution is truly of little value. It is a sinecure to protect that which requires no protection.

"The officers and vessels of the navy would find employment more valuable to commerce in seeking out new markets for the productions of

our soil and machinery; in ascertaining and making known the limits of coasts and shoals, and in being sure vehicles of correspondence and intelligence between distant points where postal arrangements do not exist. Instead of keeping their days of sailing secret, our ships of war should depart on stated days, as punctually as mail boats; and wherever they can, without interfering with the postal regulations of countries, carry a mail from port to port within the limits of their cruising. Our public ships would thus serve our interests to a much greater extent than by lounging idly in port for months together, as they were known to do in past times, until, as it was said, they were in danger of grounding on the beef bones thrown overboard by their crews."

"You have made quite a speech," rejoined a gentleman; "but I think you confound the system of employing the navy, directed at Washington, with the navy itself, and hold it responsible on points which are above its control. While admitting the general usefulness and importance of the navy, you deny its special utility to our commerce in Brazil, on the ground that this nation should be treated with as much confidence as the most civilized countries on the earth. I fear the civilization here will not yet compare favorably with that of Europe; and until such comparison is satisfactory, I for one would regret not to see ships of war in the harbor of Rio-de-Janeiro. Affairs are very tranquil now; but no one can guarantee their stability, and in the event of revolution, in the event of insurrection of the blacks, Americans here, in the absence of our squadron, would have no security for their lives or property; no place of refuge. It is wise to maintain a naval force here for this reason alone, if for no other. England and France believe it to be necessary to keep squadrons constantly cruising on this coast; the reasons which influence the governments of those countries doubtlessly influence that of the United States in this matter. The presence of ships of war have unquestionably tended to diminish the African slave trade with Brazil; and to bring many of the wise and humane men of the empire to think seriously of its impropriety. Moreover, there is no way so effectual to exhibit our war ability, and make known abroad the resources of the country, as that of the palpable evidence conveyed in a noble frigate, or a ship of the line. Ignorant, weak and poor countries do not, cannot manufacture such things. I admit that in time of peace our public vessels and officers might be profitably employed in surveying coasts and shoals, and in conveying mails at stated periods; but the officers, willing as they are to serve the country, cannot enter upon such duties with

out authority. If the neglect of these points be a fault, it is not chargeable on the navy, but on the power which controls it. The internal organization of the navy is antiquated and defective; and there may be many practices in it conflicting with the statutes, and contrary to the spirit of republican institutions and government, but the navy is not alone to be answerable for this condition. Every word of censure cast upon the navy as it is, applies forcibly, if not deservedly, to legislators and the administration of affairs at Washington. Many of the evils at present complained of in the naval service, may be traced into the administration of the Navy Department; and if the whole subject were carefully analysed, on the broad principles of truth, (commonly called philosophy,) it would be found the navy, as a body, is not deserving of all the censure applied to it in different quarters. That it contains some inefficient, and exceptional officers, the true friends of the navy do not deny; but considering the frailties, follies and conceits of humanity, and the temptations to which they are frequently exposed, it is questionable whether any community of men, of equal numbers and pretensions contains fewer of doubted ability or morality. There are differences of opinion among even the most intelligent; and on some points these differences may be warmly, and even injudiciously debated, and possibly to the extent of interfering with the discharge of official duty. But these differences can be set at rest by decisions of the national legislature, and a firm and unflinching administration of law by the Executive. The differences have grown out of defective organization, which has often and long been a subject of discussion; and of course, when this organization is reformed, discussion of it will cease, but not till then. There must be a law: because it has become of late years too frequent to discuss the legality of authority before respecting it, and thus it is that certain orders of the Executive are disobeyed, or treated contemptuously, by officers of high position and higher pretension. But this may be an offspring of that transition condition through which the navy has been slowly passing for several years; and all is tending to a practical exhibition of the doctrine that there can be but one social grade of intelligent gentlemen, divide them into as many official grades as you may. In a word, equality of social rights will be recognized in the navy as it is in civil life, in which superior intelligence and conduct confer consideration without regard to vocation. When off duty, the commodore and passed-midshipmen are on the same social level, and possess the same social rights."

"Come, gentlemen," interrupted our host,

"permit me to lead you to a more agreeable subject of discussion; dinner is announced."

We soon forgot naval matters, under the influence of good cheer, and in due season took leave of our excellent host, to return to our several vocations.

Chronicles of the Valley of Virginia.

BY PEN. INGLETON, ESQ.

"To the intent that the honorable and noble adventures in feats of arms, performed and achieved during the wars . . . should be memorably registered, and put in perpetual reminiscence, whereby the brave and hardy may have ensamples to encourage them in their exertions, I Sir John Froissart will treat and record, a history of great encomium and praise . . . and will take my foundation out of the true chronicles sometime since compiled by the right reverend discreet and sage John La Bele . . . who with good heart and due diligence, did his true duty in writing this noble chronicle. . . . I will neither forget, diminish nor abridge the history in anything . . . but rather I will multiply and increase it, as near as I can following the truth from point to point."

FROISSART.

THE STORMING OF WINCHESTER JAIL.

I.

HOW CAPTAINS WILLIAM WHITE AND ABRAHAM FRY HUNTED IN THE SLEEPY CREEK MOUNTAIN.

The morning of the tenth day of October, of the year of Grace 1768, was very clear and bright in that wild and rugged country, which constituted the western part of the good and loyal county of Frederick, in the Ancient Colony of Virginia. The particular portion whereon the events we are about to relate in part occurred, was then, and is to this day, known as the "Sleepy Creek Range"—an undulating and thickly wooded mountain, which, like the Massinutton, after running on in one unbroken rampart, divides itself into two parallel ridges, sinking suddenly into the plain.

On the morning of the day just mentioned, two tall and stalwart men clad in the ordinary hunting shirt and moccasins, and carrying in their hands long heavy rifles, such as then were most in favor with the border men, paused on the summit of the most southerly peak of the range of Sleepy Creek.

The eldest of these men was a fair and worthy specimen of that wonderful race which

then peopled the western border. His iron gray hair clustered in grizzled masses round a tall, well-developed forehead, wherein were set two eyes as dark as night, and instinct with courage and resolution;—his lips were full and closely compressed;—his whole face, from the keen dark eye to the protruding chin, displayed the dauntless nature of the man. His tall and gaunt frame, whereon the storms of sixty years had left no trace of their ravages, seemed a model of strength—so vigorous was every movement, so like an antique statue's were the brawny muscles;—and there was in every motion, every gesture of the man, that calm strength and quiet power, which render always their possessors dangerous above all other enemies.

His companion was younger and more impulsive;—his age could not be greater than thirty-five, and in his laughing lip and gay blue eye, much of courage and high feeling might be seen—not so much of that resoluteness we have spoken of in Captain William White. He had not seen the horrors of the former time, and been a part of them as the elder hunter had, unhappily; and he laughed and jested gaily, and went on lowly singing, while the bright sun gathered strength, just mounting over the far lowland woods.

At times the elder hunter would check this indiscreet sound with a motion of his hand; sometimes remonstrate; at other times say nothing, though it was calculated to spoil their sport. At last they reached the extreme summit of the mountain, and descended toward the east. Here a rough bridle path, running toward Winchester, was visible, and near it the hunters sat down to rest, and "eat somewhat" as they expressed it then.

So taking out their dried beef and rude loaf, they commenced breakfast, talking in a subdued tone.

II.

WHAT WAS THE SUBJECT OF THEIR CONVERSATION.

After a pause of some moments, the younger hunter, who was called, as the reader has been told, Captain Abraham Fry, rose up, and shaking himself, said to his companion:

"I know not what is your opinion, Captain; but I think it certain."

"What is that?"

"This contest with England."

The Captain shook his head.

"She is not so bad as you make her out," he said.

"She could not be worse to us colonists of Virginia. Say now, can Captain William White,

the brave Indian-fighter, the courageous borderer, approve what they call the "Black Act?"

"What is that?"

"I mean the Stamp Act."

"It is unconstitutional and unjust."

"Ah, well! I am glad you think so. And what say you of the state of things in this our good county of Frederick?"

"We have many grievances, it is true."

"Yes! by my faith, so many that they will not always be borne: and what is more, in the resistance we make, the colonies will be successful!"

"And why do you think so?"

"Have we not such men as you, Captain White—and many such all over the land?"

"And what am I?"

"You are a man who would more than match ten regulars in any fight."

The Captain smiled, shaking his head.

"It is true," said he, "I might strike down many enemies fighting Indian fashion; but I no longer like that mode of fighting as of old."

"Take care! There are Indians about here, still."

"Not many: we are done with them—I am old and rusty this many a year."

"Well, if you and such as you are nobody, have we not George Washington?"

"Ah," exclaimed Captain White, his large eye brightening, "now you talk reason. I know Washington—for I have seen him at work in '54. But all this is useless—things are quiet in this good year of Grace 1768—very quiet."

"The quiet of death."

"You should say rather, thinking as you do, the silence that precedes a storm!"

"Yes—and the storm will come."

"We shall see."

"See what a state of things is here in Frederick? What think you—say now—of our County court?"

The hunter shook his head.

"Not much good."

"And of this Martin Felsee, our worthy sheriff, what says Captain White of him?"

"He is a villain!"

"And you have had him many times at arm's length! By my faith, let him not stand so long with me!"

"Friend Fry, this man represents the law."

"What law?"

"The law of the land, which every good man must obey."

"Well, I would represent another law!"

"What is that?"

"Of vengeance!"

"You are wrong," said Captain White, sh-

king his head. "For many years I thought and acted so: but no good ever came of it."

"Let me tell you of his last villainy. It was only the other day"—

"Hist!" said his companion, rising, "the sun will not wait for us. Defer your story, friend Fry;—we must be moving if we would sup on venison."

III.

WHAT SORT OF GAME THE TWO HUNTERS ROUSED.

The hunters did not pause long to gaze upon that fair and fertile country; but with eyes alone for their game, commenced the descent eastward. Their path ran parallel to the slightly defined road we have mentioned, winding along the southern descent, and at intervals this narrow track came in sight, then disappeared again, swallowed, like a sleeping snake, by the richly variegated woodlands of October.

Suddenly the elder hunter laid his hand on his companion's arm, and bending down his head, uttered the low Indian "hist!"

"What now!" whispered Captain Fry.

"Did you hear nothing?"

"No."

"Nothing at all?"

"Nothing but the rustle of the leaves."

"And did you see nothing," continued White, with his eyes bent on a thick copse at some distance—"nothing?"

"Yes, I saw the topmost limb of that chestnut bend down with the weight of a squirrel, and I dreamed but now that a cloud upon the western mountain yonder was a herd of elk."

The old hunter gave no heed to these carelessly uttered words, but suddenly levelling his rifle at the thick copse, fired. Then to his companion—

"Indians!" he cried. "To your tree, or you're a dead man!"

"Did I not say they were still in these parts!" said the young hunter: and following the example of his companion, he darted behind a tree. It was well for him that he did so. At the moment he had screened his person, two quick reports were heard, a ball buried itself in the broad trunk of the oak, and with a yell three Indians sprung from the copse and appeared in the open glade of the forest.*

* They had not been out long before they discovered two Indians in the glades.—*Kercheval*, p. 140.

IV.

THE RESULT OF THE ENCOUNTER.

The Indians immediately darted to their trees, and commenced loading their firelocks. Captain White would never have permitted them to do so, had his own rifle not been just discharged, and so for the moment rendered useless.

In an instant the whites and their enemies had both re-charged their guns, and then commenced one of those contests of skill and cunning, which had for their stake good human lives. The Indians endeavored by every stratagem possible to wile their enemies from the shelter of their protecting trees, and to make them throw away their rifle shots: and that in such wise with such great skill that none but experienced woodsmen could have resisted them.

"We shall lose our supper, more still," said White, "should we not bring down these beasts."

So taking off his cap, he held it guardedly in his hand and slowly protruded it beyond the tree trunk. In an instant a shot echoed along the mountain, and a rifle ball dashed the cap from his hand to the distance of ten paces. The Indian saw his mistake and unguardedly abandoned his tree:—the mistake cost him his life; for he had no sooner exposed himself than he fell, struck through the heart by White's rifle ball. At the same moment two other shots were heard—one of the surviving Indians had shot at Fry, the other at White: both were unharmed.

Captain White clubbed his rifle and rushed upon his enemy: the Indian, holding in his hand a long knife, met him face to face, and endeavored to plunge it into his heart. White's rifle broke at the first blow, and his enemy closing, they both rolled upon the ground. There the contest was one of simple strength, and the Indian was no match for the white hunter, who, wresting his own knife from him, stabbed him in the side. The Indian closed his eyes, and fell forward biting the grass. White rose up, covered with blood. At the same moment he was joined by his companion, who had pursued his flying enemy for some distance, and only gave up the pursuit on remembering the critical situation of his friend.

"See there," said White gravely, and wiping the sweat from his forehead, "he is nearly gone."

"Dead for a doubloon!" cried Fry, touching the body with his foot.

"Yes, I felt the knife go deep."

"You stabbed the dog?"

"It was my only chance of life. I thought I had given up this sort of work for good," he added, shaking his head.

"I said there were Indians about still."

"Yes, so you did."

"And why did they attack us?"

"I know not."

"My rascal ran like a deer—did you see him?"

"Yes, yes; but come now; we must see to what tribe this savage belongs. He is not dead."

"Not dead—the rascal!"

The Indian in his death agony turned over, and with fast glazing eyes looked upon the elder hunter.

"How de do, broder?" he murmured.

"Brother with a vengeance!" said the young hunter; "you dog, did you not try to 'brother' us with your firelock there but now!"

The Indian murmured something.

"Speak!" said Captain White, checking his companion. And kneeling down, he raised the Indian's drooping head. "Speak, you poor, bloody heathen!"

"White broder no take poor Injun scalp?"

"No—I'm not a scalp-taker."

The Indian seemed much astonished at receiving this assurance; it was plain he had rather proffered the request in a moment of despair, than with any real expectation of having it granted.

"Your scalp is of no use to me," said the hunter, "and none to you either, since you are about to die."

"And white broder bury poor Injun body?"

"Yes, yes; you shall have Christian burial, which you do not deserve. But don't fear for it. Yes, yes!"

The Indian seemed to understand this very well, and muttering lowly, "White broder good to poor Injun!" without another word expired.

"See there now," said Captain White thoughtfully, "this human nature is a wonderful thing. That poor Indian devil tries to kill me with all his might; and when my knife has well nigh finished him, begins with 'broder' and 'poor Injun.' This is a strange world!"

"There is something stranger than the conduct of the Indian."

"What is that?"

"Your own forgiveness and kindness to him, Captain."

The Captain shook his head.

"I can't bear malice," he said; "when a man is dead,—his heart no longer beating, the hatred is gone from him. The warrior there is dead. He shall rest as is fit, and that in six feet of earth."

"Shall we bury the other one also?"

"Yes, yes!"

"Why, you're a strange Indian-fighter, Captain."

"I'm done with it, friend Fry. I wished to have my hands no longer bloody as in the old days;

but since heaven has seen fit to force me to kill, I will at least give burial to my enemies."

"Where shall we find spades?"

"At my house, which, as you know, is some three miles distant. Your own is at least six there in the low country. Come!"

And leaving the dead Indians lying as they fell, and keeping a sharp look out for the one who had fled, and might be lurking with others, the hunters slowly took their way towards Captain White's hunting cabin. His proper dwelling was on Cedar Creek.

V.

HOW THE HUNTERS WERE INTERRUPTED WHILE BURYING THE BODIES, AND BY WHOM.

In less than two hours, the hunters were again in the little mountain glade—this time mounted, for carrying more conveniently the spades and pickaxes they had brought to dig the Indians' graves.

They tied their horses, and then selecting a little knoll, over which a huge oak tree threw its broad arms, they set to work in silence to hollow out the grave. It was hard labor, though they had thrown upon the ground their caps, coats, hunting gear, and every thing calculated to impede their exertions; and as they toiled, penetrating deeper and deeper into the rocky mountain soil, huge drops of perspiration rolled down their brows and cheeks. At last they had dug to a depth of at least six feet, and the grave was sufficiently deep. They then proceeded to the spot where the dead Indians were lying, and raising them by the neck and feet, bore them to the knoll, and placed them in the grave. Fry was about to throw in the first spadeful when White stopped him:

"Poor creatures!" said he, "we ought to say something over them."

Then lowering his head solemnly—

"The Lord have mercy on these poor sinful heathen!" he said, "and make them clean, and forgive their sins, and take them to himself. Amen. Dust to dust is all they are now;—go on, friend Fry."

Before the first spadeful of dirt fell, a party of three men made their appearance at a bend of the road, riding eastward. They hastily approached, and he who rode at the head of the party exclaimed in loud, harsh tones:

"Stop! I command you in the King's name."

"What now!" said White, turning round.

"Ah, Captain White!"

The captain answered calmly:

"At your service, Mr. Martin Felsoc."

"And what are you doing there?" asked the officer.

"We are burying two Indians, as you see."

"Two Indians, eh?"

"The grave is open; you may see what number, if my word is not enough."

"Your word is quite sufficient here," said Felsee, with a sneer, "you are my prisoner!"

The captain drew back.

"You and your companion—both."

"And on what grounds do you arrest me, sir?" said the hunter, frowning.

"On what grounds, indeed!"

"You do not answer."

"Are you demented?"

"I asked you on what grounds I was arrested!" repeated the Captain, calmly.

"For murder."

"For murder—me!"

"Nothing less."

"Me—for murder!" repeated White.

"You and your companion!"

"Mr. Felsee," said Captain Fry, leaping on his horse, "you are a false villain, I tell you to your teeth, and we will show you and your men what it is to try to arrest good and true men in this manner."

And cocking his rifle—

"Go on your way!" he said, "the road is open!"

Felsee drew back, trembling before the fiery countenance of the hunter.

"You threaten me!" he said.

"Yes—I do."

"An officer of the law?"

"A villain—and I would think the world indebted to me should I send you out of it!"

"Sir! Captain White, I call on you to"—

"Call on me for nothing, sir!" said White, raising his proud, contemptuous face, and fixing a glance upon the officer, before which he quailed. "I am your prisoner, I believe, on a charge of murder!"

"You—his prisoner!" stammered Fry, letting his rifle fall.

"Yes; I have no desire to resist an officer of the law. I will stand my trial."

"You are mad, captain!"

"Come, come, friend Fry, imitate me. Let us go to Winchester in this worthy man's company."

"Rather to hell!" exclaimed Fry. And raising his gun in his strong hands: "Let any one touch me!" he said, with flaming eyes.

Felsee hesitated.

"I am your prisoner," said White, "and ready to go with you."

"And your companion?"

"That is your affair!"

"Arrest this man!" cried Felsee to his subordinates.

Fry raised his rifle. Not a man stirred.

"Do you hear me!" cried Felsee.

The men only muttered some unintelligible words, which seemed to allege their own unarmed condition; and in another moment their duty was no longer a possible duty.

Fry raising himself in his stirrups, said boldly to Felsee:

"Martin Felsee, you will yet suffer for this thing you have done! I shall see to that, and by my faith, if this matter is not revenged by the rightful person, I will take my vengeance on you for the insult you have offered me here to-day, and the wrong you have done my good and true friend, Captain William White. Look to it!"

And turning his horse he rode away, leaving Felsee white with rage. That worthy was recalled to himself by these grave words:

"I am waiting, sir."

"Ah, you at least I have!" he exclaimed, exultingly. "Come, mount—for Winchester!"

VI.

CAPTAIN FRY MEDITATES, AND ACTS.

Several days had passed since the events we have related, when on a fair evening, Captain Abraham Fry sat in the small porch before his mansion—his arms hanging down, his head resting on his breast, his listless eyes fixed absently now on the wooded mountains to the west, now on the road which led to Winchester. The captain seemed sunk in troubled thought:—for once in his life that hardy spirit found himself at fault, met and opposed by the mysterious power of *the Law*. This new element, so to speak, in frontier life, perplexed him:—young as he was, he had lived far enough back in the former times to recollect when no such power existed, and now it seemed at once to have grown so large and strong as to defy all opposition. "*The Law*"—what was that! What could this mysterious thing be, which had at once struck powerless the man whose will was of iron, who bowed to nothing—the brave William White? Was it not possible to oppose it—could any one be punished for defending himself from an Indian attack? What was society coming to?

These thoughts were interrupted by the approach of a traveller from the Winchester side; and on a nearer approach, he proved to be a friend of the Captain's living some miles west of the mountain. He dismounted and entered, and the two men exchanged greetings:—the Captain still much preoccupied. He walked up and down, played with his rifle listlessly, and his dreamy

eyes ever and anon were bent as before upon the mountain and the winding road running below his door. "Your mind seems busy with something, Captain," said his guest.

The Captain stopped.

"I am in fact much troubled," he said, wiping his brow.

"Troubled about what, pray?"

"About a friend."

"And who is that?"

"White."

"Captain William White who was carried into Winchester under arrest the other day?"

"You come from Winchester!"

"Yes."

"You saw Captain White?"

"Certainly."

"Have you heard why he was arrested?" exclaimed Fry.

"For murdering an Indian, they say."

"And what more do they say—may the foul fiend seize them!"

"Why how you start!"

"I was with him."

"You!"

"Yes—what say they of the accusation?"

"I heard many say it would go hard with him."

"Go hard with him!"

"Yes—murder, they say, is made out by Martin Felsee's testimony. In that case, good-bye to Captain White!"

Captain Fry rose up, greatly agitated—and his fine and manly face quivered with rage.

"Ah! they say that do they! And Martin Felsee, the false villain! I will yet stand face to face with that foul knave, and strike him with that force that no blood shall remain in his body. But I killed one of those Indians—I will go and tell all."

"You, Captain!"

"I was with White!"

"You had better keep out of the way yourself, then—or two heads are gone!"

"Heads—keep out of the way—oh, I see all!"

And the Captain fell in a chair, struck, it seemed, with vertigo. He remained thus for some moments—then rising suddenly:

"I know what remains for me to do," he said, with flashing eyes, "and that I will do!"

And the very next day Captain Abraham Fry set about carrying out his resolution.

VII.

A SCENE IN WINCHESTER JAIL IN 1768.

Martin Felsee, sheriff of the county of Frederick, proceeded with his prisoner toward Win-

chester, where in due time he arrived;—and clattering along Loudoun street past the Fort, he bent his way to the jail. Therein Captain White was ere long safely lodged.

The jail was not a very prepossessing building—rather the reverse without and within. It was an edifice of considerable size, constructed of logs strongly joined at the angles, and the main door of heavy oak led into a sort of hall, on which opened the doors of the cells. The whole was surrounded by a high fence, and the grim old building with its small, iron-barred windows and huge smoking chimneys, resembled nothing so much as an ogre who had retired from sight to digest his human food, and was ashamed of being seen.

Captain White was ushered into the worst of the rooms of the jail and heavily ironed. Martin Felsee seemed to feel a very sincere and genuine hatred for his prisoner, and it was not very long before this sentiment displayed itself.

"Good morning, Captain White!" said Felsee, who acted as jailer, the day after his arrival, "you begin to believe, I hope, that Martin Felsee has caught you at last!"

"Go," returned White; "speak not to me."

"And why not, pray, good Captain," asked Felsee, sarcastically; "are you—standing all but convicted of murder—so much above the man you once struck and insulted?"

"Go!" repeated White.

"Softly, my friend;" said the jailer, "I will remain, if it please you."

"Remain then."

"And to pass the time, we will converse a little."

"Go or stay, speak or be silent—all is indifferent to me."

"You lie," replied Felsee coolly, "for you know I am the principal witness against you; and from the character of the fellows with me, you know they will swear just what I order them to swear."

"You dare to insult me!"

"Yes—I do dare."

"Dog!"

"Come, no hard names,—I have means of correction here."

"Correction! What dare you say, villain; repeat that word!" cried White, with a movement of his powerful frame which strongly excited the jailer's fears.

"I mean you shall have but bread and water—but bread and water, do you hear?"

The Captain turned round contemptuously.

Felsee seemed much irritated at this movement, and said bitterly—

"It is very well for a felon to turn his back on an honest man!"

"You dare call me a felon!" exclaimed White.

"Yes, a murderer!"

"Murderer and felon—recollect those names, Martin Felsee," said the captain, suddenly resuming his calmness, "I will make you remember them night and morning during many long years yet."

Felsee seemed more and more enraged at the words of his prisoner; and he commenced pouring out a flood of insults and threats, which the powerless captain could only groan under, lamenting his powerlessness to catch his enemy in his brawny arms and crush him; or summoning all his philosophy, treat with silent contempt.

Felsee having exhausted, for the moment, his store of bitter and abusive words, retired, uttering again the words felon and murderer. White rose up, overcome with rage:

"Yes! yes!" he muttered, "you shall remember them day and morning for long years. Remember what I say!"

Felsee went out laughing.

VIII.

A SCENE IN WINCHESTER COURT.

When Captain William White was brought a prisoner to Winchester, charged with the murder of two Indians—nothing having been said of Fry, whose fiery and reckless character Felsee did not care to contend with—the usual monthly court of the county of Frederick was held in a handsome log-building, in the immediate vicinity of the jail.

Here—into the presence of some half dozen solemn and stately Justices of the Peace,—the prisoner was led. The justices sat on rude chairs, ranged in a row, on a ruder platform, raised only some three feet from the floor; and a large crowd, anxious to see the "Indian killers," having assembled, the sheriff, Mr. Martin Felsee, was busily engaged in preserving order sufficient to render the words—pompously uttered—of their worships audible.

After the simple and very hasty forms had been gone through with, Captain White was, without more ado, requested to give an account of himself, what he was brought there for, and "any other matter touching the issue, which had come under his knowledge"—this phrase, like charity covering a multitude of sins, against regularity and sense, in their worships. Captain White related the events with which the reader is acquainted, and plainly produced a strong impression on the minds of many.

Martin Felsee then was heard, and under his skilful hand, matters speedily assumed a differ-

ent appearance. He colored the picture highly with those dark tints which pleased him most—he blended fact and falsehood—he gave a thrilling account of the assault made on him by Captain Fry—from which he said heaven in its mercy had preserved him—and having skilfully handled this latter subject, so as to produce on the justices, the impression that a personal insult had been offered to their authority, ended his account, and sat down. The subordinates corroborated all he said.

Captain White was called upon for his witnesses—he had none. The court shook their heads. A vast murmur, which came very near breaking into a shout, rose from the crowd. Martin Felsee's utmost exertions could not produce order. But when the justices deferred the case to next month, on the plea of the late arrest, and for other causes; and "could not raise bail"—the shout arose in good earnest;—and the worshipful magistrates had the conviction, (never a pleasant conviction to such men,) that they had done an act which *the people* did not approve. They did not understand this word then what it meant; but they nevertheless *felt* what it was.

So Captain White was carried back to jail amid many murmurs, and the court hastily adjourned to attend the races at the old race-course, eastward from the town. As for Martin Felsee, he spent a cheerful hour in bitterly taunting his helpless prisoner.

IX.

THE CONSEQUENCE OF CAPTAIN FRY'S RESOLUTION.

The resolution which the worthy Captain Fry had come to on that bright October evening, was nothing less than to "raise the country," and going to Winchester, force open the jail and liberate Captain William White.

He set about the accomplishment of this purpose speedily, and no man could have done more than he effected, in the time given him. Captain Abraham Fry was one of those men who persuade by the tones of their voice, the flash of their eyes, and the movement of their arms. The young men of all western Frederick, in a few days, comprehended clearly, that the brave and hardy Captain White, had been arrested for defending himself from an Indian attack, and now lay heavily ironed in Winchester, where he was to be tried and found guilty, on the evidence of Martin Felsee, a man most thoroughly and truly hated wherever he was known.

When the general indignation was deeply aroused, Fry boldly counseled an attack upon the jail and a rescue of the prisoner. At this

many drew back: they could sympathize with Captain White, but never break the law, and breed a riot to rescue him, however badly and unjustly treated. Such an expedition would not be safe, and what was more, would be unlawful. This dreadful word seemed to meet Captain Fry at every turn.

But he overcame it, and such was his ardor in the affair, that before many days had passed, he had organized a company of fifty or sixty men, who, armed to the teeth, were determined to break the jail if necessary, and rescue the prisoner.*

These men were to rendezvous on a night fixed for the purpose, at Mr. Isaac Hollingsworth's, just outside of the town. There Fry was to join them, and taking the command, lead them to the attack. The Captain went home happy, after arranging all these matters. He would accomplish these cherished objects;—since he would liberate White, punish Felsee, and beard, in its very temple, the detested "Law."

—

X.

THE ATTACK.

The night fixed for the intended attack, saw all the conspirators duly assembled at Hollingsworth's, where they waited patiently until nearly day-break, then setting out, they entered the town just as the first red rays of the sun were scattering themselves over the horizon, and lighting up the Fort.

With no silence, in no secrecy, did the band proceed; but went on boldly, defiantly, toward their object. At the corner of Loudoun street and Brook street, they met with Mr. Robert Rutherford, who, learning their intent, besought them earnestly to turn back and give up their dangerous intention.

They listened patiently for some moments; then perceiving that the time was passing—time they should make use of—they calmly told him they were well convinced he spoke what he thought right; but they thought it wrong. Then they passed on.

At the noise made by the company on their march, many windows were raised, many fair heads were thrust out; and the half-dressed forms, says the chronicle, were seen to flit from door to door, with the joyous exclamations, encouraging, too, of "go on, brave boys; good luck to you!"

*"But White had rendered his neighbor too many important services, and was too popular, to be permitted to languish, loaded with irons, in a dungeon, for killing Indians." Ker. p. 140.

and other merry words of comfort and sympathy. The party relished these more than the remonstrances of Mr. Rutherford, and so they passed on to the jail, which they immediately invested. They were followed by many of those scantily dressed maidens, and other early risers; and this popular feeling, we are told by the chronicle, was very grateful to them then.

They broke down the fence and entered the enclosure: then a devil's tattoo of knocks was beat upon the door. The head of Martin Felsee appeared at the window beside it.

"What would you have good people?" he asked, trembling.

"White!" escaped in one echoing shout from every lip.

"What, Captain White, here lawfully imprisoned?"

"What is it always—lawfully?" cried a commanding voice; "well, let us see this law which can stand against bullets."

"Bullets, gentlemen!" exclaimed Felsee; "surely you have lost your senses!"

"Open, scoundrel!"

"Never," replied Felsee, who thought he recognized those in the crowd who would prevent any violence.

Nothing more was said by the rioters; but in a moment, their ranks were seen to divide, a white object gleamed in the morning light as it was raised by a dozen stalwart hands, and then a large mass of stone hurled through the air, fell upon the hapless door, and crashing through timbers and lock, and bar, and all manner of fastening, yielded the fortress into their hands.

They rushed in, and Martin Felsee was caught as he endeavored to make his escape. At sight of his woful face, the young girls who had penetrated with the party, clapped their hands and shouted with laughter.

—

XI.

HOW THE PRISONER WAS LIBERATED.

Captain Abraham Fry stood face to face with Martin Felsee, and bent upon him one of those frowns which betray an undying enmity.

"False villain!" he said, scornfully; "were it not for your condition here—alone, and with enemies all around, nothing should defer that combat between us which shall yet take place."

Felsee saw his advantage.

"You insult me," he said.

"I waste no more words on you, dog! The keys!"

"I have them not."

"The key!" said Fry, cocking his rifle, "or you are a dead man!"

Felsoe drew them from beneath his coat-skirt—

"Take them," said he; "I can now declare with truth, that *they* were also forced from me."

Captain Fry immediately ran to the door indicated as that of his friend, and in a moment he had caught him up, and with a few heavy blows, dashed his irons—those disgraceful irons, which Felsoe "had dared," they said, "to place upon the limbs of the great Indian fighter, Captain White." Then the Captain was led forth, and then a shout arose which made the rafters ring again. The shout was—

"Welcome! welcome, Captain! You are free—free!"

All those hardy natures were overcome with joy on seeing once again erect and lion-posted, free from bonds, and stately as of old, the valiant Captain; and as they stood there, in the fresh morning light which bathed their wild forms and faces in its rosy splendor, and gathered tumultuously round their chief, now rescued, and by their daring once more free, they presented a spectacle which had in it much of martial and imposing beauty.

And once again as Captain White raised his tall frame, and shook himself like a lion freed from the hunter's toils, that joyous shout arose, of—"Welcome! welcome, Captain! You are free!"

XII,

HOW CAPTAIN WILLIAM WHITE KEPT THE PROMISE
MADE BY HIM TO MARTIN FELSOE.

Captain White did not receive these gratulations with the pleasure which they would on other occasions, have caused. There was no mirth or joy in his haggard face and master frame. But his dark eye shot lightning when it rested on Martin Felsoe; and from Felsoe it never wandered; there it remained with a depth of hatred in its lurid light, which appalled the craven heart within him.

"Come, Captain!" cried the party, "we are here to take you off."

"Thank you friends," said White, calmly.

"You will go?"

"Who doubted it?"

"I, by my faith!" exclaimed the leader of the party.

"And why?"

"Fry presented his rifle, cocked it, and peremptorily demanded the keys, telling the jailer he would be a dead man in one minute if he did not deliver them." Ker.

p. 140.

"Because you professed such admiration of the law, by my faith!"

"I have none now."

"Nor I," exclaimed Fry; "I came here to see what this law was; and if the jail and jailer are all, heaven help it, I say."

"I am ready to go with you," said the Captain, "all are faithful friends; and I ask one more favor."

"What is that?"

"That you will delay while I say a few words to the man who arrested me, and stands yonder now with impudent coolness."

"Who—Felsoe?"

"I wish to say a word to him."

"Well," said Felsoe, whose fears had somewhat decreased, and who consequently resumed his insolent tone; "Well, say your say. What is it?"

"I wish to remind you of the insulting words you used to me when I was a prisoner here. Do you remember them?" said Captain White, coldly.

"I said nothing," returned Felsoe, "but what was the truth."

"You called me *liar* to my face!"

The jailer returned a sullen look.

"You called me *Felon* and *Murderer*, whereas I was neither."

"That will yet be proved," replied Felsoe, with a look of hatred impossible to describe.

"You see, my friends," said White, turning round.

"The dog deserves punishment."

"We will give it to him now!"

"No!" exclaimed White, drawing his hunting knife, "that is my affair."

Then turning to Felsoe:

"Do you remember," he said, "what I promised you when you called me *Murderer* and *Felon*?"

Felsoe turned pale and drew back.

"I promised you I would make you remember these words night and morning for years—now I will keep my promise!"

And throwing himself upon Felsoe, the hunter tore open his vest, and clutching him by the throat, ploughed, with the point of his knife, the letters M. F. on his naked breast.

"Go!" he said, hurling the jailer from him, "you have there your own name, or '*Murderer*' and '*Felon*,' as it pleases you! The punishment is slight for all the pain and agony you may have made me suffer!"

Ten minutes afterwards, the Captain borne along in the midst of his triumphant friends, and inhaling the fresh morning air, left Winchester, and mounting a fleet horse, bent his course toward the western mountains.

THE VILLAGE OF THE WATERS.

BY C. H. H.

I love thee, Village of the Waters, more
Than tongue of mine dare ever hope to tell;
Round thee are twined such memories of yore,
And on thee rests so sadly sweet a spell.
I know, dear mother of my heart, full well
How brightly gleam thy waters as they flow,
Though I have never trod that lovely dell,
Nor plucked the flowers that by its streamlets blow,
Since early manhood's day dimmed morning's radiant
glow.

It is in sooth a bright and genial clime,
A land of beauty,—where my lot is cast,
Where joyous birds, and lisp'ing runnels chime
With dancing winds that gaily frolic past:
Here no wild storm, nor fiercely howling blast
Chills the young flowers, or dims the sunny skies;
But all of Eden that remains thou hast—
Land of the South!—how fair to mortal eyes
Thy slumbering valleys rest, thy mist-robed mountains
rise!

And yet, though zephyrs, with their scented breathing,
Telling sweet tales of orange bowers, invite
To fragrant woodpaths, where the woodbine, wreathing
The dark Magnolia—like a gentle sprite,—
Whispers of rest, of hearts-ease, and delight;
Though all seem basking in joy's golden ray,
And earth be flooded with the heavenly light,
The Mind will oft, when Nature is most gay,
With sickening longing turn to scenes far, far away.

Then fades the Present:—to my spirit's ken
A village nestling in a valley seems,
Where deep, broad rivers meet, and I again
Walk its loved streets, as men will walk in dreams:
Yet on my own, no face, with welcome, beams;
Ah no! for they that loved me—all are fled,
And there is left—alas, not one—who deems
Me other than a stranger, and instead
Of living friendships I must turn me to the dead!

Ah me, how Memories rise!—yet let them come,
They may assuage the sad, the bitter grief;
And let me speak them, for if lip be dumb
The wearied heart can never hope relief:—
Long years ago—though now they seem but brief—
In life's young day's, ere I had learnt to roam,
Or e'er had turned o'er sorrow's tear-stained leaf,—
Here where I heard the waters dash and foam,
I dwelt with childhood's friends in childhood's happy
home.

Here was my all:—all loving heart could ask,
No thought of mine e'er left that happy fold,
In morning's roseate light I joyed to bask,
Life's current rippled over sands of gold;
And I had playmates; Oh, as we beheld
The treasured glories that the past displays,
The sports—the heart-words—of those days of old,
How thrills the heart! how fondly do we gaze!
But where are they whose love made bright those golden
days?

Alas! I know not. One beyond the sea
Has journeyed far: while in some distant land

Others have sojourned, though of them to me
No word hath come. Ah, Time's relentless hand
Hath wrought sad havoc with our loving band!
And as I tread my lonely way along
These streets where are the meetings I had planned?
Not one is here of all that happy throng,
And sundered are the ties that I had deemed so strong.

But why grieve I for *them*? Is not my Sire
Still circled fondly by that holy ring,—
And on our home-hearth burns not still the fire
That warmed my heart when life was in its Spring?
Alas! Alas! death's dark, remorseless wing
Swept my dear sister to the realms of night,
And when, with pang as keen, our breasts to wring,
He tore my brother from that circlet bright,
My sainted mother drooped, and vanished from the light.

Why linger I if none that love are here?
Why wound afresh my sadly bleeding heart?
Why stay to shed the unavailing tear,
When stranger voices gruffly say—"depart!"
Ah! here is that which solace can impart,
And draw the venom from the tooth of pain,
Blunt the dire edge of death's destroying dart,
And change my losses to exceeding gain!—
I therefore tarry here, and would for aye remain.

For me, sweet Village of the North, there still
In thy lone midst, a pleasant home is found;
'Tis near the base of yonder gentle hill,
Within the precincts of this sacred ground.
Nor can I hope, by searching earth around,
To find a lovelier spot to rest my head.
And here, where holy memories most abound,
I would remain, in deathless wedlock wed,
To this dear church-yard mould—this *Trinity of Dead*.

STRAY WRITINGS.

BY E. A. POLLARD.

CRITICISM.

Much, and much more than is commonly
imagined, is required of him who aspires to crit-
icise literature as it should be criticised.

The critic must not regard art apart from the
mind, to affect which is its purpose; but purely
as a fact of consciousness, as a mental state, he
must understand the workings of the mind, else
he will not understand his business. The main
question in mental philosophy is—What laws
does the succession of our thought and feelings
obey?—and the critic must answer this question,
else he will do his business empirically, and,
judging without giving reasons be an useless and
a most hated critic.

A little thinking will now bring us to the con-
clusion, that the critic must himself be a worker
in the Fine Arts—at least be possessed of sensi-
bility and taste. Two works of Art may pro-

duce feelings the same in kind, and so he called by the same name; and yet produce feelings very different in degree, and so have very different merits. There are rules which make up the essentiality of Art, and there are rules for the embellishment of Art; and, of course, to know these latter properly, the critic must be as said above, else he will only be useful to beginners in literary labor.

Above all this, the critic, being a judge, must entirely put down his prejudices and temper. He must be as anxious to discover excellences as defects; and he must not be, (what is common among judges,) too severe upon faults, far above which he thinks himself. He will often be hated and slandered, for he will often wound vanity, and raise his voice against the popular taste; yet he must be too proud of his calling, to use it as a vent for passion, or as a means of revenge. His calling is to correct storied Art,—and well worthy is it of pride.

HISTORY.

What is history? A question, forsooth, not so easily answered as is generally supposed, nor in as few words as are generally given to its answer.

History is the record of certain events. Or, if you like it better, (and most of us like modest definitions of all callings except our own,) history is an *inquiry* for certain, some events, which sense, says Volney, the Greeks gave to the word *ιστορία*. I am now at a curious question—Of what kind are these events, which deserve a place in history, which, in short, are historical?

The historian records events not to show his learning, not to minister to our empty curiosity, not to make us smile nor weep, not to entice our wills, not to do anything else than to show the sequence of moral causes and moral effects, taking place in the people or in the individual. The question is now answered. To put upon paper all those events, which occupy—may, fill up past time,—or rather all those which we can reach, is very much labour without very much profit; and is not, in fact, to write history. He is most truly a historian, who selects and gives to us those events which best hold to view the operation of moral causes; and, I add, most usefully a historian, when these causes are such as have most power over the nature of things. He may not be much of a fine writer: he may not draw touching and enticing pictures. He may not be much of a showman: he may not open a curiosity box, over which we may gape first with wonder and then with weariness. But never mind all this. He places facts upon the

tongue of the theorist, speaking in *ifs*—sufficient usefulness and therefore sufficient glory for any one person.

Perhaps it is not out of place to add that the usefulness of the historian does not stop here. To limit the usefulness of anything to its end, is a gross and yet not a very uncommon fallacy. The historian, while he meets the end of his calling, often excites praiseworthy and zealous ambition, and, carrying us a long distance away from home, excites new wants, and cures us of prejudice, of an extreme conservative spirit, and of unbefitting vanity. Although certain persons have always been fond of expressing old opinions, and attacking fixed beliefs, no one has ever said that history, properly written and properly read, is not of immense usefulness.

But I have not finished writing out the definition of history. We must clearly, and we can easily distinguish between the historian and the historiologist—the former recording events and doing nothing more: the latter explaining, generalising, using these events, being either politician, moralist, or something of the sort. The former often and very naturally usurps the office of the latter; and hence the frequent confounding the two. But history and historiology should not be brought under the same pen. And for saying this I can give more reasons than one, other reasons than the productiveness of divided labor. So much for the definition of history, and I hope that it is enough.

BENEDICITE.

I saw her move along the aisle—
The chancel lustres burned the while—
With bridal roses in her hair,
Oh! never seemed she half so fair.

A manly form stood by her side,
We knew him worthy such a bride:
And prayers went up to God above
To bless them with immortal love.

The vow was said. I know not yet
But some were filled with fond regret:
So much a part of us she seemed
To lose her quite we had not dreamed.

Like the 'fair Ines,' loved, caressed,
She went into the shining West,
And though one heart with joy flowed o'er,
Like her, she saddened many more.

Lady! though far from childhood's things
Thy gentle spirit folds its wings,
We offer now for him and thee
A tearful Benedicite!

Reflections Suggested by the Death and Character of Henry Clay.

BY W. J. TUCK, M. D., MEMPHIS, TENN.

"He was a man, take him for all in all,
I shall not look upon his like again."

Our illustrious orator and statesman is no more! The melancholy event which we have been so sadly anticipating for some months, has proved, alas! but too certain, and he who was the foremost man in all the nation, and first in the hearts of his fellow countrymen, now slumbers in the cold and icy embrace of death—leaving the whole country in mourning, a nation in tears!

We have received no particulars of his last moments, but we doubt not, from the information received from time to time, that his end was peaceful and happy. He has, for months past, expressed his cheerful resignation to that most solemn of all events which he knew was rapidly approaching, and daily evinced the most cheering hope of that immortal felicity reserved in Heaven for all those who truly trust in God and the atonement of the Saviour.

The death of so great and distinguished a citizen as Henry Clay, cannot fail to present many interesting and solemn associations to every reflecting mind. We are here most impressively taught that the great and the noble, as well as the humble and obscure, are alike subject to the same inexorable law, that pale death, with equal pace, knocks at the cottages of the poor and the palaces of the prince—that

"The paths of glory lead but to the grave,"

and that,

"Death levels all things in his march,
Naught can resist his mighty strength,
The palace's proud, triumphal arch,
Shall mete their shadow's length."

How affectingly are we also reminded that our greatest and most illustrious statesmen, patriots and orators are rapidly following in the way of all flesh—men of whom it will be said, in future ages, "there were giants in those days." The renowned and chivalric son of South Carolina has but recently yielded to the inflexible decree; "the old man eloquent," the nation's noblest son, has followed rapidly in the wake, and solitary and alone of the unequalled trio, remains the "great expounder of the Constitution," whose advancing years admonish him that he too must soon leave the scene of his earthly tri-

umphs and glory and meet his renowned compatriots in the spirit land. When shall we look upon such forms again? Who shall rise up to fill their places, and shed upon their nation's name so much honor and glory and immortality?

We shall attempt no labored eulogy upon the character of Henry Clay. We should most signally fail to do justice to such a subject. Throughout the length and breadth of this great nation, the ablest writers and the ablest orators will delight to proclaim forth in tones of glowing and pathetic eloquence, the noble virtues and exalted patriotism of our departed statesman. Eloquent will they trace out his interesting and eventful history from his early and boyhood obscurity, to his proud and lofty position on the mountain height of glory and renown, which he so nobly won by his brilliant native genius, his bold and unequalled eloquence, his constant and untiring energy and industry, his ardent and self-sacrificing devotion to his country's welfare, and that broad and expansive philanthropy which has inseparably associated the name of Henry Clay and Liberty in every portion of our globe.

We shall only permit ourselves to linger for a few moments, upon two of the prominent and noblest traits of character in the history of this great and good man, 1st, that *patriotism* which led him to love his country's good and happiness above,—far above all earthly considerations; and, 2d, that *religion* which inculcated the love and veneration of his Great Creator, which was the crowning climax of all his excellence, which sanctified his brilliant fame, and gave to his closing career that peace and happiness which the "world can neither give or take away."

It has been correctly said by his biographers, that patriotism was the ruling, predominating trait in Mr. Clay's character. The sacred flame burned brightly in his bosom from the earliest dawn of manhood to the last moments of his existence. It has been shown forth in every act of his long and eventful public life. He was ever willing, if necessary, to sacrifice his own well-earned fame and reputation upon the altar of his country's welfare and glory. How often has it been said, and with truth, that he would rather be right, in acting for his country's wealth, than be President. When in the darkest and saddest moments of his existence, he was persecuted and villified and hunted down by his enemies with the most bitter and rancorous malignity, when even deserted by his friends and left almost alone, in the majestic solitude of his glory, he was never known to quail or falter for a moment, in the cause of his country's welfare—he was still the same bold and independent patriot, the same unyielding and unflinching hero,

"Unawed by power, unappalled by fear."

Like the brave and undaunted Leonidas,

"He alone
Remained unshaken. Rising he displays
His God-like presence. Dignity and grace
Adorn his frame, and manly glory joined
With strength Herculean. On his aspect shines
Sublimest virtue and desire of fame,
Where justice gives the laurel; in his eye
The unextinguishable spark, which fires
The souls of patriots; while his brow supports
Undaunted valor and contempt of death,
Serene he rose and thus addressed the throng."

In one of his own eloquent speeches, he gives a most graphic and glowing description of that patriotism which he so warmly cherished, and in which every eye may behold a most striking and life-like portrait of this noble virtue as evinced in his own history. He says:

"The high, the exalted, the sublime emotions of a patriotism which soaring towards Heaven, rises far above all mean and selfish things, and is absorbed by one soul-transporting thought of the good and glory of one's country—that *Patriotism which catching its inspiration from the immortal God, and leaving at an immeasurable distance below all lesser, grovelling and personal interests and feelings, animates and prompts to deeds of self-sacrifice, of valor, of devotion, and of death itself—that is public virtue—that is the noblest and sublimest of all public virtues.*"

Such was the patriotism of him whose loss has filled our nation with mourning. The faults—for all men have their frailties—will now be forgotten; even years before his death, his most bitter political opponents had forgotten their hatred, and spoke his name only in terms of veneration and respect; and now that death has thrown a sacred veil over his imperfections, his noble and unsurpassed public and private virtues will be cherished and remembered in the hearts of his countrymen—and "as blessings brighten as they take their flight," we have never so highly appreciated, as we shall now do, the immense and irreparable loss which we as a nation have sustained in the eternal departure from among us of one who has been the chief instrument of preserving and perpetuating our political union, peace and prosperity, and who has thrown a halo of lustre upon our nation which will be undimmed in all coming time.

We shall close this humble tribute to the memory of the illustrious dead, by directing briefly the attention to that most excellent and admirable of all the traits in the character of our great statesman. With all his greatness and genius and eloquence and world-wide reputation, he combined

the character of a devout and humble christian. Like a truly wise man, he had discovered the vanity and nothingness of all mere earthly distinctions—like a genuine philosopher, he had correctly analyzed the great problem of human life and ascertained that after all, Religion was the "one thing needful," and that all else was "vanity and vexation of spirit." In earlier life, in the midst of numerous engagements and high political excitement, he had neglected this all-important subject, and sought for happiness in the honors, gratifications and distinctions of this world—but "honors, pleasures, wealth and fame" have always failed to fill that "aching void" which is felt in every human heart. How natural then that a wise man should reject all such broken cisterns, and drink from that fountain, from which if a man drink, he will never thirst. But at all periods of his life, Mr. Clay always entertained the highest veneration for religion before he practically embraced it. When in 1832, he moved a resolution to request the President to appoint and recommend a national fast on account of that terrible scourge, the Asiatic cholera, which was devastating the country, and when, very unexpectedly, Congress and the President opposed the resolution, Mr. Clay arose and remarked:

"I am a member of no religious sect, and I am no professor of religion. I regret that I am not. I wish that I was and trust that I shall be. I have always had a profound regard for Christianity, the religion of my fathers, and for its rites, its usages and observances. Among these, that which is proposed in this resolution has always commanded the respect of the good and devout, and I hope it will obtain the concurrence of the Senate." These words were nobly and eloquently spoken, and were a certain presage of the period when he who felt so profound a regard for religion would fully embrace it and enjoy its consolation. And now the scene of his earthly career closes. We have not as yet learned his last words. We doubt not they were spoken in praise of the God who had so much blessed him, and in devout prayer for the happiness and welfare of his beloved country, to whose service he had devoted his life and all his energies. We know that he constantly spoke of his approaching and certain dissolution with cheerfulness and christian hope; with the bright prospect of a blissful immortality beyond the grave.

"Like one who draws the drapery of his couch
About him and lies down to pleasant dreams."

What an important and excellent lesson does such a death with so great a man, convey to all, and especially to the politicians of our country.

What a noble and glorious testimony to the truth and saving power of the religion of the gospel! Will men doubt the sincerity and honesty of this great and good man in his last moments, when about to leave forever, this sublunary scene, and appear before the tribunal of his God? And will they doubt of the capacity of so capacious a mind to judge wisely of that system which he embraced as the only solace and hope of man when leaving this world, and entering upon the solemnities of eternity! What an appropriate and severe rebuke to those vain and miserable scoffers who make a jest of religion and regard it only as suitable to the weak-minded and superstitious!

But we have already too far protracted our reflections. We close by remarking, that our illustrious and christian statesman, though dead yet liveth. His happy and quenchless spirit shines in bright glory near the throne of his Creator; while he still lives, and will ever live, in the hearts of all true Americans.*

"Can that man be dead,
Whose *spiritual influence* is upon his kind?
He lives in glory; and his *speaking dust*
Has more of life than half its breathing moulds."

Sunday Night, July 4, 1852.

* The attributes of Mr. Clay's eloquence are thus graphically and beautifully described by Colton, his biographer:

"His person tall, erect and commanding; his countenance as well as his voice capable of expressing every feeling and passion of the human soul, pleasure, or pain, satisfaction or discontent, hope or fear, desire or aversion, complacency or contempt, love or hatred, joy or grief, ecstasy or anguish, kindness or cruelty, pity or revenge, resolution or despair; his large mouth and swollen upper lip, working quietly or in agony, as occasion requires; his eye resting in calmness, or beaming with lively emotion, or sparkling with strong feeling, or flashing with high passion, like the thunderbolt of Heaven in the darkness of the storm; his arms now hanging easy by his side—now outstretched, now uplifted, now waving with grace, or striking with the vehemence of passion; his finger pointing where his piercing thoughts direct; the easy, or quiet, or violent movements of his whole frame; the bending of his body forward, or sidewise, or backward; the downward or upward look; the composed, or suffused, or impassioned countenance; the watching, shifting glances, taking in the field of vision, and making each one feel that he is seen, and individually addressed; the theme, himself; his audience, his fame, his position on the subject of debate or under discussion; the respect and esteem in which he is held by them; his dignity, his courtesy, deference, his disinterestedness, his philanthropy, patriotism; all these, and many others that might be named are among the attributes of Mr. Clay's eloquence, and appertain to that accumulation and concentration of influences, which have given his popular harangues, his forensic efforts, his various public addresses, and his parliamentary speeches so much influence over the minds, the hearts and actions of his countrymen."

"I LEFT THE SOUTH BEHIND ME."

I left the South behind me
With all its golden bloom—
Its orange trees and locusts,
Its radiance and perfume.

I knew the red of sunset
Would still lie on the trees—
The winds roll organ-music
Still o'er the forest seas—

That every morn would glitter
Upon the dewy flowers,
And stillest moons—ah!—draw her
As once to woodland bowers—

But still I left behind me
The wealth of golden bloom—
How could I bear the sunlight
—The verdure, the perfume!

The flush of morn and evening
Brought only bitter tears—
She was no more my angel,
My dream of happy years:

My heart—how could she break it,
As she would break a flower,
In which no odor lingered,
The plaything of an hour.

It may have been that, careless,
She meant to give no pain—
I know not—but my heart's dream
Can never come again!

And so I left behind me
The wealth of golden bloom—
I could not bear the sunlight,
The radiance, the perfume!

L

CHARLES LAMB.

Considered as a man of genius, he was not in the very first rank, simply because his range was a contracted one: within that range he was perfect; of the peculiar powers which he possessed, he has left to the world as exquisite a specimen as this planet is likely to exhibit. But, as a *moral* being, in the total compass of his relations to the world's duties, in the largeness and diffusiveness of his charity, in the graciousness of his condescension to inferior intellects, I am disposed, after a deliberate review of my own entire experience, to pronounce him the best man, the nearest in his approaches to an ideal standard of excellence, that I have known or read of. In the mingled purity—a child-like purity—and the benignity of his nature, I again express my own deep feeling of the truth, when I say that he recalled to my mind the image and character of St. John the Evangelist—of him who was at once the beloved apostle, and also, more peculiarly, the apostle of love. Well and truly, therefore, did the poet say, in his beautiful lines upon this man's grave and memory—

"Oh, he was good, if e'er a good man lived!"

De Quincey.

EVIDENCES OF CHRISTIANITY.*

This is a valuable book. It had its origin in a scheme of the friends of the Christian religion connected with the University of Virginia, to secure the delivery of a series of lectures on the *Evidences of Christianity*, before the officers and Students of that institution. The strictly unsectarian character of the University, rendered it a problem of some delicacy, how the arrangements for the course could be made to comprehend the different branches of the Church, and avoid all appearance of sectarianism. After discussing several plans, it was finally determined that there should be a successive series of courses, to be delivered during successive years; that the whole number of lecturers in each course, should be chosen from the same Church; and that each Chaplain of the University for the time being, should make the successive arrangements, and superintend the publication of the lectures, if such a publication should be considered desirable. This will account for the apparently sectarian character of the work before us. All the lecturers in this case, are Ministers of the Presbyterian Church. The prefatory sketch in the volume, contains an account of the arrangement of the general plan, which will be satisfactory to all who are willing to be satisfied.

A book of this sort, containing the best efforts of some of the ablest Ministers of a great and intelligent Church, could not fail to exhibit a large collection of great and varied excellence. We took it up with expectations considerably raised, and we have laid it down with those expectations more than met. In the fifteen lectures in the volume before us, the reader will find, perhaps, as many varieties of excellence in the different rhetorical and logical elements of the series, as he will in any similar publication of the present day. All of them may be characterized as able, and many of them, as exhibiting a high order of ability in the different kinds of intellectual merits to which the taste and genius of the several authors led them to aspire. Some of them are glowing with brilliant declamation: some are suffused throughout the whole texture of the discussion with one deep hue of imaginative sentiment. Others are much more rigidly logical in their structure, and one of the most remarkable features of the volume is the immense variety of logical address exhibited by the different authors. In some, the argument proceeds with a brief and simple directness of inference.

the conclusion moving in a single narrow line from the premises. In others, the grasp of the premises is broader, and the detail of the argument becomes more complicated in its motion, and requires a larger amplitude of mind to concentrate it effectively upon an inference. In some, the ability displayed, is the ability of a discourser; in others, of a debater; while the great lecture of the volume exhibits a combination of qualities of a degree of excellence not seen often in the literature of an age. With regard to the mechanical execution of the work, it is well printed and badly bound: it is gotten up after the usual flimsy style of modern binding, and threatens to return the purchaser to the bookstores much quicker than there is any reason for, except in the interest of the seller. Each lecture, except two, is preceded by an engraving of the author.

This book is a most seasonable publication. It was needed. The tendencies of all the various influences in the intellectual and social pursuits of modern times, are decidedly skeptical. The rapid increase of wealth and luxury naturally tends to soften and effeminate the mind, and render it impatient of all severe and solemn ideas. The prodigious activity of intellectual exertions, the vigilance with which old ideas are taken up and passed under the most rigid analysis, add largely to the skeptical inclination of the day. The popular literature of the times, in all its branches, criticism, poetry, metaphysics, social reform, is almost universally tinctured with it. The investigations of modern science have given immense acceleration to the movement, and the moral ideas of equality which so extensively pervade the political doctrines of many modern philosophers and reformers of society, growing morbid in the heated imaginations of unwise men, are utterly at war with the principles of the gospel. It would be a profitable speculation to trace the causes and the effects of these complicated influences, and display the logical connection which establishes their utter incompatibility with the moral ideas and the doctrines of the Bible. It is easy to explain the tendency of modern literary pursuits to produce infidelity, by the refining power of letters on the imagination and the sensibilities, unaccompanied by any corresponding purification of the spiritual vision, to behold the true nature of sin. It is easy to see why the social reforms of modern times are so powerfully tinctured with skepticism, when we remember that contact with the miseries and vices of the outcast, has no necessary tendency to open the understanding to the real guilt of these lost wretches. It is difficult for the eager benevolence of a modern reformer to stand among the cells of a parish poorhouse, and amid the squalor and wretchedness around him, recognize

*LECTURES ON THE EVIDENCES OF CHRISTIANITY. Delivered at the University of Virginia, during the session of 1850-'51. New York. Robert Carter & Brothers, 285 Broadway. pp. 606.

the guilt and condemnation of every solitary soul in the ghastly company, under the just wrath of God. All the indignant speculators upon the iniquities of political injustice, are rather disposed to console themselves with the idea that the oppressed in this world will necessarily receive a recompense in the world to come. These vague and general ideas, which would not bear expression in the face of a christian community, secretly exist widely in the minds of many nominal accreditors of the gospel, and lay the foundation for the most inveterate hostility to its claims. But there is no alteration in the stern and significant doctrines of the Bible, to suit the deranging views of the age. The declaration still stands the *whole world is guilty : there is none that doeth good ; no, not one*. The menace is still glittering amid the gloom and terror of the divine anger, *the soul that sinneth it shall die*. To these and all similar truths, the natural pride and passions of human nature will always object, and these truths will always animate and intensify the contest to overthrow the evidences of Christianity. Whatever causes tend to increase these natural aversions of human nature to these threatening facts, will necessarily increase the eagerness to destroy the system of religion which supports them. From these facts, imperfectly stated from the signs of the times, we shall not risk much in asserting that the great contest of the church with infidelity is by no means at an end. It may be that the severest and most prolonged contest it has ever yet maintained, is just about to open. It is therefore the duty of all who accept the Christian revelation as true, to prepare for the conflict, and this is the great reason why we are so much gratified at the appearance of this able and effective discussion of the evidences of Christianity. It is an index to the infidel that the gospel has not yet lost its power over the intelligence and impartiality of the human understanding. It warns him that the power of this great system of religion is still as fresh and vigorous as ever. It tells him he is to expect no holiday task in his assaults upon the gospel of Jesus Christ. It tells him he comes to apply the torch to no hoary and trembling superstition, with the winds of popular contempt whistling along its decaying aisles, and overturning the dishonored altar of a once successful, but now detected fraud. It tells him that he approaches a fortress strong in the unabated strength of granite and brass, manned by resolute and disciplined troops, and bearing, graven on its castellated front, the great promise of the Master, *the gates of hell shall not prevail against it*. We rejoice to hear a note of defiance so cheerful and so strong, sounding from the battlements, in the able volume upon our table.

The first lecture of the series was delivered by the celebrated Dr. William S. Plumer, on *Man's Responsibility for his Belief*. The subject was admirably selected as the first of the course, and we are sorry to say we are less satisfied with the discussion, than with any other portion of the series. Dr. Plumer is unquestionably the ablest and most effective preacher of the whole group of lecturers. His tall and commanding person, the glance of his stern and serious eye, the energy of his action, and the overwhelming power of his enthusiasm, when thoroughly excited, render him one of the most effective orators this State has ever given to the pulpit or the public forum. But separate the magic of his oratory from the substance of his remarks, and the reader will experience what the reader of a still more celebrated preacher invariably feels. Neither Chalmers nor Plumer will ever retain their contemporary reputation for pulpit abilities, upon their printed discourses. Neither of them say foolish or unimportant things; there is always good sense, shrewdness and practicality in their remarks; but the printed sermon bears but little of the grandeur and thrilling power of its spoken delivery. The lecture before us is full of the characteristic marks of its author: clear, concrete, full of appeals to simple fact, innocent of every tincture of abstract ideas, terse even to bluntness, and plain, even to roughness, we have not the smallest doubt, that uttered in all the majesty and dramatic power of the speaker, it was decidedly the most immediately effective of all these addresses at the time of delivery: but we question whether it will answer as a satisfactory discussion of the subject. It will be satisfactory to all who are already disposed to accept the doctrine of the lecture; but we question whether it would ever affect the views of a skeptic of keen and practised metaphysical acumen, who hates the idea of responsibility, and who is determined to pick a flaw in any argument designed to give such startling importance to his speculative opinions. Dr. Plumer tells him if he takes arsenic he must die, no matter how sincerely he may have believed it was calomel: that he will not be helped out of a pond, no matter how honestly he may have been convinced that the ice would support him; and if the Christian religion be true, he will not escape the danger incurred by neglecting it, no matter how honestly he may have questioned its truth. This is perfectly true as to the *fact*; but the fact does not distinctly imply the proper kind of responsibility to which man is held for his religious opinions. A man may take arsenic by *mistake* as well as by *design*; but the death which overtakes him in both cases is, in the one, his *misfortune*, in the other, his *fault*: in the one case he

is to be pitied, and in the other to be *blamed*. Now, the infidel may easily turn the flank of the analogy proposed by the lecture, by admitting that he would fall under the calamities foretold, if the gospel be actually true, and asserting that he *would not be* responsible for his loss, since his loss would then be his *misfortune*, and not his *fault*. Nor is there anything in the simple fact stated in the analogy, to discriminate between a *misfortune* and a *fault*, and let us know in any particular instance, whether a man perished by his own fault, or by reason of causes for which he was not properly answerable. This fact of inevitable ruin is valuable to drive the mind to a thorough and honest inquiry after truth, since it implies that our views must be naturally correct, as well as honestly entertained, to be really serviceable to our happiness. This is the true value of the fact; but it is not valuable in determining the question of man's proper moral responsibility for his views, simply because it does not discriminate between what constitutes a moral responsibility, and what merely subjects a man to the results of certain causes. If the infidel allows that he may perish by misfortune, he does by the very terms of the admission, exonerate himself from all responsibility for it. On the contrary, if it can be shown that he is properly responsible in a *moral* as well as a *physical* sense, for his own loss, the whole aspect of the case is altered, both in regard to its moral character, and the ultimate results which it will produce. We shall endeavor to state very briefly, the true principles upon which man is held to a just responsibility for his opinions.

The responsibility of man is a fact which is asserted by his own consciousness. There is in the nature of man, a sense of right and wrong, and whoever transgresses this sense of duty, necessarily experiences a sensation of disapprobation in his own feelings, which demonstrates his responsibility. Now the great component elements of responsibility, whether for opinions or practices, are an *obligation* covering the case, and *freedom to act under this obligation*. No man can be held responsible for not doing what he was under no obligation to do, or for believing what he was under no obligation to believe. Admitting an obligation to exist, any interference with the freedom of his action in meeting the obligation, does, just to the extent of that interference, relax the obligation itself. From this, we conclude that no man is morally responsible for anything, whether opinions or actions, in which his voluntary powers are not called into play. It is the *will alone*, the *moral power* of the soul alone, that gives a *moral complexion* to any act of the *mind or body*. There may be acts of the mind as well as acts of the body, which have

no particular moral character in themselves. But these acts, indifferent in themselves, become right or wrong, from the influence of the *will*, the *motive*, the *moral nature* of the agent in doing them, and the *degree* of good or evil in them, will be measured by the degree of good or evil in the cause of its moral complexion. The *will* must exert itself upon an opinion or an action, before it can possess any proper moral character, so far as relates to the agent himself. He may be *legally* responsible for what his own will did not originate or agree to; or he may be involved in the consequences of the acts of another for which he was neither legally or morally responsible. But no man can be held *morally* responsible, except for the acts of his own *moral* nature. Ignorance, unless it is voluntary, does not involve moral guilt; the absence of this voluntary influence makes it simple *mistake*. It will make no difference as to the *fact* of moral character, although it will make a difference in the *degree* of that moral complexion, whether this influence of the will shall *precede*, or *attend*, or *follow* the formation of an opinion. If the individual has a *will about* it; if, while he either admits or denies a thing, he has a *like or dislike* to it, he will be morally responsible for his views, just to the extent in which his will is concerned in it, and will deserve respect or the contrary, just in proportion to the purity or impurity of the moral feeling with which he has tintured his opinions. This influence of the *will* may *precede* the opinion, just as a man may refuse to allow the good qualities of another, because he dislikes him. The prejudice of feeling in this case is directly concerned in producing an unfavorable estimate of the real qualities of the individual. Or this influence of the will may attend the formation of an opinion, or it may follow it; but in whatever direction it may come, or by whatever cause it may be produced, the existence of this *moral feeling* or influence concerned in our opinions, thoroughly establishes our proper responsibility for them. From all this, we conclude that *whenever the mind is in any sense or shape influenced or susceptible of influence by the will in the reception of truth, then the responsibility of man for his belief is fully proportioned to the degree in which the voluntary powers of the soul are concerned in the formation of that belief*.

Let us return now to the other great element of human responsibility. Man cannot be responsible for his belief, unless he is under some obligation to believe, and no man is under *any obligation to believe a thing unless there is evidence enough to prove it*. If there be such a sufficiency of evidence, it is clear that his unbelief is not the result of a physical incapacity of faith arising from the lack of evidence, but from the influence

of other causes acting on his moral nature. If there be not a sufficiency of evidence, he is still bound to give the subject an impartial investigation to ascertain that fact. If he fail to investigate, he fails to learn that there is a deficiency of evidence, and cannot base his rejection of the doctrine upon such a deficiency. He rejects it, therefore, on other grounds, which are not sufficient to justify that rejection, and stands convicted of dishonesty in holding his opinions. Allowing these opinions to be substantially true, he is yet guilty of being right by mistake and of getting right by a dishonest evasion of evidence. But while it is true that no man is bound to believe anything that cannot be proved to be true, it is also unquestionable that *his voluntary powers* may be most intensely concerned in relation to the evidence. Not only is man not bound to receive anything as true, without a sufficiency of evidence, but the mind is so constituted that it cannot receive anything as true, unless upon some kind and some degree of evidence. Faith must undoubtedly be controlled by the evidence before the mind. No effort of the will can make a mind inquiring for the truth, believe a thing to be true, for which there is no evidence. Nor can we avoid giving credit to a thing, however *unwilling* we may be to accept it, if the evidence to prove it is decisive. This power of evidence to force a conviction over the struggles of the will, is the ground upon which it is claimed, that man is not responsible for his belief, *that it is altogether controlled by the evidence, and not subject to his will*. This takes it for granted that man is not responsible for anything but which is absolutely under the unlimited control of his will. But this is by no means true. Man is responsible for the acts of his will, no matter whether those acts of the will are absolute and controlling or not. Just so far as his will is employed, he is responsible, and no farther. If his will merely resist, the admission of a truth, and his assent is yielded reluctantly and bitterly, he is obviously responsible just to the extent of that reluctance. If his will can so control his estimate of the evidence; if his prejudices are so powerful as to render him incapable of an impartial judgment upon the testimony, his responsibility is obvious. If the mind yields bitterly to the force of overwhelming evidence, it is obviously responsible for the moral feeling by which its resistance was prompted. *No matter what may be the peculiar nature of the act of the will in any particular case, man is responsible just according to the nature of that act*. Indeed, the opinion that man is not responsible for his belief, takes it for granted that feeling and prejudice have nothing to do with the formation of opinion. But this is contrary to the universal testi-

mony of history and experience. The idea of man's responsibility for his belief, is a principle that underlies the whole structure of society. It is the principle which requires the absence of all personal interest in causes coming before the public officers of justice. It is a principle which pervades our estimate of human character in every walk of life. We never fail to denounce a judge whose judgment is perverted by his passions. We never fail to disapprove the moral character of a man who forms all his views of men and things, simply from his prejudices, without waiting or caring for an honest investigation. The truth is, by far the greater portion of the opinions of all men, is formed more from simple suggestions of feeling, than from a consultation of facts. It is absolutely impossible to prevent the contact of the *will* of man, with the evidence or the opinions presented to his understanding. The moral nature of man will keep step with the motions of his mental nature. If the mind acts at all, the very nature of action implies activity and exertion. If it act at all, it must act either right or wrong. Thus the influence of the will is found to affect our views of the evidence, by presenting a perfectly impartial view of the testimony, or by so resisting or adding to the evidence, as to give it undue preponderance, or deprive it of its just consideration, according as the prejudice of the heart is for or against the subject of the evidence. There is another distinct mode in which the voluntary powers of the soul will be called into play by the evidence of a case. The *nature* of certain kinds of evidence, necessarily imposes a responsibility upon the mind. There are various kinds of evidence: some intrinsic or self-evidence; others circumstantial; and others again, require the active exertion of the mind to perceive their force. The evidences of christianity are not analogous to the evidences of the existence of the sun—an evidence acting by a physical necessity, and impressing conviction without any exertion of the mind. They are similar to the evidences of the higher mathematics or the evidence of any historical fact, which require an exertion of the mind to grasp them. Now, in making this exertion, the voluntary powers of the mind are called into play, and responsibility inevitably ensues. The sum of the whole is this: man is not morally responsible, except for the acts of his moral nature; but as it is impossible to prevent the action of his moral nature along with every exertion of his active powers, it is absurd to talk of releasing man from his responsibility for his belief. Until we can release man from responsibility for the influence and acts of his will, we must allow his responsibility for everything in which the will is concerned, and conse-

quently for his opinions. To admit the responsibility of man at all, and deny it, for his opinions, is absurd; for it admits man to be accountable, yet denies it in one grand department of his nature; yea, in the very spring and source of the acts for which his responsibility is acknowledged. He is responsible in the formation of his opinions, in their indulgence, and in their results. If an opinion springs into his mind from the bias of his heart, he is responsible. If any truth is presented to his understanding, and he refuses to consider it, he is responsible. If any truth is forced upon him, and he dislikes it, he is responsible. Or if his mind, under any aspect of the truth as presented to it, is imbued with any kind or degree of moral feeling about it, he is responsible for the same, and entitled to respect or contempt, according to the purity or impurity, the strength or the weakness of that feeling.

If Dr. Plumer had only interpreted his facts, generalized them into propositions, or distilled them to a principle, his lecture would have been far more effective over the class of minds for which it was intended. The classes who would be satisfied with the lecture as it is, have really no need of it; while those who really need it, will not be content with the incomplete state of the argument. The argument is true as far as it goes, but it does not go far enough. The lecture is not untrue, but incomplete in its statement of the argument.

The lecture next in succession, is very different, both in structure and in style, from the one just noticed. It is decidedly the ablest discussion of the whole series, with a single exception. Mr. Van Zandt's subject is the *Necessity of a Revelation*. He has discussed it with a most masterly ability, and arranged the results of his strong and patient thought in a style of very considerable merit. The first part of the lecture is devoted to the discussion of the true nature and value of the argument drawn from the alleged necessity for a revelation. In this portion of the argument, the most consummate powers of analysis and construction, are displayed. The whole argument from the necessity of a revelation, has been depreciated by at least one of the greatest minds of modern times, from a mistaken view of the true nature of the argument, admitting it to be valid. Dr. Chalmers could see but little force in the plea for the Bible as a revelation from God, on the general ground of necessity for such a revelation, because admitting this necessity, it did by no means follow that the Bible was the revelation, whose necessity was admitted. He preferred, therefore, a direct approach to the question, *is the Bible a Revelation?* holding that the actual fact, if it could be established, would establish its own necessity. He sought to establish the necessity by proving the

fact; while the opposing parties claim to establish a *presumption to the fact*, by means of a *prior demonstration of its necessity*. The objection of Dr. Chalmers to the plea from a necessity, is only justified upon the supposition that the argument was a *presumptive* argument. But such is not the case; it does not claim to be more than a mere presumption. But the presumption if it can be established, is valuable, as it throws the burden of proof upon the infidel ranks, to the extent of the presumption, and places the question in such a position, that if the Bible is found to answer these necessities of the case, which prove the necessity for a revelation, then the claims of the Bible are established as that revelation which was needed. In thus stating the true nature of the argument, and vindicating its real force, by putting it in its proper position, the lecturer has rendered a really valuable service to the support of the Christian faith.

In conducting the discussion on the direct question of the necessity of a revelation, Mr. Van Zandt has not given sufficient prominence, perhaps, to one very significant fact; this is the absolute impossibility of separating the teachings of the Bible from the lessons of reason in modern speculations on the subject. He has seen the fact, and used it with effect in his argument; but we think it possesses a force, absolutely conclusive, against the infidel position in this part of the question. The question is not what reason can prove to be true, after it has been told of it; but what it can discover without being told. This is the exact state of the question, and the statement of it, makes it evident that it is impossible at this time to separate between the two, and ascertain what reason could discover without the Bible, and what it can prove within the advantage of its statement. Admitting it to be possible that the infidel could expel every trace of the influence of the Bible from his mind, in forming his theory, it would be impossible for him to establish the fact of the completeness of that expurgation, and the argument would fail for want of sufficient authentication and certainty. But it is absolutely impossible for a modern infidel to expurgate all the influences of revealed truth from his mind. It is impossible for him to say how much he is indebted to the Bible or not, for his premises or his conclusion. He can, therefore, no longer fairly appeal to what reason can do, independently of revelation. It is inadmissible for a modern infidel to deny the necessity of revelation, on account of the power of reason. He may assert in vain what reason can prove, unless he can establish what reason can discover, and clearly trace a distinction between reason alone, and reason influenced by the statements of the Bible. If the Christian should bring

an argument into the controversy, branded with such an objection, no infidel would allow its validity: but the rule is as good against him as for him, and his plea against revelation on account of the boasted achievements of reason, is ruled out on the ground of its indistinctness and its unsusceptibility of definite discrimination upon its real force. It is impossible to get the question of the real power of reason uninfluenced by revelation fairly before us at any other bar than the porches of the ancient speculators of Greece. Even there the question is not free from objections, arising from the influence of tradition upon the theories of those great heathen philosophers. But no where else can it be at all admissible, even as a matter of debate. To get a full idea then of the capacity of reason to determine the great questions of religious speculation, we must go back to the grand old thinkers of heathen Greece. It seems to us that no man can read these singular compounds of weakness and strength, darkness and light, and estimate the conscious uncertainty which attends the boldest assertions of their remarkable authors, without being satisfied that reason can only create presumptions at best, where absolute certainty alone can be of use to the happiness of man. The cause of it is obvious: the great things which lie beyond the vale of sense, are *simple matters of fact*, which can only be determined by testimony from within the mysterious bourn. Thus we may presume, from the fact of our existence now, that we will exist hereafter; but it is only a presumption: the fact can only be made certain by a definite statement from a competent witness, cognizant of the actual state of affairs. In other words, by a revelation from God himself.

The discussion of the whole subject by Mr. Van Zandt, is very happily conceived. The lecture is really a master-piece of quiet, meditative analysis. The argument ought to be, and will be, not merely satisfactory, but conclusive, to all candid and competent judges.

The lecture of Dr. Ruffner, on Miracles, is a clear and forcible presentation of the usual views of the subject, undistinguished by any preëminent ability, but fully in keeping with the reputation of the author. But we are sorry to be compelled to dissent entirely, both from the truth of the following paragraph, and the prudence of publishing it in a volume, so likely to last as the lectures before us. We are sure there must have been some mistake or negligence concerned in the composition of sentiments, so singular as the following:

"Men may publish doctrines that are sublime, pure, benevolent, and fully approved by the reason and conscience of mankind; yet, however, they may appear worthy to have emanated from

Heaven, they may still be the product of merely human wisdom. Whatever the human mind is capable of receiving by revelation from God, it may also, by possibility, originate, by the exercise of its own powers. Divine revelation, though flowing from an infinite source, is necessarily limited to the capacity of the recipient. In God and in his works, are depths of wisdom, reaching infinitely beyond all the profundities of human thought. The human mind seems indeed to have an indefinite range of thought; it can form combinations innumerable of those elements of thought, which it derives from sense and reason. But it can form no conception of anything beyond the informations of sense and the suggestions of reason. Therefore, while human nature remains unchanged, the Spirit of God can reveal nothing to the spirit of man, but what is already within the natural range of human conception, and intrinsically undistinguishable from the natural products of the mind. Many a poor enthusiast has mistaken the ardor of his feelings and the vividness of his conceptions, for the inspiration of God. Without an external sign from God, no man certainly can distinguish a Divine revelation from what is purely human; for revelation is necessarily so humanized in passing through a human medium, that nothing indicating its Divine origin, remains distinctly impressed upon it. As external evidence is necessary to distinguish general history from ingeniously wrought fictions, so without the criterion of miracles, we might confound the revelations of the Holy Spirit, with the dreams of the enthusiast and the inventions of the impostor."^{*}

It is certainly a most singular statement, that whatever the human mind is capable of receiving by revelation from God, it is capable of originating by the exercise of its own powers. If this be true, we really do not see that there is any necessity for a revelation at all. If this be true, we do not see how there can be any such thing as a mystery in religion. There is one sense in which a divine revelation must be limited to the capacity of the recipient, and there is another, in which this is not true. The mind is perfectly capable of accepting as true, many things which it cannot comprehend. We may easily accept the fact that the will has power over certain muscles of the body, yet we may not be able to understand the mode in which this power actually operates. A thousand illustrations of this assertion will occur on the slightest reflection. Now it is true, the mind must be able to understand *a statement of a thing* before it can receive it as true, and in this sense, divine revelation must be limited to the capacity of the recipient. But it is a very different thing to understand fully *the thing which is stated*; in this sense, the assertion is not true. It may be impossible for the human mind to form any conception of the Eternity, or the triune constitution of the

^{*} Lecture, pp. 61—62.

Deity; yet it is perfectly competent for the mind to accept the statement of the fact, that there is a Trinity, on the authority of a competent witness. Indeed, there seems to be a perpetual confusion in the whole paragraph. In one place, it confounds our ability to form definite conceptions of a thing, with our capacity of accepting it as true. In another, it confounds our ability to discover a thing, with our capacity to accept it on competent authority. One sentence seems to surrender all the ground claimed by the deist, by allowing the full competency of natural reason. Others seem to give up all that has ever been asked by those who objected to the mysteries of the gospel. Another destroys one great branch of the Internal Evidence of Christianity, by denying that the revelation, after passing through a human medium, retains any thing distinguishably above the capacities of the human mind. We regret this, extremely; for we have no idea in the world that Dr. Ruffner really meant to convey the ideas so unfortunately conveyed by his language, and the paragraph will give an occasion of exulting remark to all those errorists who have so long contested those points with the friends of Christianity. If he merely meant to say that man must be able to understand what God says, the remark is true in one sense; it would not answer the purpose of a revelation for God to speak in an unknown tongue. If this is all he meant, the idea was not worth the risk of so serious a misunderstanding as it was easily capable of receiving. But if it meant that man must be able to understand all that God actually declares to be true, we must protest in the name of all sound reason, and all sound theology, together. If this be true, there must be a change in the substance of a truth, with every different understanding to which it is presented, and what is intrinsic truth to a strong, clear mind, becomes false and absurd, as soon as it is presented to any mind incapable of understanding it. While we acquit Dr. Ruffner of all intention to convey such impressions, we must be permitted to regret that his language should have been so unguarded as to be not only readily susceptible of such a construction, but as to actually suggest it with a force well nigh irresistible.

In commenting upon the paragraph quoted from this lecture, we have left ourselves but little space to devote to the real value of the argument from the miracles of Christ. This branch of the great subject of the Christian Evidences must ever be an impregnable barrier against all the attempts of infidelity. It contains in a peculiar degree the great characteristic of the gospel as a system of facts. Jesus Christ is said to have done certain miraculous works, and the whole question is determined, when it is settled

that he actually did do what is alleged to have been done. If he did not do them, then nobody is bound to believe that he did. If he did do them, then all are bound not only to accept the gospel as true, but to comply with all its requisitions. Now the question simply is, can these facts be proved? If they cannot be proved, nobody is bound to believe either them or the system of religion built upon them. Is it possible to prove them? Mr. Hume says, No, because it is much more likely the witnesses should lie, than that the miracle should have occurred. This is very true: it is much more likely that witnesses should lie, than that a miracle should occur; and the whole question left for discussion is the question, *did they actually lie?* The whole question then, as a question of evidence, is reduced to a question of the credibility of the witnesses; a question which Hume must admit to be entirely susceptible of proof. The whole point is simply a question of fact. If the facts can be actually proved, then it makes no difference how much philosophers may argue against the possibility of the event. If the facts cannot be proved, then no one is bound to believe them, and the question is at an end. Hume's argument can only hold on a single supposition; a miracle is unsusceptible of proof only on the hypothesis that it is an *impossibility*, a thing *beyond the power of God*. If it be allowed to be possible, then the whole argument again returns to a simple question of fact. God is able, or he is not able, to work a miracle. If he is not able the debate is at an end. If he is able, the question whether *he will work one*, can only be determined by an expression of his will; and the question whether *he has actually worked one*, is a plain question of fact to be determined in the usual way. Anything that is possible, is susceptible of proof. We say then very quietly to all skeptics, if these facts cannot be proved, you are not bound to believe them, and we refer you to the testimony. If they are true, then you are as much bound as any body else to examine the testimony and accept the facts. We recommend you to a diligent and impartial examination of the appropriate proofs in this part of the subject. We could simply put you on your guard against the influences of your prejudices in judging of the testimony. No man ever found any difficulty in accepting the gospel, who was really willing to accept it as true.

It is not necessary for us to dwell upon the merits and demerits of the entire series of articles before us. The lecture of Dr. McGill is a rather unique discussion of the prophetic testimony of the Scriptures. It does not pretend to enter into specific detail, placing prophecy and fulfilment side by side, so as to destroy the possibility of doubt. The world has yet to see an

argument on this great subject worthy of the tremendous power of its bearing on the question of the divine origin of the gospel. Nor will the formation of such an argument require less than the most consummate powers of analysis and combination, a learning comprehensive of the history of all ages, and a patience of research which cannot be exhausted. It is certain that the argument before us has not even begun to approach such a discussion. Easy, graceful, imaginative, skilful in the extreme, and as affected as it is everything else put together, the lecture is really a masterpiece of elegant and imaginative theological coxcombry. It is chiefly valuable for the list of characteristics required in every genuine prophecy.

The sketch of the character of Christ, by Dr. James W. Alexander, is a pleasant and rather graceful piece of chit-chat. The article of Dr. Sampson is a plain and labored article, full of ripe scholarship, and indicating a maturity of information on the subject which speaks in the highest terms of the efficiency of the theological school to which he is attached, and the ability of its teachers. The articles of Messrs. Moore, Hoge, Miller, Smith, Green, Robinson and Rice are filled with varied and valuable thought. There are some very fine specimens of declamation in Mr. Hoge's lecture. Mr. Miller's article is the most singular in the book, and affords a capital exemplification of the closeness with which the sublime and ridiculous are associated. It is almost impossible to understand it; this must be admitted; but at the same time this must be ascribed to the nature of the subject, and not by any means to the lack of ability in the lecturer. No one but a man of keen and vigorous understanding could have constructed this unique and Gothic structure out of the mists and clouds of German metaphysics. Mr. Robinson's article in particular is extremely able; it stands third in the series for ability. The logic is the broad and massive weapon of a debater, and the rapid flow of the style indicates a popular orator, accustomed to the extemporaneous efforts of popular assemblies. His subject is the Difficulties of Infidelity, and the rapid, yet weighty movement of the logic is enlivened all through with the pathos, the wit, and the glowing fancy of one able to touch the hearts, as well as to command the intellects of men. It seems to us that this peculiar mode of defending the gospel by a positive movement on the camp of the enemy might be made irresistibly effective. It is a new and thoroughly warranted method of proceeding, and one which promises rich laurels to the successful achiever of the adventure, as is abundantly shown in the foray of Mr. Robinson. The system of infidelity—if the term system will submit to the

the completeness with which such a supposition accounts for the idea, and by showing how progressively inadequate to explain its origin are the successive suppositions ranging down from revealed and natural religion, to the entire negation of all religious ideas in Atheism. A brief series of remarks introduces and dismisses the question of the authenticity and uncorrupted preservation of the books of the Old and New Testaments. Then follow in the two successive paragraphs, a set of vigorous discriminations between certain ideas commonly confounded by writers on the authority, inspiration and revelation of the sacred books. The closing division of the introduction displays the ground of the duty he was about to perform, and announcing the subject of his remarks, with a few allusions to the method of treatment he had adopted, he proceeds immediately to the discussion. The first paragraph of the lecture proper, is so fine a specimen of the various kinds of merit that unite in this most singular specimen of intellectual effort, that we cannot withhold it from the reader. It is designed to exhibit the influence of the *internal evidence* of the Scriptures, upon the existence of God; a question which has hitherto been claimed by the infidel and given up by the Christian, as a *preliminary* question, necessary to be settled before approaching the question of the divine authority of the Bible. It did certainly seem reasonable that we should prove *there was a God*, before we undertook to prove that he had spoken to man. The whole controversy was checked at the outset by this specious demand. The infidel vaped extensively over the absurdity of attempting to prove to him that God had spoken, before he admitted there was a God at all, or admitting there was, before it was allowed that he *could* speak to man. But we imagine this plausibility will appear no more in the great conflict of the gospel with infidel hostility.

"1. They tell us on the threshold, that it is not competent for us to prove that God has spoken to us—much less to prove this by any considerations connected with the message itself—until we have first proved that God exists; and moreover that we must prove this latter point, not only previously to, but independently of, the former. I could have wished that a separate lecture on the being and attributes of God, had formed a part of this course; not only as by this means greater completeness would have been given to the whole; but especially because, in our day, there is a growing infidelity, much of which wickedly baptizes itself into the name of Christ, the fundamental error of which attacks the separate, personal existence of God. As there is none, I may the more properly clear this particular objection—though avoiding, as I needs must, the general argument. To that end, suppose I were to make the same challenge to an argument designed to prove from the work of creation, that

the universe has a divine author: and demand that the existence of God be first and indefinitely proved—before any one shall attempt to prove, that all created things are his handy-work? Suppose again, I should interpose a similar challenge, to an argument purporting to prove the existence of God, as the ruler of the universe—or the judge and final rewarder of men, or their merciful benefactor—either from considerations from the general order of nature, or the universal course of Providence, or the adaptation of man to the universe? Is it not obvious that the objection applies in the same manner, and nearly to the same extent, in one case as in another? They first deny that we can prove the existence of God, by any argument *a priori*. Independently of that, there is his work within us; and this also they deny. Independently of these two, there is no way in which we can know anything of God, except by the external manifestations he makes of himself. If he had made but one kind of external manifestation of himself—that would be a way, whether of works, or providence, or word, to know him: but if he makes many external manifestations of himself, each is a way as real as any other, and to those capable of comprehending it, as conclusive, both that he is and what he is. It might just as well be said that the course of providence affords no proof of the being of God, but only an elucidation of his character, after his being had been previously and independently proved. And the same thing might be said of the works of God. We have no more idea—perhaps not so much—how God ought to make a world, or how he ought to govern it—than how he ought to speak to it. In this case, therefore, the word of God may be as real and as legitimate a source of proof of his existence, as either his works or his providence can be: since it is just as certain that if God has spoken, there is a God, as it is, that if God creates, or God rules, there is a God: and it cannot be pretended that it is more difficult to deduce anything whatever concerning God, from a full revelation of himself by words, than by works, or by providence. It is very manifest that a demand that we shall prove the existence of God, previous to and independent of any particular manifestation of himself—might be made with equal propriety of every successive and every conceivable manifestation of himself: the end of which is, that in proving God's existence, we must be deprived of all the manifestations of that existence—that is, in effect, of all the sources of knowledge of his existence—until that existence itself is first proved. This is a round-about, and very silly way to atheism. For let it be considered, that so far as we are concerned, it is the very same thing to say, there is no God at all, as to say God has made no manifestation of himself to us. And again, upon the supposition of our own intelligent existence, which cannot well be denied, it is impossible for us to conceive, that God should not manifest himself to us, if he exists at all: since we know nothing more certainly than that activity is an attribute of all existence that rises above the condition of inert matter; and that it becomes more intense, more exalted and more comprehensive, with the increasing dignity and power of the existence itself: so that the non-manifestation to

intelligent existences, of an infinite, almighty, and all-pervading activity, is an inconceivable absurdity. And still further, upon the supposition of our having any certain knowledge of anything whatever, which cannot well be denied; the probability at once becomes violent in favor of the existence and by consequence the manifestation of God. For the most certain thing to us, is that we do not individually occupy the entire universe—and that exterior to ourself there is much beside and independent of us. It is impossible, in the nature of the case, for us to know that in that universe exterior to us, one of the things may not be God; so that the non-existence of God is a proposition which, even if it were true, is wholly incapable of being proved. In such a state of the question—even supposing the probabilities to be capable of being exactly balanced—when considered *a priori*, which is by no means the case—the very slightest presumption which could arise in favor of that which may be proved, at once inclines the scale against that which in its own nature cannot be proved. And therefore, as there is an utter impossibility of proving the non-existence of God, and very many methods of rendering the fact of his existence probable, there would, in the case supposed, arise immediately the violent probability already stated. For the purposes of the present argument, therefore, there is manifestly no such necessity as that which is so constantly urged by infidels, and so generally conceded by Christians: a demand on one side, and a confession on the other, equally absurd, and in their result atheistical. For let it be supposed, there is a God:—then the question would be, is this his word? Or let it be supposed for the moment undetermined whether there is a God or not:—then the question would be in such a position that any proof that this is the word of a God, would in like manner prove that there must be a God. Either way, the question remains the same—do these Scriptures commend themselves to us as a revelation from an infinite, eternal, and unchangeable being? If they do not, there may still be such a being. If they do, there must of necessity, so far as we are concerned, be such a being.”*

This is certainly one of the most notable specimens of original and convincing discrimination upon ideas long admitted to be unsusceptible of division that has ever appeared. It presents, in a prominent view, many of the high qualities of the lecturer at a single glance. The watchfulness with which he refuses to pass even the oldest and most familiar landmarks of the controversy without notice, exposes a most uncommon quality of his mind. This is the fierce vigilance with which his mind seems to sweep the entire range of any subject on which he is employed. Not only is he busy in pushing rapidly forward the main body of his argument, but it seems as if his mind were playing at the same time with supernatural activity across every relative idea, and every possible relation of each idea, not merely with the main subject, but with every c g-

* Lectures, pp. 327—330.

nate subject. There seems to be a species of side glance always flashing round on either side of the argument with an energy almost savage. This perpetual recognition of the minor relations of his thoughts to each other, or to other things as well as to his argument, would be a ruinous process to a dialectician less thoroughly master of himself and his logical weapons than Dr. Breckinridge. It would embarrass the general argument at every step of its progress, and perhaps strip it of its legitimate effect on the final issue, by detaining the attention upon the minor relations of the thought, to the exclusion of the main current of the logic. But it is one of the most singular proofs of the exquisite discipline and power of the great mind under review, that no multiplication of these minor relations between the links of his logic, ever impedes the motion or prevents the effect of his argument. On the contrary, they add immeasurably to the appearance of matchless vigor of intellect, and the inexhaustible profusion of logic which is spread all over this remarkable production. The main argument seems to be groined and twisted in the mere wantonness of exuberant power. It is curling all over with these clusters and tendrils of logic damascened into the substance of the argument. This singular peculiarity is at once a fruit and an index of another power, exhibited in every part of the lecture before us, in which the author seems to surpass every speaker or writer of the present day. This is the *immense wealth* of logic which he seems to have perfectly at command. He never seems satisfied with a single view of the subject however satisfactory; or with a single, argument, however conclusive. There is an incessant passage of new forms of logic before the mind, until we are impressed with the conviction, that he only stops because the page will not hold all that he would put upon it. One huge mass of reasoning is scarcely placed in its position, before another, still more magnificent, is piled upon it, and at length the great structure is towering above us, glittering like the marble walls of some Grecian temple, the model of a perfect combination of strength and beauty.

The observant critic will be struck with another combination of qualities in the logical structure of the article before us. We refer to the singular union of *intensity* and *comprehensiveness* in the mind of the author, and particularly, the *immense variety* of both these species of excellence in this particular production of his powers. It is perhaps the rarest and highest combination of qualities ever found in the human mind. It is not so difficult to take *one* wide and rather undefined view of a question; nor is it so difficult to follow such a view, by a view *falling far within* the circle of the first. But it is a very different

thing to *multiply* these wide views, to draw the line of the second concentric circle *just within the edge* of the first, and to maintain this steady contraction of view, dwelling keenly at each successive involution upon the objects in its range, and sweeping every thing at that immense distance with the clear, all-grasping glance of a perfect comprehension. It requires, for example, no effort to discern the sharp outline of the mountains, displayed against the clear, blue sky above and beyond them; but it takes the fierce, intense gaze of an eagle, to take in each object below the horizon, and to press its glance steadily along each successive decline from the top towards the bottom of the ascent. The feat, in matters of intellect, requires a similar union of breadth and intensity in the understanding, to that required in the eye, by the material vision. Difficult as it is, it is accomplished in this lecture, with a perfection in which it is done in no other English composition, with, perhaps, the exception of some parts of the Living Temple of John Howe. At one moment we are amazed at the breadth and compass of one view, and before our astonishment is exhausted we are presented with another, across wide and variegated scenery, over which the mind roves in delighted wonder. Then the whole aspect of the argument is instantly altered, and we are drawn down to that contemplation of an effort as subtle and intense as the speculations of Spinoza. Nor is this interchange of view allowed to us once; but it is repeated until the marvel of power is infinitely multiplied in the marvel of variety. There is also a curious exhibition of this union of breadth and intensity of mind, in the lecture, in the *double series* of logical ideas employed in some of the paragraphs, pushing upon two distinct, yet related conclusions at the same time. If we may be allowed to degrade a noble exhibition of intellectual power, by so paltry a comparison, we would liken it to an athlete of the circus, riding two horses at once, a foot upon each, moving at full speed round the arena, master in full of himself and his flying coursers. Examples of this peculiarity will meet the reader on almost every page in the latter part of the lecture.

The union of these powers of mind in an intellect so thoroughly disciplined, necessarily gives effect to another remarkable exhibition of intellectual ability. This is the power of *concentration*. Indeed, the striking exertion of this power has been of decided disadvantage to the lecture before us. Its huge masses of thought are compressed together with such force, as to render it to a degree incomprehensible to the common reader, and even to the scholar, unless at the expense of an amount of thought, which many are not likely to give it. This is the principal blem-

ish of the lecture; but we shall congratulate ourselves on its obscurity, if it will induce the author to resume the subject and expand the article into a volume. This obscurity is not owing to any lack of clearness in the conception of the lecturer, but from the excessive condensation necessary to the presentation of a complete outline of the argument in his own understanding. The lecture before us does not exhibit such striking examples of this immense power of condensing thought, as are afforded by some other efforts of the celebrated author. In this peculiarity as a public speaker, he is unequalled by any orator this country has ever produced. Some of the speeches of the distinguished speakers of America, exhibit certain traces of this power; but the large majority of them are constructed strictly upon the syllogistic plan. In this method of argument, the speaker rises step by step, displaying, as he goes, the machinery of his logic in every movement. This is the analytic mode of discussion, which, while it affords ample scope for the highest efforts of the highest order of intellect, yet by no means requires so rare and powerful a faculty as this peculiarity we are now illustrating in the mind of Dr. Breckinridge. This peculiarity is the power of combination and concentration in an oration. It is the power of selecting the results of analysis, or the great concrete facts in a large and complicated subject, and compressing them together in one continuous and compacted strain of remark. It is easier to *analyze* than *combine* thought: it is far easier to frame an address, by taking a few leading ideas, splitting them asunder, and moving over the divisions of its separated parts, than to frame it from without, by collecting results, and recombining them into a new and effective argument. In this tremendous power of *remarking* as distinguished from *arguing*, no one has ever surpassed the celebrated man under notice. Not that he is deficient in the power of analysis; not at all: for this power of his mind is on the same large scale with all its other powers; but this power is not so marked and rare a peculiarity as his power of concentration.

But none of his extraordinary mental faculties are more remarkable than the *perfect ease* with which all of them seem to move in obedience to his will. There is a conscious ease and vigor of movement in the motion of the entire discourse which can only be paralleled in the masterly discourses of Isaac Barrow. The reader of this massive argument will be astonished to be told it was delivered extempore. This alone was wanting to complete the triumph. In the great efforts even of the greatest men of our own country and of England, there is every variety of ability displayed; but in the most of them we may

detect the signs of effort: we see the straining of the muscles; we detect the contortion of the face as the strong faculties within are heaving with the mighty travail of thought. But there is an air of conscious ease, a masterly vigor and grace of motion, about the action of the great mind before us, that gives us a most exalted conception of the inexhaustible resources of the unemployed power within it. He moves amongst the complicated difficulties of his subject with the easy confidence of a master, and handles the huge and glittering masses of thought as a Titan would dandle a child.

If we turn from the logical peculiarities of the article to its rhetorical elements, our admiration and astonishment will be greatly increased. The style is one of uncommon merit. Easy, graceful, full of breadth and compass, it expresses the quarried gems of thought within with a power and grace worthy of the substance it conveys. It is inferior in studied simplicity and elegance, in ornate and yet massive power to the style of Mr. Webster; but it is only inferior to that of this greatest of the political orators of America, who in fact has never been equalled in point of style in public speaking, by any orator of any age. Indeed, the celebrated senator is the only man now living who can afford a legitimate comparison to the great ecclesiastical debater of the Presbyterian church. Nor do we hesitate to say, if the proud alternative were left us, we should choose the faculties of the Kentuckian, in preference to those of the Jupiter of our political hemisphere. Equally capacious with the understanding of Mr. Webster, the mind of Dr. Breckinridge is far more active, far more intense, and far more easily set in motion. It has often been remarked of Mr. Webster, that until roused by some great occasion, the action of his mind was rather dull and embarrassed, giving but little sign of its real power. But the thoroughly disciplined powers of the great Kentuckian move easily up to any required amount of exertion at the simple motion of his will. Mr. Webster is far more careful in the ornament of his speeches; yet there are passages in the lecture before us, which may be compared with the finest passages in his orations, on the simple issue of beauty and grace, while in pathos and tenderness the advantage is altogether on the side of the ecclesiastic. The gorgeous paragraph that closes the celebrated reply to Hayne, in the Senate, is unsurpassed and unsurpassable for the magnificent combination of the highest splendor of imagination and the utmost intensity of passion which it contains. But for chastened and subdued splendor—for the broad and vigorous stride of the thought—for the indescribable union of beauty with intense and thoroughly disciplined excitability of mind, the

passage below will compare with any passage in the English language. The lecture on the Evidences of Christianity does not afford us the materials for a complete analysis of the genius of Dr. Breckinridge, and a full comparison of his powers with the abilities of Mr. Webster. He possesses certain powers which could not so properly be displayed in the lecture before us. One of these is the power of sarcasm and invective. No man ever born in this country, not even John Randolph himself, was more completely master of the weapons of denunciation. He is the only successful combination the world has ever seen between the abilities of Junius and Charles James Fox. Besides this he has another quality in which he is uniformly eminent—courage. No man has ever lived who possessed more boldness than Robert Breckinridge. Tried by popular clamor of the most exasperated kind—by threats of assassination—by threats of mob law, for his unsparing assaults upon the heresies of Popery—the intrepid witness for the truth hurled a louder defiance to the deepening clamor of his foes, and with unflinching fidelity stood to his duty as a minister of Jesus Christ. His courage gleams in all the productions of his tongue and pen. It always gives him the most perfect possession of his faculties, and enables him to say exactly what he wants to say, and in the exact way in which he wants to say it, in every circumstance and emergency in which he is placed. We have no language to express our admiration for an intellect so massive and yet so subtle, so full of every species of power, so easy and vigorous in its action, so thoroughly disciplined, and so capable of any amount or any kind of exertion. This singular union of will, purpose, discrimination, power of combination, analysis and concentration, tenderness, beauty, ease, and grace, is most marvellous as an example of intellectual greatness. We invite the special attention of the reader to the following selection—

“The fact is never to be lost sight of, that the religious system developed in the Scriptures—that system which in its perfect form we call the religion of Jesus—professes to be, not a doctrine merely, but also a power, a paramount and irresistible moral power. It claims to be the power of God unto salvation; and upon that ground challenges the judgment of mankind. From the very first, it has aimed at the exclusion of all error, the removal of all evil, the extirpation of all sin. From the point we have reached, we are able to estimate this force, as it has been exerted through many centuries, and in an immense variety of positions, and to determine, with accuracy, both its nature and its effects, both its interior organization and its outward operation. Let us begin with the latter. We have seen the religion of Jesus in conflict with Judaism, after

the glory had passed from Moses to Messiah: the struggle of a real with a ceremonial righteousness: the idea of God in types and symbols, perishing before the idea of God incarnate. We have seen it in conflict with ancient heathenism: all the gods enshrined in the Pantheon, and all the gods supported and adored by the triumphant Cæsars, lords many and gods many, dethroned by the true and living God. We have seen it in conflict with the false prophet of Mecca: the fierce, licentious, and warlike religion of the East, after a struggle so protracted and so vehement, withering away before our eyes, even as this pure, gentle and peaceful system culminates more gloriously. We have seen it in conflict with the man of sin: the Bride of the Lord, pining for twelve hundred and sixty years under the rank and ferocious apostacy of the Middle Ages, meek and undismayed through centuries of despair, victorious at last only because the very gates of hell could not prevail against her. We have seen it in conflict with every form of error from within, and every mode of opposition from without; superstition, heresy, idolatry, skepticism, oppression, persecution, seduction, corruption, everywhere confronting all, everywhere resisting all, precisely in proportion to its own vital purity, as determined by the open Bible which it has borne aloft throughout the earth. And now, in these last days, one wide and universal conflict is waged with every error and every sin, throughout the whole world; and the banner, which is the emblem of divine love, still rises higher and higher, and floats more and more broadly over the host of the redeemed: and still from the undaunted array, the loud battle-cry of centuries is lifted up more audibly, glory to God in the highest, and on earth peace, good will towards men. In how many aspects, and through how many ages, has the same sublime spectacle been exhibited, God manifest in the flesh, redeeming, reclaiming, reconquering rebellious man! Truth united with goodness, subduing, saving sinners! Grace abounding—grace triumphant! As we survey this ceaseless, and as it might seem, endless struggle, there is one truth constantly obvious, one conception infinitely remarkable, which, justly weighed, ought to be decisive. It is of the nature of all human passions to subside at last. All human excitements pass away. All human interests decay. All human institutions perish. What is great and good, along with what is little and vile, hastens to a common oblivion—is swept into an undistinguished ruin. New passions, new excitements, new interests, new institutions, follow each other ceaselessly, each springing up from the decaying mass of the old which return no more forever. There is no restored empire amongst men. There is no restored philosophy, that has ever risen from the dead to lead men captive a second time. There is no restored superstition, that has ever recovered a lost dominion over the human soul. How immeasurably different from this universal law of all human things, has been the force which has manifested itself throughout the whole career of Christianity? With an unutterable tenacity, its divine truths cleave to man, and stimulate him more and more. With a divine vigor they recur and recur again. With an immortal

freshness, they recover from every stroke, and shake off every incumbrance, and purge themselves anew from generation to generation. One immense portion of the work of God's church in the world, has been to recover portions of her own heritage wrested from her by violence, and to teach, a second time, nations and races amongst whom her memorial had been obscured or utterly put out. And that which happens to nothing else, is that in which her main hope and strength lie; the continual revival in her own bosom, of her own primeval spirit, the constant recurrence of the living power, through which all her conquests have been won. This grand peculiarity, and all the wonderful effects which flow from it, the one and the other distinguishing the Christian religion from all human things, admits only of that explanation which the Scriptures themselves give. It is Immanuel! God is with us! This explains all."*

We have selected this paragraph for the double purpose of illustrating the peculiar eloquence of the author, and getting a foundation for a few remarks upon the general subject of this volume. The evidences of Christianity are absolutely overwhelming. They stand as an anomaly in the history of human knowledge. No single fact in all the compass of ancient, classic, and profane history, can exhibit one tithe of the variety and strength of evidence that can be arrayed for each fact of the Christian system. On the supposition that the gospel is false, it is absolutely impossible for the infidel to account for the immense variety and force of testimony, by which the ablest men and the most enlightened nations have been so completely deluded. Admitting the falsehood of the gospel, that rejected mass of testimony will stand forever, glittering in the sunlight of a new dispensation of truth, a fact as real, as massive, and far more mysterious than those heaps of granite under which the Pharaohs have been rotting royally for uncounted centuries. We have a right to demand of the infidel that he take up one by one the great lines of evidence upon which the gospel relies, and explain how it could happen that a delusion like the faith of Christ could manage to secure in its defence such varied and powerful co-operation from the different kinds of testimony adduced. We have a right to the explanation, and we demand it; nor shall we be satisfied with any explanation that does not meet the question upon its merits and determine it fully. We stand upon the facts supporting what is said to be a false system of religion, and we insist upon an interpretation of these facts, and an explanation of their true relations to the great delusion. Until it comes, and, if not satisfactory, when it does come, we shall rest upon the unquestionable facts, the historic verities of the Christian religion, and retort

* Lecture, pp. 355—357.

things, not subject either to the observation or the consciousness of man.

Let us now select an example or two, in illustration of that branch of the Internal Evidence, based on *the great law of adaptation*. If the necessity of a revelation is admitted, then the question is in this position. If the Bible can be shown to meet those demands of human nature, on which the necessity of a revelation was predicated, the conclusion will be inevitable that the Bible is *the* revelation, the necessity of which is conceded. This adaptation of the Bible to the nature and necessities of man, is an overwhelming proof of the superhuman wisdom employed in its construction. This adaptation is indefinitely multiplied. It consists, in one case, in the exact adaptation of its descriptions to the facts of human nature. It consists, again, in the exquisite suitability of the provisions of the Bible for the relief of these wants. It consists, again, in the adaptation of the expedients to meet the exigencies of the problem of human redemption as they relate, not merely to man himself, but to the divine character and law. Indeed the adaptation is perfect, and the full wealth of the argument cannot be extracted, until *all* the necessities of the soul have been explored, classified, and fitted to the peculiar power in the gospel adapted to fill or subdue them.

There is a general adaptation *in the great mode of presenting* all the minor truths, which find their lodgment in the different divisions of human experience. There is no more striking peculiarity in all the Bible, than its *concrete mode of teaching*. It gives *results*, not *processes*; it makes a statement, but shows not the slightest solicitude to prove it. There is an air of calm confidence which breathes in everything it says, which is utterly unaccountable on the supposition that it is a fraud. It appeals always to facts; even its most mysterious and incomprehensible statements are simple statements of fact. It seems content to wait for the development of its truths, to leave men to accept or reject the testimony that asserts them, and shows no eagerness to hurry the demonstration when the unbelieving refuse it. It tells man that a certain thing is true; it tells him, if he will wait for the development of the truth, he will see that it is true; but if he rejects the testimony of God and refuse to wait for the demonstration, the Bible never loses its air of serene assurance. It bids him act as he will about it, but that he must take the consequences. The nature of all moral laws, and the principles of human nature itself, would have to be altered, before a fraud could be made to breathe such a calm spirit of conscious truth and power.

But what we meant to accomplish, by alluding to this concrete mode of teaching in the Scrip-

tures, was to exhibit its perfect adaptation to the requirements of human nature. Religion is designed for the many as well as for the few—for the foolish as well as for the wise; but the masses are not accustomed to long processes of abstract discussion, to balancing arguments and accepting their opinions only as the results of long and complicated speculations. They want *facts*, not *arguments*; *results*, not *processes*; the *final conclusion*, not the *series of steps* by which it was reached. If the gospel had gone about a long argument to prove each statement of its doctrines, the whole system would have been unfitted for the practical exigencies of our race. The only way in which a system of religion can be made suitable to all classes, is to let it be stated in simple, clear, concrete statements, upon the authority of a witness of whose competency there can be no dispute; and this is precisely the mode of the Bible. But, besides—this way is equally well suited to speculative men, as well as to the undisciplined masses of intellect in the world. The Bible comes to such minds with a simple statement of a conclusion, and invites them to examine its correctness by as much speculative ability as they may choose to employ. In excluding argument as the basis of its positions, the gospel does not mean to negate reason, or at all to exclude the utmost exertions of the human intellect. It appeals, on the contrary, directly to reason in its highest, its best, its most comprehensive exertions. It only places reason in a new position; it reverses the usual office of argument and places it *after* instead of *before* its conclusions. Instead of appealing to reason to prove its positions, it proves its positions by the testimony of a divine witness, and then calls upon reason to examine its positions and test their correctness. This is the only way in which the complicated arguments of speculative minds on the metaphysics of natural religion can ever be made useful. Those arguments are always useless in the *discovery* of truth; they are only fitted for its *defence*, or *elucidation*. Now no kind of men are more skeptical than these. Their mental habits have led them to the conclusion, that no matter how plausible a thing may be, an argument can be found against it. They never rest on any truth, because they do not feel assured but what some new argument may be presented which may entirely reverse its position. No matter how rigid may be the logic that leads to a conclusion which they dislike, they never yield to it, because they think, if they cannot see the refutation now, they may see it hereafter. Now the only way that a keen and disciplined intellect, full of power and pride, can be made to hold any thing with a real security, is by presenting to it a conclusion based upon the entire sweep of a subject in all

its possible relations. It will then feel certain that no new argument can spring up to change the face of the result. But no mind but the infinite understanding of Jehovah can sweep all the possible relations of a thought, and he alone then could be a competent authority in such a case. No authority less than an intelligence which cannot be mistaken, and an integrity which cannot possibly deceive, can satisfy such a mind. A revelation from God then is absolutely necessary to enable men of this sort to believe anything whatever as absolute truth. Such a person may think he has some settled ground; but he is mistaken; he is not satisfied that something may not yet be discovered, which might essentially modify even an axiomatic truth.

Beside his general adaptation to human nature, in its mode of presenting its truths, there is in the gospel a most tremendous adaptation in the *particular truths it teaches* to the necessities of human nature. The illustration of this branch of the Christian Evidences embraces the entire range of the necessities of a fallen, yet immortal nature. The argument is cumulative; it gathers strength with each particular instance of adaptation in each department of human nature, and its full force can only be measured by the almost infinite instances in which this great adaptation can be discovered. Man is guilty; the gospel presents an atonement. He is depraved: the gospel presents a power to sanctify the heart and purge all the powers of the mind from the taints of evil. Man is frail and helpless, the prey of powerful passions, the victim of a thousand temptations; but the gospel provides a *power* to govern him, to restrain him, and guarantees his final redemption from the power of sin. Man needs comfort in trouble, support under strong trials, and aid in the dreadful hour of the dissolution of nature. All these in the most consummate perfection have been provided in the gospel. There are *minute adaptations* that become apparent in certain stages of religious experience, which sometimes actually startle the mind with the perfection of their fitness to the fact in the soul. There is no branch of religious inquiry more animated with vivid interest, than this adaptation in the *minutiae* of Scripture truth to the facts of experience. The general argument grows powerfully in force from these facts; for the *minuteness*, the *retired nature of the feelings*, and the *infrequency with which instances of the same sort occur*, when viewed along with the manifest air of *unconscious allusion* in the sacred text, set it beyond all question that these descriptions of the mental phenomena of religious experience were not drawn from the experience or observation of the writers, but from a higher source. If they did not originate in the experience of the authors, the nature

of the facts precludes the possibility of their acquaintance with them, except on the supposition of inspiration.

But this adaptation of the gospel does not terminate upon man. It meets the exigencies of the question of human salvation in its relations to the divine character and government, with such exquisite and extraordinary power, as to make it absolutely impossible that a wisdom less than superhuman could have constructed it. The plan of salvation as revealed in the Bible, presents the most extraordinary combination of intellectual elements that the world has ever seen in any system of thought. There is an amplitude of grasp, a fulness of comprehension of the difficulties to be met, a perfection of skill in meeting these difficulties; there is a keenness of discrimination, a wit and fertility of resource, and a broad recognition of all that is required by the honor of the divine character, which is absolutely marvellous. There is an illustration of the divine attributes in the cross of Christ, which surpasses every illustration of those attributes traceable in any or all of the works of nature. There is a glory of God in the broad shield of the skies, in the glitter of the stars, in the mighty revelations of the planets, in the headlong race of comets, in all the grand motions of the gleaming sentinels that watch on the midnight heavens. There is another glory in the face of the earth, in its broad oceans mirroring the dial of the firmament, in its rivers rushing to the sea under the shade of eternal forests, in its battlemented mountains of everlasting granite, in the richness of its flowers, and the verdure of its plains. But the gospel challenges our attention to another object. It tells us to seek *for the glory of God in the face of Jesus Christ*. It stops us at a cross; it points us to a face of unutterable dignity, pale in the shadows of death, spotted with blood, the eyes upturned in prodigies of despair, and the whole shaded by a crown of thorns! Go study it, infidel! We tell you in yon pale and bloody face, God has engraven an illustration of himself that surpasses all he has imposed upon earth or heaven. He has there illustrated *more* attributes, in a *more powerful* manner, and in a *peculiar combination*, to be seen no where else in all the universe. His goodness shines not so gorgeously in the gates of massy gems and the battlements of gold that tower round the city of the redeemed, as in yon wasted and tortured countenance. His justice blazes not in such fierce and intolerable radiance upon the dark turrets of hell, as in that face! Over that cross clusters a rich and massy splendor which dims the brilliancy of the cloud which overspreads the mount in God in heaven! We challenge you to the search! Go gather all the difficulties of the great

things, not subject either to the observation or the consciousness of man.

Let us now select an example or two, in illustration of that branch of the Internal Evidence, based on *the great law of adaptation*. If the necessity of a revelation is admitted, then the question is in this position. If the Bible can be shown to meet those demands of human nature, on which the necessity of a revelation was predicated, the conclusion will be inevitable that the Bible is *the* revelation, the necessity of which is conceded. This adaptation of the Bible to the nature and necessities of man, is an overwhelming proof of the superhuman wisdom employed in its construction. This adaptation is indefinitely multiplied. It consists, in one case, in the exact adaptation of its descriptions to the facts of human nature. It consists, again, in the exquisite suitability of the provisions of the Bible for the relief of these wants. It consists, again, in the adaptation of the expedients to meet the exigencies of the problem of human redemption as they relate, not merely to man himself, but to the divine character and law. Indeed the adaptation is perfect, and the full wealth of the argument cannot be extracted, until *all* the necessities of the soul have been explored, classified, and fitted to the peculiar power in the gospel adapted to fill or subdue them.

There is a general adaptation *in the great mode of presenting* all the minor truths, which find their lodgment in the different divisions of human experience. There is no more striking peculiarity in all the Bible, than its *concrete mode of teaching*. It gives *results*, not *processes*; it makes a statement, but shows not the slightest solicitude to prove it. There is an air of calm confidence which breathes in everything it says, which is utterly unaccountable on the supposition that it is a fraud. It appeals always to facts; even its most mysterious and incomprehensible statements are simple statements of fact. It seems content to wait for the development of its truths, to leave men to accept or reject the testimony that asserts them, and shows no eagerness to hurry the demonstration when the unbelieving refuse it. It tells man that a certain thing is true; it tells him, if he will wait for the development of the truth, he will see that it is true; but if he rejects the testimony of God and refuse to wait for the demonstration, the Bible never loses its air of serene assurance. It bids him act as he will about it, but that he must take the consequences. The nature of all moral laws, and the principles of human nature itself, would have to be altered, before a fraud could be made to breathe such a calm spirit of conscious truth and power.

But what we meant to accomplish, by alluding to this concrete mode of teaching in the Scrip-

tures, was to exhibit its perfect adaptation to the requirements of human nature. Religion is designed for the many as well as for the few—for the foolish as well as for the wise; but the masses are not accustomed to long processes of abstract discussion, to balancing arguments and accepting their opinions only as the results of long and complicated speculations. They want *facts*, not *arguments*; *results*, not *processes*; the *final conclusion*, not the *series of steps* by which it was reached. If the gospel had gone about a long argument to prove each statement of its doctrines, the whole system would have been unfitted for the practical exigencies of our race. The only way in which a system of religion can be made suitable to all classes, is to let it be stated in simple, clear, concrete statements, upon the authority of a witness of whose competency there can be no dispute; and this is precisely the mode of the Bible. But, besides—this way is equally well suited to speculative men, as well as to the undisciplined masses of intellect in the world. The Bible comes to such minds with a simple statement of a conclusion, and invites them to examine its correctness by as much speculative ability as they may choose to employ. In excluding argument as the basis of its positions, the gospel does not mean to negate reason, or at all to exclude the utmost exertions of the human intellect. It appeals, on the contrary, directly to reason in its highest, its best, its most comprehensive exertions. It only places reason in a new position; it reverses the usual office of argument and places it *after* instead of *before* its conclusions. Instead of appealing to reason to prove its positions, it proves its positions by the testimony of a divine witness, and then calls upon reason to examine its positions and test their correctness. This is the only way in which the complicated arguments of speculative minds on the metaphysics of natural religion can ever be made useful. Those arguments are always useless in the *discovery* of truth; they are only fitted for its *defence*, or *elucidation*. Now no kind of men are more skeptical than these. Their mental habits have led them to the conclusion, that no matter how plausible a thing may be, an argument can be found against it. They never rest on any truth, because they do not feel assured but what some new argument may be presented which may entirely reverse its position. No matter how rigid may be the logic that leads to a conclusion which they dislike, they never yield to it, because they think, if they cannot see the refutation now, they may see it hereafter. Now the only way that a keen and disciplined intellect, full of power and pride, can be made to hold any thing with a real security, is by presenting to it a conclusion based upon the entire sweep of a subject in all

some respects superior to the strictly Internal Evidence of the records themselves. It is an evidence which comes over the long lapse of years, appears directly to our very senses, and is susceptible of application in every age and nation, and indeed in every case of genuine religious experience. We allude to the *doctrine of regeneration*. Dr. Breckinridge very properly says in the opening of the eloquent paragraph quoted a while ago, that the gospel professes to be not merely *a system*, but *a power*. He then proceeds to illustrate the assertion in its broadest application to the general triumphs of the truth over systems of error, and the various departments of the personal necessities of men. But the argument assumes its sharpest and most pointed significance, in its application to this subject. Here is a direct claim to a *present and most commanding power*—a claim which affords a direct test to the reality of its pretensions. It claims to exert the most exalted power over the souls of men, to work the most mysterious and stupendous changes upon it. Here then is a simple issue which can be tried in the most satisfactory manner. Here is a bold and audacious appeal to the personal inspection of individuals in every age and country to examine for themselves whether the gospel be true. The record describes the nature and the various steps in the alleged change wrought upon the moral nature of man. It tells of its origin, its progress, and its completion. It relates the peculiar signs of the change itself, as depicted in the consciousness of man, and the outward evidences which prove the reality of the revelation to others. Here then is *consciousness* testifying to the individual within, and *conduct* appealing to the senses of others without. It also tells under what conditions these peculiar phenomena will rise in the mind, and under which ~~else~~ they will arise, thus giving additional difficulty to the hypothesis of fraud with every successive addition to the terms of the problem to be settled. To this great claim, we challenge the attention of the whole infidel world. Let us take the Bible and its picture of these phenomena in our hands, and go search for *the fact* which is alleged to exist in the mental experience of certain men. If there be such a fact, it must be as demonstratively certain as any other phenomena of the mind. If we can find it, let us apply it to the descriptions in the record, and *if that record be true, the fact and its description* will mutually authenticate each other, just as a *seal* and its corresponding impressions in the wax will do. Now we assert that there is no fact in the mental history of man; not even the fact that he has a mind, not even the existence of any faculty of the mind, that is susceptible of more overwhelming demonstration, than the reality of regenera-

tion, according to the conditions of the gospel. Nay, more, we believe it susceptible of demonstration, from the facts of consciousness, that the agency concerned in the production of the change, is a *supernatural* agency. Here, then, is the issue: is this doctrine true, and true under the peculiar exigencies established in connection with it, by the teachings of the Bible? The evidence in the case is the clearest and the most decisive of all species of evidence—the evidence of consciousness, aided by observation. The field of observation is unlimited in extent, reaching over the religious experience of men in all ages, and among many different nations, and touching that experience as developed before our eyes. The *facts* may be sought in living examples, and their *authentication* may be read on the pages of the Bible. Let us approach with the seal, and apply it to its impression.

The testimony of consciousness is perfectly clear, as to the *reality of a change of some sort*. It is certainly difficult to conceive why religious phenomena in the human mind, may not be as clearly perceived and as accurately reported, as any other mental phenomena. If a metaphysician may be qualified by his talents to discern, and by his reliability to report, the various phases of mood and sentiment, in the human soul, it will be impossible to show why a Christian cannot make an equally reliable report upon his religious exercises, if he is allowed to be intellectually and morally competent to testify. Indeed, the plainest understanding in the world, may make a perfectly reliable statement on this subject, just as any man capable of understanding at all, is competent to state a fact, however unable he may be to explain it. We do not mean that all such persons are fitted to determine *the nature* of the change; for the question now before us, respects simply the *reality, not the nature* of the change. The plainest person, while he may not be able to discriminate accurately upon the true nature of this alteration in his feelings, is perfectly competent to say whether a change of some sort has not passed upon him. To deny this, is to deny the very nature of consciousness. It would be insufferable to deny a plain man's assertion that he had a memory. He might not be able to give a definition of memory, or separate it into its three departments of receiving, retaining and recalling truth; but he is perfectly credible in the assertion of the fact, because he feels he does remember. The question as to the *nature* of the change in the regeneration, is necessarily a question of *inference*, not of *consciousness*. We can only arrive at the certainty of conversion in any particular case, by taking the peculiarities of the alleged change as they are presented in the consciousness of the individual, and comparing them

with those marks alleged by the Bible, to belong to all genuine conversions. If the facts do not agree to the statements of the Bible, then the change alleged by consciousness, is not the change asserted by the gospel. If the testimony of consciousness is indistinct, owing to the imperfect manner in which the facts are developed, the only legitimate inference is not the falsehood of the gospel claim, but that we selected an imperfect sample of its effects. But if the facts do agree, then we *infer* from the agreement between them, first, the genuineness of the conversion of the particular individual, and second, the *reality of all the claims of the gospel*.

Now, let us assume the conditions on which an absolutely reliable statement of the true relations, and distinctions between these mental phenomena, can be given. They are precisely those required in the establishment of any other mental phenomena, subject to the introspective judgment of the mind itself. The witness must be competent to tell what he experiences. It is not necessary, although it would be better that he should be able to discriminate perfectly upon the true nature of his feelings: this may be left to the judgment of the inquirer, after he has gathered the facts from the statements of his witnesses. These witnesses can be gotten of all sorts, from the plainest understandings to the highest and most thoroughly disciplined metaphysical intellects in the world. It is obvious that this argument is cumulative in force, and its proper measure is that absolutely inconceivable weight of credibility derived from the unconscious agreement of tens of thousands of witnesses in every age, and from among every people, all agreeing absolutely in one definite statement of fact. Here, then, is the testimony. Let the infidel take the Christian literature of all ages, and examine the *recorded descriptions* of these peculiar moods and phenomena which we term religious experience. Or let him gather from the Bible, the alleged marks of a genuine conversion, and then go to any religious person or persons, in whose acuteness and candor he has unbounded confidence, and question them about the peculiarities of these religious developments upon their own minds. Let him go from one to another, to avoid all reasonable exceptions to the correctness of his inductions, by making his examination sufficiently broad and diversified. Let him subject all to the most rigid cross-examination, and the argument will grow in power with each successive witness. Let him gather the facts, and if they do not agree to the record, we allow the argument to be unsound, and the religion which makes such pretensions to such marvellous power over human character, a detected imposture. If the great fact of regeneration cannot be proved,

no one is bound to believe it. If it can be proved, then the gospel is true, and it is at once the solemn duty and the infinite interest of every one, both to believe and accept it.

But it may be urged, that the Bible only contains a very skilful arrangement of the results of a large number of surveys and examinations of the religious phenomena of the human mind, and that when we are startled by such singular coincidences between the facts of our own consciousness and the statements of the word of God, we are only meeting with one of the old facts of the human constitution, long ago observed and described by the old Hebrew writers. The brief period of the world's history at the time many of these striking observations were written, precludes the possibility of their being made, simply by accurate observation of religious phenomena, by the ancient religious teachers of Judea: time is one of the essential conditions of such a hypothesis. But besides: the pretensions of the Bible and the facts in the phenomena alluded to, determine definitely against such a theory. The Bible not only asserts the change; but it asserts also, the conditions under which alone it can occur. It declares that it is only manifested through a reliance upon Christ for personal assistance directly applied. Now let us turn to the facts. It has been established by the experience and observation of ages, that *there is one absolute and uniform law of these mental phenomena*: this is that *they never arise except when the soul ceases to exert its own powers for relief, and learns to rely upon another*. One of the facts alleged about the nature of man, is its own disabled condition to relieve itself.* Now let us suppose a case: A man under profound apprehension of certain religious ideas, or to use the usual phrase, *convinced of sin*, begins to seek for relief. He struggles long and stubbornly to extricate himself: but he finds it impossible: the difficulties that oppress him, refuse to yield. In despair, he ceases to exert himself, and relies upon another for assistance. He soon finds that he is relieved; that he is helped; that he can now do, what once he could not do. Now put together the absolute conviction that he could not help himself; the actual cessation of his efforts; then the fact that he is finally relieved; and *the conclusion is irresistible that he has been helped to this belief by some independent agency*. He cannot help himself; he even ceases all exertions; he relies distinctly upon another to relieve him; and he actually gets it. From whom could he experience this deep mental relief, except *from some distinct and supernatural agent*? The facts here exactly to the assertions of the Bible, that man is saved *not by the will of the flesh or*

* John xv, 5; and similar passages.

will of man, but by a trust in the power of God. But it may be alleged against this view of the case, that possibly this consciousness of helplessness on the part of the individual, was a mistake; that he possessed more power than he supposed; that he failed at first because his powers were not in a propitious condition for exertion; and that the final relief sprang from the more fortunate exercise of his own powers in a happier condition. This objection forgets altogether, that the person is not only conscious of helplessness, but actually ceases to exert himself, and relies upon another. We may admit the explanation of the objector; but it only reaches to one part of the case. It is also based on the supposition that this consciousness of helplessness was false. It might be answered then, by proving the reality of this helplessness from the various sources of its own appropriate evidence. But let us admit that this conscious helplessness was a delusion; yet it is perfectly certain that relief never comes until the person *ceases to exert himself*: this is the *universal law* of these mental phenomena. Now, if relief never comes until the individual ceases to exert himself, the conclusion still holds that he has been helped to it by another; for it amounts to precisely the same thing in the causation of an event, to say that one had no power to produce it, or did not exert what power he had. Should it be supposed that the relief spoken of, is merely the repose of the soul after violent exertion, it is enough to say, it is not merely repose that the soul experiences, but relief from certain fearful and unmistakable phenomena in its experience, which no sophistry could explain away, and no human effort could expel from the soul. It is a complete and permanent revolution of the whole moral nature of man. It is a radical alteration in his hopes, his fears, his affections and desires. It absolutely makes him a *new creature*. How is it possible that such a harvest of new and permanent sentiment, so powerfully modified from the standing views and sentiments of the soul, could have been produced by a mere cessation of mental exertion? The supposition is an absurdity. In a word, if these facts are not true, and true under the conditions alleged in the Bible, nobody is bound to believe one word of them. But if they are true, the reverse follows with irresistible force, and the gospel is established as divine.

We might proceed to construct a similar argument from the nature of the *faith* required in the Bible. This faith is not merely believing a thing to be true; but it is a proper realization of the thing itself. It is the apprehension of truth in ourselves, and in various other things. It is therefore, a *touch-stone* of truth. If a thing is not true, the mind cannot realize it; but if it is

true, and the mind is brought really to apprehend it, it becomes impossible any longer to question its existence. It is one thing to believe a thing to be true; it is another to *realize* it as true. It is this realization of truth we are called to submit to in the gospel, and thus be made absolutely sure of the verities displayed in the word of God. Indeed, the whole circle of Christian experience presents an enormous field of evidence to the truth of Christianity, and we challenge the entire infidel world to meet the argument with a fair and full refutation. We refer them to *facts alone*, as the foundation of our creed.

In conclusion, we would utter a few words of warning on this solemn subject. There is a prodigious proclivity towards infidelity in the present day. The skeptical tendencies of human nature have been greatly stimulated by the spirit of the age. The immense multiplication of books and readers; the increased activity and power of thought in the public mind; the successful detection of many long-honored social abuses, and the researches of modern science, all have tended to produce it. This state of things ought not to be surprising to any who reflect upon the true nature of all great investigations of truth. In fact, an objection to the gospel has grown out of the quantity of opposition it has met with in its career in the world. Surely, it is said, a great truth as the gospel claims to be could not meet with such varied and able opposition as the gospel has actually encountered. A shade of uncertainty is thought to overlie the whole subject, because it has been incessantly disputed. But a few remarks will be enough to expose this mistake. The gospel is not responsible for the quantity of errors that spring up among men, and if it has to resist them as they successively rise and claim its own place, surely it is not properly chargeable with the warfare. Truth is a unit; error is multiform; and as one or more of its protean shapes presents itself for consideration, it is necessarily in collision with the truth. Thus the truth is found in conflict, as often as error is presented, not because there is any uncertainty in the truth itself, but because there is no end to the combination of false ideas claiming to be true. The gospel is no more responsible for the conflicts it has encountered, than some gallant ship moving across the stormy deep, meeting wave after wave in successive shocks, now drifting back under the fury of the storm, but always returning in triumph to the struggle, and crushing billow after billow beneath her rushing keel, as she speeds on victorious towards her destined haven, is responsible for the struggle with the elements. The unity of the ship is not affected by the number of waves that strike her sides, or the fury of the tempests that struggle to engulf

with those marks alleged by the Bible, to belong to all genuine conversions. If the facts do not agree to the statements of the Bible, then the change alleged by consciousness, is not the change asserted by the gospel. If the testimony of consciousness is indistinct, owing to the imperfect manner in which the facts are developed, the only legitimate inference is not the falsehood of the gospel claim, but that we selected an imperfect sample of its effects. But if the facts do agree, then we *infer* from the agreement between them, first, the genuineness of the conversion of the particular individual, and second, the *reality of all the claims of the gospel*.

Now, let us assume the conditions on which an absolutely reliable statement of the true relations, and distinctions between these mental phenomena, can be given. They are precisely those required in the establishment of any other mental phenomena, subject to the introspective judgment of the mind itself. The witness must be competent to tell what he experiences. It is not necessary, although it would be better that he should be able to discriminate perfectly upon the true nature of his feelings: this may be left to the judgment of the inquirer, after he has gathered the facts from the statements of his witnesses. These witnesses can be gotten of all sorts, from the plainest understandings to the highest and most thoroughly disciplined metaphysical intellects in the world. It is obvious that this argument is cumulative in force, and its proper measure is that absolutely inconceivable weight of credibility derived from the unconscious agreement of tens of thousands of witnesses in every age, and from among every people, all agreeing absolutely in one definite statement of fact. Here, then, is the testimony. Let the infidel take the Christian literature of all ages, and examine the *recorded descriptions* of these peculiar moods and phenomena which we term religious experience. Or let him gather from the Bible, the alleged marks of a genuine conversion, and then go to any religious person or persons, in whose acuteness and candor he has unbounded confidence, and question them about the peculiarities of these religious developments upon their own minds. Let him go from one to another, to avoid all reasonable exceptions to the correctness of his inductions, by making his examination sufficiently broad and diversified. Let him subject all to the most rigid cross-examination, and the argument will grow in power with each successive witness. Let him gather the facts, and if they do not agree to the record, we allow the argument to be unsound, and the religion which makes such pretensions to such marvellous power over human character, a detected imposture. If the great fact of regeneration cannot be proved,

no one is bound to believe it. If it can be proved, then the gospel is true, and it is at once the solemn duty and the infinite interest of every one, both to believe and accept it.

But it may be urged, that the Bible only contains a very skilful arrangement of the results of a large number of surveys and examinations of the religious phenomena of the human mind, and that when we are startled by such singular coincidences between the facts of our own consciousness and the statements of the word of God, we are only meeting with one of the old facts of the human constitution, long ago observed and described by the old Hebrew writers. The brief period of the world's history at the time many of these striking observations were written, precludes the possibility of their being made, simply by accurate observation of religious phenomena, by the ancient religious teachers of Judea: time is one of the essential conditions of such a hypothesis. will of man, but by a trust in the power of God. But it may be alleged against this view of the case, that possibly this consciousness of helplessness on the part of the individual, was a mistake; that he possessed more power than he supposed; that he failed at first because his powers were not in a propitious condition for exertion; and that the final relief sprang from the more fortunate exercise of his own powers in a happier condition. This objection forgets altogether, that the person is not only conscious of helplessness, but actually ceases to exert himself, and relies upon another. We may admit the explanation of the objector; but it only reaches to one part of the case. It is also based on the supposition that this consciousness of helplessness was false. It might be answered then, by proving the reality of this helplessness from the various sources of its own appropriate evidence. But let us admit that this conscious helplessness was a delusion; yet it is perfectly certain that relief never comes until the person *ceases to exert himself*: this is the *universal law* of these mental phenomena. Now, if relief never comes until the individual ceases to exert himself, the conclusion still holds that he has been helped to it by another; for it amounts to precisely the same thing in the causation of an event, to say that one had no power to produce it, or did not exert what power he had. Should it be supposed that the relief spoken of, is merely the repose of the soul after violent exertion, it is enough to say, it is not merely repose that the soul experiences, but relief from certain fearful and unmistakable phenomena in its experience, which no sophistry could explain away, and no human effort could expel from the soul. It is a complete and permanent revolution of the whole moral nature of man. It is a radical alteration in his hopes, his fears, his affections and desires. It absolutely makes him a *new creature*. How is it possible that such a harvest of new and permanent sentiment, so powerfully modified from the standing views and sentiments of the soul, could have been produced by a mere cessation of mental exertion? The supposition is an absurdity. In a word, if these facts are not true, and true under the conditions alleged in the Bible, nobody is bound to believe one word of them. But if they are true, the reverse follows with irresistible force, and the gospel is established as divine.

We might proceed to construct a similar argument from the nature of the *faith* required in the Bible. This faith is not merely believing a thing to be true; but it is a proper realization of the thing itself. It is the apprehension of truth in ourselves, and in various other things. It is therefore, a *touch-stone* of truth. If a thing is not true, the mind cannot realize it; but if it is

true, and the mind is brought really to apprehend it, it becomes impossible any longer to question its existence. It is one thing to believe a thing to be true; it is another to *realize* it as true. It is this realization of truth we are called to submit to in the gospel, and thus be made absolutely sure of the verities displayed in the word of God. Indeed, the whole circle of Christian experience presents an enormous field of evidence to the truth of Christianity, and we challenge the entire infidel world to meet the argument with a fair and full refutation. We refer them to *facts alone*, as the foundation of our creed.

In conclusion, we would utter a few words of warning on this solemn subject. There is a prodigious proclivity towards infidelity in the present day. The skeptical tendencies of human nature have been greatly stimulated by the spirit of the age. The immense multiplication of books and readers; the increased activity and power of thought in the public mind; the successful detection of many long-honored social abuses, and the researches of modern science, all have tended to produce it. This state of things ought not to be surprising to any who reflect upon the true nature of all great investigations of truth. In fact, an objection to the gospel has grown out of the quantity of opposition it has met with in its career in the world. Surely, it is said, a great truth as the gospel claims to be could not meet with such varied and able opposition as the gospel has actually encountered. A shade of uncertainty is thought to overlie the whole subject, because it has been incessantly disputed. But a few remarks will be enough to expose this mistake. The gospel is not responsible for the quantity of errors that spring up among men, and if it has to resist them as they successively rise and claim its own place, surely it is not properly chargeable with the warfare. Truth is a unit; error is multiform; and as one or more of its protean shapes presents itself for consideration, it is necessarily in collision with the truth. Thus the truth is found in conflict, as often as error is presented, not because there is any uncertainty in the truth itself, but because there is no end to the combination of false ideas claiming to be true. The gospel is no more responsible for the conflicts it has encountered, than some gallant ship moving across the stormy deep, meeting wave after wave in successive shocks, now drifting back under the fury of the storm, but always returning in triumph to the struggle, and crushing billow after billow beneath her rushing keel, as she speeds on victorious towards her destined haven, is responsible for the struggle with the elements. The unity of the ship is not affected by the number of waves that strike her sides, or the fury of the tempests that struggle to engulf

her in the stormy waters. Besides: the gospel has, by direct statements or incidental allusions, linked its credibility to facts connected with every branch of mental and physical inquiry. It is consequently susceptible of attack and defence in every division of all these subjects, and as these branches of knowledge are successively developed, so do the relations of the Bible to each, naturally come again under discussion. Such discussions have arisen and ended; some are progressing now; and others will come hereafter. But surely no discriminating or honest thinker will ascribe this incessant conflict to the uncertainty of the gospel, when it is legitimately traceable to the essential nature of error, or the unestablished position of recently discovered truth. There is at present, a great conflict in progress between certain views of the Bible, and certain alleged results of complete, or at least reliable investigations of natural science. Indeed, some seem to anticipate that the great conflict of the gospel, seems either about to commence, or has actually begun. Many believers in the gospel appear to indulge the most distressing apprehensions on the subject, and on the other side, many enemies of the Cross of Christ exult in bitter triumph over the anticipated downfall of the Christian superstition. But both classes are wretchedly premature in their emotions on the subject. To the one and the other we have only to say, wait for the full developments of the facts on both sides, and then indulge your emotions of joy or alarm, as the case may be. For ourselves, we feel not the slightest emotion of terror or alarm: Christ is able to take care of his own cause, and we are very willing to allow him to do it in his own way. We know at least this, that the gospel is a system of *facts*, nor will the discovery of a *thousand other facts*, at all disturb either the existence of another *fact*, or the logical inferences that grow out of it. We do not care what facts the geologist may prove; they will not upset the miracles of Christ, or refute the testimony of consciousness to the reality of regeneration. Let the researches of science go on in the name of all that is desirable; we do not wish to honor our Master by closing the avenues of the mind or shutting up all investigation into the secrets of nature. He would accept no such honor, should we bring it; he is the friend, not the enemy of the highest possible advances of the human mind. If the gospel is not true, we are willing to abandon it when geology or any other science has demonstrated its falsehood; but not before. If it is false, it can do no man harm to refuse to accept it; no man is under any obligation to believe anything that is not true, or which cannot be proved to be true. If there is evidence wanting, there is a physical incapacity

of belief created, which exonerates all from any obligation to believe. But if there is a sufficiency of evidence, men are bound to believe. Nor are they at liberty to reject one part of the testimony of unquestioned credibility, because they cannot see how it may be reconciled with another. Their belief depends upon their knowledge; their unbelief on their ignorance. Let them wait until the intermediate facts, reconciling the alleged contradiction, are brought into view. But pending that discovery, they act at their peril, who reject one species of truth, upon the alleged insuperability of the difference between it and another species of truth.

To the objection based upon this incessant conflict of the gospel, we reply, finally, that it really applies to the very nature of things: it applies equally well to that whole constitution of affairs, by which God has refused to make all truth axiomatic, and has left much of the most important truth to be discovered only by the faithful and laborious investigations and the most impartial judgment of mankind. It lies against every thing, against which any thing plausible can be said, as much as against the gospel. The truth is, God has left error to be plausible and specious, and truth hard to be discovered and maintained at certain stages of an inquiry, just to try the moral question whether men love the truth enough to pursue it in the face of difficulties. There is an ample field displayed in the evidences of Christianity, as well as of every other great truth. Especially in its higher branches, *for the action of the moral nature of man*. There is a plenty of difficulty to try whether he is willing to know the truth, or whether he will indulge his prejudices by taking up with some specious error, and refusing to prosecute the inquiry to the uttermost with an industry of application, and an honesty of judgment, worthy of so grave and solemn a subject. Here will be a test for his honesty, which no really honest and resolute man will hesitate to apply. Let him apply it, and it is all we ask. He will find difficulty enough to impose upon him if he is desirous of being imposed on; but if he is willing to know the truth, and is resolute in seeking it, he will not fail to find a solid anchorage for his faith in the granite and adamant foundations of the gospel. If Christianity cannot maintain itself before the highest, the most searching, the most comprehensive, and the most impartial investigation, of which the human mind in its highest elevation is capable, in the name of the God of truth, let it perish. We speak in the calmness of a fixed and resolute conviction. We challenge the whole world to assail the gospel of Jesus Christ successfully, in the spirit of candor, and the acuteness of a true intelligence.

The only regret that ought to be indulged in view of such collisions of the gospel, with the plausible systems of error that oppose it, is on account of those unhappy men whose prejudices against the gospel will lead them to adhere joyfully to any plausible error, and to risk the consequences of a rejection of the truth. As for the cause of truth itself, none need entertain one moment's uneasiness about its final success. But we would most distinctly warn all who are losing their self-possession in the confusion of the strife, not to yield to any scheme of opposition to the gospel of Jesus Christ, no matter how plausible it may be. The gospel is true: it is not only true, but divine: it is guarded by the same unseen but Almighty hand, whose silent motions guide the stars in their courses, and support the pillars of the blue cope above us. He, who throws himself upon the long column of truths, that moves under the bannered cross of Calvary, must sink, as all others before him have sunk, beneath their onward and resistless advance. The golden mail and the silken banners of the holy array, gleam under the light of a face, before which, all the powers of earth and hell will flee in dismay. It is best to wait till God shall settle the controversy with his foes, before we risk all upon their side. *Whosoever shall fall upon this stone, it will break him in pieces; but on whomsoever it shall fall, it will grind him to powder.*

ELLEN DAY.

I have a cherished memory,
Which I would not forget;
A dear, delightful dream of love,
That lingers round me yet:
For in that dream I wander back
To years long passed away;
And seem to be, the boy I was,
When I met Ellen Day.

I was sixteen, she two years less;
And never to my sight,
Had such a maiden form appeared,
So like an angel bright.
We met, beneath the forest shade,
She was our Queen of May;
And from that hour, queen of my heart,
Was lovely Ellen Day.

She was my partner in the dance
Beneath the greenwood tree;
She sung a ballad which rehearsed
True love's sad history:
I then was young, my locks were dark,
But now, my hair is gray:
Yet never voice seemed sweet to me,
As that of Ellen Day.

The livelong day, my heart was light,
For she was by my side;
And though a boy, I inly vowed,
To win her for my bride:

That evening, as we homeward walked,
I gave my heart away;
And gained another; 'twas the heart
Of lovely Ellen Day.

Four years sped by—another year,
And at the altar we
Most fondly hoped to link for aye,
Our earthly destiny:
But oh! before the year had fled,
Death bore my love away;
And laid within the grave so cold,
My lovely Ellen Day.

I mourn her yet; the only charm
Of life has passed away;
For, oh! my heart is buried in
The grave of Ellen Day.
Long years have fled, yet by her grave,
I daily kneel, and pray;
And soon, I hope to lay me down,
Beside my Ellen Day.

TO THE GENERAL ASSEMBLY OF VIRGINIA.

The Memorial of John Howard, Wm. H. Macfarland, G. N. Johnson, S. S. Baxter, Thos. H. Ellis and John B. Floyd, to the General Assembly of Virginia, in behalf of the Virginia Colonization Society.

The undersigned have been appointed by the Virginia Colonization Society a committee to ask from the General Assembly further legislation upon the subject of Colonizing, in Liberia, the free persons of color in this Commonwealth.

The great social evil which it is the object of this Society to remove, is daily growing in magnitude and malignity. From the existing political and social condition of the free negro, must indeed naturally and inevitably follow his moral corruption and that of the community in which he lives. Placed beneath the white man on the one hand, and nominally above the slave on the other, in contact with both, but in union with neither, he can never be reached by the strong motives which impel either class to exertion and to honest courses. All of the more lucrative and honorable pursuits of life are virtually closed to his admission. For agriculture, for manufactures, for commerce, he has neither the requisite capital, nor intelligence. For the mechanic arts, in which as much as in any of the industrial pursuits, enlightened intellect is necessary to skill and success, he is unfitted by that general ignorance which the policy of the law imposes,

and the safety of society requires, even if the natural prejudices of the whites admitted him to equal competition. The learned professions and the avenues to political preferment are alike far beyond his hopes. Even in those humbler trades and menial employments to which the last necessity drives him, he contends with educated white labor on the one hand and with well disciplined and systematic slave labor on the other.

Meanwhile the very immunities of his nominal freedom enhance the wretchedness of his condition. He has no kind master, like the slave, to provide liberally for him in sickness and health, in infancy and old age. He knows nothing of the moral influences of well regulated domestic government. He feels, from his position, none of those nobler sentiments of our common nature which, even in servitude, bid us cling with grateful reverence and affectionate regard to our benefactors and superiors. He feels not even that salutary, though abject fear of impending punishment, which, while it may not in itself morally elevate the slave, at least keeps him from vicious idleness and urges him to honest and orderly habits. Crushed by the combined agencies of superior capital, of superior intelligence, and the competing power of organized slave labor, itself wielded by intelligence and aided by capital; crowded out even of the humbler occupations of life, and cut off from all high encouragements to honorable toil, with nothing of liberty but its name, and all of slavery but its blessings, with no settled home, no community, no country of his own, a social outcast and a political outlaw, the free negro, conscious of the irredeemable degradation of his lot, grows reckless of a future from which he has nothing to hope or fear, becomes discontented in his feelings, disorderly and dishonest in his habits, mischievous, daring and desperate in his crimes. He is drawn down, he is kept down and must continue descending to still deeper degradation by the strong tendencies of his position and the powerful impulsions of moral laws immutable in their operation—his whole being gravitates, unimpeded, toward corruption—there is no room for him to rise—he can only sink,

is compelled to sink, and that with accelerating velocity forever.

If amid this class of persons, under peculiar circumstances, many commendable examples are found of upright, industrious and valuable men, it is only one of those strong facts which go to show that, encircled by proper influences, in a better position, a more congenial home, these people are susceptible of a high degree of respectability, of cultivation and improvement. But, as a class, it is beyond all question that the free blacks of Virginia have been, still are, and must continue to be the most idle, the most vicious, the most corrupt and corrupting element of our population. The criminal statistics of the State unite with general observation in establishing this fact. By a calculation based upon the average number of convictions in the State, as disclosed by the Penitentiary reports from 1800—when the institution was opened—to 1829, it was shown by Governor Giles that crimes among the free blacks were more than three times as numerous as among the whites, and four and a half times more numerous than among the slaves. From 1829 to the present time, the proportion has regularly increased, as will appear in part by the following extract from the last annual report of the intelligent Superintendent of the Penitentiary to the Board of Directors:

"In ten years, from 1831 to 1840, inclusive, 410 white persons and 141 free persons of color were imprisoned in this institution. The white population in 1840 amounted to 740,968, and consequently one person was imprisoned annually for every 18,072. The free negro population was 49,842, and one person so imprisoned for every 3,535. From 1841 to 1850, inclusive, 371 whites and 172 free negroes were imprisoned. The white population in 1850 was 895,867. The free negro 53,537. So that one white person was imprisoned, annually, for every 24,147, and one free negro for every 3,095. Thus, in the first period, *crime among the free negroes was 511 per cent greater than among the whites in proportion to numbers; and in the second, it was greater by 780 per cent.*" That is, in other words, while during the first pe-

riod of ten years, the free negro population was more than 15 times less than the white population, it committed more than one third as many crimes, and during the second period, being more than 16 times less, committed nearly one half as many crimes! "It will be observed also," adds the Superintendent, "that between these periods, the receipts of white persons diminished 9 per cent., while those of the free negroes increased 21."—*Annual report of the Board of Directors of the Penitentiary Institution, 1851, page 12—Doc. No. XIV.*

It is true that in regard to free negroes, the criminal laws are unusually stringent. It is also true that those laws are administered with great rigor. But these facts do not diminish the force of the conclusions deducible from the above calculation. They give the strongest possible corroborating proof. Besides showing the unequal condition and the deep degradation of the free negro, they indicate the intensity and the prevalence of his depravity. The protection of property, the security of life, the peace and preservation of all that is dear to man, the very civil and social necessities of our position, demand that severity of the law, which, even with all the rigor of a faithful administration, is not adequate to keep in check the vicious tendencies, the corrupt passions and habits of these unfortunate people. From them, to the great expense and annoyance of the Commonwealth, our jails are filled with prisoners, our courts are crowded with criminals, our Penitentiary is populated with convicts, and society saturated with moral corruption, notwithstanding all the penalties of the law and the certainty of their execution.

The tendency of so vicious and degraded a population to corrupt society at large, is too obvious to require extended remark. It is notorious that, besides the crimes with which they are directly chargeable, the free negroes are the colluding agents, the secret instruments and accomplices by which unscrupulous white men carry on illegal and demoralizing traffic with slaves, and perpetrate, with impunity, constant and systematic violations of the most salutary laws of

the land. Along the public high-ways and in our villages and cities and their immediate vicinity, these evils are peculiarly felt. Each party to these threefold crimes—the white man, the free negro, the slave—is personally corrupted by their commission, while society in general is injured and defrauded. Much, moreover, of the growing tendency to idleness and sullen insubordination observable in our slaves, is caused by their nightly association with free negroes. Instigated or rewarded by them, or incited by their bad example, an influence so powerful in ignorant minds, many of those petty thefts and those wasteful depredations upon the possessions of even the kindest masters, are committed, which detract so much from the value of property in slaves. It would not be too much to say that many of the more flagrant crimes and fiercer scenes of violence and bloodshed enacted in our fields and workshops, and around our firesides, are attributable to the same cause. Nor should it be forgotten that the presence, in our midst, of so large and vicious a black population, nominally free, circulating in constant intercourse and frequently intermarrying with our servants, must infuse into their minds fallacious notions of liberty and all those poisonous thoughts and feelings which Northern abolition has engendered, and which abolition agents are apt secretly to encourage among the free blacks themselves, as fit instruments in their hands for stirring up the slaves. Generally ignorant and degraded as are these people, not a few of them, especially in our larger towns, are able to read and write and correspond with their friends throughout the State and other States, are familiar with the current thoughts and passions and political movements of the day as reflected from the public newspapers both North and South, and as detailed to them by the perpetual flow of travellers and inquiring sojourners with whom they meet and talk, or hear converse.* The genius itself of Ab-

* A member of the Committee was told at the office of one of the Richmond papers, for instance, that about five hundred copies of the daily issue of that paper are taken by the free negroes of the city. The memorialists would cheerfully bear testimony to the correct habits, orderly dispositions and general good character of many of these persons. But the very intelligence, respectability

olition could not desire a more efficient means of communication with our slaves—of gradually spreading among them false ideas of the hardships of their condition and delusive hopes of an impossible freedom—of scattering deep and far and wide the seeds of idleness and discontent, of turbulence and rebellion, of universal bloodshed and ruin.

The two most powerful reasons which have ever induced Northern abolitionists systematically and virulently to oppose the Colonization Society, are, first that the social evils caused by the free negroes in our midst, are a just infliction upon our heads for the sin of slavery, and secondly that the removal of the free negroes would destroy the best means of tampering with our slaves.

How far this last reason rests on good foundation, the thousands of Southern slaves that have been cajoled and kidnapped by abolition agents, but too well show. Such are some of the more prominent and growing evils inflicted upon us by this population. Necessarily from their position, corrupt, they corrupt and curse all in contact with them, and live the ready instruments in the hands of a powerful fanaticism that sets at defiance the Constitution and the laws of the Union.

But great and alarming as are these evils now, their magnitude must be multiplied in the future, as the number of this population is enlarged and the interests of the two races become more conflicting. Notwithstanding the rigor of the laws, emancipation regularly goes on, while the natural increase itself of the free blacks annually swells the multitude in our midst. From the foundation of the Commonwealth to the present time, the ratio of increase of the free negroes has been greater than the ratio of increase either of the whites or slaves. Nay, while from 1790 to 1850, the whites have increased only 102½ per cent., and the slaves only 64½ per cent, the free negroes have multiplied at the rate of 301 per cent. as will appear from the following tabular statement :

and decent behaviour of these exceptions, give greater weight and currency to any false views and dangerous feelings imbibed through the channels indicated which they may express to their friends, and thus these facts at the same time enhance the evil tendency of those views and feelings and the facility of their rapid circulation among the masses of the free negroes and slaves.

	White pop. of Va.	Free Negroes.	Slaves.
1790.	442,117.	12,866.	292,627
1850.	885,304.	53,829.	472,528
	<hr/> 453,187.	<hr/> 40,963.	<hr/> 189,901
	102½ pr. ct.	301 per ct.	64½ pr. ct.

The free negroes have thus increased about three times more rapidly than the white, and about five times more rapidly than the slave population. Should the increase continue only at the ordinary rate of increase of population throughout the Union,—doubling itself once in every twenty-five years,—the free negro population of the State, by the close of another period of sixty years would be largely upwards of two hundred thousand souls.

Whether the past ratio of increase will continue, or how far it will be affected by the prospective political and social condition of the country, it is impossible to divine.—One powerfully retarding cause, however, will in future be removed. Emigration to other States will not hereafter occur. Many of the Northern and North Western States, to which free negroes have hitherto chiefly gone, have now closed their doors against them. Iowa, Illinois, Indiana, Ohio and Delaware have passed laws inhibiting negro immigration. New York and Pennsylvania are seriously considering the subject.* The general tendency of Northern legislation looks in that direction. Southern States are forced to adopt the same policy from fear of the evils which we now endure. Several of the Southern States indeed have inhibited the introduction even of slaves unless owned or purchased by actual settlers or residents. From these facts we infer that emigration to other States will not in future check the growth of the free negro population in our midst. The natural increase and the daily manumission of slaves will regularly go on to multiply at a fearfully rapid rate this anomalous and unfortunate class of persons. Manumissions will take place despite of statutes. The present laws upon the subject are perhaps as stringent as the just freedom of conscience and a proper regard for the benevolent feelings of masters

* Bills for that purpose were introduced, last winter, in the Legislatures of both these States—what was their fate we do not know.

will allow. Leave is given to emancipate; the privilege to the slave of remaining in the State, being confided to the discretion of the courts. But when the kind intentions of the master, and the good character of the slave are known, the discretion of the courts seldom regards the harsh policy of the law.—During the year ending the 1st day of June, 1850, as appears from the Congressional abstract of the late Census, 218 slaves were emancipated in Virginia, and permitted to remain in the State. Even if manumission were forbidden by the law, easy evasions would constantly occur. Men would stand nominal masters for slaves virtually set free. Nor can it be denied that the tendency toward emancipation must increase as population becomes more dense and the interests of society become more conflicting. Should that period ever arrive in Virginia, which has long since arrived in every country of Europe, when it will be cheaper to hire the white laborer than to rear and feed and clothe and take care of the slave, motives of interest will compel emancipation.

But even if this element be omitted in the calculation, an aggravation and multiplication of the evils which we now suffer may be clearly foreseen. Now that emigration, both white and black, from Virginia has comparatively ceased, every element of her population must much more rapidly increase in future than heretofore. Should the free negro population increase only at the ordinary rate of population in the United States, we have seen that at the expiration of another period of sixty years, it will largely exceed two hundred thousand souls. It would reach that amount if it increased only one-fourth as fast as hitherto. Meanwhile, should the other elements of population be doubled once only in thirty years—below the usual average—the white population will, by 1910, amount to 3,581,276, and the slave population to 1,890,112—making an aggregate of 5,588,986. Similar calculations for a longer period may easily be made. Now when so large and increasing a multitude shall occupy the places at present occupied by not one million and a half of people, the means of living must be with greater difficulty obtained.

The universal struggle between capital and labor which always grows fiercer as population enlarges and civilization advances, will be in full activity. The existing relations between the races being preserved, the free negro must be the first to suffer in the competition. Ignorant himself, he will contend with a still higher and a more universally diffused intelligence. Poorer than now, he will contend with the power of a far superior wealth. Still more than at present crushed by the combined pressure of higher intelligence, of greater capital, by educated white labor, and by organized slave labor, the hardships, the necessities, the inevitable degradation of his condition must proportionably increase, until slavery shall become a boon whose blessings he may ask in vain. The powerful impulses of want and despair will drive him to crime. Corrupt and corrupting now, the imagination may not conceive the Upas influences he will then diffuse around him, contaminating alike the white population and the slave. But from a future so filled with gloom we turn away. A sketch of that future might be deemed a fierce dream of the fancy, were not the hopeless poverty, the utter degradation, the constant criminalities in which even the few free blacks scattered among the dense population of the Northern States, are now steeped and stupified, notorious and terrible facts, exciting the sympathies and the alarm of all humane and patriotic men. When, indeed, it is taken into consideration that, as the degradation of this population necessarily increases, as their crimes yearly multiply, as their vicious influence daily spreads corruption throughout the community, white and black, as they become more dangerous instruments in the hands of designing fanatics to kindle the flames of insurrection and rebellion; our laws and the whole system of our policy toward them must, through the urgency of self-preservation, become more and more rigid, harsh and severe, and that thus all parties concerned must continue to suffer accumulative evils from the longer existence of this population in our midst, we may well turn in dismay from a prospect whose shadows loom so darkly on the vision.

With these evils everywhere surrounding us, and still greater evils gathering on the horizon of the future, it becomes wise and patriotic men to adopt efficient measures by which this vicious, corrupting and dangerous population may be removed from the State. The only feasible plan which has been suggested for the accomplishment of this object, is that presented by the Colonization Society. The plan which your memorialists propose, they believe, would not only effect the object in view, but in so doing truly benefit all parties concerned. It would rid the State of a great nuisance. It would confer upon the population removed the greatest possible blessings.

This Commonwealth may well feel an honest pride in what she has done for the advancement of so wise and humane a measure. The part, indeed, which Virginia has taken in this great enterprise, deserves to be generally known, and the noble results which have been so far developed, fully warrant the State in continuing the policy it has heretofore pursued. The history of this movement will show that the very idea of African Colonization had its origin in Virginia, and that no State in the confederacy has given it a more uniform and liberal support. It will be seen that the committee appointed in 1776, by the first Legislature assembled under the auspices of American freedom, to revise and remodel the laws of Virginia,—the acting members of which committee were Edmund Pendleton, Thomas Jefferson and George Wythe,—proposed a scheme of colonizing the free colored population of the State, the very magnitude of which prevented its adoption. It will be seen that subsequent Legislatures and that Virginia's most useful and distinguished statesmen have, from time to time, down to the present period, approved and advocated the plan now in the full tide of successful operation. The acts of 1800, of 1801, 1802, 1816, '23, '28, '33, '37, and 1850, all give to it the seal of the State's approval, while such men as Jefferson and Monroe, Madison and Marshall, Randolph and Mercer, have fostered it in its infancy and lent to it the energies of their great minds, and the influence of their powerful

names. It was in accordance with the recommendation contained in the first series of those acts and of the efforts of such wise and patriotic men, that territory was obtained to which the free blacks of Virginia and of the other States of the Union might be removed. By the sagacity and intrepidity of Commodore Stockton, acting under the authority of Congress, and an agent of the American Colonization Society, in 1822 land was purchased along the coast of Africa to which persons of color, captured under the act of Congress forbidding the slave trade, might be transported. With the permission of the General Government, the American Colonization Society, the origin of which is due to Virginia, made the tract of land so purchased the nucleus of its operations. Presided over and cherished by the first statesmen and patriots of the country, by the Washingtons, the Clays, the Keys, the Jacksons, the Crawfords and Websters of the day, that society has succeeded in planting a colony, which, for the steady energy of its solid progress and the encouraging prospects which brighten around it, is unparalleled in the history of the world. In scarcely more than the quarter of a century, the elements of an empire have been established, that seems destined, with the blessing of Providence, to bring under the dominion of republican government and christian civilization the debased and idolatrous millions of a benighted continent. Like every great political and social movement, this enterprise has contended with difficulties and met with partial reverses of fortune. But its progress has been onward. A comparison of its history with the early history of the Colony of Plymouth, or of Jamestown, from which this powerful and happy nation has sprung into existence, will show that in point of expenses incurred, of mortality suffered, of difficulty experienced in subduing the natives, of establishing the foundations of good government, and of cultivating the industrial pursuits and ennobling arts of life, the Colony of Liberia throws into shade the efforts of our fathers. From Cape Palmas to Sierra Leone, a distance of more than six hundred miles, with an average width of territory of from thirty to forty miles, the coun-

try has been redeemed from barbarism and brought into communication and communion with the civilized world. The soil of the country is fertile in the rich and beautiful products of the tropics. The climate, varying as you ascend from the coast to the interior, from the temperature of the warmer to the milder zones, is happily adapted to the race originally born and embrowned amid its fervors. The soil and climate of the interior land,—any quantity of which can be purchased at small prices from the native inhabitants—are suited to the cultivation of every staple and every luxury known either to the torrid or the temperate zones. Coffee, equal to the best Mocha, rice, cotton, corn, wheat, potatoes, the palmtree with its manifold uses, the banana, oranges, lemons, dates, and a rich variety of other fruits, grow in the bountiful profusion of nature, or are successfully cultivated by the hand of intelligent industry. The commerce of Liberia and the country adjacent, already amounts to more than \$5,000,000 per annum, and yearly increases at the unparalleled rate of 50 per cent.—Of this commerce, England, ever wise to reap advantages from every trade and every people, receives \$3,500,000, and the United States \$1,500,000. With this commerce, the population of Liberia is only about 8,000, composed entirely of free persons of color emigrated from this country, with a native population of nearly 80,000, subject to their government. Seeking rather to secure intelligent, honest and industrious citizens than a large number of promiscuous people; the Colonization Society has employed its funds, obtained only from the generous philanthropy of liberal-minded friends, in selecting and colonizing those best fitted by their education and their known character for enterprise and integrity, to lay the foundation and compose the structure of an orderly, thriving and virtuous society.—Such a body of men, relieved from the appalling degradation of their political and social condition here, and emancipated into the enjoyment of equal rights, equal privileges, equal encouragements and aspirations, with the highest rewards for honest toil and the noblest honors for generous ambition, have awakened to the energy of a new life, the activity of a regenerated being, full of impulse and power, animation and joy. With the kind aid of benevolent friends, the free man of color has there built neat and comfortable homes, furnished not unfrequently with many of the elegancies of civilized life. He has cultivated the rich soil around him to the production of abundant and delightful food. He has founded common schools and higher academies for the general and liberal education of his children. He has erected temples to the living God in a land of idols, and made the waste places of the wilderness vocal with the worship of enlightened piety. He has established courts of equal justice—to him here unknown—governed by the common law of England, adapted to the circumstances of his condition, and throwing the shield of a righteous protection over the property, the persons and the lives of men, where once the savage rule of unrestricted power swayed its sceptre of avarice and blood. With these noble elements of a pure and progressive civilization, he has the crowning blessing of a republican government, modelled in its main features after our own, securing to every citizen not only liberty, but equality, and opening up to all the most energising prospects and the most elevating hopes. Three of the greatest powers in the world, England, France and Prussia have acknowledged the independence of the Liberian Republic, and have established treaties of commerce with its government. But for the peculiar relations which we sustain toward the African race, the United States would long since have set or followed the example. There now grows and flourishes that noble little republic, a refuge, an asylum for the unfortunate free colored population of this country, a centre of life and light to the surrounding tribes of benighted Africa. The powerful influence it must wield in civilizing and Christianizing that rich and populous, but untilled and unenlightened land, the future generations of men only can realize and appreciate. We know that the Germ of Christian Civilization has been planted in a propitious soil, and that it gives good prospect of a glorious fruition.—

We can but hope that, intermingling in daily commerce and friendly intercourse with the native tribes, the colony will infuse into them something of its own intelligent energy and purifying life, and that gradually but finally, that whole continent, like this western world, may be redeemed from barbarous despotism and idolatry, to the blessings of a just government and a pure religion. Thus far at least the brightest anticipations of the best friends of this colony have been fulfilled, nay transcended. Its past history and its present progress give the most gratifying proof of the noble adaptitude of free institutions and the Christian religion to the purposes of Colonization. Even the free black of the United States, though with no political privileges, yet born and brought up under the pervading influences of a republican liberty, in some manner educated to that liberty by daily observing its practical operations and absorbing its influences, in contact with the principles and habits inspired by an ennobling faith and the whole moral atmosphere around him; even he, the oppressed and despised here, thus schooled by the silent, yet powerful teachings of circumstances, when placed in an equal land and a more congenial home, develops energies and displays abilities his native race had never before shown, and proves himself, by practical illustration, more capable of self-government and true civilization than the most cultivated and polished people on the continent of Europe. The Liberian Republic this day would compare most favorably with any government which the French people have ever founded or overthrown.

Your memorialists have dwelt thus long upon this topic, to remove any doubts that might be entertained, of the practicability of colonizing our free colored population on the shores of Africa. They know that extravagant accounts have been given, both of the success and of the supposed failure of this colony, just as of every other bold and distant enterprise: but they do not hesitate to affirm, that the most sober, the most rational and reliable representations which have been made by those best qualified by intelligence, impartiality and practical acquaint-

tance with the progress and condition of the colonists, to speak upon the subject, furnish the strongest grounds of hope for the noble success of the colonization movement. Your memorialists believe that a congenial home, with rich lands, an equal government, and every element of happiness and improvement, is open to the free blacks of the State. These people are here a growing curse to us, and to themselves. Removed, by degrees, to Liberia, they would become an orderly, thriving and respectable population. Degraded here, they must inevitably sink to still deeper debasement. Under better influences, to say the least, they may improve, and cannot possibly be injured.

The plan which your memorialists propose, appears to them feasible and wise. We do not ask the Legislature, by one great movement, to rid the State of this population. Even were abundant funds lying idle in the public treasury, so sudden and wholesale an emigration should be deprecated by all. Besides other obvious reasons, which must strike the good sense, and touch the humanity of every intelligent man of kind feeling and common justice, the colony would be unprepared to receive, in so short a time, so large and promiscuous a population. Your memorialists respectfully ask the Legislature to grant an annual appropriation sufficient to defray the expense of colonizing a number equal to the annual increase of the free colored population of the State. That population now numbers 53,000, of which the natural annual increase is supposed to be about one thousand and sixty. Should emancipation go on, and emancipated slaves be permitted to remain in the State, the annual increase will, of course, be much larger. But, no doubt, if the State should once adopt a systematic and permanent policy of colonization, private individuals who might wish to emancipate their slaves, encouraged by the example of government, and aided by the better facilities afforded, would be willing to furnish the requisite funds for their emigration, and, indeed, to make emigration a necessary condition of the freedom granted to the slave. Should this course be pursued, or should the law still further discourage

emancipation, without deportation, the number of free blacks to be annually transported by the aid of the State, would be only the natural increase of the number now in our midst. By making selection only of the young and vigorous—say between the ages of fifteen and fifty years—and permitting the old and infirm to linger out the brief remnant of their lives in our midst, the State might rapidly rid itself of this population. The uniform experience of African colonization proves, that for the transportation and subsistence during acclimation, of each emigrant—all ages and both sexes included—the lowest average sum required is \$50. Say that the number annually sent out would be 1,000, the annual appropriation required would be \$50,000. Should a larger number than one thousand be sent out, of course a larger annual appropriation must be made. It is proper to state also, that in this calculation, the expenses of collecting and conveying the emigrants to the port of transportation, are not included. To accomplish the object in view, perhaps an annual appropriation of \$60,000 would be the lowest amount required. But as the more active and prolific of this population are removed, the natural increase of those remaining will grow less and less. The necessary appropriation would therefore annually diminish in amount. In this manner might this great social evil be extinguished, and the greatest earthly blessings conferred on those who are now hopelessly degraded, and must continue to descend in degradation as population becomes more dense, and the progress of society advances.

Your memorialists earnestly invoke your honorable body to take this whole subject into serious consideration, and to pass some operative and efficient measures in relation thereto. Heretofore, our legislation upon this subject has been temporary and inefficient. The acts making appropriations in behalf of colonization, were to have effect for short periods, and have been so clogged and encumbered by restrictions, as to be rendered almost null and void. Such was the act of 1833,—appropriating \$18,000 annually for the period of ——— years. Such more re-

cently was the act of 1850. By this last act, a regular appropriation was made of \$30,000 for five years, and a *per capita* tax and a tax for registration levied upon free negroes, the proceeds of which, (amounting annually, as appears by a special report of the 1st Auditor, to about \$10,000,) were devoted to the same object. (See Acts of the General Assembly, 1849-'50: p. 7 and 1st, Auditor's report.) Provision was thus made for the appropriation of the sum of \$40,000 a year for five years to the purposes of colonization. With this sum, eight hundred emigrants could have been annually sent out to Liberia, and comfortably settled in congenial homes. But unfortunately it was especially provided in the act that not more than \$25 should be allowed for the transportation and subsistence of each adult emigrant, and not more than \$15 for infants of and below the age of ten years. The lowest average sum required being \$50, this act, therefore, allowed, in some cases only one half, and in many others, but little more than one-third of the necessary amount. This restriction, with other provisions, has rendered the act almost totally inefficient. During the first year after its passage, only one hundred and seven free negroes were colonized, which required an expenditure of \$5,350, of which, only the trifling sum of \$675 was paid by the State, the remaining sum of \$4,675 being supplied by the Virginia Colonization Society; and during the second year, only one hundred and forty-five were colonized, at an expense of \$7,250, of which the State paid \$2,250, and the said Society the sum of \$5,000: the residue of the appropriations for the last two years, being between sixty and seventy thousand dollars, has been, of course, unused. Should the Legislature refuse to adopt more permanent and effectual measures for the removal of this population, your memorialists would respectfully but urgently pray, that the act of March, 1850, may be so modified as to be made available for the purposes for which it was passed, and that the unexpended residue of the last two years' appropriations, may be devoted, in like manner, to the same object. Your memorialists, however, can not forbear the hope that the Le-

gislature will adopt a more liberal policy—a wise and permanent policy, looking to the gradual, but final eradication of this great moral, social, and political evil, which we have so long endured. Even upon the score of economy alone, that policy commends itself to public consideration and speedy adoption. In the lessened expenditures for criminal charges, a great portion of which the Commonwealth pays for the prosecution and punishment of culprit free negroes, in the improved habits, and, consequently, increased value of our slaves, and in the general moral improvement of the community at large, ample compensation would be received for the funds necessary to remove the free colored population from the State. And now, that under the auspices of a more popular Constitution and of more liberal legislation, it is earnestly to be hoped that the resources, physical, moral and intellectual, of the Commonwealth, are to be greatly developed, and every element of social progress to receive a new and powerful impulse, a more opportune and favorable period could not be selected for the eradication of the great evil of which all complain. That the General Assembly, in its wisdom and patriotism, and the generous feelings of a noble humanity, may grant the prayer of your memorialists, your memorialists will ever, &c.

THE HILL-SIDE SPRING.

How aid the fainting memory
The eyes o' the heart!
The life of old—its happier part—
Can never, there enshrined die.

Those olden days, how faint and pale
To the mind's eyes!
But, in my heart I found her sighs
Her image. It can never fail!

Do you remember, faithful friend,
To whom I write,
The spring that bathed the marble white,
O'er which the apple boughs still bend?

You cannot surely have forgot
The hours passed there!
The golden-hued and raven hair
That glimmer still around the spot?

Ah, happy hours! how flitted on
The mornings bright—
In the effulgence of the light,
The rosy light of boyhood's dawn!

But they are gone—most of all she,
My hope, my stay;
She married many a weary day
Ago;—no less my memory!

L. I. L.

THE SUMMER BOWER.

It is a place whither I've often gone
For peace, and found it—secret, hushed and cool—
A beautiful recess in neighbouring woods
Arched overhead and girt around with green,
Domelike and dim, yet no where so enclosed
But that the gentlest breezes reach the spot,
Unwearied and unweakened, and when they,
Those musical confusers of sweet sounds,
Sleep, you may sometimes with unstartled ear
Catch the far fall of voices, how remote
You know not, and you do not care to know.
No livelier influence hath entrance there.
A narrow opening in the branched roof,
A single one, is large enough to show
With that half glimpse which dreamers love so much,
The blue air and the blessing of the sky.
Thither I say I often bend my steps,
When griefs depress, or joys disturb my heart,
And find the calm I look for, or return
Strong with the quiet rapture in my soul.

But one day—
One of those July days when winds have fled
One knows not whither, I, most sick in mind
With thoughts that shall be nameless, yet no doubt
Wrong, or at least unhealthful, since they had
No real cause of gloom and wrought no end,
I, with these thoughts, and on this summer day,
Entered the accustomed haunt, and found for once
No medicinal virtue.

Not a leaf
Stirred with the whispering welcome which I sought,
But in a close and humid atmosphere,
Every fair plant and intertangled bough
Hung lax and lifeless. Something in the place,
Its utter stillness, the unusual heat,
And some more secret influence I thought,
Weighed on the sense like sin. Above, I saw,
Though not a cloud was visible in Heaven,
The pallid sky look through a glazed mist,
Like a blue eye in death.

The change, perhaps,
Was natural enough—my jaundiced sight,
The weather and the time explain it all.
Yet did I draw a lesson from the spot,
Which I commend to thought. Reader! if thou
Hast any sacred sorrow at thy heart,
Look to the stars for solace, call on winds
And waters for a blessing, seek in flowers,
The voiceful and the voiceless things of earth
That sympathy man gives not—they shall bring
Fresh from the heart of Nature balm to thine.
But for the mind which makes its own dark griefs,
These have what life has—nothing.

AGLANS

Scenes Beyond the Western Border.

WRITTEN ON THE PRAIRIE.

BY A CAPTAIN OF U. S. DRAGOONS.

June 20th, '45.—We marched to-day, twenty-seven miles to the crossing place of the Platte river. In all this distance, there was grass but at two spots; and few buffaloes were seen.

I was riding near the head of the column, over the bare prairie, when suddenly, within twenty yards, up sprang a grizzly bear! He ran about eighty paces, threw himself about, and stood some moments, gazing at us with his head high raised. "Grizzly bear!" was shouted down the column, and gave an impulse to the true hunters, which strongly tested the punctilios of discipline: a half dozen of us spurred to instant pursuit: away we galloped, toward the mountain, at greater than buffalo speed. That bold hunter, Capt. M., the foremost, headed and turned back the bear—round a slight swell—when some of us suddenly met it; whereupon, a dragoon's horse, in great fright, gave its rider a tremendous fall; his danger added new excitement,—several shots were instantly fired, and a ball fortunately striking its shoulder, turned off the furious beast toward the river; near it, he took refuge in a very small hammock, where Capt. M. very rashly followed. The bear then came at him with expanded jaws and a savage roar, that sent the horse about with a desperate leap, which made the saddle pommel tear open the Captain's vest to his chin! The bear then dashed on, into the river, where, at twenty paces, a lead of large shot was fired into the back of his head, with no apparent effect; three men followed him there and might have killed him, as he ascended with difficulty the opposite bank; but he escaped into an almost impenetrable thicket of plum bushes, &c., where, it being very extensive, we sought for him in vain.

It was a singular thing, that the moment the bear sprang up before us, near the same spot a very large and perfectly coiled rattle-snake began so loud and threatening a rattle, as to divide the attention of many with his bearship.

A hare shot to-day, although quite poor, weighed seven and a half pounds; the legs were twelve inches long. I supped on a "sagehen," which I shot with my pistol; its quality and flavour seemed to partake of both the grouse and chicken.

June 22d.—Independence Rock.—Yesterday, we forded and left the Platte, to turn confused masses of mountains with picturesque red-rock precipices, which there begin to wall it in; it is

called the Red Buttes. We passed one spring, with a little grass, about half way of our march of twenty-seven miles to another. The last half was the most desolate and wild region we had seen: high plains where there was nothing but clay or sand, and a few stunted, dusty artemisias, interspersed with great rock-hills of dark volcanic appearance. We had to dispute possession with buffalo of the small well-cropped oasis where we encamped, and with another grizzly bear, which we routed out, at dusk, after it had greatly alarmed the horses.

About 5 o'clock, this morning we were in the saddle, anxious—with the famed Sweet Water for our goal—to finish the remaining twenty-five miles of desert. We passed several springs, with a little grass, bog, and some plum bushes; as we neared the river, the country grew more wildly barren; there was a great plain of white sand, and, here and there, of glittering *Epsom Salts*! Amid the mirage and white dust, and the dizzy glow of reflected light and heat, which nearly turned the brain, I have still in my mind's eye a kind of vision of the indomitable hunter, Capt. M., scudding over far black slopes, which seemed themselves in wavy motion, fiercely pursuing flying buffaloes: it was a rivalry of all the German extravagance of their favorite legend of the wild huntsman. The facts seem simple, but there was an unnatural strangeness, a suffocating, alarming heat in the dazzling plains, and the black hills, that gave a dreamy confusion and doubt to realities. Did then, the strange mirage cheat the senses with apparitions of a desperate hunter, on that wonderful gray horse, pursuing black monsters, far, far and indistinctly into the glowing haze?

After all, we knew it was Ben. Moore,* or the devil! But it had always been said that he would follow a buffalo to the abode—left to that imagination which here seemed realized.

But onward moved our silent procession; each followed the whitened horse before him; nothing more could *then* be seen; and expiring fancy, and distressing fact were shadowing forth together the prospect of numerous equestrian statues of salt; and none of us looked back, which might figure in our unhappy history; when, presto! a puff of good natured air, blew pain and doubt and dust away! We were on a verdant sod, laved by a crystal stream. Just behind us, was a pillar; no, a little mountain; a single rock of granite.

Ah! not long, bright Sweet Water! did we

* Captain B. D. Moore, 1st Dragoons, at San Pasqual, California, Dec. 6th, 1846, fell in a charge, far ahead of the foremost, amid a circle of foes, to whom he would not surrender! I was told, soon after, that the enemy, full of admiration, strove hard to disarm and save him.

refrain thy tempting embrace: thou wert a Lethe to the desert behind; all illusion faded from the delightful realities of thy bath.

The rarity and dryness of this air is proved in an ancient buffalo skull, found here, with the ears, and inch-thick hide dried and preserved.

It is near midnight. Silence reigns in the desert; but now and then, come the cries of wolves from the mountains. They give an almost supernatural tone to these solemn solitudes. The repose which twenty hours of excitement and toil demand, is banished. Hark! how they howl! Be grandly dreary, and ye will be attuned to the heart! Yes, never better to a sentimental girl, the gentlest breathings of an æolian harp. Ah! how very doleful is that plaint! Never, never the doleful! Give me the placid calm, with which the soul may revel in fairy creations, adorned by all the flowers of thought, or proud action, the storm of wild and passionate will. The gilded and painted memory, or fierce oblivion.

Come, O, sleep! thou luxury to the happiest; thou matchless blessing to those that may not be comforted. Come deathlike; profound as Adam's first. Oh! fated Progenitor! Then from near thy soft heart, sprang its resistless enemy; evermore armed against the peace of thy unhappy sons! Nay, the very Angels surrendered Heaven, and trembling, yielded to her arms.

June 25th. Independence Rock, which we left yesterday morning, is about one hundred and twenty feet high, and a thousand long; it is the first appearance of a strange ridge of granite masses, near a hundred miles long, which stands in the midst of a great plain, in a direction perpendicular to that of the Rocky Mountains. The Sweet Water for near half its course, from the South Pass to the Platte, runs near its southern base.

Some of its dome-like elevations are near 1,500 feet high; apparently no tree or shrub,—no beast or bird relieves its stern and lifeless gray; its monumental solemnity. For how many ages, since its upheaval by the primitive fires, has it stood—changeless in summer heats and wintry storms—in untrodden solitude; in awful silence!

But the "Rock" is isolated; and I rode ahead several miles over a plain, yesterday morning, hoping to surprise a chamois, or "bighorn," at the "Devil's Gate," the actual extremity of the ridge.

So named perhaps by some earnest believer in satanic grandeur, it is in truth the gateway, chosen, (for its romantic beauty, I shall say) by that fair and gentle offspring of mountain dell, the better named Sweet Water; for, we practical mortals led our martial train with peaceful ease by a much gentler portal, to its valley, a smooth

gap of prairie hill. Whether thus formed in the comical throes of nature—river and sundered rock together—or, whether the waters dammed and falling, wore away the softer trap-rock vein through the granite, less resisting than the hill of stubborn argil and gravel; so it is, the stream here finds an outlet through a profound and narrow chasm in vertical granite.

There are vegetable and mineral attractions and repulsions. The Elm-twigg distorts itself, turning short back to avoid the contact of the locust: the parasite selects the noblest oak, which trails its tender foliage, high over the many self-dependent neighbors, as the tenderest woman oft chooses the most sturdy and rugged mate; and certain it is, this merry little river, whose sparkling waters often demurely purl over golden sands; this very coquette of all the mountain offspring, if it ever approaches the fir-clad mountains of soft inviting blue, turns suddenly back; leaves too, the grassy bed of the valley; and cleaves to the stern rocks: nay, as if for love, or it may be, for strong excitement sake, now and then it enters their very heart, which seems to open to embrace it; and thus, careless of the dry and melancholy plain, goes sporting through their stony bed in fierce or joyous triumph: and then for change again, it comes quietly forth, more deep and staid, and with an innocent smile, to the bosom of the tame and neglected valley. But I have left the "gate" to describe the walls and interior.

My first delight being calmed, I secured my horse, and slung my rifle—that I might better clamber with both hands, and *alone with Nature*, ascended instinctively to a happily selected niche of this her favored temple. Alone! O, who among men would chose more than *one* witness to such an interview!

I was a hundred feet up, and well within the crooked chasm: all breathless, I cast my eyes first upward to the grand walls, still 300 feet above, and approaching in dim perspective; for crowning evergreens formed an arch, as if offering link of beauty to the stern masses, frowning gloomily above the abyss which had sundered them forever.

Below, the waters roared as if to gather courage to dash amongst the shapeless rocks; boiling angrily, they increased by their misty spray the dizzy awe of the downward view. With a slight pause or two, they reflect a gleam of light, which relieves but heightens the majestic solemnity of effect; and then seem to hurry forth from the dread labyrinth, to meet gladly again the light of day.

I have stood on "Marshall's Pillar," overhanging New River 900 feet; I have studied Harper's Ferry from every point; but "Devil's

Gate." with its solemn calm profound, wraps the mind with a spell which no glare of day comes to break; and has so striking an Unity in its grandeur, that it must receive the meed of sublimity.

From the granite range, five or six miles to a parallel mountain ridge at the South, is called the "Valley," of the Sweet Water; it is in fact, chiefly one slope of barren hill, whose sands and gravel are only redeemed from nakedness by melancholy artemisias and absinthia; to the North of the granite, the country is flat and more valley-like; I should say then, that the granite was erupted in the centre of the valley; in the very course of the Sweet Water.

This afternoon, we stopped in the opening of a romantic pass, where the river was narrowly confined by little mountains of rock, to leave a small party with the weakest horses to await our return. Two hunters, who had been sent after buffalo, joined us there with trophies, but with the uneasy haste of a retreat: they had found a grizzly bear with three cubs, and had managed to kill one and had taken a second alive; but then the furious dam had given them a chase, which they dared not stop to encounter, on ground broken by large sage bushes: so they had gladly brought off, as a compromise, the two cubs;—the live one, exhausted by the chase and the excessive heat, seemed dead, and they laid it in the water; a crowd of men were gathered closely around, when suddenly the little beast assumed vigorous life with so fierce a growl, as to disperse his spectators like a bombshell.

We had left the road of loose sand, and now attempted more directly to pass the defile: above us, six or eight hundred feet, great shapeless rocks, piled loosely, or suspended on inequalities of the parent mass, threatened to fall, as many had done before; there, scattered about in the sparkling rapids, and among the rosehushes of the narrow bank, nearly barred our passage, but we fortunately accomplished it. Soon after we emerged on a little green level—still between the mountain precipices—we surprised a flock of chamois passing from one to the other: before we were well recovered from our own surprise they had accomplished their object; but immediately several hunters were scaling the granite in pursuit; and a lucky one reached gunshot distance. When his carbine awoke from silence echoes which had never found a voice, wounded or not, the goats, which on reaching their native rocks had regained an easy confidence, seemed now winged by terror, and skimming the almost vertical slopes and fearful precipices of smooth, naked granite, with a daring velocity which was wonderful, admirable, incred-

ible! I cannot express the thrilling and delightful surprise it gave us.

We ascended then a long sandy slope, still between granite; the reflection was blinding—the heat scorching: there was no sensible perspiration, owing to the rapidity of evaporation; but clouds brought shadows to our relief; and never too was toil sooner forgotten. At the top we paused insensibly, and all gathered there just to behold and gaze excitedly at the glittering summits of the Rocky Mountains. Their sharp pyramids of snow seemed to penetrate,—and all sun-lit—were sublimely relieved by the dark clouds. We descended to find a level camp ground on the Sweet Water; and the telescope now reveals faintly many more pinnacles penetrating dim, airy space, beyond the eye's power to catch the bright reflections of their snow mantles. Like phantoms they seem, mysteriously shadowing forth an unknown land,—a new world.

Near the camp, rising from the green sward, stands a solitary rock of granite: it is two hundred feet high. I ascended and sat long musing there—not alone, for I found company in a single shrub which strangely flourished near the very top.

I am little curious, in little things, and seldom in any manner "played the devil"—to which they often lead so wonderfully; but in this stilted position, I was a daylight Asmodeus: the doings of all the little world below, were open to a glance; and owing to the strangely ascending quality of sound, which I had observed before, I could hear all their uttered thoughts; at four hundred yards remarks came distinctly, to which the person addressed, at twenty paces, answered "what!" I lingered until the torches of some *ex tempore* fishermen, with spears or gigs, warned me that my descent was becoming perilous.

27th June.

"Reposing from the noontide sultriness,
Couched among falling columns"—

C. "How pleasant thus to repose at high noon of the long, hot day, on a bear skin in the deep shadow of our willow; and in full view of the eternal snows, which send this crystal tide with its delightful verdure!"

F. "The green valley gave us all the pleasure of an unlooked for discovery—the charm of a surprise."

C. Pleasure always flies a studied plan. I like, too, to take misfortune at short notice."

F. As the poor buffalo yesterday did theirs; so their last mouthful of grass was sweet!"

C. "Did you not regret to dispossess them! They seemed to leave with a real reluctance; but so great a herd must soon have finished our forage."

F. "I cannot remember when we rested before! so rarity gives it a greater zest; but we had all the *trouble* of a march, to come three miles! Well, it gave us a good appetite for breakfast."

C. "Not very necessary after the frosty night. But our quiet discussion of trout and buffalo steak, was a good introduction to repose and a pipe."

"How beautifully those light clouds float along from the east, wafted by the gentle airs that just give music to the leaves over head. Ye far wanderers! are ye messengers from that busy world? If so, pass on; and those white summits—those representatives of Nature's simplicity, will receive you quite unmoved!

"What is the world to us? Not much more than we to them!

'Let the wide arch of the ranged empire fall!
Here is my space.'

F. Ah! but Anthony thus spoke under the excitement of a powerful passion."

C. "Most sapient, true; for does he not soon add,

'Now for the love of Love, and her soft hours,
Let's not confound the time with conference harsh:
There's not a minute of our lives should stretch
Without some pleasure now.'

"I rather think there is nothing worth living for beside Love, Music add War."

F. —"And a pipe! for what content, you heathen, does it not appear to give you. And the beauty of this sparkling, but calm morning is something to live for, and gratefully too."

C. "Beauty! I worship beauty! I enjoy it in the tiny flower—it absorbs me in the bright spring landscape, where Nature has kindly played the artist, or in the sunset clouds which methinks good angels paint in heaven's own colours; it enchants me in smiling eyes and lips wreathing their divine intelligence with a halo of love!"

F. "Bravo!"

C. "Thus love at last, as love at first—all-absorbing—feeding upon music,—sporting with war:—love, the link of earth to heaven,—love is all in all!"

(*F.* "He must have been reading Saint John!")

C. "The beauty, then, which now soothes me momentarily, is but a sweet minister to the soul—to which absence is the doomed evil, but space immaterial—and leads it with a melancholy joy, to the imaginative communion of love."

F. "When I have you committed, fairly pinned in contradiction, you fly off into a maze of extravagant fancies, where I should be lost, as well, if I followed."

C. "And get the best of it! Ah! my good friend, let this wild mountain air have fair play; let us with the desert's freedom joyously float convention and opinion—upstart usurpers!—let us make mocking sport of the prosaic solemnity of ignorant prejudice;—let us shoot popguns at least, against the solid bulwarks where folly and selfishness sit enthroned!"

F. "Then fire away!—though hang me if I know what you mean."

C. You are so poetical! The material wilderness, with no fair spirit minister, would sink us to mere animals. Well, I mean that fanatics, hypocrites and malicious gossips generally rule society: sometimes under the cloak of religion,—sometimes as envious, presumptuous censors.—they intimidate the true and innocent, who resist not, nor despise,—but slavishly cower before their unblushing falsehood: thus, all pure simplicity of manners,—all the most private and sacred relations of life are blurred by their foul intrusion. I mean, too, that life is burthened with a thousand artificial cares and anxieties; the growth of envy, jealousy and folly, the prolific brood of another arch-tyrant, fashion."

F. "Well! what care we in this honest wilderness! Care for nothing you cannot help, is the sum of my philosophy."

C. "But who lives, who may not be wounded through another!—Then so be it! let us treat the whole world as it has done us, and—forget it! I dare say, nay, I am sure, that beyond some family ties, there is not upon the wide earth a heart in sympathy with our good or ill; whose even beat would be as much disturbed, were this wild sed to cover us forever, as at the most ephemeral of the trifling cares which make up their petty lives."

F. "At last you have struck a chord that answers as to the touch of truth! And as for love, I know none better than that of the she-bear for her cub; and that lasts, and is returned, just so long as circumstance and interest bind."

C. "O! my friend! Is there not then a pure soul-love, a deathless friendship, "passing the love of women," which all life's trials and the world's baseness cannot soil or sap? If that be truth, 'twere better never to look into her Medusa face! O! better to cherish enthusiasm, (despite the sneers and ridicule of cold, calculating woman;) better, (as it would become) a blind heroism of credulity! Ay, a heroism of policy,—like that of the great Cortez, who burnt, unread, the proofs of a conspiracy, rather than embrace damning doubt."

Evening.—In this day of rest, each has followed his bent; some, headed by Capt. M., of course, have wandered to the stony, sunny hills, seeking the excitement of hunting;—others fish;

still worse, but *de gustibus*.) others sleep away the day. As for myself, with my pipe and pen, and my plum bush—my occupation appears. Nothing disturbs me, but that a luckless brood of magpies inhabit my plum bush. Heavens! how they chatter! How querulously and fiercely they chatter! No girl-school could equal it. I shall assuredly skin, and stuff, at least one of them; or slit a tongue—which might make the matter worse.

This same plum bush is a singular affair: its stems are three feet through, and so closely wound together, that little is wanting to a solid mass: but the half are dead,—and on their dry limbs, hangs the wool of buffalo, rubbed off yesterday.

The bright Sweet Water, giving in the morning strong indications of a devious and capricious course, we yesterday reluctantly resigned her cheerful company, and betook ourselves to her companions, the hills; in the hope, however—which was not disappointed—that we should find something new and pleasing in their more serious company.

After a delightful drink of the water of a little green bog, which has masses of ice near its surface, (and without accounting for this strange fact, I will merely mention that hot as it is by day, water froze last night in my tent,) we gradually ascended what seemed a vast plain;—the granite masses began to disappear;—to the left, the blue mountains became prairie hills; the snow clad Wind River peaks were steadily before us. We exchanged loose sand for a gravel soil; for some soil there is, with a scant, yellow grass;—but mosses are more common: the universal wild sage is thinner and smaller;—heathcock and hares have nearly disappeared—there is, instead, a brownish rabbit,—and curlews too, whose wild cries are well atone with the scenery. About mid-day we were ascending a very dry, hard road—as it seemed—when we met a stream of water!—making a deliberate, but very sure progress. It was not much, “for a new country,” but I thought it remarkable. Then we found buffalo, and had a good, old fashioned and successful chase. We were on very high ground, and the scenery was noble; far away toward the left, to the south of the Pass—that giant gateway to the western continent—the mountains rising again in forbidding grandeur;—great plains in front which might lead to the new ocean,—but in part relieved by towering mountains glittering with snow down nearly to our level;—while more to the right, a majestic table Bluff, 8,000 feet high! seemed there to bound the earth.

But suddenly, with a delightful surprise, we looked down into the smiling face and bosom of our little coquette, Sweet Water, all renewed in

grace, and blooming in a glittering dress of green: absence gave appreciation and zest to the meeting. She was now in a sweet, secluded valley, three miles long, on which high stony hills every where walling it in, frowned in vain. She only smiled the more!

And its attractions had gathered there a vast herd of buffalo, which surprised us as much—so unusual have such become. But here comes Frank again: well, rest is evidently not a time for dull narrative.

F. “Most industrious of scribblers, I give you good evening! How charming, for a change, is our old friend, Siesta! I hope the beautiful nymphs of this happy valley, if they suffice you, hovered over your dreams. But, in truth, I think you dream all day, when no wild bull is a-foot. Hast thou, most favored mortal, tempted an Egeria from her sacred fountain and grove to meet thee, where others groan in very spirit, in the hot and dusty stony barrens?”

C. “You are quite overpowering! Your dreams surely were spirituous. But a truce to day-dreams; light as they are, the whole world granteth them not a foundation spot!”

F. (*He has turned the tables.*) “Well, the Captain has got back; and has had an interesting excursion. He went a dozen miles over—or down—to the Wind River, (or a branch,) which he says is a thousand feet lower than this; and that the mountains, to which it gives its name, appear from thence far more lofty and grand.”

C. “I am sorry I did not go! Is it not water of the Yellowstone?”

F. “Yes; but first of the Big Horn, which takes its name from your “chamois”—they are all goats—that is a fork of the Yellowstone. But is not this a sweet valley! I have bathed in the beautiful little river, where it is five feet deep; the sands seemed of gold,—and on the bank I found ripe strawberries.”

C. “They have a story of Capt. B., whose travels this way were published, that he spent a day or two here, collecting the yellow mica sand, in the belief that it *was* gold. But while you have been indulging in the beautiful, which I hope stirred somewhat the poetical element, which exists perhaps in all, and is dormant in few elevated minds, I have found in the rugged hill-side food for thought at least;—the impression of a sea-shell in primitive limestone;—this, at the top, or rather at the base of the Rock Mountains, (for this South Pass, 60 miles wide, has not the characteristics of a mountain, is merely the highest steppe of the continent,) is a fruitful subject for palæontological research, if such be not without the pale of your practical system?”

F. “Bah! your modern geognosy is a humbug! or, too deep at least, for a wandering dra-

goon. Now, would you go about determining the age of the formation from your knowledge of the shell? or give it physiological gradation from your profound knowledge of superposition of strata?"

C. "The former, if I only knew it. You will allow me at least, on your own recommendation to note the fact in my journal?"

F. "Of course; but with becoming modesty. It is enough to ruffle one, to have such a long word thrust at him, of a pleasant summer evening, and a thousand miles from a library."

C. "But, good heavens! do not condemn a word for its length. Palæontology is an almost poetical triumph, which throws an attractive grace over the sterility of geognostic investigations and symbols on the human tombs, which throw beams of startling light over the obscurity of fabulous antiquity,—so when we discover the traces or remains of existing, or the extinct life of the old world, their natural tombs—the fossil rocks—are monuments on which Time thus records their relative ages. It is a beautiful chronometry of the earth's surface!"

F. "Allow me then a few years of devotion to the study of the analysis of primitive zoölogy and botany, and I will then, if possible, give you my speculations with all the boldness of poetical science upon the formation and age of the continent—all by the light of your chronological, fossiliferous, infernal shell!"

C. "I understand you. *Ne sutor ultra crepidam*. But there is ever "speculation in the eye" and face of nature. Did you notice yesterday that great level-topped bluff? There is something in the idea of grandeur with which these high plains inspire me, that I cannot fully understand."

F. "Is it not the impression of massiveness, which the extent of the level shape adds to the effect of height?"

C. "Something of the sort:—perhaps so. I have been reminded by some of these lofty table-lands, so swelling as to hide all the earth beyond, of a feature of Niagara; that scene of hacknied sublimity, of which it is supposed that nothing new can be said or written. But it was the rapids, and not the falls, whose smooth descent the eye measures by the banks, that impressed me most, and with an effect that I certainly have not heard or read of. Standing on the Canadian side, much below the falls, in full view of the rapids, in all the foaming majesty of their long rocky descent, I could see nothing beyond—nothing between them and the sky, whose glittering light clouds seemed blended with their bright foam and spray. Then came with the strong semblance, the sublime idea that the

mighty flood was rolling forth continually from the high heavens!"

Farewell, my friend! Soon the desert shall receive me.

"Farewell! with him alone may rest the pain."

Notices of New Works.

TIME AND TIDE: *Or, Strive and Win.* By A. S. Roe. Author of "James Montjoy," "To Love and to be Loved," etc., etc. New York. D. Appleton & Co. 200 Broadway. 1852.

Mr. Roe will lose, by this new work, none of the reputation he acquired by his excellent and popular moral tale of "James Montjoy." His power lies in describing with great naturalness and feeling, everyday scenes and characters—in daguerreotyping the real life struggles of real life personages, with the "hostilities," as Carlyle would say, which surround and stand in the path of mortals. There is not a particle of rhetoric about this author's style, no striving after effect by those carefully moulded and elaborated periods which characterize—and not favorably—so many of the poet-authors of our day and generation. Mr. Roe's narrative flows on without effort—it is a brook winding through pleasant, cheerful scenery, not a torrent.

Such works will forever be popular; and will live and be read for their home truth, when many volumes of much greater pretension shall have been swallowed up by time and change. And this is as it should be. The writer who purifies in any degree one human heart, or reconciles that heart to its earthly state of probation, has done more for humanity than many a celebrated philosopher and man of science. "Time and Tide" is, as we have said, an every day story of everyday people—showing their strugglings and misfortunes, but their successes and happinesses too; but the moral of the book is summed up in the second division of the title—Strive and Win! Brave words these, which hold how much of deep philosophy, how much of lofty counsel! In them is the essence of all human wisdom, and they are the true talisman which will open for all the most heavily closed doors. The characters have great truthfulness, and Charles, and Frank, and his sister Emily, will be favorites with every reader;—as will not those worthies Marsh and Twineall. The arrest of Charles, on a criminal charge, is told with great beauty and force; and there are many such pages in the book where power and grace are blended.

The author fails, however, in one particular—and badly. Old Peter, the negro factotum of Mrs. Stanley, does not talk "African"—for we may almost elevate into a separate tongue the negro management of English. No one who has listened frequently, or with attention, to the negro's *patois*, would have written the passages in question.

We recommend "Time and Tide" to all our readers. It may be found at the bookstore of A. Morris.

OUTLINES OF ENGLISH LITERATURE. By *Thomas B. Shaw*. *A New American Edition with a Sketch of American Literature*. By *Henry T. Tuckerman*. Philadelphia: Blanchard & Lea. 1852.

The first American edition of Mr. Shaw's volume has been a book of constant reference with us ever since its publication. The work is rendered more valuable in its present form by the addition of Mr. Tuckerman's Sketch of American Literature. Mr. Tuckerman has executed his task with taste and judgment, and the only fault we have to find with the performance, is that which belongs to all northern works of this character—injustice to southern writers. There seems a fixed and determined purpose on the part of all New England authors to recognize nothing of literary excellence beyond the Potomac. Accordingly, in the present Sketch, we see every southern *litterateur*, who is mentioned at all, dismissed in a single paragraph, while whole pages are devoted to the discussion of northern minds. We think this very unfair, and especially did we not look for it in Mr. Tuckerman, who has many southern admirers, and whose literary merits have been acknowledged, in the handsomest manner, by the Southern Quarterly Review.

The work is for sale by A. Morris.

ELEVEN WEEKS IN EUROPE: *and What may be Seen in that Time*. By *JAMES FREEMAN CLARKE*. Boston: Ticknor, Reed & Fields. 1852.

Mr. Clarke's Sketches of European Travel are in the highest degree delightful, and constitute the very poetry of guide-books. We should regard such a *vade mecum* as worth far more than Murray, and we cordially commend it to all such as intend visiting Europe for purposes of observation and improvement. Those who go simply to make the fashionable tour, would not be much benefitted by Mr. Clarke's experience. The three subjects of special admiration with Mr. Clarke, were the Alps, the fine old paintings and the magnificent cathedrals, which one must cross the Atlantic to see. Each of these *specialités* he has described with spirit and enthusiasm. It may be interesting to many of our readers to know that the entire expense of Mr. Clarke's tour, including outward and homeward voyages, was Six Hundred Dollars, and that with this outlay he spent four weeks in England, two weeks in France, three weeks in Switzerland, one week on the Rhine, and one week in Belgium.

The book is for sale by A. Morris.

THE GREEK GIRL: *a Tale in Two Cantos*. By *JAMES WRIGHT SIMMONS*. Boston and Cambridge: James Munroe and Company.

There are so many evidences of power and poetic genius in this metrical story, that we are heartily sorry the author did not write it, as he might easily have done, in a style of his own, instead of hazarding another imitation of Don Juan. The sometime slipshod stanza of my Lord Byron, in that brilliant and witty, but very wicked production, rises occasionally into a majesty to which writers quite as gifted as Mr. Simmons, have vainly endeavored to attain, and to copy only the worse portions of a model without its redeeming excellence, subjects one to sharp criticism. In saying this we mean only that Mr. Simmons had fallen into very rough and slovenly versification from copying the stanza of Don Juan, not that he has

caught anything of its licentiousness. But while we regret the form of the work, we are not insensible to its merits, and we do not hesitate to say, that for luxuriance of imagery, and depth of philosophical reflection, the Greek Girl deserves to be widely read. We should like to lay some passages from it before our readers, but we think they will derive a juster impression of Mr. Simmon's powers from a perusal of the entire work, and we therefore advise them to buy it upon our simple *imprimatur*.

It may be obtained of J. W. Randolph.

THE POETICAL WORKS OF FITZ-GREEN HALLECK. New Edition. Redfield. Clinton Hall. New York. 1852.

Halleck is a poet after our own heart, though the Tennysonian taste of the day has exalted others above him, who are more psychological (or more egotistical) than he, and throw around their ideas a cloudier drapery of language. We therefore thank Mr. Redfield for this seasonable and handsome edition of his poems. In looking over it, we find our old favorite pieces as delightful as ever, and recognize in the "Extract from an Unpublished Poem," a new candidate for our admiration. This extract has gone the rounds of the newspapers, or we would quote it.

A. Morris has the volume for sale.

THE SOUTHERN QUARTERLY REVIEW. July, 1852. Charleston, S. C. Published by Walker & Richards.

This excellent publication, under the scholarly editorial management of Mr. W. Gilmore Simms, continues to maintain its long-established reputation, as one of the highest exponents of the American intellect. The number before us discusses several national subjects with great ability. The article on the battle of Churubusco is a fine piece of military history, from the pen of one who unites to an intimate knowledge of the art of war the graces of a polished rhetoric; and the doctrine of Foreign Intervention, as expounded by Kossuth, is treated in another paper with marked discrimination and force. We are glad to see also a genial critical notice of Kennedy's Horse Shoe Robinson. Such a Review as this Quarterly is a credit to the South and to the country.

THE NORTH CAROLINA READER: *Containing a History and Description of North Carolina, Selections in Prose and Verse, &c., &c.* By *C. H. Wiley*. Philadelphia: Lippincott, Grambo & Co.

Mr. Wiley deserves well of the people of North Carolina for this excellent volume compiled in their service. It is designed for schools, and will generally replace, we trust, the thousand Yankee publications of a similar character, which have, for many years, been in use in Southern academies. The History of North Carolina, contained in the work, is graphically written, and is well suited to popular reading. The selections seem to have been most judiciously chosen, and altogether the book commends itself to the patriotism of North Carolinians in a high degree.

From Messrs. Bangs, Brothers & Co., through J. W. Randolph, we have received two additional volumes of Bohn's publications. One is vol. V. of Vasari's Lives of

the Painters, which completes the new and handsome edition of that standard work, and contains a full index to the whole:—the other is a volume of translations from Ovid, containing the *Heroides*, the *Art of Love*, and other of the higher productions of the graceful Latin Poet. We are always glad to have the opportunity of paying our humble tribute of commendation to the valuable Libraries of Mr. Bohn, in which only books of the highest excellence are included. The low price at which these books are offered to the public, places them within the reach of all readers. The volumes before us may be found at all our bookstores.

THE BLITHEDALE ROMANCE. By *Nathaniel Hawthorne*. Boston: Ticknor, Reed and Fields. 1852.

Mr. Hawthorne has fully sustained himself in the *Blithedale Romance*, although we rate it much lower, as a work of art, than either the *Scarlet Letter* or the *House of the Seven Gables*. It abounds in highly wrought scenes, a *riant* humor, a just perception of character and happy description. The plot is cast at Brook Farm, where many years ago a set of rose-water reformers gathered themselves into a sort of association to improve this wicked world of ours, and show mankind how to dwell together in unity. Hawthorne was himself one of these amiable sentimentalists, and it was expected that the *Blithedale Romance* would turn upon the history of this Utopian scheme, but in the preface he expressly disavows any design to show up his brother philosophers. He has peopled Brook Farm, instead, with personages altogether imaginary, and constructed around it a story of considerable interest. This interest is mainly kept up by the fact that the story is told by one who had been only a looker on, and not an actor, and the results are thus invested with an extraordinary effect by the ignorance of the reader on account of the supposed ignorance of the narrator. The atmosphere is unreal, weird, spiritual, a medium favorable to the representation of Hawthorne's ghostly creations.

A. Morris has the work for sale.

A JOURNEY TO KATMANDU: Or the Nepaulese Ambassador at Home. By *Lawrence Olyphant*. New York. D. Appleton & Company, 200 Broadway. 1852.

The visit of the Nepaulese Ambassador to London, during 1850, is quite fresh in the recollection of all who read the accounts of the *fetes* with which he was honored, and the jokes that were perpetrated at his expense. Punch made a small fortune out of his Excellency, whose openness of character and ignorance of the conventionalities of Christendom betrayed him into some curious adventures. The most amusing instance of his extreme simplicity was his proposition to purchase the Coldstream Guards, their evolutions upon review at Windsor having greatly delighted him. We are not certain, however, that this did not show a rare perception of the true character of *enlightened* nations, where all things are reduced to a pecuniary standard. At all events, General Jung Bahadur was no ordinary man, and those who would like to know more of him, will find a charming account of his accomplishments, his *bonhomie* and his native good sense, in "A Journey to Katmandu." Mr. Lawrence Olyphant is the son of the English Governor of Ceylon, and was the travelling companion and guest of General Bahadur on a visit to the capital of Nepal. There he became acquainted with the habits and customs of the

people, which he describes very satisfactorily. A large amount of novel information is given in the volume, which is beautifully printed as one of the series of Appleton's Popular Library.

It may be obtained of A. Morris.

A JOURNAL kept during a Summer Tour for the Children of a Village School. By the Author of "*Amy Herbert*," "*Gertrude*," &c., &c. In Three Parts. Part II. New York: D. Appleton & Company, 260 Broadway. 1850.

The rare faculty of description which Miss Sewell has heretofore exhibited in her works of fiction, qualifies her, in an eminent degree, to write pleasant books of travel, and in the "*Summer Tour*," this faculty has been exercised with great effect. The part before us relates entirely to Switzerland, and no more faithful representation of the Alps has ever been given to the public. The placid lakes, the quiet villages nestling at the bases of the eternal mountains, the awful avalanche, the glittering glacier, and high above all the towering and majestic summit of Mont Blanc—such are the pictures that are represented to us by Miss Sewell's *Journal* with striking fidelity and success. We commend it, therefore, with great confidence, to all summer loungers, as a refrigerative agent, feeling satisfied that although one cannot—

—hold a fire in his hand

By thinking on the frosty Caucasus,

he may still refresh himself in the hot noons of August with such drippings from the "regions of thick-ribbed ice." The effect has been cooling to us at least. We shall look with interest for Part III. of the "*Summer Tour*," and take occasion to say here to the publishers, that we did not receive Part I.

The work may be found at the bookstore of A. Morris.

THE KNIGHTS OF ENGLAND, FRANCE AND SCOTLAND. By *Henry William Herbert*. Redfield, Clinton Hall: New York. 1852.

THE CAVALIERS OF ENGLAND, Or the Times of the Revolutions of 1642 and 1688. Same author and publisher.

These two volumes, from the pen of one of our best writers, contain some powerfully drawn sketches, based upon the legends of the olden time. Mr. Herbert always writes with effect, and we see no reason to think that these new works will not enjoy as wide a popularity as any of their predecessors. Mr. Redfield has done himself great credit by the handsome style in which the volumes are given to the public.

J. W. Randolph has them for sale.

THE LEGISLATIVE GUIDE, Containing all the Rules for conducting Business in Congress: Jefferson's Manual; &c. &c. By *Joseph Bartlett Burleigh*, LL.D. Philadelphia. Lippincott, Grambo & Co.

A most useful publication embodying all that legislators should know to enable them to dispatch public business. If Congress and our thirty-one legislative assemblies would master its contents, and proceed according to order in their deliberations, we should enjoy the benefits of a more rigid economy of time and money in the administration of State and National affairs.

SOUTHERN LITERARY MESSENGER.

VOL. XVIII.

RICHMOND, SEPTEMBER, 1852.

NO. 9.

Notes and Commentaries, on a Voyage to China.

CHAPTER XII.

Rio de Janeiro; Animal degeneracy; Unity of the Human Race; Physiology useful to Political Economists; Botanic Garden; Cultivation of Tea; Lagôa de Freitas; Funeral Ceremonies; Consumption of Wax; Undertakers; Number of Churches; Celibacy of Priests; Ceremony on a Corpus Christi Day; A Brazilian View of the United States; Santa Priscilliana; St. Sebastian, and Sebastianists; Military Ceremony in the Navy; Cocked Hats.

Rio de Janeiro has an air of antiquity; its streets, which cross at right angles, are narrow; very few of the houses are more than two stories high. The walls are generally white, and the roofs are of red tiles; but foreigners remark that the uniformity is broken by a practice of varie-gating the fronts of shops, and even of dwellings, in various colors. The churches are numerous; some of them are impressive, (I will not say imposing, though they may be,) both inside and out. Three fifths of the street population is negro, and perhaps an additional fifth is mulatto. The Anglo-Saxon on landing, is struck with the small stature, and the comparatively feeble physical constitution of the men; even the slaves do not appear to be generally very athletic. One Anglo-Saxon is equal, seemingly, in muscular power, to two of Brazilian growth: appearances may deceive, but I think experiment would prove this estimate to be correct.

I have no hesitation in expressing a notion that there is a declension of animal power in the varieties of the human race, which have immigrated to Brazil, and probably, also a commensurate declension of mental power; and that this declension is due to habitual departure from obedience to physiological laws, as well as to influence of climate. Europeans bring with them, and continue their habits of diet and drink, which are not adapted to produce the highest condition of animal life under an elevated temperature; and being always urged beyond their capability, the organs are impaired; their functions come to be imperfectly performed, and the result is a degeneration in the powers of the individual.

The animal imperfections thus induced, are transmitted to offspring; and the vices of organizations are increased, generation after generation. Promiscuous marriages of negroes with whites, mulattoes, and the resulting castes of many degrees, contribute to lessen both the physical and mental powers. The progeny of a Caucasian and negro, may be superior to the latter, but is never equal to the first; the children resulting from such an amalgamation, are hybrids, and are inferior, as animals, to the pure offspring of either. For such reasons, the social laws or customs which sanction an amalgamation of the various races and castes of men, are in conflict with animal improvement, and with the highest development of the human mind and body. In vain may we look amidst the population of Brazil for preëminently great soldiers, statesmen or philosophers, until physiological law is understood and observed by society, at least in this particular, for many years to come. The controlling minds of the state will be found among white immigrants and their immediate and unmixed descendants; the mixed or hybrid castes will ever be inferiors in natural ability, and consequently in acquired powers. Franklins and Newtons; Fultons and Whitneys; Howards and Washingtons, can never arise from hybrid or mongrel parentage; they can only descend from the pure, unmixed blood of one species. Whether we regard the whole human family as the issue of a single pair, and therefore consisting of no more than one species (using the term in a strictly systematic sense) or not, it is difficult not to perceive distinctive differences in the several races; differences in the anatomical structure and form, even of the bones themselves, which are not traced, even if they be traceable, to the influence of diet, of climate and habit of life. No system of training, it is believed, will enable a Caucasian stock, to produce a negro variety, or species; nor am I aware of any ascertained fact which countenances a suspicion, that a negro pair could be possibly cultivated into producing a Caucasian stock. The negro and white are specifically different; there are varieties of both species. The Anglo-Saxons, the Celts, &c., are varieties of the Caucasian species; and the Abyssinian, the natives of New Guinea, the Hottentot, &c., are instances of the negro species. The cross of varieties of the same species, it is believed by practical agriculturists, often leads to a transmissible improvement in those qualities for which animals

are most valued; but a cross between species produces degenerate hybrids, which, among inferior animals, are rarely prolific. It has been said that the duration of life, the strength of muscle, capability to resist morbid influences, are less in mulatto hybrids, on an average, than in the white or negro species. If this be correct, no additional evidence is necessary to demonstrate the deterioration of *animalité* consequent upon such conjunction of species.

If the protection and preservation of those qualities of body and mind upon which the strength, intelligence, health and happiness of a people depend, pertain to political government, then political economists and legislators should carefully study physiology, that is, the phenomena and laws of organic life. The statutes which regulate legitimacy, should be devised with a view to discourage all marriages which can influence injuriously the development of the race. Unions which may be sources of hybridity in any degree whatever, should be discountenanced; for this reason, connubial relations between the white and black species should have no legal existence under any political system interested in the perfection of the Caucasian race. It will be advantageous to all not to mingle the species: "J'aime qu'un Russe soit Russe."

May 8th. About 10 o'clock, A. M., we entered a carriage drawn by four mules. The two leaders were managed by a postillion in livery who rode one of them; the other two were driven by a negro mounted on the box. We rattled through the streets, the animals being urged incessantly by whip and spur, until we reached a barrier where a toll of a half "patac," equal to about eight cents, was paid. It seemed to be within the city. We passed round the beautiful bay of Botafogo, and on a road lined by pretty villas, more like the creations of fairy land than real structures, and alighted at the Botanical Garden, which is about six miles from the landing in the city. A negro boy acted as cicerone. Two hours were agreeably spent in admiring the trees and flowers and arbors. The sacred lotus of India, floated in the ponds; we rested in the shade of the bread-fruit tree of Tahiti, and the tall bamboo of the East. Here are camphor, cinnamon, and cardamom trees; the sago palm with its salmon-colored fruit; the tea-plant of China; creepers and flowers of every hue, all beautifully arranged, and all in excellent condition. The spot is poetically beautiful, and in the language of a messmate, "perfectly Lalla-Rookish" in every respect. To the southward, the garden looks out upon the ocean; and the Corcovado, rising almost perpendicularly to the northward, watches over it.

"O Jardim Botânico," was founded in 1817,

by Dom João VI., say the histories; but the spot was devoted to the cultivation of exotics, long prior to that date. It appears that about the year 1800, the colonial government of Brazil, set apart about fifty acres in the parish called Lagôa de Freitas, to receive a variety of plants brought from the Isle of France in a transport ship, on which were a number of Portuguese convicts from the East Indies, sentenced to banishment in this then remote country. Those plants, among which were the clove, cinnamon, camphor and nutmeg trees, were the commencement of the present collection. The tea plants were imported about the year 1810 or 1812, and subsequently some natives of China, were employed in their cultivation for several years. The last of those Celestials disappeared from Rio de Janeiro in 1829.

The Botanic Garden is not exactly what the name imports. It is not cultivated with a view to the diffusion of a knowledge of botany, but rather to acclimate useful plants, and spread their seeds through the empire. Some success has attended the undertaking; for tea of Brazilian growth now supplies a very considerable portion of the demand for the article, among the common classes. There is no direct trade between Brazil and the East; and all the tea of Chinese growth to be found in the market, reaches Rio by way of the United States and Europe.

An idea of the extent of the tea culture, may be gathered from a memoir on the subject by Antonio Felisberto Nogueira, a proprietor of Jaguary, who has a tea plantation of 100,000 plants; with 23 hands, young and old, he has obtained 3,200 pounds. On an average, each laborer collects daily, for one hundred days, eight pounds of leaves, which yield two pounds of dry tea; and during the second harvest, four pounds daily, for forty days: so that each laborer in the course of the year, collects 240 pounds of tea, worth at Rio de Janeiro, about 1,600 reis, or about fifty to sixty cents the pound. The cost of boxing, packing, transportation and commissions, is to be deducted.

This branch of agriculture is due, exclusively, to the existence of the Botanic Garden, called of Lagôa de Roderigo de Freitas. It is very near a pretty sheet of water thus named, which is separated from the ocean by a bank of sand, which is sometimes overflowed. Forty slaves, children and adults included, are employed in the garden. Beyond the support of these, the expense of the institution is very small. The Imperial Government gives it necessary attention, and is doubtless extending its usefulness to every part of the empire.*

* Anuario Politico do Brazil.

Seeds or cuttings are freely given to all who may apply for them; fees of admission are not demanded.

On returning, the *Lagõa de Freitas* excited attention; but the beautiful round and deep bay of *Botafogo*, which is said to be a league to the southeast of the city, spreading out a smooth sheet of water, separated from the sea by the Sugar Loaf and other granitic rocks, drew forth exclamations of admiration from my companions. Indeed, it would be difficult to imagine a more lovely looking bay in nature; its beauty is enhanced by the village or town of *Botafogo*, consisting of elegant villas and neat dwellings arranged along the circling shore of the bay, which is ornamented by a fine road. All these improvements have been made since the year 1820, when it was scarcely more than a fishermen's village.

As we drew nearer to the city, we noticed that the grocer's shops, were marked by sides of bacon hanging on the front, and festoons of onions suspended over the doors. In almost every direction, the eye encountered painted door-posts, variegated walls and tile roofs, shaped like the drawings seen on old-fashioned blue china. In the streets were passing water-carriers, marching erect and steadily under a half barrel of water nicely poised on the head; pedlars and pack-mules, carts and slaves moving in opposite directions, which, under a blazing noonday sun, formed a picture strikingly in contrast with street scenes in our own northern, Atlantic cities.

We reached our hotel about 3 P. M., and dined.

In the afternoon we strolled to the Navy Yard, at the extreme end of *Rua Direita*. At the gate was a negro sentinel, bearing a musket on one shoulder in a slovenly, don't-care kind of manner; but he was neither a soldier nor a marine, for he wore the duck frock and trowsers of a naval seaman.

We wandered first through one street and then another noting whatever was different from what we are accustomed to see at home. In the square in front of the church of *San Francisco de Paula*, our attention rested on a hearse, to which several negroes in gaudy liveries, covered almost in tinsel, were attaching three pairs of white mules, whose heads were bedecked with black plumes. The body of the hearse was scarlet, and each corner was ornamented by a gilded seraphim. This was shaded by a roof supported on white twisted columns, three feet high; around which were twined wreaths and garlands of roses. Several funeral attendants, arrayed in blue cloth coats with white breasts and facings, and each armed with a wax candle six feet long, were preparing and gathering around

the vehicle which, we learned from a bystander, was to convey the body of a child to the tomb. The church bells were ringing, and numbers of people were entering the temple. We mingled in the crowd.

A tall catafalco, gaudily decked in gilded arabesques, occupied the centre of the church, and upon it, reposed the dead body of a man in a black suit, the head being hidden under a white cloth. This corpse was in a shallow box, covered in black cloth, trimmed with gold lace an inch wide; the cover, when closed, formed a pent-roof, but it was now open. A company of priests stood round, chanting the services for the deceased, and swinging smoking censers of frankincense, and from time to time sprinkling holy-water. When the chant ended, the corpse-box was closed and borne to the place of temporary interments, adjoining the side of the church, followed by a procession of priests and laymen in black cloaks, each bearing a lighted wax candle about six feet long.

The cemetery consists of a square, each side of which is about a hundred feet in length. A roof about fifteen feet wide runs around the sides, the centre being open to the sky. The walls are about fifteen feet high, and are made up of tiers of vaults, each about two feet square, penetrating six or seven feet into the structure. These vaults or tombs, are occupied from one to two years, or until decomposition has removed all but the bones, which, at the end of that time, are removed and burned, and the ashes are collected and inurned.

A scaffold was arranged close to the wall and opposite to the open mouth of a vault prepared for the interment. The body was set down and a short chant was performed; then it was raised upon the scaffold, and another chant succeeded. Now two attendants in long black costume and white cravats, removed the corpse from the box, and placed it in the vault, carefully adjusting the head in a hollow prepared to receive it. The corpse-box, or temporary coffin, which is rented for the occasion, was removed, and each one of the laymen in black cloaks, took up a grocer's scoop full of powdered quick-lime, ascended the scaffold and sprinkled it over the body, and the vault was left to be closed by the mason.

A corpse was lying in state before a temporary altar at the opposite side of the cemetery. Funeral services were performed, and it, in like manner, was consigned to a vault.

A sudden peal of bells induced me and my companion to return into the church, where we found many gentlemen assembled, and forming in two ranks with a broad space between, extending from the principal entrance to the main altar. Each one bore a long wax candle. We

stood in the rear, but on being observed, a candle was placed in our hands, in a very polite manner, and we fell into line. By this time, the choir, or orchestra above, was seen to be filled with musicians. At least a hundred and fifty candles were burning in the hands of those who were assisting at the ceremony, besides those on the several altars and around a catafalcal structure, nearer to the main altar than that from which the dead man has been just removed to the decomposing vault. Presently, six persons bearing a bier or corpse-box covered with bouquets and wreaths of flowers, came from the scarlet hearse, seen in the street through the open door of the church, and proceeded slowly between the rows of mourners, up to the catafalco, upon which they deposited it. At the moment the corpse bearers entered the church, there was a gush of most delightful music from the choir, in which a full instrumental orchestra and an operatic troupe were assembled. The music was from the opera of *La Donna del Lago*, and executed in a most exquisite style. When the overture was concluded, a procession of priests entered from the cemetery and crossed the church, chanting as they walked from the recent interments. Presently they returned, arrayed in a more costly ecclesiastic uniform, and arranged themselves around the catafalco, upon which the remains of the child had been placed. At its head an image of the glory or host glittered more brightly than the one displayed in the ceremony which consigned the adult body to its vault.

A short chant by the priests was succeeded by music from the choir, both vocal and instrumental. We distinguished amidst the sweet sounds permanently but unnaturally altered male voices; and sweet were the tones of violins, viols, horns, tromboons and trumpets, but richer far, was a flute solo, with occasional accompaniments. Then came a short priestly chant, followed by a chorus which was enchanting. When the ceremony was concluded, and the lights extinguished, the sun had set; the remains of the child were left to rest before the altar during the night. We were thanked for our assistance, and departed for the ship.

How strange to us was the ceremony we had just witnessed, perhaps because we did not comprehend all its meanings. There was nothing sad or solemn; it was elevating, exciting and calculated to remind one more of the mimic show of a theatre than of the future abode of departed souls. Yet it is a beautiful manifestation of parental affection for a lost child—or possibly it may be found on close scrutiny, to be vanity—when we remember the prevailing belief that the souls of infants ascend directly to heaven, and there at once become pure and spotless angels, im-

bued with power to intercede in behalf of the parents they have left on earth. When infants die, it is customary for friends of the bereaved parents to pay them visits, not of condolence, but of congratulation; a custom which may naturally spring from an unlimited faith in the happy change death brings to the innocent soul of a child.

Whether the future bliss of the child's soul, or the angelic power of intercession for parents left behind is in any degree influenced, according to the opinion on the subject entertained by the Roman Catholics of Brazil, by the style and expense of the obsequies, is a question I am not prepared to discuss or answer. But I cannot conjecture even, that thinking and intelligent people believe that the souls of pauper infants are less pure for lack of funeral pomp. Such a notion involves an idea that poverty and penury in this world follow us into the next, and we may fail to occupy a place we merit in heaven, for want of means to see priests and pay for prayers, candles and music, while in this earthly condition. Yet it is manifest, there is a belief in the efficacy of high priced prayers; we are taught by what we see, that the poorest men strive to bestow something on priests to supplicate for the souls of their departed friends, and the rich often bequeath large sums to the clergy to secure a speedy transit through purgatory. Experience teaches the living that priests, as a general rule at least, do not feel it incumbent upon them to labor zealously for the dead without an adequate remuneration to themselves, or to the church. Roman Catholic obsequies in Brazil, if an opinion may be formed from what we have just witnessed, must be profitable to the clergy; for it is not probable that the small salaries of priests would permit them to expend such quantities of wax lights without a pecuniary return. It is certain the obsequies of the poor are dimly illuminated. The importation of wax into Rio for the year 1845, was 601,393 lbs., one-third of which was from the United States; and 480,000 lbs., of candles, one-third of which were of spermaceti. This statement is accurate enough to show that the consumption of wax and of candles, must be very large; for this supply is in addition to the home production which is considerable. The city contains twenty-eight manufactories of candles—*Fabricas de Velas*.

The attention given to funeral pomp and religious ceremonials, may be inferred from the number who seek profit in them. The city directory records the names of sixteen undertakers—*Armadores de Enterros*; and of two whose vocation is to hire splendid vestments, with or without jewels, for angels used in processions—*Armadores de Aujos para Procissões*: their vocation is to dress and decorate the effigies of an-

gels and saints which are constantly paraded in religious processions and ceremonies. I did not ascertain whether these people change the ancient fashions observed by angels in their costume; or like their fellow-craftsmen of England, change the patterns of sorrow's tokens displayed about the dead. Of late years, the fashion in coffins and coffin ornaments, has become a study of some importance.

It has been argued by a Romish priest, very plausibly too, that there is utility in funeral pomp. According to my recollection, for it was introduced in a funeral sermon, his argument was that the principles of justice recognized on earth among men, constituted our only criterion for appreciating the justice of heaven. We know that all men are not equally good, or equally bad; there are degrees and gradations in virtue and in vice, and it is revolting to our ideas of justice to suppose that one and the same punishment awaits all offenders, whether guilty of great crimes or trifling indiscretions. It needs no argument to show (he would say) that men die who are not good enough for heaven, but who are nevertheless too good for hell. For such souls, an intermediate place is provided, from which, through intercession of the Saviour, they may be transferred to the realms of bliss. This intercession can be obtained through the supplications of the ministers of the religion; and it is a beautiful feature in the Roman Catholic church, that she never forsakes her children; even after death she watches over them, and exerts herself in their behalf. Very few die, whose graves are not watered by the tears of affectionate friends and relatives; and it is almost always in their power to influence the action of the church, and through her instrumentality, to abridge the sojourn of a departed spirit in purgatory.

The inference from this kind of argument is that the more sumptuous and costly the ceremony, the more earnest the supplication, the shorter will be the duration of purgatorial probation, all things being equal. It is not until purgatory has been passed, that the rich and the poor become equal; and, admitting this theory, is it not possible, nay probable, that the souls of the abject poor, of those who have perished in times of a common famine for instance, languish in purgatory hundreds of years, because the friends who survived them were too poor to pay the cost of masses, just as poor men, though innocent of crime, have languished in jails because they and their friends had not money enough to constitute bail, or to fee lawyers to solicit their enlargement. This theory of purgatory places Romish priests in the light of attorneys on earth, qualified to plead causes before the court of Heaven; and unlucky indeed is the soul that departs without

leaving means enough behind to retain one of them in his case.

The city of Rio contains forty-seven Roman Catholic churches, besides one British Episcopal and one German church. The British church was founded in the year 1820, and the German in 1837.

The ceremonies of religion seem to be carefully observed. Religious shows and exhibitions met by foreigners in the streets in honor of church festivals, may be regarded as satisfactory proofs that the people profess to be Roman Catholic Christians. Whether they are better or worse than the inhabitants of other Christian countries, Protestant or Catholic, is not a question to be entertained by a passing stranger, who might be led into error by relying upon prejudiced observations of others. It is very certain that the Anglo-Saxon protestants resident here, testify against the priests, who, it is said, violate their vows of chastity, but still so far respect appearances as to require their illegitimate children to regard them as uncles. A better knowledge of physiology will in time show the propriety of abrogating the law of the church which requires its priests to lead a life of celibacy: the laws of nature cannot be rendered inoperative by human statutes, whether established by church or state governments.

As a sample of street manifestation of religion, I beg leave to transcribe a passage from notes made on a former visit, because they are as appropriate now as they were then.

I went on shore and found the praça filled with soldiers, priests and people, collected together to celebrate the feast of Corpus Christi. Along each side of the Rua Direita, from the imperial chapels, stood a file of militia, neatly dressed in blue jackets with green velvet collars and yellow trimmings; greenfeather pompons, some having rings of gold bullion upon them, were stuck in their bell-crowned military caps, which, with white pantaloons and belts, gave them the appearance of regular troops. The complexions of their faces were almost as various as the colors of their uniforms. They "stood at ease," looking up and down the street, lazily expecting the procession from the church. The body of troops before us is composed of shop-keepers and mechanics, who were enrolled to serve as a protection against negro insurrections. The balconies and verandas on the "Rua Direita," as well as those on the streets through which the procession was to pass, were hung with banners of silk and satin of every color, embroidered in gold or silk; and the verandas were filled with ladies and children, waiting to view the coming pageant. The street was crowded with a moving mob, composed of all tribes, among which were circulating negroes,

bearing on their heads trays of various *bonbons* and trifles, the names of which were called aloud in most unpleasantly nasal tones.

About midday the *Te Deum* was ended. The bells rang rapidly and irregularly; great guns and musketry were fired, and an incredible quantity of squibs and rockets were set off in every direction, in spite of the incongruity of burning fireworks and candles in the broad glare of a tropical day, for which I could learn no rationale. All this hub-bub was the signal for the procession to move from the church. Those stationed along the street, lighted the tall caudles in their hands. First issued forth, moving with gravity, for they were all stout, fat fellows, a number of clergymen, bearing standards adorned with tinsel and flagree. Then came a living personation of St. George, the defender of the faith, on horseback, in the array of an ancient knight, vizor down, lance resting on toe, followed by an effigy on horseback, representing a trusty squire in gilt armour, bearing his knight's shield; then came a pursuivant in the knight's livery, but St. George was unaccompanied by either dragon or maid. Next eleven horses under beautiful trappings, led by servants in the livery of the imperial household; the back cloths had on the depending corners and on the part covering the saddle, large silver plates, impressed with the imperial coat of arms. Then came a band of music followed by priests and censers; then the Host, beneath a canopy of white satin, deeply embroidered in gold, followed closely by the imperial household and the body guard of the emperor, armed with glittering pole-axes. The first Regent, Francisco de Lima e Silva, led the young emperor by the left hand in the middle of the street. His imperial majesty, then thirteen years old, wore a general's uniform of green, having too brilliant gold epaulets on his shoulders; a blue sash, a *crachat* or star on his breast, and a cambric cape thrown over all. His hair, which is light, was cut close, and, being bareheaded, a phrenologist might have pronounced at a glance, his perceptive and intellectual faculties to be well developed, and that the basilar portion of the brain was in good proportion. The members of the imperial household were dressed much after the same fashion, and all bore candles in their hands, not excepting even his imperial majesty. The procession was closed by priests, infantry and cavalry. As the Host passed them, the soldiers knelt upon the left knee, in acknowledgment of the presence of the Deity. The sight was impressive.

I viewed this procession from a veranda in the company of an intelligent gentleman who had visited the United States in a diplomatic capacity. I remarked that such shows serve to amuse the vulgar, without exerting much influence fa-

vorable to the purity of religious feeling. He replied, "that may be true; but if the people desire them, why should they not be indulged in such innocent amusements? People are naturally fond of display, and men are better servants of the public in embroidered coats, and when wearing decorations of honorable distinction, than in plain clothes. The republican notions of the present day are ultra. Your first Congress was composed of men who dressed and conducted themselves like gentlemen—like men who had proper respect for themselves, and who were unwilling to be confounded with the *profaanum vulgus*, as seems to be the case now in a number of instances. There were no Davy Crocketts in those days, holding seats in your House of Representatives. In those days no man could be found to usurp as much authority as General Jackson did in removing the deposits from the bank of the United States, and in several other instances I might name. You pride yourselves on your republican government and your democracy; but the government of Brazil is essentially as free and republican as that of the United States, and has not the odious inconvenience of democracy and its too frequent elections. Our president, or as he is here termed, emperor, has not half the power of the president of the United States, and very much less patronage. He bestows orders of distinction, but they cost nothing, and he can do nothing without the consent of the Senate; and being elected for life, the country is free from those political parties, which, to judge from the public journals, distract the policy of the United States. Our emperor is nothing more than a state seal, used to give authority to public documents, and is, *de facto*, destitute of all power."

Among the religious curiosities of the capital of Brazil, is an authentic relique of Santa Priscilliana, a virgin martyr, which was presented by Pope Gregory XVI. to Doctor Manoel Joaquim de Miranda Rego, the rector of the parish of Santa Anna, during his visit to Rome. They were conveyed on the 10th of May, 1846, with great pomp and ceremony, from the church of San Francisco Xavier da Prainha, in which they were deposited temporarily, to the church of Santa Anna, where they now repose. On the occasion, there was included in the procession a group of 196 girls, from eight to eleven years old, all dressed in white tunics reaching to the feet, and covered from the head to the knee with transparent white veils; a crown of roses encircled the head; they bore a candle in one hand and in the other a bouquet of natural flowers. They advanced singing, in infantile tones, to harmonious and pathetic music, "*Vem ó esposa de Christo, recebe a corôa: Vem, ó minha querida.*"

entra no meu jardim."—Come, oh bride of Christ, receive the crown : Come, my dear, enter in my garden.—Their performance was so effective that, it is said, the spectators shed tears of devotion.

Santa Priscilliana, a Roman virgin, in the time when Julian, the apostate, emperor, persecuted the disciples of the Cross, was only sixteen years of age; she always accompanied her mother, Santa Priscilla, who devoted all her efforts to alleviate the sufferings of the martyrs during their imprisonment and tortures; and after their death, to collect their remains and place them in the tombs. Apprehended in these pious exercises and made prisoner, she confessed the Cross, and bore the most horrible pains of torture. The minister of the tyrant despairing to obtain anything from one of her heroic virtue ordered her neck to be transfixd with a sword; she fell dead on the plaza, to live eternally in heaven, and to be venerated on earth as a religious heroine.

The mortal remains of the holy virgin martyr Priscilliana, were found in a subterranean cemetery of Ciriaca, in the via Tiburtina whence they were brought by the cardinal Patricio, Vicar General of Rome, and presented as above stated, to Doctor Rego by the Pope Gregory XVI. In the catacomb, near the skeleton of the holy virgin, opposite to the head, was an earthen vessel, labelled with her name, containing her blood with sand as it was gathered up from the ground on the day of her martyrdom. This jar is enclosed in the glass case which contains the relique. The bones of this holy virgin are enveloped in a covering of wax, which represents her appearance at the age of sixteen; only the top of the head is uncovered, leaving the skull bone of the virgin saint exposed.*

What virtues or power adhere to the bones of this poor murdered girl, the records do not state; but it is presumed there are not wanting statements enough to encourage a belief that petitions from sinners presented over these mortal remains, have been miraculously answered. Such reliques contribute to incite a pious fervor in the minds of credulous people, who probably regard martyrdom as proof positive of the truth of the creed of the martyr, although it is in fact merely a proof of a steadfast faith, and has no reference to the truth or falsehood of the doctrines upon which the sufferer heroically relied. There have been martyrs to the various creeds of heathen and other misbelievers, who have been regarded as unimpeachable witnesses of truth; but truth is not to be demonstrated by suffering pain, or by sacrificing life.

Denis, in his history of Brazil, tells us that the

festival of St. Sebastian, which falls in January, is celebrated with great pomp, he being the patron saint of Rio de Janeiro. The city was usually illuminated for three successive nights. An effigy of the saint, crowned with a diadem of precious stones, was carried in procession to the Senate, with music and every demonstration of devotion. Gradually the custom fell into disuse; but an epidemic disease, which was attributed to neglect of the festival, so alarmed the people, that the procession was revived with increased splendors, and ordered to be continued for the future.

Denis asserts that there is a religious sect, called Sebastianists, numbering in Portugal and in Brazil not less than three thousand persons, who faithfully anticipate the reappearance upon earth of St. Sebastian. Don Sebastian, king of Portugal, was distinguished for his religious as well as his warlike enthusiasm. About the year 1580, Muley Mahomet sought and obtained from Portugal aid to place him upon the throne of Morocco, to which he claimed to be rightfully entitled, though it was occupied by his uncle, Muley Moluc. Don Sebastian led an army of 13,000 men into Africa, where he was encountered by not less than 50,000 Moor-men under the command of Muley Moluc himself. The Portuguese force was entirely routed and Don Sebastian was killed, and both the disputants of the throne died, one on the field of battle and the other was drowned. This army was conducted into Africa under a pretext that by placing the Mussulman prince, Muley Mahomet, on his throne, the Christian king, Don Sebastian, would open the road to the conversion of the Moors. This pious feature of this undertaking, which some historians imply was really to afford the young and fiery monarch of Portugal an opportunity to display his military prowess, mainly constituted the ground for elevating the unfortunate warrior to the position of a saint.

At one time it was asserted that the unfortunate Don Sebastian was not dead, but that he had escaped death and was wandering about Europe. Among other stories which were attributed to the Jesuits, was one which declared that God had rescued Don Sebastian from the midst of his enemies; that he had placed him on a desert island, and that a celestial messenger had transferred him to the care of a holy hermit. The conclusion was natural that under such circumstances he would live for centuries, and at the appointed time leave his island and resume the throne of his ancestors.

At a later period the Sebastianists believed in certain predictions of one known to them as the Black man of Japan—*Pretinho do Japão*. And then we have the vaticinations of an old woman,

* *Anuario Politico do Brazil*.

a religious devotee resident in a convent at Oporto; her dreams often signified the coming of the young king, and those persons who were noted benefactors of Portugal were in turn suspected to be Don Sebastian doing good *incognito*. In 1830 the son of the Infanta Dona Theresa, the eldest daughter of John VI. enjoyed this distinguished honor.

The Sebastianists have no particular place for assembling, and do not form, strictly speaking, an essentially distinct congregation. The common article of their faith is that Don Sebastian will certainly appear, and that they will certainly witness the happy event. They await his coming with as much confidence and simplicity as do the Jews of the present day the coming of the Messiah. It is said their number has increased, particularly in the province of Minas-Gereas. There they are characterised, like the quakers, and the Moravian brothers, by their industry, benevolence and simplicity. They are quite numerous in Rio de Janeiro.

The members of this sect might be described as a kind of Roman Catholic Millerites.

May 9th. The transition from religious ceremonies to the code of military civilities observed in the navy, results from a formal visit of inspection, paid by the commander-in-chief of the United States squadron stationed on the coast of Brazil. The commodore informed the captain he would visit our ship this morning at eleven o'clock. Preparations were immediately made for the reception. The decks were made perfectly clean, and the senior lieutenant, who has within a few years past acquired, by a process of slow assumption, the title of "executive" officer, frequently visited all parts of the vessel, to be sure that every rope-yarn was in its appropriate place, and that every article which might be unseemly in the commodore's sight should be carefully concealed from view. The dignity and importance of the commodore were no doubt enhanced by this operation, in the estimation of Jack, who knows that the first-lieutenant does not often exhibit so much anxiety to make all things appear to advantage. This manifestation of solicitude exerts a beneficial influence on the subordination of the ship. The crew was ordered to be in clean mustering suits, and the officers in "full dress." The quarter-master of the watch kept his spy-glass very constantly directed towards the flag ship. Scarcely had the commodore's barge, distinguished by a triangular blue flag ornamented with white stars displayed on a staff in the bows, shoved off, before it was known that the great man was approaching. A boat rowed by fourteen oars, shaded in its whole length by a white awning, and steered by the coxswain, seated high at the extreme end

or stern, rapidly drew near, and when within about one hundred yards of our ship the boatswain piped a long shrill note, and four side-boys passed out of our gangway, and took their stations at each side of the accommodation ladder, while two other side boys stood just within. There was the stillness of expectation, disturbed only by the pipe of the boatswain, and the rattle of oars as they were laid into the commodore's boat just before she touched the side-ladder. The marine guard was drawn up on the port left side of the quarter deck, and the officers were assembled on the other near the gangway, headed by the commander and first-lieutenant, to receive the commodore as he stepped on the deck. As he entered, cocked hats were raised from the heads of all; the marines presented arms; the drum rolled three times, and the boatswain piped. These sounds scarcely died, before the sound of a salute of great guns was heard: when the thirteenth and last was fired, and the introduction of the officers was over, the commodore and suite accompanied by our first-lieutenant and others, walked over the several decks of the ship. The crew was drawn up along the gun-deck, standing in two rows facing each other, with their backs to the guns. Each man touched the rim of his hat as the commodore passed.

The veteran expressed himself, in complimentary terms, satisfied with all he saw, and after a brief visit to the cabin, retired from the ship. The boatswain, and the side-boys, and the marines repeated their exercises; and the visit of inspection was ended.

Such formalities are useful, if not essential to the preservation of a high state of discipline, because they tend to give a palpable proof of the importance and respect with which superior officers are to be regarded by all subordinates. They are all ancient, and borrowed from the British code of naval formalities. There are modes of reception and leave-taking appropriate to various grades. Six side-boys receive a commodore or captain; four meet a commander, and two a lieutenant and all other commissioned officers who by custom mess in the ward room. These military ceremonies are devised in reference to the grades of line-officers; and are extended to officers of the staff corps, according to their assimilated rank—that is, according to the grade of the line with which they may be classed.

But it is believed, line officers are reluctant to extend these prescribed formalities to officers of any of the staff-corps, and they either neglect or resist their observance in spite of the General Orders of the Secretary of the Navy, which assign an assimilated rank to medical officers and pursers. Those orders are virtually obsolete, because the Department has not deemed it expe-

dient, for reasons which are not stated, to require costume by those whose duty obliges them to wear it. The cocked-hat, which seems to have been purposely shaped to deprive it of all pretensions to utility or beauty, is never worn as a thing of choice. It requires a long apprenticeship to learn how to put it on and off, and to keep it fast on the head when the wind blows. There are differences of opinion on the mode of placing it on the head; some few contend that the corners should stand over the shoulders; others that it should have an oblique position; but the majority assert that it should stand "fore and aft," that is, the plane of the cocked hat should be parallel with the axis of the body—one corner projecting forward straight over the nose, and the other inclining downwards over the spine.

I remember a commander and a lieutenant, whose difference of opinion on this subject was so long and warmly contended, that it ended in a rupture; the commander insisted that the cocked hat was designed to be worn "fore and aft," but the lieutenant always wore it "athwartships" on muster-days, and was always rebuked; still he persisted in his opinion at the risk of being tried by a court-martial for disobedience of orders, for he was of opinion that if disobedience could be made of it, he would find his revenge by bringing a charge of cruelty and oppression against the commander, which he would contend was manifested in the attempt to force an officer to wear a cocked hat "fore and aft." This contention about the mode of wearing a cocked hat ended only by sending the lieutenant to another vessel of the squadron. He left us firmly persuaded that our commander was a tyrant of the greatest magnitude; and up to the day of his death, he wore his cocked hat "athwartships" as a sign of his determined resistance to tyranny.

The instant the official visiter has departed, every officer hastens to divest himself of the heavy, cumbersome, and uncomfortable full-dress. It may be regarded as a very unpopular

Ne'er think I can deceive thee.

BY REV. SIDNEY DYER.

Ne'er think I can deceive thee,
Or cause thee e'er to rue,
Though all are false, believe me,
One heart can still be true.

The stars above us beaming
Will leave their azure sphere,
Ere from my brightest dreaming,
Thine image disappear.

I know the heart is changing,
And fickle as the wave,
And often in its ranging,
Recalls the love it gave.

The floods may leave the ocean,
The dewy flowers the lea,
But never my devotion
One moment turn from thee.

Though far our paths may sever,
Should fate e'er bid us part,
Nor time, nor place shall ever
Divide my constant heart.

But while its pulse is beating,
Its truth unstained shall be,
And when the last is fleeting,
That throb shall be for thee!

Some Things about the Valley of Chamouni.

(TAKEN FROM MY JOURNAL.)

It was a delightful ride that I made, July 16, 1851, in the banquette of the Diligence, from Geneva, up the valley of the Arve, towards Chamouni. But though my notes are lying before me, I will forbear any description of the ride, or of any of the many interesting objects it presented to our view. At Annemasse, where we passed from the territory of the Swiss Republic, into that of his majesty the king of Sardinia, our passports were demanded, and our baggage was *visited*, as they say in French. This last operation was performed as slightly as a hospital physician visits his patients. The whole system of passports seems to be falling into decline, and is manifestly useless to all parties, when, as in this instance, no charge is made. We took in his majesty's territory a most miserable breakfast. Doubtless he thinks, that as his dominions furnish Mont Blanc to the world, his subjects may be excused for the breakfasts that they charge two francs for. If this is not the best excuse in the premises, it is the only one which occurs to me just now, and I am well content on my part to accept it, as I have forgotten the breakfast, and expect to feast upon Mont Blanc the rest of my life. At Sallanches, we exchanged our diligence for a *char-a-coté*. This is a vehicle drawn by two horses, and holding three persons, who sit upon a seat running lengthwise in the voiture, and opening to the side—in fact a sort of sofa upon wheels. Thus the travellers look out neither before nor behind, but always face the country sidewise, as they ride along. It is a singular looking affair, but very comfortable. Passing from the village and vale of Servos, you cross a dividing ridge called the Montets, between the two valleys, and look down

upon the valley of Chamouni, along which the Arve works its way. The name Chamouni, or Chamounij, or Chamounix, for the orthography varies, is derived upon the authority of an ancient document from the Latin *Campus Munitus*, French *Champ Muni*, fortified field, perhaps from its mountain barriers. The valley reminded me of many spots I have seen in our mountains of Western Virginia, saving of course the superior scenery around, and making an exception also in favor of the better cultivation of Chamouni. It seemed very strange to me to see the evidences of a dense population—houses, villages, and the parsimonious use of land and wood,—in the midst of mountains, whereas among such scenes with us, land is superabundant, woods a nuisance, houses scarce, and villages among the things that are to be. Chamouni is the only place where I have seen building going on—in this little stretch of country, several new houses are building, and sometimes I noticed, exactly what is to be seen so often in our country, an old indifferent house going down, and a new one much larger and finer about to replace it, as if the owner, (which is true with us) had made a fortune in the old house, and was laying out a part of it. I saw also, two water saw-mills, that had quite an American look, except that on the other side of the Atlantic, the stroke would have been at least twice as rapid. Altogether, I could not but be struck with a certain home-look about things, though I was treated as a stranger, for I took a severe cold. If any one reads these notes, who afterwards makes a trip up the vale of Chamouni, let him thank me for charging him to put on his overcoat, after he descends the Montets, or rather when he reaches the top, heated as he will probably be, by walking up the ascent on the other side. The valley has a draught through it, and its proximity to the glaciers is such as to make the air very cold. As I am giving advice, I may as well give another piece, which is to be located at Chamouni. Unless there shall have been some fundamental change in the kingdom of Sardinia, such as the overthrow of the monarchy, the adoption of the Protestant religion, or something else that may be reasonably expected to work a great alteration in the province of Savoy and in the village of Chamouni in particular, let not my descendants to the third and fourth generation, put up at the Hotel Royal de L'Union. It has a poor bureau, poor table, black bread and sour wine, poor servants, poor chambers, and every thing to correspond, except the beds which are good, though queer—the covering consisting of a thin calico sack, filled with down. In extenuation however, of this state of things, let it be remarked, first, that the proprietors are building a new

Hotel just across the little stream, and secondly, that I do not know, that at any of the other Hotels, they have better servants, rooms, table, bread or wine. Therefore upon consideration, I leave my descendants to act in the premises as a wise discretion may dictate.

Wednesday, July 16. My first view of Mont Blanc, was as we left Dijon in France, the mountain being about 150 miles distant. My next was on the top of the Jura Mountains, from which you look down suddenly upon the rich valley, the antique city of Geneva, the silver lake, the rushing Rhone, and after the eye has been arrested for a moment by these things, it fixes itself with a concentrated fascination upon Mont Blanc, rearing its awful brow, apparently, just on the other side of the valley. My feelings, heightened by some peculiar associations, were such as can be awakened but once in a lifetime, and I have a sort of trembling even now, as I recal them. After I left Geneva, the first fine view that I had, was from the bridge that crosses the Arve, just before you enter Sallenches—of this, the guide book says, “on this bridge one of the noblest views in the Alps is presented of Mont Blanc,” and I have no disposition to gainsay the book. During the whole of my ride yesterday evening, I had a full view of the monarch mountain, becoming momentarily more imposing, until I stood just opposite to it, at the Hotel in Chamouni. The evening was clear, except that some mist enshrouded the top of the mountain, not however reaching near down to the lower limit of its snow. Presently the mist swayed off, just from one peak, and then from another, though never actually from all at the same moment, but unrolling as it were, the mighty volume, slowly, leaf by leaf.

The height of Mont Blanc, is the first thing you feel. You are enabled to realise it here, by means of comparison and gradation. You look upon mountains high enough to attract attention elsewhere, but here they are of the lowest grade, and there is a stunted vegetation to their summits—next above these are mountains with bare rocky tops—higher than these, are mountains within the range of perpetual snow, and above these, above all, up, up, away up in the heavens, towers Mont Blanc. The snow is dazzling white, and though so high up, you can distinctly see where it breaks off, in heavy flakes at the precipices. So lustrous, polished, and solid does it look away up in the heavens, that it suggested to me the idea of the great White Throne, to be established for final judgment. In one part of the mountain, there are a number of very elevated peaks of sharp bare rocks of a brown, or reddish-brown color, and when the mist partly veils, and partly reveals them, as the evening

sun shines against them, they come out in the shape of battlements and spires, and resembling strongly as they do, Gothic towers and temples, it was not incongruous to liken them to the pinnacles of the Heavenly City. Last night I awoke, and without thinking of the mountain or indeed of where I was, I went to open my window, because the air seemed compressed—I was startled at the scene. The moon was shining, and I could see with distinctness, but still the obscurity was sufficient to cause the white part of the mountain to appear much more distinct than the dark part or base, and of course to make it seem much nearer. The effect was most singular. It looked as if that which in the evening I had been gazing at with reverence, away up in the sky, had crept down close to the earth to visit mortals, and to inspire that superstitious dread that we feel at the supposed presence of any thing supernatural.

Nothing exaggerated can be said about the greatness of Mont Blanc, and no one can have an approximate idea of it, who has not seen it. I feel how utterly inadequate would be any description that I could give, to furnish even the basis for such emotions as it excites when seen. After saying this, it may seem strange for me to add, that according to my experience, there is nothing of such grandeur, that so soon becomes familiar to us. At Geneva, in a few days, I forgot to look at Mont Blanc in the distance, and here at its base, I begin already to feel the same thing. I think that this is because its wondrous height and whiteness make it look like *sky-furniture*, and we regard it as we do the bright clouds with which it shares the empire of the upper air—they are very glorious, but they do not attract our attention, except when the mind is affected somewhat out of the ordinary way.

I have to-day enjoyed one of the pleasantest excursions I ever made in my life. It was to Montanvert and the Mer de Glace. Montanvert is the name of the summit of the mountain which you ascend in order to reach the Mer de Glace, and which impends over it. It is a spur of Mont Blanc, and is about 6300 feet high, or about half as high again as the Peaks of Otter. Of course it affords some fine views, but not of Mont Blanc, which is near to it and in the same direction. The object in ascending this mountain, is to obtain a sight of the Mer de Glace. The Glaciers are among the most sublime features of the Alps, and the Mer de Glace is perhaps the *greatest glacier in the world*. It is a stream of ice descending entirely down to the valley of Chamouni, from Mont Blanc, and filling up the interval between two mountain ridges. Its longitudinal extent is from 15 to 20 miles, its width varies from 1 to 2½ miles, and its depth or

thickness has been estimated by Professor Forbes at 350 feet, and by Saussure at 600. It is fed by the snows, melting in summer from the Alpine summits, and itself melting at its termination in the valley, it gives rise to the river Arveron, a branch of the Arve, which issues from an enormous ice cavern at its base. It is as its name imports, a sea of ice, of which the waves seem to have been frozen fast in their fluctuation. The nature of the upper surface of the ice depends partly upon that of the ground on which it rests; where the ground beneath is even, or nearly so, the ice is smooth and level; but whenever the supporting surface becomes slanting or uneven, the glacier begins to split and gape in all directions. In some places the layers of ice displaced and upheaved, rise in toppling crags, obelisks, and towers of the most fantastic shapes, varying in height from 20 to 80 feet. As might be expected, there are a great many *crevasses*, or fissures occasioned by the parting of the masses of ice. These fissures were for the most part transverse to the general direction of the glacier, never extended quite across the ice-field, and become narrower towards the extremities, so that when they gape too wide to leap across, they may be turned by following them to their termination. Many of them are of immeasurable depth, and as you gaze down them, you see in perfection the *azure blue* color peculiar to the glacier, with the iridescence common to prismatic substances. Scattered about on the glacier are huge blocks of stone which have tumbled from the heights, and have been borne along by the advancing glacier, for as Byron says,

"The glacier's cold and restless mass,
Moves onward day by day."

The advance of the ice-field of the Mer de Glace is estimated at between 400 and 500 feet yearly. The walking on it is by no means either altogether safe or agreeable. As I entered upon it, I saw a party who had preceded me up the mountain. Some of them were standing on the edge of the glacier, not having ventured farther, and one was returning, leaning upon the arm of the guide, by means of which support he had made an excursion on the ice. I declined the like assistance proffered me by my guide, as I felt some sort of pride about being aided by a man who had not the appearance of being either as strong or as active as myself, but I did not by any means scorn the proffer of his Alpenstock, or iron shod staff, which he did not need, as his shoes were provided with large iron nails to keep him from slipping, while my boots were very *glissantes*. As it was, I got along as far as travellers usually proceed, and as there was some rain falling, the

walking, the guide said, was worse than common. "Ah," said he, in that flattering tone, that every body seems to be master of who speaks French—"Ah que vous êtes celeste!" a curious compliment—"le plaisir de guider un Monsieur qui sait se bien marcher!" Notwithstanding my celestial marching as Pierre was pleased to call it, I did not feel at all comfortable as I descended a hill of ice, at the foot of which was gasping a hungry crevasse, abundantly wide to take me in, so smooth that the descent would be truly facile, and so deep, to judge from the sounds of the stones I let fall, that no fathom line could reach the bottom. They tell a story of a shepherd who, in driving his flock over the ice to a high pasturage, had the misfortune to tumble into one of these clefts. He fell in the vicinity of a torrent which flowed under the glacier, and by following its bend under the vault of ice, succeeded in reaching the foot of the glacier with a broken arm. More melancholy was the fate of M. Mouron, a clergyman of Vevay; he was engaged in making some scientific researches upon the glacier, and was in the act of leaning over to examine a singular well-shaped aperture in the ice, when the staff on which he rested gave way; he was precipitated to the bottom, and his lifeless and mangled body was recovered from the depths of the glacier a few days after. However, ladies walk along here, and make an excursion sometime, quite across the Mer de Glace, higher up, to the Jardin, as it is called. By the way, the guide assured me that it was not at all uncommon to find in a party of Alpine voyagers, ladies whose fearlessness shamed the weaker nerves of their male companions. As for myself, I was content with having extorted such a prodigious compliment from Pierre, and had no care to go skating about any farther, in smooth boots. After leaving the glacier, on the mountain, I passed by a stone on which had been engraved by themselves, the names of Pocock and Wyndham, the first Englishmen who visited Chamouni, 1748. The inscription now seen, has been lately cut, and bears this note—"un vandale ayant détruit la 1re inscription." This vandal, so unceremoniously introduced, was, as my guide informed me, a Chamounard, who had engaged to send to an Englishman a young *chamois*, at a high price one may be sure; for young *chamois* browse upon five-leaved clover; however, he did obtain one, by *hook and by crook*, we may suppose. Nevertheless, as was natural enough, the young *chamois* died, and the poor Savoyard wrote a letter to the Englishman, mentioning the facts, and asking for some *indemnité*: but the Englishman, though perfectly willing to pay a very large sum for a living *chamois*, saw no reasonableness at all, in paying anything for

a dead one, and declined the proposition. Whereupon the Savoyard, despairing of gain, resolved upon vengeance, if not upon the very Englishman, at least upon some of his race, and if not upon the living, at least upon the dead; so he kindled a fire upon the top of the rock engraved with the names of Pocock and Wyndham, and by the heat, caused it to split and tumble over, where it now lies with part of the original inscription still visible. Ah thought I, mountains and glaciers are *unique*, but *human nature* is one. Never before did my eyes behold anything so majestic as Mont Blanc, or so wonderful as the Mer de Glace, and never will again: but this human nature—in high or low—Englishman or Chamounard—it is just what I have been used to all my life; it is what I will meet as soon as I land at New York, and what is to be found in my own mountains in Virginia.

After purchasing on the top of Montanvert some polished pebbles as souvenirs of the locality, I commenced my descent on the same good mule that had carried me up. To me, my mule ride up and down the mountain was almost as new and interesting as the glacier. I am not sure that I shall not remember it as long, and speak of it as often. I had often heard of the ability of mules to carry their riders in difficult passes, and of their surprising surefootedness, but I never gave it full credence, or as we say, never realised it. I knew how everything is apt to be exaggerated in statements made by those who have felt the emotions awakened by the sight of wondrous things, and who would awaken by power of description, like emotions in the breast of others. I had supposed, therefore, that the amount of the matter was, that mules were far more surefooted than horses, and that they could go in safety over comparatively bad paths. But I feel now as if it is hardly an exaggeration to say, that they can go over impassable ways, and that they do not fall at all. I am well used to riding on horseback, and that over mountainous roads, and therefore would naturally feel less apprehensions, in Alpine travelling, than many others. But I know, that to have attempted to descend, on one of our horses, the mountain I came down to-day, would have been nothing short of wilful self-destruction. I had been filled with amazement at what I had witnessed in the ascent, but notwithstanding the experience of the surpassing ability of the mule, I never would have got on his back to ride down, had I merely consulted my feelings. I was fresh, the day was cool, and to walk down would have been agreeable in itself, to say nothing of escaping the seeming hazards of the precipitous ride, but I had no notion of missing the opportunity of a thing so rare as a ride upon a mule down an Alpine

mountain. So I rode from the top to the bottom. I confess that for the first few hundred yards I was filled with apprehension, for with my knowledge of beasts of burden, I did not see how it was possible for one to descend in safety. The path is excessively steep, being a sharp zig-zag with very short turns, and either passing over imbedded rocks, sometimes rising one above another like steps, and sometimes shelving in towards each other in gutter shape, or else encumbered with loose stone. On one side, there was often a sheer descent of many hundred feet, and any where, the mountain-side was so precipitous, that had the mule fallen over, certain death awaited the rider. Now, in this difficult and perilous path, the mule always walks of preference, on the *outermost verge*. The reason for this, I suppose, is that the greater the circumference, the easier is the descent, and these sagacious animals have learned to secure this advantage, even when the difference is very slight. But, whatever is the reason, the fact is unquestionable, and perfectly well known to all who have made even a single mountain ride. I saw my mule, in a narrow passage, over a precipitous place, where there was a sufficient inner track, walk on the outer edge so far, as to put his foot on a rock that was on the extreme verge; and, indeed, I believe, projecting over. It may be asked why I did not guide him? I neither pretended to guide nor support him by the bridle, but allowed him to take his own way, and often I did not even have the bridle in my hand. By the way, the bridles are what we call blind-bridles, that is, furnished with blinders for the eyes, as harness bridles usually are. I asked the guide why this was, and he said that mules had a great deal of curiosity, and unless their gaze was thus restricted, they would be looking about when they ought to be picking out the road. If the mule could depend only upon the judgment of the rider, in selecting the best spots in the path, he would never have earned the reputation that he has. But his instinct improved by practice, is a much surer dependence, and renders the mountain mule worthy of all the praise that has been bestowed upon it. Consequently mules are personages of much importance here. They put the hire of a mule and of a guide at precisely the same sum—six francs a course, each. I asked Pierre how he relished this equality; and shrugging his shoulders, he seemed to be of the opinion, that the guide ought to receive more, but said that the mule well earned his money; which is certainly true. The mules are very fine. There are no small ones among them, and most of them are noticeable for their size—they are well kept, and not at all vicious. There is, every spring, a review of the mules, and any one

that is too old or too young, or is adjudged to be vicious, or careless, or from any reason whatever, unfit for the service, is, as the guide called it, *reformé*, that is, removed from the guild, and bruderschaft of the Alpine service. What a thing it would be, if all of us had to be called up every year as the mules are, to answer for every misstep we had made. The guides are an enrolled, or, indeed, enlisted company, in the employment of the government, and under the direction of a *Chef de Bureau*, who regulates all matters of law and right that arise. He paid me a visit in my room. I had spoken to my guide about conducting me to Martigny the next day. Presently a Frenchman, who had visited the Mer de Glace the same morning with another guide, came to me and proposed to join me on the route to Martigny, and thus save the cost of employing two guides instead of one. I agreed to his proposition, though for some reasons, I was not particularly well pleased with the maker of it. Presently he came to me and said that his guide made some difficulty, affirming that he was the oldest, or ranking guide, and that where two parties united, it was the inferior guide who must be dismissed. Just then his guide came in to urge his own claims. I told him that I was well content with my guide of the morning, who had conducted me to the Mer de Glace, and had done his best to be serviceable, and that I was unwilling to disappoint him after I had spoken to him, though I had made no actual contract. He replied that it was the law of the service. I concluded by saying, that it was my purpose to take Pierre if I could, but if I could not, that then I would place myself under his guidance. No sooner had he left the room, with an apology for speaking about the matter, saying that he had no right to address himself to any voyager, except through the Chef, than Pierre entered and prayed me to retain him, and to allow him to bring the Chef to see me. Presently the Chef entered, a very respectable looking man, and after hearing my statement, he said that when two parties joined, they were entirely at liberty to take either guide they pleased, and that inasmuch as the employer of the other guide had proposed to join himself to my party, he thought if there was any preference, it belonged to my guide. So I told him to send me Pierre and his mule for a trip tomorrow to Martigny.

S. L. C.

WORDSWORTH AND SOUTHEY.

(From De Quincey's *Literary Reminiscences*.)

* * * * *

On the next day arrived Wordsworth. I could read at once, in the manner of the two authors, that they were not on particularly friendly, or rather, I should say, confidential terms. It seemed to me as if both had silently said—we are too much men of sense to quarrel, because we do not happen particularly to like each other's writings: we are neighbors, or what passes for such in the country. Let us show each other the the courtesies which are becoming to men of letters; and, for any closer connection, our distance of thirteen miles may be always sufficient to keep us from *that*. In after life, it is true—fifteen years, perhaps, from this time—many circumstances combined to bring Southey and Wordsworth into more intimate terms of friendship: agreement in politics, sorrows which had happened to both alike in their domestic relations, and the sort of tolerance for different opinions in literature, or, indeed, in anything else, which advancing years and experience are sure to bring with them. But, at this period, Southey and Wordsworth entertained a mutual esteem, but did not cordially like each other. Indeed, it would have been odd if they had. Wordsworth lived in the open air: Southey in his library, which Coleridge used to call his wife. Southey had particularly elegant habits. (Wordsworth called them finical,) in the use of books. Wordsworth, on the other hand, was so negligent, and so self-indulgent in the same case, that as Southey, laughing, expressed it to me some years afterwards, when I was staying at Greta Hall on a visit—‘To introduce Wordsworth into one's library, is like letting a bear into a tulip garden.’ What I mean by self-indulgent is this: generally it happens that new books baffle and mock one's curiosity by their uncut leaves: and the trial is pretty much the same, as when, in some town, where you are utterly unknown, you meet the postman at a distance from your inn, with some letter for yourself from a dear, dear friend in foreign regions, without money to pay the postage. How is it with you, dear reader, in such a case? Are you not tempted (*I am grievously*) to snatch the letter from his tantalizing hand, spite of the roar which you anticipate of ‘Stop thief!’ and make off as fast as you can for some solitary street in the suburbs, where you may instantly effect an entrance upon your new estate before the purchase money is paid down? Such were Wordsworth's feelings in regard to new books; of which the first exemplification I had was early in my acquaintance with him, and on

occasion of a book which (if any could) justified the too summary style of his advances in rifling its charms. On a level with the eye, when sitting at the tea-table in my little cottage at Grasmere, stood the collective works of Edmund Burke. The book was to me an eye-sore and an ear-sore for many a year, in consequence of the cacophonous title lettered by the bookseller upon the back—'Burke's Works.' I have heard it said, by the way, that Donne's intolerable defect of ear, grew out of his own baptismal name, when harnessed to his own surname—*John Donne*. No man, it was said, who had listened to this hideous jingle from childish years, could fail to have his genius for discord, and the abominable in sound, improved to the utmost. Not less dreadful than *John Donne* was 'Burke's Works;' which, however, on the old principle, that every day's work is no day's work, continued to annoy me for twenty-one years. Wordsworth took down the volume; unfortunately it was uncut: fortunately, and by a special Providence as to him, it seemed, tea was proceeding at the time. Dry toast required butter; butter required knives; and knives then lay on the table; but sad it was for the virgin purity of Mr. Burke's as yet un-sunned pages, that every knife bore upon its blade testimonies of the service it had rendered. Did that stop Wordsworth? Did that cause him to call for another knife? Not at all; he

Look'd at the knife that caus'd his pain:

And look'd and sigh'd, and look'd and sigh'd again;

and then, after this momentary tribute to regret, he tore his way into the heart of the volume with this knife, that left its greasy honors behind it upon every page: and are they not there to this day! This personal experience just brought me acquainted with Wordsworth's habits, and that particular, especially, with his intense impatience for one minute's delay, which would have brought a remedy; and yet the reader may believe that it is no affectation in me to say, that fifty such cases could have given me but little pain, when I explain, that whatever could be made good by money, at that time, I did not regard. Had the book been an old black-letter book, having a value from its rarity, I should have been disturbed in an indescribable degree; but simply with reference to the utter impossibility of reproducing that mode of value. As to the Burke, it was a common book; I had bought the book, with many others, at the sale of Sir Cecil Wray's library, for about two-thirds of the selling price: I could easily replace it; and I mention the case at all, only to illustrate the excess of Wordsworth's outrages on books, which made him, in Southey's eyes, a mere monster; for Southey's beautiful library was his estate; and this differ-

ence of habits would alone have sufficed to alienate him from Wordsworth. And so I argued in other cases of the same nature.

Meantime, had Wordsworth done as Coleridge did, how cheerfully should I have acquiesced in his destruction (such it was, in a pecuniary sense,) of books, as the very highest obligation he could confer. Coleridge often spoiled a book; but, in the course of doing this, he enriched that book with so many and so valuable notes, tossing about him, with such lavish profusion, from such a cornucopia of discursive reading, and such a fusing intellect, commentaries, so many-angled and so many-colored, that I have envied many a man whose luck has placed him in the way of such injuries; and that man must have been a churl (though, God knows! too often this churl *has* existed) who could have found in his heart to complain. But Wordsworth rarely, indeed, wrote on the margin of books; and, when he did, nothing could less illustrate his intellectual superiority. The comments were such as might have been made by anybody. Once, I remember, before I had ever seen Wordsworth—probably a year before—I met a person who had once enjoyed the signal honor of travelling with him to London. It was in a stage-coach. But the person in question well knew *who* it was that had been his *compagnon de voyage*. Immediately he was glorified in my eyes. 'And,' said I, to this glorified gentleman, (who, *par parenthèse*, was also a donkey,) now, as you travelled nearly three hundred miles in the company of Mr. Wordsworth, consequently, (for this was in 1805,) during two nights and two days, doubtless you must have heard many profound remarks that would inevitably fall from his lips.' Nay, Coleridge had also been of the party; and, if Wordsworth *solus* could have been dull, was it within human possibilities that these *geminii* should have been so? 'Was it possible?' I said; and, perhaps, my donkey, who looked like one that had been immoderately threatened, at last took courage; his eye brightened; and he intimated that he *did* remember something that Wordsworth had said—an 'observe,' as the Scotch call it.

'Ay, indeed; and what was it now? What did the great man say?'

'Why, sir. In fact, and to make a long story short, on coming near to Loudon, we breakfasted at Baldock—you know Baldock? It's in Hertfordshire. Well, now, sir, would you believe it, though we were quite in regular time, the breakfast was precisely good for nothing?'

'And Wordsworth?'

'He observed'—

'What did he observe?'

'That the buttered toast looked, for all the world, as if it had been soaked in hot water.'

Ye heavens! '*buttered toast!*' And was it *this* I waited for? Now, thought I, had Henry Mackenzie been breakfasting with Wordsworth, at Baldock, (and, strange enough! in years to come I *did* breakfast with Henry Mackenzie, for the solitary time I ever met him, and at Wordsworth's house, in Rydal,) he would have carried off one sole reminiscence from the meeting—namely, a confirmation of his creed, that we English are all dedicated, from our very cradle, to the luxuries of the palate, and peculiarly to this.* *Proh pudor!* Yet, in sad sincerity, Wordsworth's pencil-notices in books were quite as disappointing. In Roderick Random, for example, I found a note upon a certain luscious description, to the effect 'that such things should be left to the imagination of the reader—not expressed.' In another place, that it was 'improper;' and, in a third, 'that the principle laid down was doubtful;' or, as Sir Roger de Coverley observes, 'that much might be said on both sides.' All this, however, indicates nothing more than that different men require to be roused by different stimulants. Wordsworth, in his marginal notes, thought of nothing but delivering himself of a strong feeling, with which he wished to challenge the reader's sympathy. Coleridge imagined an audience before him; and, however doubtful that consummation might seem, I am satisfied that he never wrote a line for which he did not feel the momentary inspiration of sympathy and applause, under the confidence, that, sooner or later, all which he had committed to the chance margins of books would converge and assemble in some common reservoir of reception. Bread scattered upon the waters will be gathered after many days. This, perhaps, was the consolation that supported him; and the prospect that, for a time, his Arethusa of truth would flow under ground, did not, perhaps, disturb, but rather cheered and elevated the sublime old somnambulist.

* It is not known to the English, but it is a fact which I can vouch for, from my six or seven years' residence in Scotland, that the Scotch, one and all, believe it to be an inalienable characteristic of an Englishman to be fond of good eating. What indignation have I, and how many a time, had occasion to feel and utter on this subject! But of this at some other time. Meantime, the Man of Feeling had this creed in excess; and, in some paper, (of *The Mirror* or *The Lounger*,) he describes an English tourist in Scotland by saying—'I would not wish to be thought national; yet, in mere reverence for truth, I am bound to say, and to declare to all the world, (let who will be offended,) that the first inkeeper in Scotland, under whose roof we met with genuine buttered toast, was an Englishman.'

LINES,

Written at Wilton, on James River. the seat of the late Robert Randolph, Esq.

The stranger stood in that antique hall,
But his heart could not rejoice,
For it seemed that an echo sprang forth from the wall,
Of the gentlest human voice.

Then he heard a voice that was loud and strong,
Subdued to a deep drawn sigh,
And the gentle notes of a syren's song,
On the wings of the distance die.

Then he saw the groaning festal board
And he heard the cares of state;
And he saw the patriot buckling his sword—
And his war-horse stand at the gate.

And he heard the welcome of days gone by,
And time swiftly shot o'er his vision;
Ah! scornful and quick on his course he did fly,
To turn the bright dream to derision.

There was rust on the blade of the patriot's sword,
And the true heart, and strong arm were gone,
The wine cup was broke on the festal board,
And the deep carouse was done.

And the gentle one whose song has sped
To breathe Love's young command,
She sleeps not with her father's dead,
But dwells in a foreign land.

That antique mirror oft hath given
The form that beauty bears,
The charms that repose round a thing of Heaven
When a seraph of light appears.

The blush of love like the rosy ray,
That steal from the morning's face,
Or the light that flies from the wheels of day,
Have there both owned a place.

But the dream is o'er, now coldly falls,
His eye on the gloomy chart,
And he wanders through those antique halls,
With a melancholy heart.

Chronicles of the Valley of Virginia.

By PEN. INGLETON, Esq.

BACHELOR SMITH.

HIS RELIANCE ON THE PROTECTION OF THE ENGLISH LAW, AND HOW IT WAS REWARDED.

I.

BACHELOR SMITH ENTERTAINS HIS FRIENDS.

History displays itself most naturally in trifling things; and like a man desirous of appearing in a higher character than his wont, only dons the robes of ceremony and assumes a stately gait when—pointing to great wars and parliaments and treaties—it would deceive the world as to its real likeness. And that is the reason why I will to-day set down in these true chronicles, the adventures of Bachelor Smith, though that adventure has in it little to recommend it but its foundation in truth.

It was in November of the year of Grace 1758, that Bachelor Smith invited to his cabin, on the western bank of the river Cacaphon,* many of his friends from the surrounding country; rough and rude men, but of that strong race who laughed at peril.

Seated round a table far more elegant than was usual in that 'new country,' the host and his guests were discussing a profuse meal, and conversing pleasantly.

"My friends," said Smith, in a pause of the entertainment, and rising as he spoke, "to the health of his majesty George II.—also to the good health of his Excellency, Francis Fauquier."

"I won't drink it!" replied one of his guests.

"And why not?" asked the Bachelor, curling his mustache. "Why will you not drink to his majesty, Friend Holliday?"

"I don't drink to the worst enemy we border men have," replied the borderer.

"The worst enemy?"

"Come Bachelor! you're not a baby in arms; and it is not for me to tell you, who have fought well and true in the wars, anything about the times."

"What times?"

"Did you know how Washington was treated by Dinwiddie?" asked the hunter, briefly.

"Oh, an old tale! Well, that *was* hard."

"So you acknowledge he was badly treated?"

"Yes, I do."

* "On the west side of Capon river, in a small cabin." Kercheval, p. 114.

"You acknowledge the whole border country here is laid waste?"

"It is as you say; and that by the blood-thirstiest savages of the great woods. Now, who should have seen that it was defended by forts and stations?"

"His Excellency, it is true."

"Whose subjects are we?"

"His Majesty's—you are right."

"I am well answered," continued the hunter, "and I knew you were only joking, Bachelor. You were a brave Indian fighter once; and it is only now when the Indians are away for a little time, that you have taken up with these nice pictures, and pretty clothes—with having your moccasins worked with beads, and drinking that black slop coffee—not fit for a man to taste—out of china which only dulls your knife. Come, Come!—give all this up, and return to the woods!"

Thus spoke the borderer.

—

II.

BACHELOR SMITH REPLIES.

These blunt words were received with laughter by the Bachelor. Then taking from the table a wooden noggin, carved over with figures and brilliantly polished:

"What is that you were saying just now, Holliday, about forts?" he asked.

"I said that we ought to have had them in the wars just past—not passed yet, either."

"Well, we did have them, my excellent friend!"

"Why did Washington complain then!"

"Come, you're too hard for me, by my faith! but I can prove that we were not treated so badly as you make out."

"Prove it."

"Do you see this noggin?"

"Yes, I do."

"Look at it well."

"You've been cutting it into pictures."

"So you see the pictures, do you? Now tell me what this carving here is for."

"It looks like a fight."

"And what is that there over the tree tops," continued Smith, pointing to the carving.

"Why, a fort."

"And what fort?"

"You are laughing at me, Bachelor. I know Fort Pleasant as well as I know any thing; and that big man there is Captain Wagner."

"You are right, and that is the battle of the Trough."

"Well, you mean that we are not so badly off with Fort Pleasant and Captain Wagner."

"It is a good fort, and he is a brave man."

"I hear he acted wrong in that very battle."

"Stuff—nonsense!—I was there—two years ago only. He could not cross the river."

"Well, well—you may have your Fort Pleasant and your Captains, as many as you please; but that don't make me easy. The Indians are about here still, and as long as the King and the Governor leave us without defence, our lives and property are nowhere. A health to such! No, never!"

III.

THE BACHELOR BRIEFLY EXPOUNDS THE THEORY OF ENGLISH LAW.

The sentiments of Holliday were those of the company at large, and they signified their approbation of them in thought and manner.

"Friends," said Smith, "you have heard that Indians are still in these parts—are they, or not?"

"Plenty of them."

"Civilized Indians or savage?"

"Child-killers," replied Holliday.

That brief word said volumes.

"Well," continued Smith, "I want you to answer my questions. Where do I live?"

"You are joking, Bachelor. There's the Cacaphon through the trees."

"Cacaphon river is right far to the West; but it is to the East of me; how say you?"

"Certainly it is."

"What do you see there through the windows to the West?"

"Mountains."

"What sort of game do you find there?"

"All sorts—bear, elk, panther—all kinds."

"No other?"

"We can find any sort to be found anywhere?"

"And is there none which finds you?"

"You mean Indians!"

"I do mean Indians; and the mountains there are full of them every Fall—you know it."

"I've fought them there!"

"Well, I'll go on asking my questions," continued the Bachelor. "Look around you—what do you see?"

"Some right pretty things."

"What sort of tables and chairs?"

"Tiptop; you can brag."

The Bachelor seemed much pleased at this compliment.

"And my shelves up there—you can't get china and painted crocks for nothing, can you?"

"They cost a power of skins."

"And where do you get them?"

"Not in Winchester—not this side of Belhaven, or Philadelphia, I reckon."

"Right—now look through my window. Do you see that nag?"

"Loudoun, aint it?"

"Loudoun—and his match aint in the country."

"Well, well, what are you coming to—speak out."

"One more word."

"Go on."

"Look at my cabin."

"Its nice enough for a woman."

"Look at me," said the Bachelor, with great gravity.

Holliday laughed.

"You look as spruce and fine as a low-country dandy. But you'd better stick to the old ways."

The Bachelor smiled.

"You see what I have now," he continued, "and you know how I used to live: Broken chairs, ricketty tables, windy house, and nothing to eat. Well, my friends, what is the cause of this change in my condition? Why has Jack Smith, with only two shirts, one torn pair of moccasins, and a broken down house with nothing in it, become Bachelor Jack Smith, living in about the easiest way of any man this side the Ridge—with plenty of hunting shirts, plenty of moccasins, and real china cups and saucers, when he wants it, even coffee, too? Why has the Bachelor changed so for the better?"

"Talk it out!—we'll listen."

"Because," said the Bachelor, solemnly, "I have for two years past, put my trust in the great English law! In that book," holding up an old tattered volume in black letter, "is laid down the glorious principle that the King of England makes all the laws of the land, and that protection to life and liberty and property, is given to all his subjects, high and low. Now," continued the Bachelor, with the air of a man who has overcome, by the vigor of his reasoning, all opposition, "I ask you, if I am not a subject of his Majesty, George II., and if so, whether my life, liberty and property, are not guarantied to me?"

The only answer to this, was a shout of laughter.

"What are you laughing at, friends—come tell me?"

"At your law-talk."

"What is funny about it?"

Holliday laughed heartily.

"I was laughing more at my thoughts than at you."

"Well, what were your thoughts?"

"Must I tell you?"

"Yes."

"Well, I was thinking that if a band of the Indian devils under Kill Buck or Crane, came along this way, they would burn your house here like a hay rick, and do your business for you, with a ball wrapped in some of this very law book."

The Bachelor shook his head as pitying the ignorance and incredulity of his interlocutor.

"Well, we shall see," he said, "meanwhile, I'll drink to his Majesty. Here goes! won't you join me?"

"Never!" exclaimed the border men, with one voice; "nor to any like him!"

IV.

TRESPASS VI ET ARMIS ON THE BACHELOR BY KING CRANE AND OTHERS.

We are told that in this mysterious world of ours, coming events cast their shadows before; and it was not very long after the discussion we have heard in the last chapter, touching the probability of an Indian inroad upon that unprotected frontier, that a band of the enemy, then hovering on the border, made a descent into the valley, and paid their respects to Bachelor Smith.

That worthy was surprised in bed, and severely bound before he could resist; though it is doubtful whether with his ideas of legality, such resistance would have seemed to him entirely proper. The Indians were accustomed to murder indiscriminately on the first attack, only when they were excited particularly to revenge upon the whites by some such affair as was, afterwards, the death of Cornstalk, or the Moravian Massacre. And in the chronicles of the time, it is observable that the captives were most often murdered because of their obstructing the march of the bands. On this occasion, no such existing cause existed, and after binding the bachelor, they proceeded to rifle his cabin, not even intending to fire it.

It is impossible to describe the agony with which Bachelor Smith saw his rich hunting shirts and beaver caps and embroidered moccasins appropriated. When King Crane*—that celebrated brave—put on his favorite pair of moccasins, stretching them to make them fit his enormous foot, he broke forth indignantly:

"Stop! Stop!" cried the Bachelor, "don't spoil my moccasins! I appeal to you King Crane as a gentleman—my moccasins! my moccasins! the work of pretty Sally Singleton!

* For an account of this Indian warrior, see Johnston's Narrative. Kercheval mentions him but once.

Spare them at least: take everything I have—my hunting shirts, my caps, my belts, and buckles—break all my china if you choose!" here one of the Indians carelessly pulled down a shelf and shattered every cup and saucer upon it. "Yes! yes! break all!" continued the Bachelor; "tear up my law book! break my beautiful noggins that have cost me so many hours of work and been so much admired by all who have seen them—take all! break all! but spare my favorite moccasins, King Crane! You know me King Crane—we have met before—you are civilized, not blood-thirsty—in many things a gentleman, even—"

Here King Crane succeeded in getting the moccasins on by splitting them down the sides.

"Villian!" cried the Bachelor, carried away by rage, "most uncivilized and blood-thirsty of all the Indians I know! Do what you now see fit—take and break anything, I care for nothing!"

King Crane who, listening with great indifference, had understood only parts of the speech addressed to him, here availed himself of the permission granted; and breaking one of the fine wooden noggins over the Bachelor's head, commanded him to cease speaking.

The Bachelor was compelled to obey.

V.

THE BACHELOR EXPOUNDS THE LAW TO KING CRANE—AND HOW IT WAS RECEIVED.

After rifling the cabin and appropriating everything which struck their fancy, the Indians mounted Smith, whose hands were securely bound, behind King Crane, who rode his favorite horse Loudoun, and so took their departure rapidly towards the Potomac.

On their way, they plundered successively three other cabins, whose occupants were fortunately absent on hunting excursions, and the same evening—having lain hidden for many hours in the mountains, crossed the Potomac and penetrated into Maryland.* At sunset, they halted and prepared to take some rest.

After eating with great gusto of the provisions stolen from the cabins successively plundered, and amused themselves exceedingly strutting about in the garments procured in the same manner the Indians laid down with their feet to the fire, and betook themselves to rest. Two sat up wrapped in their blankets and watched, though with many nods.

* "They crossed the Cohongoruton, (Potomac,) and halted at a place called Grass Lick, on the Maryland side." Ker. p. 114.

Smith was placed in their midst, and a blanket having been thrown over him, King Crane and another of the Indians lay upon the sides; thus securely holding down the valiant Bachelor. He often related to his friends on his return, the manner in which King Crane (somewhat sleepy) received his remonstrances, and particularly his explanations of the English law of persons and property.

"You have manifestly committed trespass on my property King Crane; and more still, an assault has been made on my person," said the Bachelor, in a tone of dignified remonstrance.

King Crane grunted.

"And yet," continued the Bachelor, "I venture to say, you do not know what trespass *vi et armis* means. Come Crane, you understand some English, speak candidly and like a man of sense. Do you comprehend the distinction between trespass *vi et armis*, and trespass on the case?"

The Chief grunted again. The Bachelor construed the "Ough!" into "No."

"The difference is this," said the Bachelor, "and I will explain it in a few words: are you listening King Crane, or are you going to sleep?"

"Ough!" grunted the Indian.

"Ah! you are listening! very well: answer me first now, whether any one has explained to you the signification of the Hebrew words *vi et armis*?"

The huge frame of the Indian Chief rolled about sleepily, and from his capacious breast issued the eternal "Ough!" which, with the Indians, means anything and everything. The Bachelor construed it into a sign of attention on the part of his listener, and laying his hand permanently on the shoulder of the savage whose eyes were closed drowsily:

"The words *vi et armis*," said he "signifies *with evil intent*:" that is, to break, smash or otherwise injure crockery; to split noggins; to tear moccasins; and I will here say, King Crane, that your conduct in ruining my favorite pair was not what I expected from a man of your distinction though you are yet young! But to continue, are you listening?"

"Ough!"

"Speak plainly;" don't say 'ough' in that way forever."

"Ough, ough!"

"Well, as you please. I now come to the main subject, the English law; and I hope you will listen attentively, inasmuch as an opportunity of gaining information on the subject of one well versed in these matters does not occur every day: are you drowsy?"

"Ough! ough! ough!"

"Uncivilized animal!" muttered the Bach-

elor, "he cannot even express his ideas: but he is evidently listening."

Then aloud:

"The law of England proper"—continued the Bachelor, summoning all his reading to his aid; "and this, I hope, will show you the enormity of the action you have this day been guilty of—the law of England recognizes, first and foremost"—

"Sleep!" said King Crane, ramming a handful of the blanket into the Bachelor's mouth, and bending his brows into a terrific frown. This rude action so disgusted his captive, as he afterwards said, that the command was instantly obeyed.

VI.

MARTYRDOM.

In the impenetrable mountain forest, the Indians were wholly secure from an attack, and so they were quite at ease in the little glade they had chosen for their resting place.

They rose early, shaking their huge frames, and lazily stretching themselves after sleep. Then as was customary with them, they applied themselves with renewed activity to the bacon and liquors, stolen on the preceding day from the cabins of Bachelor Smith and others. The dish, however, which excited most interest and was looked forward to with the greatest pleasure, was a large fat turkey, now boiling in a huge pot, stolen like the fowl: with the water in which it boiled, they had mingled, with the Indian partiality for everything sweet, a quantity of brown sugar; and they seemed to watch the progress of cooking with the liveliest interest.

The Bachelor now unbound, paid no attention to such trifles, but suddenly he was horrified to find that the fire had been kindled with a portion of his beloved Law-book, thrown, when his cabin was rifled hastily, into the iron pot. He ran to the spot, and catching it up, remonstrated indignantly on this desecration:

"My favorite volume!" he said, "to be used for lighting a fire! King Crane, I protest against this usage, and will never forgive you!"

King Crane, supinely stretched by the fire, suffered a grim smile to corrugate his features.

"Book good to light fire," he said, in his broken English.

"And for nothing else, you would say. Why have you torn it in this way, when dry sticks and leaves were plentiful?"

The savages only laughed.

The Bachelor was consoled to find that only a page or two was destroyed besides the blank leaves. This somewhat restored his good hu-

mor, and perceiving that the Indians were for the moment in a very amiable state of mind, owing to their lively anticipation of boiled turkey for breakfast, he determined to endeavor for the last time, to soften them by the power of his legal reasoning.

"Very well," said the Bachelor, "not much harm is done my book; and I will now, with your permission, King Crane, resume the matter we were discussing last night when you were, and very naturally, too sleepy to clearly comprehend or attend to me."

King Crane looked indifferent, watching the gurgling pot.

"I was, when you went to sleep," continued the Bachelor, "discussing the first great principle of English law, namely: the protection of life which it affords.

"More sugar," said King Crane.

Disregarding this interruption, the Bachelor continued holding the volume open on his knees, and gesticulating permanently as he bent his eyes on the chief.

"The principle to which I have referred," said he, "lies at the foundation of all law: for you will easily understand, my friend, that laws are perfectly good for nothing if they do not, according to the principles of the *lex fori* and the *lex sitæ*—of which you know nothing—protect the subject at least in that right, of all rights the dearest and—"

Here King Crane much disgusted, raised his enormous foot and kicked the book from the Bachelor's hand. The Bachelor jumped up much enraged:

"Your conduct, King Crane!" he exclaimed, "is not the conduct of a respectable savage! You should be ashamed of it; and under no circumstances would Kill Buck, your friend, bad as he is, be guilty of so ungentlemanly an action! It is easy to see your knowledge of civilized life is small; and you may do what you see fit with me for saying that you are a perfect savage."

King Crane had been much wearied with the Bachelor's discussion; and now he seemed to feel renewed disgust at his abusive language. He therefore determined to increase the pleasure of boiled turkey, by a little sport: so ordering two of his men to tie the struggling Bachelor to a tree, so that his feet were raised from the ground, he commenced taking his revenge. This lay in holding under his naked feet, blazing leaves of the law volume. The Bachelor's philosophy and dignity were unequal to the trial. He jerked up one foot then the other, with most undignified haste; and each movement of this sort was hailed by the Indians with bursts of laughter.*

* For the truth of this picture of Indian character, see Johnston's Narrative throughout.

VII.

THE BACHELOR IS MORE THAN EVER CONFIRMED IN HIS FAVORITE THEORY.

The prisoner's tribulations, and the ordeal were not after all very severe. The savages were in an amiable mood, and did not design serious injury to their prisoner—only a little harmless sport.

When they had finished their breakfast, they betook themselves to preparing all things for continuing their journey. The Bachelor's fine and spirited horse, Loudoun—so named in compliment to Lord Loudoun, or to the fort of that name at Winchester—was to carry the numerous stolen articles, while the band marched on foot; and one of the Indians was ordered by King Crane to go and catch him.

Loudoun was grazing with his saddle off, but the bridle still on, a short distance from the encampment, and the Indian warily approached him with many endearing words and winning gestures. To these Loudoun replied by throwing up his heels imminently near to the face of the savage, and cantering off with a sonorous neigh.

The Indian saluted this manœuvre with a storm of curses in English—for long before they acquired that language, the red men became very proficient in its vocabulary of abusive epithets. Then slowly and warily approaching the animal he endeavored a second time to catch the bridle. It was a vain attempt, and he returned much out of humor.

King Crane, seeing his want of success, turned to the Bachelor.

"Pale face catchee devil horse!" he said gravely.

"Who, I?" said Smith. "That is unreasonable, Crane. My feet are in no condition to run on after your unwarrantable usage, and I can scarcely draw on my moccasins."

"Pale face better catch 'im."

"I will not."

King Crane caught up his rifle. The Bachelor's nerves were unpleasantly affected by the click of the trigger as the piece was cocked; and first securing his beloved law book in the bosom of his hunting shirt, he betook himself to the painful duty of pursuing Loudoun. But Loudoun knew his master's voice and showed none of the restiveness which he had before exhibited. He came whinnying up.

Suddenly a luminous idea flashed through the Bachelor's mind. The Indians were busy with their preparations; he was some hundred yards from the encampment; escape was possible! As quick as thought, he leaped upon Loudoun,

and digging both heels into his sides, set forward at full speed towards the Potomac.

The Indians saw the manœuvre too late : they uttered a terrific yell, and throwing down everything immediately started in pursuit;—at their head King Crane, armed with his long rifle, cleared the ground with wonderful quickness. Loudon was more than a match, however, for any human speed; the distance between the Bachelor and the Indians grew greater and greater, and arriving at the summit of a little hill, he turned in his saddle to shake his fist at his enemies.

At that moment a wreath of smoke rose above King Crane's head, a report was heard; and the Bachelor reeled in his seat.

"Ah!" he shouted, "I am struck, you think, King Crane—I am dead, you think! Rifle balls you would say, travel faster than horseflesh! Fool! that law you have laughed at and despised, has saved me at last—look!"

And taking from his breast the volume, he held it up towards the Indians. The ball from King Crane's rifle had buried itself in the thick leaves and the book had preserved its owner's life!

On the next day the Bachelor was mending his noggins, when Holliday entered his cabin.* He had heard of the attack.

"Well," he said, "Bachelor, what think you of the protection of English law now?"

"I think more than ever!"

"How so?"

"Look here!" said the bachelor, holding up his book in triumph.

* "They went to Smith's cabin and found him mending his bowls and trenchers, by sewing them up with wax ends."—*Kercheval*, p. 115.

TWENTY.

TO MY COUSIN FRED.

One year had gone, another come,
 Beguiled by many a sugar plum,
 Was I a baby fair;
 My cheek was dimpled like mama's,
 My eyes of hazel were papa's,
 So nurses did declare.
 My little limbs of fairy mould,
 My glossy, silken curls of gold,—
 My brow, my lips, my arms,
 These of each flatt'ring tongue the theme,
 Made my fond mother proudly deem
 Me—paragon of charms.

Of kinsmen, guests, retainers all,—
 Who gathered in our ancient hall,—
 I was the petted toy.
 Old Captain Blunt, my favorite was,
 Fac-simile of rough "old Pos,"
 Who wished I was a boy.
 Three—four—five passed,
 And still I chased
 The butterfly so wild,
 With footsteps fleet,
 And laughter meet,
 For lips of romping child.
 Six, seven and eight,
 Made all things straight,
 Or square, I should have said,
 Then lines were drawn,
 And copies torn,
 And I was sent to bed.
 Nine, ten, eleven,
 And still uneven
 Attention I had paid,
 To many a rule,
 Laid down in school,
 To make me sore afraid.
 But twelve had come,
 The ante-room
 To promised years of glee.
 New powers sprang forth,
 Of nervous growth,
 And wond'rous were to see.
 Thirteen, most charming of the train
 Of years, which cannot come again,
 And giddiest of the teens,
 Much planning brought,
 With wisdom fraught,
 For future ball-room scenes.
 Fourteen—fifteen,
 My hopes all green,
 Unblighted, unsubdued,
 I danced and sung,
 Guitars new strung,
 Was nothing of a prude.
 Could talk to four,
 Yes—twenty more,
 If they perchance should call,
 Of books and flowers,
 Elysian hours,
 And of a fancy ball.
 Sixteen—seventeen,
 And well I ween,—
 I thought myself a belle.
 My fortune fair,
 I tried with care,
 Each night with Kate and Nell.
 Eighteen swept by
 In poesy;—
 In moonlight passed nineteen.
 Proud Twenty came,—
 Exchanged my name
 For yours, dear coz, has been.

AUSTRIAN POLITICS.*

The total neglect of certain departments of historical study, is a singular defect in our systems of education in this country. While even in schools of the humblest pretensions, instruction in some of the more prominent facts of our own history is afforded and some elementary notions of the theory of the government may be formed, the young man, even in the more advanced period of his studies is abandoned, very much to his own inclination and guidance, as to the study of European history. Left to grope his way in the dark, without the benefit of judicious training, if he gains any knowledge of cotemporaneous political history abroad, he is most likely to adopt the views of extreme partisan writers as the basis of his creed in foreign politics. With a natural and American sympathy for what he supposes to be liberal in other systems, he is constantly liable to error from overlooking those circumstances which form the basis of the fitness of political systems for the practical ends of government, and to judge events abroad by a standard that must always prove fallacious—an American one.

The secret, however, of this general neglect of the study of foreign politics, is to be found, we think, in the fact, that such subjects awaken very little popular interest, for it is rarely that any thing connected with them arouses the great heart of the people in sympathy or anger. To most persons, revolutions and disturbances abroad present no other aspect than brave and heroic, but necessarily hopeless struggles. Those who strive in this unequal conflict, are often greeted with many expressions of hollow sympathy, but their final discomfiture, and the utter barrenness of any permanent benefit from their efforts, are in the minds of too many "foregone conclusions." We are all of us too apt to turn away from an account of some suppressed insurrection or some successful *coup d'état*, with the self-complacent reflection, that the European masses know nothing of true republicanism, and that we alone are capable of the enjoyment of political freedom. The great reason of this apparent indifference, is generally an ignorance of the character of the people, and the real merits of the struggle, which we undertake thus summarily to judge.

*AUSTRIA IN 1848-'49: *Being a History of the late Political Movements in Vienna, Milan, Venice and Prague; with details of the campaigns of Lombardy and Novara: a full account of the Revolution in Hungary: and Historical Sketches of the Austrian Government and the Provinces of the Empire.* By WILLIAM H. STILES, late Chargé d'Affaires of the United States at the Court of Vienna. In two volumes. Harper & Brothers. 1852.

Our sympathy with the oppressed in Europe is emotional rather than founded on rational conviction, and having no root, it soon withers away. Occasionally some enormous outrage, perpetrated by the absolutist powers in Europe, such as the extinction of the Kingdom of Poland, or the annihilation of the independence of Hungary, or some monstrous treachery, such as the withdrawal of a constitution wrung from a reluctant monarch in the hour of peril, when that hour is past, will startle the public mind into an indignant denunciation of such fearful wrongs. Still the excitement does not last long enough to produce any very thorough appreciation of the peculiarities of the case, or to lead to any careful study of the subject. Some crude observations in a newspaper, or some extracts from the possibly better informed, but still thoroughly partisan journals abroad, tend but little to the enlightenment of those who wish to trace these extraordinary events to their true sources. Inquiries of this kind to lead to any satisfactory result presuppose a familiarity with the historical progress of a people, their striking peculiarities, and above all, an ability to investigate authorities in their own language, which comparatively few among us, even of those whose tastes have led them to the pursuit of historical studies, possess.

It is well worthy of remark, as illustrating the general ignorance which prevails among us in reference to those portions of Europe, in behalf of whose cause we have recently made the loudest professions of sympathy, that in no one of the vast number of addresses which were made to Kossuth during his progress through the country, was any attempt made to vindicate the Hungarian cause upon the ground on which the Hungarians themselves have uniformly justified their resistance,—the forcible violation on the part of Austria, of a written constitution, which had been in vigor for nearly eight hundred years, and the preservation of which, in its integrity, had been many times solemnly guaranteed by that power. Of sympathy with Hungary as a fallen nation, and of hatred to Russia as the potential instrument of her downfall, there has been abundant expression; but of the nature of the relations between Austria and Hungary, and between Hungary and Croatia, which is so indispensable to a correct appreciation of the subject, and of the strictly legal and constitutional course pursued by the Hungarians in their contest with the imperial government, which appeals so deeply to the sympathies of those who recognise no true liberty save that guarded by law, we hear scarcely a word. No wonder that the excitement in favor of the Hungarians should have so soon subsided, if so little real knowledge of the true mer-

its of the question was accessible to the popular mind.

We hail then, with peculiar pleasure, the publication of a work, which, while it will add to the general store of our historical knowledge, promises to enlighten us on a subject, concerning which, there has been so much conflicting discussion—the general condition of the Austrian Empire, and the exact nature of its relations to the different provinces comprising it during the revolutionary crisis of 1848-'49. To those whose studies have led them to investigate the nature of the Austrian system, and to trace the progress of the events of the revolution with a view of determining in what respects that system was adapted for the purposes of rational government at the present day, and in what manner the revolution proposed to remodel it in order to insure the permanent establishment of freedom and good government for the millions under its sway, the task has been too often wearisome and unprofitable. Aside from the difficulty of determining *a priori*, even with a somewhat accurate knowledge of the history and characteristics of a people, what system of government presents the best chances of working well in practice, there has been in the way, at least of the American enquirer hitherto, an almost insurmountable difficulty in ascertaining the real facts of the case. Austria, perhaps, to a greater degree than any country in Europe, has been a *terra incognita*, to us. Her government was looked upon with that of Russia, as the great champion of the Absolutist cause in Europe, and the wonder excited by the news of a successful revolution in Vienna, was scarcely greater than the difficulty has since been, in determining from conflicting accounts, the character of the people, and the true meaning of the events of the revolution, and why, and how, that revolution appears to have produced so little permanent result. To decide why the new era, which dawned upon Austria so bright with political promise, soon became overcast, and has, after a brief duration and uncertain existence, sunk again into a hopeless night of despotism, is a problem as full of interest, as it has hitherto been difficult of solution. It increases very much the interest of the investigation of the subject, that our guide is an American, whose official position and moderate views may be considered as guaranties of the fairness of his statements, and the impartial spirit with which he appreciates events, of many of which, he was an eye witness.

Mr. Stiles is evidently impressed with the confusion of ideas, and want of correct elementary notions, concerning the history and general condition of the Austrian Empire. He appears to have conscientiously addressed himself to the

subject, by giving the reader an elaborate account in detail, of the events of the revolution, which is almost the only commentary needed upon its general scope and tendency. The two preliminary chapters, containing a very full historical sketch of each of the different provinces of the Empire, the mode by which they became constituent portions of it, the origin, character and history of the various races inhabiting the country, are full of valuable information, a knowledge of which is indispensable to a correct appreciation of the events of the revolutionary crisis. Mr. Stiles possessed some rare advantages for the preparation of such a work. *Chargé d'Affaires* of the United States in Vienna, from 1845 to 1849, he had an opportunity of calmly studying the character of the people, and watching the progress of events before the impending storm burst in all its fury upon the imperial house. It was, of course, an important part of his official duty, to keep his government informed of all the events of political interest, which transpired during his residence in Vienna. In addition, however, to the ordinary sources of information, which his official position required him to consult, he seems to have been busily engaged in collecting a large mass of material from other quarters, which has been of the highest value in illustrating the general subject. His book is evidently prepared in a pains-taking and impartial spirit, which commends it at once to the favorable consideration of those who have felt an interest in the subject, but who have despaired of arriving at the truth, not knowing how far they might place confidence in statements evidently thoroughly imbued with a partisan spirit. With unmistakeable American feeling, he does not attempt to disguise his sympathy with whatever was liberal and life-giving in the new era which the revolution inaugurated in Austria, nor does he conceal the expression of his regret at the mournful fate which so soon befel it; but we think it is impossible that any one can read the book, especially those chapters which relate to the Hungarian question, without feeling that the author was conscious of his responsibilities, and has preserved the calmness of a judge in the decision of a long contested and fiercely litigated cause. We look upon the work as a most creditable offspring of the diplomatic leisure of the Author, and a highly commendable effort on his part, to enlighten his country more on a subject where the voice of their representative must be necessarily potential.

The plan of the book we think simple and natural, and well adapted to keep clearly before the reader that general connexion of events in the various portions of the Empire, which is essential to a comprehensive idea of the revolution.

and its results. It is not easy, for instance, to understand the object and bearing of certain measures, adopted by the Hungarians, without clearly keeping in view the contemporaneous progress of events in Vienna and Lombardy; while many of the movements of Radetzky's army depended far more on the state of parties in the capital, and the progress of the Croatian insurrection, than upon the strategy of Charles Albert, or the success of his army. Such a view will be found, indeed, a clue, which will unravel much that seems obscure, and will explain many things which have given rise to serious controversy in a natural way.

It is not easy to acquire an understanding of the Austrian policy at any period of its history, or in any portion of the imperial dominions, without taking into consideration the various and apparently discordant materials of which the Empire is composed. There is no instance in history in which so heterogeneous a population has been ruled for so long a period by a common sovereign. The Empire of Austria, as at present constituted, is composed of three Kingdoms, one arch duchy, three duchies, four provinces, eight principalities, three bishoprics, besides eight smaller territorial jurisdictions, and is inhabited by seven races, differing in character, habits, language and religion. Nor is the difference in soil and climate, and in the advancement of the people in knowledge and civilization, less marked than that which exists in their political condition, and in their peculiarities of race. The polished, but luxurious and effete civilization of Lombardy has no more in common with the rude vigor of the military frontier settlements on the Banat, than the refinement of Paris with the restless energy of the Cossacks of the Don; and yet these distant provinces, differing, it would seem, in all that has hitherto produced different forms of government among mankind, have long acknowledged the sway of a common sovereign; and what is truly most extraordinary, it seems to have been the constant ambition of that sovereign to rule them all by a common system of centralization, the head of which is at Vienna, and the despotic energy of which is felt in the remotest provinces of the Empire. To rule a country composed of such discordant elements, so as to preserve even tolerable harmony, and to maintain the cohesion of its several parts, was a work of consummate difficulty. How it was done, and for so long a period done successfully, is an extremely curious subject for investigation, for the full understanding of which, we shall derive much assistance from Mr. Stiles' work. The exposition of the practical working of this Austrian system, by which something like unity of administration was preserved, is also full of in-

terest and instruction, as showing the extraordinary difficulties in the way of those who sought to remodel the government upon the basis of free institutions. To change such a system by a revolution in the sense of a liberal one, and yet preserve the integrity of the Empire, was a task far beyond the powers of the popular leaders whom the events of March, 1848, brought to the surface, and their efforts to bring it about resulted in practical absurdity, as the history of the times clearly indicates.

The different modes by which the various once independent portions of the Empire were brought under the imperial sway, form an exceedingly curious study. The acquisitions of the House of Austria by investiture, conquest, marriage, family compacts, and general territorial treaties, which terminated the great European wars in which she took so active a part, are among the most singular instances of the aggrandizement of the great powers, at the expense, and by the sacrifice of the weaker. In this department of his subject, Mr. Stiles has exhibited commendable industry and research. We scarcely know where to turn, to find a work in the English language, so full and accurate in its details, on these important but hitherto neglected and little understood subjects. The recent discussions on Panslavism, or the attempt to reconstitute the Slavic race on the basis of its nationality, has given a new interest to the early history of the nations of Eastern Europe, which renders the detailed account given by Mr. Stiles, extremely opportune. It is extremely interesting to remark how the absolutist and stationary system of the Empire, has been maintained by the adroit policy of the government in arraying the jealousies of the conflicting nationalities against each other, thus availing itself of the weakness resulting from want of union to carry out a system of common repression. A study of the history and character of these different nationalities shows but too clearly the wisdom of the government, in adopting such a system to effect their ends.

The importance of the position which Austria has long maintained in the European system, is well sketched by Mr. Stiles. After the Germanic imperial dignity became hereditary in the House of Habsburg, the influence and power of the Austrian Princes determined the action of the whole of Germany. In this way, the historical importance of the House of Austria becomes so blended with the events of the Empire, that it is not easy to separate them. The wars succeeding the reformation, however, were those in which the personal views of the Emperors were most decisive, and the results of which, have left the greatest influence upon her existing system. Long before her Princes exchanged the title of

Emperor of Germany for that of Emperor of Austria, she was one of the great powers, on whose policy in the general system of European politics, the peace of the whole continent, in a great measure, depended. Without a somewhat careful study of the position occupied by Austria for the last three centuries, we shall be at a loss to account for some of the more striking peculiarities of the civilization of Western Europe. It is difficult to say what would now have been the condition of the Catholic Church and the German Empire, had the House of Austria not waged war so fiercely and so obstinately against the Reformation. The changes produced by the general adoption of Protestantism, and the feebleness of the Germanic body, whose strength became completely undermined by the intestine wars which succeeded the Reformation, have exerted an influence upon all public transactions and private opinions since, which have remodelled the whole face of Europe, and the legitimate results of which, in the spirit of reform, and a spirit of nationality as opposed to centralization, are to this day potent, not in Austria only, but throughout Europe, for good or for evil.

Modern liberation on the continent, as an element of the science of politics at war with the state of society, consolidated by the feudal system, is generally considered as owing its development, if not its origin, to the French Revolution of 1789. It is singular, however, that in the Austrian dominions, the theory of popular government which was advocated by the political philosophers of the eighteenth century, was made the basis of reform in the ancient system by the Emperor himself, long before that event. While the courtiers in the *salons* of Versailles were loud in their praises of the republican theories of the Encyclopedists, and in their adulation of La Fayette, the country all the while groaning under the fearful misrule of priestly and state tyranny; while Frederick the Great was boasting that his highest ambition was to be thought the friend and disciple of Voltaire, and yet ruled his subjects with the iron hand of military despotism; while Catherine, the Semiramis of the North, could, at one moment, write a letter, inviting Didérot to St. Petersburg, to superintend the education of her son, and draw forth the celebrated eulogy of Voltaire—

"C'est du nord aujourd'hui d'où vient la lumière,"

while at the next, she signed the treaty for the partition of Poland, their cotemporary, Joseph II., Emperor of Germany, signalled his accession to the throne by the wildest projects of reform in the ancient system, and by an obstinate determination which never yielded to strike at the root of whatever he conceived to be abuses

in the administration, both civil and ecclesiastical, of his States. He suppressed Convents and seized upon their property for the endowment of Hospitals; he forbade any communication of the Bishops with the Court of Rome, and erected himself into the Supreme Judge, to the exclusion of the ecclesiastical jurisdiction, in matters of divorce. He was the only Sovereign who exhibited a strong resolve in carrying into effect those theories of change and reform, which the education of the philosophers of the eighteenth century had rendered fashionable. The success of his reforming projects, was, however, very small, and his epitaph was the best commentary on his career: "Here lies Joseph, who was unfortunate in all his undertakings." The influence of his Acts upon the Austrian system, so far as they opened an era of reform, passed away with his death, and Austria, in common with all the monarchical powers of Europe, was placed in such a position by the French Revolution, that the instinct of self-preservation was the only guide to her policy during the European wars which succeeded. After the overthrow of Napoleon, it was found by all the powers, that in defeating the French and restoring the Bourbons, they had but half achieved the conquest of the revolution. During the progress of the war, liberal ideas had spread, the light of freedom had, as it has been said, streamed in for the first time, on Austria, through the chinks made in the old system by the French bayonets, and there were hopes excited by success, which it was dangerous to repress, at the risk of another such convulsion as that which had just heaved Europe to its centre. The Congress of Vienna was avowedly called together, to remodel the territorial system of Europe, which Napoleon had arranged with a view of dividing the spoils of his conquests among his successful soldiers, upon a just and equitable basis, having respect to the ancient affinities and long established habits of the various nations, as well as to determine upon some plan in concert for satisfying the just exigencies of the people. The high hopes which were formed from the assembling of this Congress of the establishment of the peace of Europe on the solid basis of liberty, secured by law, were, as is well known, destined to disappointment. The German people particularly, felt themselves both insulted and betrayed by the result of the Congress. At the bidding of their sovereigns, and with the most solemn promises that the struggle once over, a system of representative government should be introduced in each State, the people of all Germany, of every age, rank and condition, rushed into the "War of Liberation," as it was called, against France, with a fervor of enthusiasm unknown in history.

since the days of the first Crusade. The Congress of Vienna, in bitter mockery of their heroism and devotion, distributed the territory which the French had usurped, with a reckless disregard of the feelings and interests of the populations in no way inferior to the French themselves, and separated, without any further guarantee of constitutional government, to the different European States, than the vague promise contained in the 13th article of the treaty, the practical interpretation of which served only to deceive and delude the people, and rouse them to violent indignation at their betrayal. In carrying out this perfidious purpose in the Congress, Austria was the master-spirit. When the Emperor, Alexander, was disposed to be liberal, she, under the guidance of that most amiable, but singularly narrow-minded Sovereign, Francis, opposed the slightest concessions to the spirit of the age, a policy which sowed the seeds of that sudden and fearful revolution which had well nigh cost the House of Habsburg its inheritance. The policy pursued by the Austrian government after the close of the war, both in her internal administration, and in her relations with foreign powers and the Germanic body, forms a most interesting chapter in the art of governing. It may, in a word, as far as its own subjects were concerned, be described as a system which had for its object the development of the sources of material prosperity and an undue exaltation of mere sensual wants, while it repressed free discussion on all subjects of political or social advancement, as high treason against the safety and welfare of the State. To this want of political education, is, in a great measure, doubtless due that general confusion of ideas of the practical art of governing, which was so conspicuous an element of the failure of the popular cause in 1848, not in Austria only, but throughout Germany. This stationary system met with little opposition in Austria, but in other parts of Germany, where the population was more enlightened, and where the hope of the establishment of a liberal system had been the great incentive held out to the gigantic efforts which were to drive out of the country the detested French, Austria found it necessary, in order to quicken the zeal of those States of Germany which were at first disposed to act in good faith towards their subjects, to exert her predominant influence by a system of repression, which manifested itself in a way even more galling than a foreign yoke. In Prussia, and in many of the minor States under her influence, through the exertions of her Ministers, Stein and Hardenburg, after the battle of Jena, an intensely national spirit had been developed, and kept pace with an ardent desire for a liberal constitutional system, and it was to the enthusi-

asm produced by such a spirit, especially among the young men in the Universities, that Germany was indebted for her deliverance from the French in 1813. In a large portion of Germany, for a few years after the close of the war, every thing bid fair to the development of constitutional life. In most of the States, the censorship of the press was actually abolished, legislative assemblies somewhat restricted, it is true, in their powers, were introduced, and the national opinion diffusing itself through a multitude of liberal journals, afforded just expectations of progressive improvement. In these circumstances, Austria deemed it seasonable to strike a decisive blow. In order to repress the rising spirit of Germany, indignant at the delay in the execution of the promises to establish representative systems, and to introduce everywhere that same political torpor which held the population of the Imperial dominions in such passive obedience, she employed unceasingly her predominant interest in the Diet, and brought into action all the resources of the diplomatic influence. Prussia was induced to abandon the liberal national course on which she had entered after the battle of Jena, and from the year 1818, the form and mode of political life in Germany, has been, to a great extent, moulded by Austrian influence. At the Congress of Carlsbad, in 1819, a death-blow was given to all the hopes of the liberal party in Germany, by the adoption by that body, with the general consent of the different governments, of measures which attacked the spirit of discontent in its focus and centre. By these measures, a degrading system of police was established in the Universities, under whose *surveillance*, instruction in every department was carefully watched in order to detect the expression of any sentiment supposed to be liberal, and therefore offensive to the existing authorities. The most learned and popular Professors, some of whom, like John and Arudt, had been most successful in rousing the youth of the country to rush into the war against France, were persecuted in every conceivable mode of mean and petty annoyance, many suffered from imprisonment, or were driven into exile. Not content with aiming a death-blow at the conspiracy, as it was called, by depriving it of its leaders, they determined to render their work effectual by a most rigid system of censorship of the press. By these means faithfully executed, it was fondly imagined by Austria, that peace and tranquillity would be insured to the German people, and that the revolutionary hydra would be forever crushed in the dust; but she had forgotten that justice is eternal, and that truth must prevail, although she was endeavoring slowly to corrupt and poison the life-blood of the nations, and force them

Emperor of Germany for that of Emperor of Austria, she was one of the great powers, on whose policy in the general system of European politics, the peace of the whole continent, in a great measure, depended. Without a somewhat careful study of the position occupied by Austria for the last three centuries, we shall be at a loss to account for some of the more striking peculiarities of the civilization of Western Europe. It is difficult to say what would now have been the condition of the Catholic Church and the German Empire, had the House of Austria not waged war so fiercely and so obstinately against the Reformation. The changes produced by the general adoption of Protestantism, and the feebleness of the Germanic body, whose strength became completely undermined by the intestine wars which succeeded the Reformation, have exerted an influence upon all public transactions and private opinions since, which have remodelled the whole face of Europe, and the legitimate results of which, in the spirit of reform, and a spirit of nationality as opposed to centralization, are to this day potent, not in Austria only, but throughout Europe, for good or for evil.

Modern liberation on the continent, as an element of the science of politics at war with the state of society, consolidated by the feudal system, is generally considered as owing its development, if not its origin, to the French Revolution of 1789. It is singular, however, that in the Austrian dominions, the theory of popular government which was advocated by the political philosophers of the eighteenth century, was made the basis of reform in the ancient system by the Emperor himself, long before that event. While the courtiers in the *salons* of Versailles were loud in their praises of the republican theories of the Encyclopedists, and in their adulation of La Fayette, the country all the while groaning under the fearful misrule of priestly and state tyranny; while Frederick the Great was boasting that his highest ambition was to be thought the friend and disciple of Voltaire, and yet ruled his subjects with the iron hand of military despotism; while Catherine, the Semiramis of the North, could, at one moment, write a letter, inviting Didérot to St. Petersburg, to superintend the education of her son, and draw forth the celebrated eulogy of Voltaire—

"C'est du nord aujourd'hui d'où vient la lumière,"

while at the next, she signed the treaty for the partition of Poland, their cotemporary, Joseph II., Emperor of Germany, signalled his accession to the throne by the wildest projects of reform in the ancient system, and by an obstinate determination which never yielded to strike at the root of whatever he conceived to be abuses

in the administration, both civil and ecclesiastical, of his States. He suppressed Convents and seized upon their property for the endowment of Hospitals; he forbade any communication of the Bishops with the Court of Rome, and erected himself into the Supreme Judge, to the exclusion of the ecclesiastical jurisdiction, in matters of divorce. He was the only Sovereign who exhibited a strong resolve in carrying into effect those theories of change and reform, which the education of the philosophers of the eighteenth century had rendered fashionable. The success of his reforming projects, was, however, very small, and his epitaph was the best commentary on his career: "Here lies Joseph, who was unfortunate in all his undertakings." The influence of his Acts upon the Austrian system, so far as they opened an era of reform, passed away with his death, and Austria, in common with all the monarchical powers of Europe, was placed in such a position by the French Revolution, that the instinct of self-preservation was the only guide to her policy during the European wars which succeeded. After the overthrow of Napoleon, it was found by all the powers, that in defeating the French and restoring the Bourbons, they had but half achieved the conquest of the revolution. During the progress of the war, liberal ideas had spread, the light of freedom had, as it has been said, streamed in for the first time, on Austria, through the chinks made in the old system by the French bayonets, and there were hopes excited by success, which it was dangerous to repress, at the risk of another such convulsion as that which had just heaved Europe to its centre. The Congress of Vienna was avowedly called together, to remodel the territorial system of Europe, which Napoleon had arranged with a view of dividing the spoils of his conquests among his successful soldiers, upon a just and equitable basis, having respect to the ancient affinities and long established habits of the various nations, as well as to determine upon some plan in concert for satisfying the just exigencies of the people. The high hopes which were formed from the assembling of this Congress of the establishment of the peace of Europe on the solid basis of liberty, secured by law, were, as is well known, destined to disappointment. The German people particularly, felt themselves both insulted and betrayed by the result of the Congress. At the bidding of their sovereigns, and with the most solemn promises that the struggle once over, a system of representative government should be introduced in each State, the people of all Germany, of every age, rank and condition, rushed into the "War of Liberation," as it was called, against France, with a fervor of enthusiasm unknown in history.

since the days of the first Crusade. The Congress of Vienna, in bitter mockery of their heroism and devotion, distributed the territory which the French had usurped, with a reckless disregard of the feelings and interests of the populations in no way inferior to the French themselves, and separated, without any further guarantee of constitutional government, to the different European States, than the vague promise contained in the 13th article of the treaty, the practical interpretation of which served only to deceive and delude the people, and rouse them to violent indignation at their betrayal. In carrying out this perfidious purpose in the Congress, Austria was the master-spirit. When the Emperor, Alexander, was disposed to be liberal, she, under the guidance of that most amiable, but singularly narrow-minded Sovereign, Francis, opposed the slightest concessions to the spirit of the age, a policy which sowed the seeds of that sudden and fearful revolution which had well nigh cost the House of Habsburg its inheritance. The policy pursued by the Austrian government after the close of the war, both in her internal administration, and in her relations with foreign powers and the Germanic body, forms a most interesting chapter in the art of governing. It may, in a word, as far as its own subjects were concerned, be described as a system which had for its object the development of the sources of material prosperity and an undue exaltation of mere sensual wants, while it repressed free discussion on all subjects of political or social advancement, as high treason against the safety and welfare of the State. To this want of political education, is, in a great measure, doubtless due that general confusion of ideas of the practical art of governing, which was so conspicuous an element of the failure of the popular cause in 1848, not in Austria only, but throughout Germany. This stationary system met with little opposition in Austria, but in other parts of Germany, where the population was more enlightened, and where the hope of the establishment of a liberal system had been the great incentive held out to the gigantic efforts which were to drive out of the country the detested French, Austria found it necessary, in order to quicken the zeal of those States of Germany which were at first disposed to act in good faith towards their subjects, to exert her predominant influence by a system of repression, which manifested itself in a way even more galling than a foreign yoke. In Prussia, and in many of the minor States under her influence, through the exertions of her Ministers, Stein and Hardenburg, after the battle of Jena, an intensely national spirit had been developed, and kept pace with an ardent desire for a liberal constitutional system, and it was to the enthusi-

asm produced by such a spirit, especially among the young men in the Universities, that Germany was indebted for her deliverance from the French in 1813. In a large portion of Germany, for a few years after the close of the war, every thing bid fair to the development of constitutional life. In most of the States, the censorship of the press was actually abolished, legislative assemblies somewhat restricted, it is true, in their powers, were introduced, and the national opinion diffusing itself through a multitude of liberal journals, afforded just expectations of progressive improvement. In these circumstances, Austria deemed it seasonable to strike a decisive blow. In order to repress the rising spirit of Germany, indignant at the delay in the execution of the promises to establish representative systems, and to introduce everywhere that same political torpor which held the population of the Imperial dominions in such passive obedience, she employed unceasingly her predominant interest in the Diet, and brought into action all the resources of the diplomatic influence. Prussia was induced to abandon the liberal national course on which she had entered after the battle of Jena, and from the year 1818, the form and mode of political life in Germany, has been, to a great extent, moulded by Austrian influence. At the Congress of Carlsbad, in 1819, a death-blow was given to all the hopes of the liberal party in Germany, by the adoption by that body, with the general consent of the different governments, of measures which attacked the spirit of discontent in its focus and centre. By these measures, a degrading system of police was established in the Universities, under whose *surveillance*, instruction in every department was carefully watched in order to detect the expression of any sentiment supposed to be liberal, and therefore offensive to the existing authorities. The most learned and popular Professors, some of whom, like John and Arudt, had been most successful in rousing the youth of the country to rush into the war against France, were persecuted in every conceivable mode of mean and petty annoyance, many suffered from imprisonment, or were driven into exile. Not content with aiming a death-blow at the conspiracy, as it was called, by depriving it of its leaders, they determined to render their work effectual by a most rigid system of censorship of the press. By these means faithfully executed, it was fondly imagined by Austria, that peace and tranquillity would be insured to the German people, and that the revolutionary hydra would be forever crushed in the dust; but she had forgotten that justice is eternal, and that truth must prevail, although she was endeavoring slowly to corrupt and poison the life-blood of the nations, and force them

at last, shorn of strength and vigor, to lie prostrate at her feet.

In many of the States of Germany, they caused their policy of repression to be carried out by the different governments, and for some time an appearance of outward tranquillity and general advancement in the natural comforts of the people flattered its authors with the hope of permanent success. But a deep-felt, wide-spread spirit of disaffection prevailed, which was not the less real, nor the less dangerous, because its expression was hushed until a fitting opportunity should arise to speak in a tone which must command respect.

The modes by which this system of absolute government was brought to bear upon every man's home and family and daily life, and thus became the source of practical grievances of perpetual irritation, are very clearly detailed, and certainly form one of the most interesting portions of the work. From them we can derive some idea of the much vaunted blessings of paternal government, and form some notions of the character of perfidy and meanness of that policy, which must be adopted, at the present day, in order to maintain for one hour the existence of so unnatural and cruel a system of despotism as that which prevails in Austria. He refers to some of the means by which the government was able to carry this system in Austria into practical operation, and classes them under distinct heads—viz: the Bureaucratic system, the Monopolies in trade, the Patronage of the Church, Education, the Censorship of the Press, Espionage, Examination of Letters, Habitual Confession, and the Standing Army. By these different media, the poison of despotism is distilled throughout the body politic, and the common end of general corruption and the preservation of the instincts and desires of mere animal life is attained. Some of the details are very curious. Take, for instance, the account of the manner in which the censorship of the press is employed:

"In Vienna, twelve censors are established, to some of whom every book published within the empire, whether original or reprinted; every article which appears in the newspapers, even to an advertisement, must be submitted. * * * It is not permitted to elucidate the actually established political system, the dreaded discovery of whose weakness is carefully guarded against by purging the language of common usage from all such dangerous words and expressions, as 'popular rights,' 'popular opinion,' 'public spirit,' and 'nationality.' Their corrections are sometimes exceedingly ludicrous, as appears from the following example of a work treating of conflicts quite unconnected with the Austrian empire, where the expression, 'heroic champions,'

was cut down to 'brave soldiers,' and 'a band of youthful heroes who flocked around the glorious standard of their country,' became 'a considerable number of young men, who voluntarily enlisted themselves for the public service.'"

Another illustration of the "paternal care" with which the government shields its subjects from even the suspicion of danger, is found in the extraordinary means adopted to prevent the Post Office from becoming the vehicle of treason.

"The Post," says Mr. Stiles, "under the reign of Joseph II. was connected with the police of the city, and with the most secret Cabinet of the Emperor, and its operations were brought to great perfection under his Prime Minister Kaunitz. The letters were opened, and the seals imitated with a skill which defied detection. The copies of all such correspondence, whose importance warranted the labor necessary in transcribing them, were by order of the Emperor Francis laid upon his table each day at seven o'clock, by which hour he had returned from morning mass, and the perusal of these documents, together with the reports of the secret police upon the subject of the foreign ambassadors and ministers, their indulgences, expenses, connections, and transactions in the city, which were also presented at the same hour, constituted, it is said, by far the most agreeable portion of his matinal exercises." * * * "The correspondence between Russia and Prussia in regard to Poland in 1772, coming to light in this manner, led to the establishment of separate government mails and private couriers, and to this day no foreign ambassador or minister in Vienna thinks for a moment of committing his dispatches to an Austrian post, but private couriers take charge of and convey their entire correspondence."

We hear much said in praise of the general diffusion of education in Austria, that it is gratuitous, and compulsory; and it has amazed many persons that in such circumstances the doctrines of "passive obedience" should have been so generally acquiesced in. But it would appear that the system there pursued is in keeping with the policy of the government in other respects, and that so far from stirring the public mind to active exercise in the investigation of the great questions of truth, interest and duty, it is actually but another instrument in the hands of despotic power to enslave and corrupt the minds of its subjects. Truly may it be said, that the torch of truth has been struck from the hands of those best qualified to hold it, in a country most in need of its life-giving influence. The spirit which guides the policy of the government in this respect, is faithfully given by Mr. Stiles.

"The Emperor Francis," says he, "at the Congress of Laybach, in an address to the professors of a public seminary, enjoined them to be careful not to teach their pupils too much;

he did not want learned or scientific men, but obedient subjects; the leading principles of education to consist in guarding the mind against the danger of entertaining political errors, instead of encouraging its full development by the free exercise of the faculties, and well-regulated self-dependence. The various scholastic institutions are so regulated as to teach the several classes what is necessary for their respective callings, and at the same time to inculcate the precepts of religion and the duties of morality. In fact, throughout all the institutions of the Austrian empire, the system of studies prescribed by the State is in perfect keeping with its principles of government, acting always on the defensive, and jealous lest any thing should intrude itself opposed to the prerogatives of the civil authority, the laws of the country, or the rights of the sovereign."

It was by a generation educated under such a system, and in such principles, be it remembered, that an attempt was made in the heat of a popular revolution, to reduce to practical operation the theory of self-government in such a country as Austria. In such considerations as these alone, can we not find sufficient ground for their ignominious failure.

We willingly turn now to a view of the general condition of the empire, which exhibits the development of its internal policy in a much more favorable light. It cannot be denied, that the principle of total avoidance of the excitement of political discussion, once firmly established and fully recognized, Austria has, since the peace of 1815, not been backward in the development of the material resources of the country. She may have moved slowly in the march of improvement, and the proverbial German caution, has, in her fear of innovation, amounted often to timidity, still she has steadily encouraged the adoption of those measures which would conduce to the material comfort and well being of her people. There may have been as much of policy as of humanity in this system, yet we think no one who has travelled in her extensive territories, and examined her public institutions of beneficence, can deny that the epithet of "well-ordered Austria" has been justly applied to her. According to Mr. Stiles, she has, in common with the other despotic powers, "constructed roads and canals, encouraged agriculture and manufactures, and reformed the laws of trade, abolished local and subordinate oppressions, endowed seminaries of learning, inculcated a reverence for religion, and patronized academies of arts, and all this good she has not hesitated to perform at the instigation of that more enlightened, but more determined hostility to popular rights, by which she has ever been professedly actuated, and with a view merely to these two plain consequences. In the first place, that by increasing

the wealth and population of her subjects she might be enabled to draw from them larger taxes and supplies, and to recruit greater armies to uphold her tyrannical pretensions; and in the second place, that by keeping the body of the people, in other respects, in a comfortable condition, she might have a better opportunity of reconciling them to the privations of political rights, and not be annoyed by the discontents which arise from distress, and be forced to combat at the same time those which arise from injustice."

Such is an outline of some of the features of that system of government, which was in practical operation in the Austrian empire at the commencement of the year 1848. The people were treated like children. The government did every thing for them, and suffered them to take no part worth speaking of in the direction of national affairs. There was neither liberty of speech, nor liberty of action, nor freedom of the press. Those institutions which teach the people how to raise themselves, and which make it possible for them to raise themselves, by perseverance and temporary self-denial, were unknown; the spirit of independent and self-sustaining action, which are their only true support, being carefully smothered in its faintest aspirings. The wonder is, that when they were cast upon their own unrestrained indulgence, not that riots and bloodshed took place, but rather that the whole of the empire was not convulsed by a horrible civil war, which would have raised every man's hand against his neighbor, and which would have been marked by atrocities, compared with which the tale of the horrors of the first French Revolution would seem but a pastoral idyll. It can hardly then be surprising, that a population reared in such a state of tutelage, should become gradually material in all their views, corrupt and sensual in their desires, and without faith or trust in their political opinions. As a natural result, while they preserved the forms, they heeded not the restraints of religion, and reciprocated the distrust of the government by cherishing secretly a spirit of disloyalty to their sovereign, and a disposition to murmur, as far as prudence would permit, when the practical grievances of the system bore with peculiar severity upon them. Such was the state of things, when the news of the overthrow of Louis Philippe, which had been always looked forward to as the toxin of revolution throughout Europe, burst upon the astounded senses of governors and governed—for the oppressor, like the knell of doom; for the oppressed, as the joyful shout bailing the birth of freedom. In the hereditary provinces, it was expected that the apparent general contentment of the people, and their supposed loyalty to the Imperial House would have checked in the out-

set any manifestation of revolutionary excess. It was soon very clear, however, that notwithstanding the precautions of the government, and the supposed apathy of its pleasure-loving people, Vienna would soon become enveloped in that blaze of enthusiasm for popular institutions, which at that time burned so fiercely in all the capitals of the continent. Nothing, indeed, can show more clearly the inherent weakness of despotism, and how absurd it is to expect that so unnatural a system should have any solid foundations in the interests and feelings of the people, than the unanimity with which after the first outbreak, the demands for "freedom of the press," "a national guard," "trial by jury," and a "constitution," as panaceas for the popular ills, were made. On the 13th March, 1848, the movement commenced in Vienna, by petitions for a popular representation of some real influence. The combined weakness and imprudence with which these demands were met by the authorities, emboldened the mal-contented and brought about a collision between the military and the people. After the first rude shock, we have a repetition of those scenes so characteristic of the disturbances in 1848 all over the continent—of concessions made and constitutions granted, of professions of loyalty to the sovereign, of general amnesty, of wild enthusiasm, of rejoicings and illuminations in honor of the commencement of so bright an era. When we consider the intoxication of those days, can we wonder that even sober-minded people, within the pale of its influence, should have believed that a political millenium was dawning? How melancholy the contrast now between the brightness of that day and the hopeless night which shrouds the same political horizon!

The excitement of the struggle over, the great difficulty was to organize the victory, rather than to achieve it. It cannot be denied, that to the complete ignorance of those to whom the popular tumult gave the direction of affairs, both of the mode of engrafting new ideas on the ancient system, so that it might derive vigor from the infusion of a new principle, rather than perish from the sudden rudeness of the shock, as well as to their utter want of familiarity with the details of the administration of the government, is in a great measure owing that increasing tendency to absolute anarchy which marked the progress of the revolution, and which, perhaps, more than any other one cause produced a reaction against the liberal party. Metternich once gone, the secret police system abolished, and new men and new measures introduced, it was found that the government machine could not be made to perform its ordinary and accustomed functions. Those who were at the head of affairs, by their

weak and vacillating policy, directed wholly by popular clamor, and utterly deficient in that rude energy which a revolutionary crisis demands, embarrassed rather than aided its action.

Mr. Stiles' account of the events of the revolution in Vienna, is not less remarkable for the picturesque interest of its details, than full of instruction in pointing out step by step the gradual descent to the most frightful of all despotisms, a state of complete anarchy, to which the adoption of such a policy inevitably leads. These details of events merit a careful study; they carry their own moral with them, and the important lessons they teach are too obvious to need an enlarged commentary. Aside from all other considerations, a view of the state of affairs in Vienna, from March to October 1848, clearly shows that to have achieved success at such a crisis, when insurrection was rampant at Milan and Venice, when Bohemia and Hungary were demanding constitutions, by which it was supposed their independence was to be assured, while an armed mob ruled in the capital, and every man's grievances were to be redressed, would have required a combination of the rarest qualities of statesmanship, but that in the hands of the pigmies, whom the popular breath had blown to the surface, after the revolution, the task was hopeless.

Nothing could have been more imposing than the comparative calmness and freedom from excess, which characterized the early days of the revolution. But when the work of re-organization was to be effected, then began the struggle between the wild dreams of the German political philosophy, and the bureaucratic spirit of the ancient system. Emissaries soon reached Vienna from all parts of Europe, and held up before the excited imagination of the populace the promise of material joys, by the infusion of socialistic theories into the new government. Political clubs were formed, "United Germany" became the watch-word of the day, and an active correspondence was kept up between the leaders in Vienna and the republican orators of the Germanic Diet at Frankfort. The German national flag supplanted the Austrian in the imperial capital, and the appellation of "*Schwarzgebb*," or Austrian, became a hy-word of reproach. The press, loosed from its long thraldom, signalized its new freedom by becoming the vehicle of inflammatory appeals and denunciations, rather than the instrument of moderating the violence of the popular passions. The students of the University, whose prominence in all the events of the revolution, was one of the most curious things in it, began to cultivate a cordial intimacy with the "*proletaria*," lower class of the laboring population, whom the dis-

orders consequent upon the state of the city, had of course thrown out of work, and thus acquired control of a most potent instrument in the work of disorganization. This poison soon produced its effect, in their compelling the government to employ workmen, at the expense of the State, in the execution of the most needless and absurd projects. The excitement among all classes was fearful, the ordinary routine of business was entirely suspended, and among the more timid, even at this early period, fears of some dreadful catastrophe prevailed.

On the 25th of April, the Emperor published the promised constitution, which contained the usual provisions for the maintenance of the representative system, and guarantees for personal liberty, and the security of private property. It was principally remarkable, however, from the grant which it contained of separate legislatures to the respective provinces of the Empire, thus insuring to these provinces a *quasi* independence.

Notwithstanding the expressions of joy and gratitude with which the announcement of the constitution was received, the tranquillity of the city was not preserved for any length of time. On the 4th of May, an armed mob broke into the official residence of the Prime-Minister, Count Ficquelmout, and insisted upon the immediate resignation of that officer, without ever deigning to inform him in what way he had offended the majesty of the people. For the details of this most extraordinary proceeding, we refer the reader to the 129th page of Mr. Stiles' first volume. On the 14th another mob marched against the imperial palace, and with a threatening aspect of violence, presented a petition to the Emperor, as king, that in the proposed new parliament, there should be one chamber instead of two. Although the palace was guarded by a large body of troops, and every preparation had been made for a vigorous use of their power, such was the terror which the mob inspired in the Sovereign and his weak-minded advisers, that the demands of the petition were at once granted. Such repeated violence at last shocked so severely the nerves of the poor Emperor, that on the 16th, abandoning his capital, he fled with his court to Innspruck, in the Tyrol. After the withdrawal of the Emperor, disorder ran riot in the devoted city. The ministry made a feeble attempt to dissolve the Academical Legion, composed of students, under whose leadership the existing state of anarchy and confusion had been brought about, and had actually arrayed a large military force to execute their order, but soon yielded, as usual, to the threats of the mob, and withdrew the troops, burning with shame and indignation, from the city. The terrible scourge of mob rule, the most unreasonable and exacting

of all species of tyranny, was felt by every man, even in the most private relations of life. The state of Vienna, at this time, is thus vividly portrayed by Mr. Stiles—

“No one could now walk the streets of Vienna without the fear of injury. Every where appeared placards of menace and violence. It was quite usual for creditors to penetrate the houses of their debtors, insulting them, when unwilling or unable to respond to their unreasonable demands. Any one who disapproved of such disorders was visited with summary vengeance; and if one desired to gratify his long cherished hate, it was only necessary to hint to the mob, that the unhappy victim had expressed a sentiment, or performed an act, favorable to order and good government. There was no personal security, for any well-attired individual was liable to insult while quietly promenading the streets. In this exigency the police acknowledged its inefficiency; the national guard shrugged their shoulders, and the ministry, terror stricken, sought refuge either in flight or obscurity upon the first symptoms of danger.”

If such was the state of the capital, we may well conclude with Mr. Stiles, that “the time had arrived when the temporary connexion between the friends of free government and the enemies of all government had to be dissolved, if the results of the Revolution were ever to assume the shape of regular institutions and established laws, and when a reaction must take place, not in favor of the old and extinct order of things, but in favor of real freedom, and against anarchy.”

Many looked for relief from the assembling of the Diet, but the composition of this body, both from its utter incapacity for parliamentary duty, and from the unenlightened character of the deputies, sixty of whom could neither speak nor understand German, forbade any hope from that quarter. The majority soon proved as factious and as entirely given over to the arts of demagoguery, as the leaders of the mob themselves. With such elements of failure, can it be wondered at that the revolution in Austria was so barren of any good practical result? Day by day the progress to complete anarchy was rapid and fearful; mob-law ruled supreme, and it became evident that a crisis which had long been foreseen was fast approaching. On the 26th of September, the departure of some regiments, which the ministry had dispatched to Hungary to aid Jellachich in his operations in that country, was opposed by the mob. This brought on a fearful collision between the troops and the people, in which the latter accomplished their purpose. Excited by their triumph, they rushed to the War office in order to wreak their vengeance on Count Latour, the minister of war.

Meeting with no resistance from the panic-stricken soldiers, who mounted guard at the ministry, they seized the unfortunate Latour, brutally murdered him, and treated his lifeless body with every species of indignity and insult. Furious from this task of blood, they attacked the arsenal and made a desperate effort to possess themselves of the arms which it contained. In the midst of this reign of terror, the Emperor again abandoned his capital, and called upon all those who loved Austria to rally around him, and aid him in inflicting a merited chastisement upon the rebellious city. The energy of despair seemed now to direct the Imperial councils, and Prince Windischgrätz, with an army of one hundred thousand men, was sent to bombard the city into submission. Of the exciting scenes of this bombardment, Mr. Stiles was an eye-witness; and there is no portion of his work of such absorbing interest, as his truthful description of its horrors. We know nothing in history more striking and dramatic in its effect, than this fearful, final act of the short tragedy of the revolution, or more mournful and impressive, than the lesson which it teaches of the terrible energy of that instinct of self preservation, which society puts forth when its existence is threatened by popular excesses.

We turn with very great interest to Mr. Stiles' views on the Hungarian question, and it is easy to perceive that in this particular department of his historical sketch, he has been zealous in making good use of the advantages for gaining reliable information on the subject, which his position afforded. He appears to have avoided the common error of discussions on this subject, that of going to extremes. He seeks to judge the Hungarians by the standard of their own constitution, and not by that of the liberalism of Western Europe. Thus he does not think it necessary, in order to justify or explain his sympathy with them in their struggle, to prove that they were republicans; on the contrary he does not hesitate to condemn the exclusiveness of their system and their many political sins, but he contends that as against Austria they had certain constitutional rights as an independent kingdom, fully recognized and guaranteed by that power, many times in successive ages against an encroachment on which resistance was not only justifiable, but entirely legal. In other words, that they were defending unquestionable rights from assault, rather than seeking for any new concessions or privileges. The Hungarian constitution, he looks upon, notwithstanding the system of aristocratic rule and Magyar predominance which it sanctioned in former times, as containing the germs of a free representative government, whose forms had been in familiar prac-

tical operation in the nation for centuries, and which needed but the modifications which were introduced in 1848 to enable it to develop freely and in perfect harmony the interests and welfare of all classes and of all nationalities. This view of the subject will disentangle its discussion from the many perplexities in which it has heretofore been involved, and will cause it to be judged by the true standard. That constitution is now in the dust, struck down by the ruthless hand of Russia and Austria; still, as a monument, which for eight hundred years gave shelter and protection to a great people, who, when it was assailed, freely offered their best blood for its preservation, it is well-deserving the respectful consideration of the student of history, and will well repay the lingering of an hour among its venerable ruins.

The great difficulty with many persons, in understanding the position of Hungary, arises from considering her a province of Austria, whereas she has never been a province of the empire; and her whole history since her connexion with the house of Habsburg, is a series of attempts on the part of Austria to reduce her to that position, and of obstinate resistance on the part of the Hungarian Diets in maintaining the independence of their country. The plain language of the compacts between the parties, their public acts, the demands of the Diet on the one hand, and the concessions of the king on the other, during the whole period since the accession of the first Habsburg to the throne, establish as clearly the independence of Hungary as against Austria, as it would be possible to show historically the independence and absolute sovereignty, *de jure*, of any power in Europe. Hungary, it should be remembered, came under the sway of an Austrian prince not by conquest—not even by hereditary succession, but as the result of the free election of her Diet, who in virtue of their powers as the representatives of the country, chose as a king, a prince, who happened at the same time to be invested with the sovereignty of the Arch Duchy of Austria and the kingdom of Bohemia, each of them as entirely independent of the other as Hungary was of both. The Diet, after the disastrous battle of Mohacs, where King Louis, with all the flower of the Hungarian chivalry, fell fighting against the Turks, chose as sovereign of this elective monarchy, (1526,) Ferdinand, Arch Duke of Austria, who was recommended to their choice because he had married the sister of their late monarch, and because they might hope from so powerful a prince, speedy succor against the Turks, who at that time had over-run the country. Before his coronation, he signed an Act by which he abjured all title to the throne, save that which he could claim from

the choice of the Diet, and on that occasion he took the oath always administered before and since to those crowned kings of Hungary, to govern according to the customs of the country, and guaranteed the preservation and enforcement of all the laws which had been settled by the Diet. He recognized the independence of the country so fully, as even to adopt the Golden Bull of Andreas II., which permitted any noble, who conceived that the king was violating the laws, which he had sworn to maintain, to resist his authority without incurring the penalties of treason.

Notwithstanding their coronation oath, the Austrian princes showed little disposition to be faithful to their engagements, or to govern in accordance with the principles of a body which shackled so much their tendencies to absolute rule as the Hungarian Diet. Hence arose a series of disputes between the Diet and their kings. Emperors of Germany, in regard to their respective pretensions to authority in the country, which continued at short intervals from the period of the accession of the House of Habsburg down to the recent revolution—disputes which invariably terminated in renewed acknowledgments on the part of Austria of the independence of Hungary and the constitutional rights of the Hungarians. The complaints of the Diet, of the violation of their privileges and jurisdiction, were unceasing. In 1608, under Matthias II., an attempt was made to reduce the number of towns sending deputies to the Diet, which produced a violent protestation, but with no result. Leopold I., (1653,) it would seem, had a design of entirely subverting the Hungarian constitution, and dispensing with the Diet, to reduce the government to the simplicity of despotism. Still he could not silence the indignant voice of the Diet, who complained that the high office of Palatine had become degraded in its dignity and power, that the military and civil employments were bestowed on foreigners, that is, Austrians, and the Protestants were persecuted on account of their religion. Better, far better, said they, would we have been under the rule of the Turks. The king answered this protest by a bloody persecution, which has rendered the name of Leopold I. infamous for cruelty, not only in Hungary, but throughout Europe. In 1687, the Diet established the succession to the throne as hereditary in the House of Habsburg, in the male line. But this resolution, even after the terrible ordeal of the bloody "Court of Eperies," was only extracted from it by promises that the Diet should be convened at regular intervals, that the king would hereafter govern according to the laws, and that a council, *excelsam concilium locum-tenentiale Hungaricum*, whose duty it should be to

see to the execution of the laws adopted by the Diet, should be established in Hungary. The spirit and determination of the people, and their attachment to their ancient constitution and Diet, could not be broken. The establishment of the Pragmatic sanction by the Diet, (1723,) by which the crown of Hungary was made hereditary in the female as well as the male line of the House of Habsburg, was not accorded by that body without the embodiment in the decree, by which it was adopted, of the most emphatic declaration of the independence of the country, and a solemn guarantee on the part of the sovereign to maintain it, *in omnibus tam diplomaticis, quam aliis quibus, vis juribus, libertatibus, privilegiis, immunitatibus, consuetudinibus, prærogativis et legibus hactenus concessis et conditis, ac in præ-senti Diæta, et in futurum etiam diætali-ter con-dendis.*

To a theoretical reformer, like Joseph II., whose grand notion of the perfection of government was that of an ideal unity, the system which prevailed in Hungary, peculiarly suited to the national habits and predilections of the people, and differing wholly from the administration of his hereditary States, could not be otherwise than distasteful. Hence, regarding the Diet as a stumbling block to his projects of reform, he determined to administer the government of the country without it. He was never crowned King of Hungary, and during his reign of ten years never convoked the Diet. At his death, the indignation of the Diet, called together to acknowledge his successor as their king, could not be contained. They at first refused to acknowledge him, considering him the successor of a perjured king, declared that Joseph II. had never reigned in Hungary, and voted all his acts illegal, null and void. It was not until the Diet had been convoked a second time, and they had had in the mean time some experience of the sincerity of Leopold II., and his liberal and indulgent policy, that they were willing to acknowledge him. But they were not brought to this resolution without the most emphatic declaration of the nature of the relations between Austria and Hungary, which the history of the country during the connexion, full as it was of examples of solemn guarantees of her independence, and of protestations against its violation had yet produced. This declaration forms the famous articles of Leopold II., (1790,) which are full of meaning when we remember that they were adopted as a protest against the recent acts of a sovereign who had outraged their rights, and as a plain statement of the conditions on which alone the new king was recognized as the sovereign of the country. By article 10th of that decree, it is declared that Hungary is free and independent

in her latter system of legislation and government, that she is not subject to any other people or any other State, but that she shall have her own separate existence and her own constitution, and shall consequently be governed by kings crowned according to her national laws and customs. After this formal acknowledgment of the constitutional independence of Hungary, as late as the year 1790, how futile it is for the advocates of the recent Austrian policy to appeal to the Pragmatic sanction, as establishing the perpetual fusion of the two sovereignties. The whole history of the connexion shows very conclusively how real a thing the Hungarians have always regarded their constitution, and how tenaciously they have clung to it at all times, resisting every attempt at its subversion. Nor does it show less clearly that Austria has always perfectly understood her rightful relations towards Hungary, and that in the most solemn manner, and on many repeated occasions, as well before as since the establishment of the Pragmatic sanction, she has recognized the constitutional independence of Hungary in the same sense in which the Hungarians claimed it. Hungary has always had, *de jure*, a national and separate existence of her own, in no other way connected with Austria than from her being under the sway of a common sovereign, a relation more nearly resembling that which formerly existed between England and Hanover, than any other to which we can point in history. Well would it have been for the true interests of both countries, had not the policy of Austria towards her been that of a harsh step-mother, and if, in her horror of all constitutional government, she had not steadily pursued her design to reduce Hungary under the yoke of that same centralizing despotism, which has paralyzed the energy of the other portions of the empire. The only period in her history since her connexion with Austria, in which her people were contented and happy, was during the reign of Maria Theresa, who respected the constitution and the laws, and for whose honor the grateful hearts of this heroic and loyal people were ready to pour out their life-blood.

Wearied at last by the ill success of their attempts to govern the country by force, the Imperial government, in more recent times, resorted to an expedient to carry out their policy in Hungary more suited to the genius of the age, which was worthy of the adroit sagacity of him who has been called the Nestor of European diplomacy. When intimidation had been tried in vain, they now tried corruption; and an Austrian party, supported by imperial court favor, was organized in the Diet and the kingdom. Many of the magnates whom the seductions of

the court induced to reside in Vienna, and who, naturally conservative, feared the liberal tendencies which began to manifest themselves in the Diet, lost much of their national feeling, and became the ready advocates of Austrian policy, while the imperial patronage, judiciously dispensed in the country by means of the Hungarian chancery in Vienna, gave the Austrian party many adherents in the lower chamber of the Diet. Still, the national and opposition party was strong from the activity and intelligence of its members, and from its policy in advocating measures in the Diet to bring about, by gradual and constitutional means, those changes which, while they were suited to the intelligence and civilization of the age, would tend to the development of the material resources of the country. There was at that time no radical or republican party; the reformers looked forward to no separation from the empire; but designed, by constitutional means only, and through the legal action of the Diet, to accomplish those organic changes which their situation required. In regard to the perfectly loyal conduct of all parties at that time, and their entire want of affiliation or sympathy with the red republicanism which disfigured all the revolutions on the continent after February, 1848, all authorities agree, and indeed the course of the Hungarians after the outbreak in Vienna is conclusive evidence of it.

The Diet was in session at Presburg, where it had met in November, 1847, when the revolution in Vienna, of March, 1848, broke out. This Diet, which has been styled a relic of feudal barbarism, and the most aristocratic assembly in the universe, had been engaged ever since the commencement of its sessions in discussing those great and radical changes which public opinion in Hungary, (needing not the example and encouragement of a successful popular *emancipation* in Paris, to stimulate it to the most generous and self-sacrificing acts for the good of the country,) demanded. Before the revolution of February, be it remembered, that convulsion which, by shaking the thrones on the continent to the centre, made their possessors yield to popular demands under a pressure of necessity, which took away both the merit and the grace of the concession, the Hungarian Diet had in the exercise of their constitutional functions accomplished a bloodless revolution. She alone, of all the nations of the continent, preserved the calm attitude of a free yet loyal State in the midst of the storm. The great principles of the equal distribution of the public burdens among all the citizens, of civil equality, of the abolition of the *Roboth*, or feudal right of service, and the recognition and representation of the various nationalities composing the country were decreed by the Diet, and

only awaited the sanction of the sovereign to have the full vigor of law.

Such was the condition of Hungary at the period of the outbreak in Vienna, when the Emperor was forced to guarantee a constitutional government to his hereditary States. In the wretchedly feeble condition in which Austria then was, with anarchy in the capital, a successful insurrection in Milan, a threatened separation of Bohemia, and re-constitution of its territory, and that of Galicia, on the basis of the Slavonian nationality, without a single statesman competent to direct the ship of State in the midst of the storm, Hungary, had she nourished those projects of absolute independence of Austria, which have since been attributed to her, at that time could have readily seized the opportunity of carrying them into execution.

The constitution granted to Hungary in March 1848, can rightfully be considered only in the nature of a declaratory act. It established in principle no innovations which the crisis in which the government then was, was made a pretext for extorting. It was a solemn acknowledgment of the reality of those constitutional rights for which the Hungarians had been contending for centuries, and which, although as we have seen repeatedly recognised by Austria, were not suffered to be developed and in full vigor. The responsibility of the Ministry to the Diet, and the conferring upon the Palatine the powers of the Sovereign, which were the principal changes in form which were effected, were regarded by the nation as guarantees only of the reality and sincerity of the determination on the part of Austria, to govern Hungary henceforward in accordance with a constitutional system. All parties were satisfied with the concessions, and the desire to preserve her connexion with Austria, was sincere and unanimous. There were many considerations quite independent of any attachment to the imperial dynasty which led those who ardently desired the development of the resources and nationality of Hungary, to retain the connexion with Austria. Under the protection of the imperial sceptre, it was thought she would be safe from the ambition of Russia, as well as preserved from those internal dissensions which the jealousies of the conflicting nationalities of the various races inhabiting the country, might produce. Hence, we find, in most striking contrast with the Radicals of Vienna, that no fresh demands for further concessions, tending to weaken the ties which connected them with the Empire, were made by the Hungarians, although such was the feebleness of the Imperial Government, as we have shown, at that time, that had such demands been made, concessions, even to absolute independence, must have been granted.

The Diet proceeded in its ordinary functions, with perfect regularity and calmness, under the new system, and enacted with entire unanimity, a mass of laws calculated to carry it into practical operation.

There was, however, a party at the Austrian court, who looked upon the development of the constitutional system in Hungary with alarm, and who had always regarded the new constitution with disfavor as interfering with that system of centralization, which they regarded as the only means of preserving the cohesion of the different parties of the Empire. In the hour of peril, these ideas were silenced by popular tumult; but no sooner did the fortune of war appear to favor the Imperial arms in Italy, and the battle of Castagna had delivered the country from the imminent danger of losing Lombardy, than every means which treachery and perfidy could devise, were brought into exercise to produce a re-action, and if possible, to recall the concessions which had been made, not only in Hungary, but throughout the Empire. The duplicity and treachery which were employed to bring about this re-action in Hungary, are scarcely paralleled, even in the annals of Austrian court intrigue. In casting about for a pretext for organizing this re-action with the true instinct of Austrian policy, they determined to embarrass the Hungarian Ministry, by fomenting the jealousies which existed among the different races inhabiting the country. At that time, a favorite theory of political agitators, was a re-constitution of the nations of Europe, on the basis of their respective nationalities making the original race, the test by which mankind were to be distributed in different States. Although this idea has always appeared to us as a wild and impracticable theory, there were many who looked to its realization as the true end of political reforms, after the revolution in February. From various causes, such sentiments prevailed very extensively among the Slavonian races inhabiting Hungary, and the party at the Imperial Court, who saw with regret the development of the constitutional system in that country, encouraged the Slavonians inhabiting Croatia, Dalmatia and Illyria, to revolt, upon the pretext that their nationality, that is, the rights to which they considered themselves entitled as a distinct race, was in danger from the Magyar predominance in the Hungarian Diet. The Diet, in order to manifest its earnest desire to conciliate, with a liberality and self-denial, which, in this country, it is somewhat difficult to appreciate, without calling to mind the antipathies which exist here between the whites and the negroes, had invited the Croats to make known their grievances, had very largely increased their representation in the Diet,

and permitted the use of the Croatian language, where the Magyar had before been employed. Croatia, Illyria and Dalmatia, it should be remembered, were integral parts of Hungary. had been annexed to its crown for more than eight hundred years, and bore legally, very much the same relation to the central power, as one of the large counties. in the interior of Pennsylvania, inhabited by a German population, who have made use of their own language, ever since their settlement, now, after more than fifty years, bears to the state government. Legally, therefore, and strictly, the Croats had no rights of nationality, as distinct from the Hungarian nation, and therefore, Austria, in supporting them, was not only encouraging sedition and rebellion, but actually put herself, in her zeal to produce a re-action, at the head of a revolutionary movement. Baron Jellacic, who was identified with this question of Slavonian nationality, and who was, at the time, a simple Colonel, was made Ban of Croatia, with the secret encouragement of the Court as subsequent events clearly show, but with the disapprobation of the Emperor and his Ministers *publicly* expressed. Jellacic commenced his career by refusing obedience to the Hungarian Ministry, and declaring treasonable any attempt to enforce its acts in Croatia. This double game, by which Jellacic persisted in opposition to the mandate of the Emperor, and his final disavowal and deposition in arraying part of the nation against the other, confounded the Ministry, and led them to suspect the secret treachery of the court. On the meeting of the Diet in July, the Palatine assured that body of the unalterable determination of the Emperor, to uphold its ancient authority in Croatia; and by an imperial manifesto, assured the Croats, that they had been deluded by hopes that their cause would receive countenance from him in opposition to the acts of the Hungarian Ministry, and that Jellacic, having disobeyed his orders and usurped powers not conferred upon him was ignominiously deprived of his authority. Notwithstanding this public disavowal of Jellacic, and the urgent efforts on the part of the Hungarian Ministry to bring about an interview with him as the representative of the Slavonian nationality, in order that their alleged causes of discontent might be examined and removed, efforts, as our author tells us six times repeated, the Ban persisted in his disobedience. The Diet, with a patient forbearance, which was unwilling to impute any want of sincerity to the declaration of the Emperor, even when the duplicity of the policy of the Court was becoming obvious, consumed the time in remonstrances against the illegality of his proceedings. It was now evident that there was a settled design to withdraw the

constitution of 1848, and that Jellacic, the instrument employed in effecting it, was an Imperial General, restoring the old system of despotic centralization, and not the champion of the Slavonian nationality against the oppression and intolerance of the Magyars. All attempt at concealment was thrown aside, as the period arrived for the execution of this perfidious scheme to overthrow the independence of Hungary. Her army was serving in Italy, the country was defenceless by disciplined soldiers, and it was thought that this was a most favorable opportunity to reduce her to easy submission. On the 9th September, Jellacic was reinstated in his dignities, and made Commander-in-Chief in Hungary, and crossing the river Drave, the boundary between Hungary and Croatia, marched towards Pesth with an invading army of Croats. He calculated upon an easy victory, and upon soon dictating terms in Pesth, to the Diet. The successful resistance which was made to his invasion, show both the unanimity of the population against this wicked and unprovoked assault, and the heroic spirit which always animates a free people in defence of their native soil.

Notwithstanding the consummation of this foul intrigue, the Hungarians did not swerve from their legal and constitutional course in their relations to the Empire. Notwithstanding all they had suffered, no proposition for a separation was made. Nothing but a sincere conviction of the solid advantages derivable from a constitutional union with the Empire, could have prevented them, in the summer of 1848, from crossing the frontier, and by a vigorous advance on Vienna, extorting from the deplorable weakness of Austria, at that time, the concession of their absolute independence. It was not until the faintest shadow of a hope of reconciliation had been dissipated by the announcement of the Constitution granted by the Emperor to his subjects in March, 1849, in which the national existence of Hungary was wholly blotted out, that they reluctantly proclaimed their independence, and appealed to arms against their perfidious Sovereign, as they had before assumed them to chastise the rebellion and invasion of a portion of their misguided fellow-countrymen. Looking back to the history of events, we cannot but regard this tardiness of resistance to the most clearly illegal oppression as the fatal error of the Hungarians: but in the view which we have been taking of the nature of the struggle, it serves to show the perfectly loyal character of the people, and the moderation of their demands, defensible on every ground of constitutional and legal principle.

We find in this calm but determined resistance to oppression, not merely because it was severely felt, but because it was a violation of law, in this

enlightened love of constitutional freedom, in this contest for principle, which scorned to beg as privileges, what was theirs by every principle of legal right, much of that deep-seated conviction of the righteousness of their cause, which distinguished the pure patriotism of our own revolutionary struggle. Hence, there was no short-lived enthusiasm, no frothy declamation, no revolutionary excesses, but a sober, manly sentiment of patriotic duty.

We cannot, of course, follow Mr. Stiles through the details, civil and military, of the struggle. There is a continuity in his narrative, which is essential to a correct understanding of it, and the force and vividness of which would be much marred by extracts. The details of the struggle are clear and perspicuous, a merit which he has not attained without a good deal of laborious research and careful collation of conflicting accounts. The book, we must confess, has one great defect which is particularly felt in reading the account of the campaigns in Hungary, and that is the absence of a good map of reference. In reading of military movements in a country whose geography is so little familiar to us, such an aid is indispensable to a correct understanding of the text.

In consulting the immediate causes of the final catastrophe, although there can be little doubt of the extraordinary resources of the country, and of the heroic bravery of the people, there can be as little of the want of proper discipline in the army, and of the jealousies existing among the Generals. The fatal question of nationality proved an apple of discord in the army as in the country, and to Gorgey's jealousy of the Polish Generals, Dembinaki and Bem, his unwillingness to serve under the command of the first, and his hesitation in coöperating with the other victorious in Transylvania, can be traced the root of many of the dissensions which introduced, first, despondency and discouragement, and finally treason, into the army.

If we wish fully to appreciate the sincerity of the zeal, and the rational convictions which guided the struggles of the Hungarians, we may contrast their course with the efforts made by the inhabitants of Lombardy, to secure their independence. The grand dream of Italian regeneration has long been the political unity of the Peninsula. Differing in all else each party joined in the cry '*Italia farà da se.*' From being at first, a mere speculation of the philosopher in his closet, this idea at the commencement of the year 1848, had so far acted on public opinion as to mould entirely its political expression, and it had moreover the support of the most powerful instruments for good or for evil in Italy, the Church and the Sword, in the persons of

Pope Pius IX., and of the King of Sardinia, Charles Albert. It was for the avowed purpose of effecting this unity and the consequent independence of Italy, that a crusade was entered upon with the open assistance of all the Italian governments in the month of March 1848, having for its object the expulsion of the Austrians from Italy. In violation of the clearest stipulations of territorial treaties, the personal ambition or love of popularity of some of the sovereigns, and the impossibility of restraining the impetuous enthusiasm of their own subjects, with others, had enlisted the King of Naples, the Pope, the Grand Duke of Tuscany, and the King of Sardinia, in a common cause with the Lombards in ridding Italy of those whom were denominated in affectation of the old Roman phrase, 'Barbarians.' The inherent weakness of this combination soon exhibited itself. Not to speak of the jealousies of the allied powers and their lukewarmness, which rendered their aid very ineffective in the general result, Lombardy herself, while the Austrians still held possession of a large portion of the soil, was distracted by factions, each one resolutely bent on carrying out its own favorite theory for the re-constitution of the country, in a way which foreboded no good to the cause of the nationality and independence of Italy. One party looked upon the intervention of Sardinia, and the annexation of Lombardy to that country, as the surest safeguard of their independence. Another, among whom were many of those enthusiasts who had wandered as exiles through Europe for years, or who had expiated their affiliation with the *Carbonari*, by years of imprisonment in Austrian dungeons, at whose head was a name identified with the cause of Italy—that of Mazzini—openly denounced the intervention of Charles Albert, and would enrol themselves as volunteers for the war, only on the promise of the definitive establishment of a republic. The aristocracy, with that traditional policy, which has always led them never to identify themselves with the people, but to side either with Pope or Emperor, as most likely to lead to their own advancement, were disposed to favor the Sardinian intervention, while the youth of the Universities, and all those who had the reputation of liberal ideas, composing all the enthusiasm and much of the numerical strength of the insurrection, embarrassed the vigorous prosecution of the war, by their avowed distrust of Charles Albert. Thus were the seeds of dissension sown, in the want of a proper coöperation between those whose policy it should have been to have buried their differences until, by a united effort, they had expelled the common enemy. The heroic efforts of the people in driving the Austrians from Milan, and the vigorous mau-

ner in which this first blow was followed up by the Sardinian army, until Radetzky was obliged to take refuge under the walls of Vienna, prove conclusively the force of Italy when united and in earnest. It was not until the definitive annexation of Lombardy and Piedmont, and the long delay of Charles Albert before Vienna, (hesitating whether to attack that stronghold until the reinforcements, daily arriving at the Austrian headquarters, rendered such an attempt impracticable,) had completely destroyed, with many, the great object of the war, that Radetzky was enabled, by turning the left wing of the Sardinian army, after a succession of most brilliant victories at Rivoli, Somma Campagna, Custozza and Villa-Franca, to return in triumph to Milan.

With this campaign vanished the dream of Italian independence, for although Charles Albert, urged on by mortified pride, and the revolutionary tendencies in his own States, made another desperate effort to retrieve his fortunes at Novara, that battle is principally remarkable in history, as marking the spot where lie entombed until the dawn of a brighter day, those hopes of the glory of regenerated Italy, which had been the source of so much high-wrought enthusiasm and deeds of heroic daring.

SUNSET ON THE CHESAPEAKE.

A full cool wind across the Chesapeake,
Rattles the leaf I write on: how the West
Where the red god is going to his rest
Is failing! Ah these words!—so dim and weak!
—A rosy smoke hangs like a veil above
The far faint headlands: golden argosies
Float through the mist and as the purple dies
They surge away!—To say I only love
This beauteous splendor of deep-rolling waves
Capped with white foam, this delicate witchery
Of mist and cloud and the far glimmering sea,
Would be but faintly to express what laves
My spirit in such dreamy happiness: all thought
Fades in the tracing: these dim lines are nought!

On the Chesapeake, July 28, 1852.

Scenes Beyond the Western Border.

WRITTEN ON THE PRAIRIE.

BY A CAPTAIN OF U. S. DRAGOONS.

June 30th, 1845.—Camp in Oregon.—In three days we have come some thirty-seven miles through these lofty barren solitudes, with no very remarkable features differing from those already described. Too barren to attract many buffalo, we find in the pretty little green valleys of the Sweet Water, where we occasionally touch it, fresh buffalo grass, on which our horses are sensibly recruiting. The stream rises daily, after noon, about six inches—from melting snow—and falls as much at night, when we generally have a black frost. Every day, showers of rain or snow fall on the mountains, the former far down the great slopes.

Willow bushes still abound in the little bends of the Sweet Water; but we have not seen above half a dozen trees since we left the Platte. There are a few antelopes, which are very tame; and heathcocks: several have been killed weighing five pounds.

We make it 281 miles from Fort Laramie, and 850 from Fort Leavenworth: the country from Laramie here, I would describe in general terms, as a sandy and very hilly desert: difficult for loaded wagons, and inadequate to the support of the teams.

At noon to-day, we left the Sweet Water and came over the South Pass: the ascent is gentle and quite smooth, over a slight bend in the prairie; to the West the descent is rather more rapid, two or three miles to a spring branch, which runs into Green River, a fork of the Colorado. We are in camp on the edge of a narrow trembling bog, which scarcely bears a horse; but he must venture for food.

There is a lofty bluff rising from the camp, whose level top extends to the actual pass, and slightly commands it: from it, the view West is extensive, and over a decidedly champaign country; it resembles the figuration of drifted snow: more to the North, the white topped mountains can be seen for at least a hundred miles: they make near us a turn eastward; and there is the spring of the Sweet Water, which thus rises at the West of some of the highest peaks: to one standing on the spot, its undecided course seems much inclined toward the Pacific.

A kilddeer and sparrow are the only living creatures which we have seen in this mountain edge of Oregon.

To-morrow we march to return; thus disking, two days in succession, both of the Atlantic

and Pacific waters. We have now the 5000 emigrants to meet; and worse, their 5000 cattle, which, we fear, have left little for our horses.

Night—on the lofty bluff overlooking the South Pass.

How solemn is the night! Silence and solitude—eldest born of Time—reign unquestioned.

Calmly sleeps the moonlight on the gray earth, which no green thing proclaims, is not a wreck.—a monument of life extinct. The winds sleep too; their wings are motionless,—there is no whisper in the air: shadow has taken to her embrace the unhappy wanderers that sleep below. Those mountain pyramids of gleaming snow point mutely to the stars, which radiant in solemn motion, alone speak of Life and Hope! Oh, Life! Thou unsought mystery, that springs from nothingness, to grasp at Eternity! Eternity! Awful shadow! incomprehensible Dread! On whose black threshold, the spirit shrinks shuddering—'till Hope comes,—like the star in the East.

A continent is spread beneath me: a new world in ocean-midst: the great ocean, at whose ever heaving surge—typing infinity—man trembled and forsook many thousand years: but at the appointed hour, Fate led him by the hand; he came—and truly found all new: the perennial life and death of changeless vegetation; and the new red race. For 300 years he has labored to subdue the untamed rigor of the primeval curse.

And now, he who of old would scale Heaven with a tower, climbs here with his burden of discontent, vainly seeking rest in timeworn deserts. Yes! now he would scale these venerable heights which storm and rain have furrowed—fructifying other lands: the continent's hoary head, the mark for battling thunders, since Lightning brooded over the great deep!

How oft, O Moon! has your snow-shining spire marked its shadows on this lofty dial? How long since erupted from ocean, they were cast upon the face of the waters? And how long since the plains arose,—in whose warm and gaseous slime grew monster forests,—now whelmed and burnt to coals.

Speak! thou pale and silent witness; tell of Earth's throes.—when a continent had birth: tell when the Storm-power chose these solemn mountain-towers, piercing the sky-mists for his throne? and his sublime laboratory of river-feeding rain; his fire-created and blasted, but icy throne!

Tell when Nature's poor red child came, and with dawning mental light, obscured by superstition, first trembled at the feet of these granite monuments of the new creation!

Calm, and beautiful, and serene! thou floatest on unanswering, with thy bright companions,—

the starry hosts which sang together before the face of God, 'ere Earth-time began: but twin-born with earth, chained thou art to her,—though—like hope—thou soarest with the stars! And sweet companion, goest thou? Must Earth's chill horizon hide thy heavenly face? must the icy barriers of destiny now break—mayhap forever—the strong spell which bound us? Must my solitude, whence I worshipped thee afar, be so darkened?

Nay, inconstant! how smilingly thou wilt shed thy light on happier ones!

And lo! She kisses the icy mountain; and now the farewell ray comes, calm—careless—cold.

And strong Darkness reigns! How awful her presence, here on the Storm-throne!

Child of Clay! Descend to the humble valley, and seek with thy kind, sleep and forgetfulness.

July 1st.—Not reluctantly we turned, this morning, our backs upon Oregon; land of promise and fable. "Homeward bound!" "Lives there a wretch"—never so much a vagabond, whose tongue was taught to lisp that honest noble Saxon word—Home—whose heart it stirs not with an emotion, which distance increases, and time cannot chill.

But to retrace one's steps is dull: dull to the wilderness wanderer, to whom the face of nature is all in all; who seeks, by change and novelty, to charm away the sense of mere routine, fatigue and privation.

The very trustworthy Mr. Fitz Patrick, our guide, has been much in Oregon; and he asserts that the country we have passed through, and consider uninhabitable, is less forbidding than it: some narrow river grounds excepted. It seems the rule, that in very barren lands, the exceptions—very striking of course—should really make great amends: how far they lend imagination to general descriptions, depends upon veracity, judgment and interest. The truth will out some day. It is certainly very difficult to return from Oregon: and the tales that are told may be like the blarney of the curtailed fox. It is said they remove thence to California: which would prove not much; for movers they will be to the end of the chapter.

We have collected numerous pets; beasts and birds; horned frogs, or lizards; plants and minerals; heathcocks—one weighing seven pounds—and hares have been skinned and stuffed: unfortunately, we have no arsenical soap; and since we left our surgeon and his stores,—not even corrosive sublimate: there is but one shot gun—an unlucky one!—and the shot is expended; and

we have had little opportunity: the expedition is military, and most rapid; and though less so for a few days past, uncertainty has prevented the gratification of the great desire of some of us to ascend a snow peak.

We came but thirteen miles; and in approaching our pleasant camp ground on the river, surprised some buffalo, and slew four or five; poor beasts! they are now between two fires.

This upper Sweet Water needs not, I think, the grim hills for a foil, to be pronounced charming: with what gentle music does its swift waters—now o'er glittering sands, now amid rocks—break the dreary silence around! In what graceful curves does it sweep round,—here a garden spot of currants and gooseberries; strawberries and clover; there, a little densely shaded thicket of willows. Heaven knows what Naiads may nestle there! in rarely disturbed enjoyment of beauty; but other airy—at least not imaginary—occupants there are who rejoice in blood! Moschetos of marvellous size! But fortunate we are in blanket-endearing mornings and evenings, which silence their war-notes and chill their wings.

July 2nd.—We have marched twenty-two miles to-day, over the hills of sand and gravel and rock, and sleep once more in that sweet valley which had so extraordinary attraction, that we made two camps in its three miles. A West wind, fresh from the snows, was cool; but the dust of many horses' feet, which it bore with it, was a serious annoyance. I caught, at a little stream in the hills where we made a short stop, two half-grown beathcocks: this was too good fortune to be thrown away; so we set to work immediately, and constructed of willow twigs, a very respectable cage: I shall try hard to get them home.

The Sweet Water enters this valley through a deep, narrow pass of several miles; the scenery very fine: but the "groves of cotton wood and beech," of which we read, are but a sprinkling of birches and cottonwoods; the river is there inaccessible; but we vary from our old track, and now and then come upon something new, and pretty too; and some wild horses this morning, were the first we have seen.

Our valley is still brighter than before; the mountain showers have visited it: what could resist its attractions!

July 3d.—Almost with reluctance, we turned our backs this morning upon the smiling meadows, the plums and willows which surrounded the camp; and although our faces were homeward, we were rather dolefully absorbed—as usual with present littleness—I mean with the twenty-five miles of dreary, hot hills before us—when suddenly we met our friends, the emigrants

—the foremost company, they were well and thriving, as the foremost generally are—but had "slept out"—of water; having travelled thirteen hours without reaching it.

I saw a poor woman weeping. The sight of our return! the home! the friends behind! the wilderness before!

We have received a favorable account of our party left with poor horses and beef cattle, which are but eight miles below us this evening. We have been solely dependant upon game since we left them.

July 4th, 1845.—The *parole* is Independence—countersign, Liberty. Glorious words, and a glorious day! It was glorious in the "Continental Congress" to declare the colonies independent, and sign their names to it: more glorious than some of the after conduct of the constituent States. There was a great deal of baseness, of intrigue, of money-seeking; a great deal of faltering in the revolutionary war: and the more glorious was it to those who withstood all; and particularly in the South, where they were fewer and had to resist the Tories and the slaves, added to British power. But to Connecticut, of all the States, is due the fame of preserving from the beginning, her chartered democracy; the others surrendered theirs, and became subject to the will of the base Stewarts.

Our independence achieved was due—first, to Washington—be his name and memory freshly embalmed, ever on this glorious day! Secondly, to the infatuation and imbecility of British generals; and thirdly, to French aid. Let those who ignorantly think that we would have succeeded without the assistance of the hereditary fool and despot—our friend Louis—turn to Spark's Washington for convincing evidence to the contrary, as well as the Great Man's decided opinion.

Independence, Liberty, Equality,—brave words! Most nations now enjoy the first—not in a commercial or social sense. Paraguay, barbarous and insignificant, under the late dictator, and Japan alone, are above or below those conditions of civilization. Other nations,—as England,—possess the first and second; but her liberty trenched upon, not by the monarch, but by the aristocracy, who make and administer the laws. France enjoys the first and third: and this blessing of Equality in as high a degree perhaps as our boasted republic; when a love for the distinction of titles is remarkable among all nations. And the Turks, too, have equality;—they are all equally slaves. The Russians are totally deprived of liberty and equality. (Why do not the fanatics of England make an abolition crusade against the white slavery there existing. Their interests do not prompt it;—we must address her fear.)

In China alone is there a systematic attempt to practice the ideal perfection of an aristocracy of virtue and intelligence. Portugal and Spain too are remarkable for their imperfect enjoyment of independence, while liberty and equality of course are wanting.

But the Oregonians, and these emigrants thither,—pure democrats all, and independent as wood-sawyers—are pre-eminent for equality and love of liberty. Last night they asked the Colonel to fire a “big gun” this morning. He readily assented; they were delighted, and their spokesman exclaimed, “Do, and I will treat you all!” The Colonel replied, he drank nothing but Sweet Water, (not even *eau sucré*.)

Accordingly it was fired! and awoke echoes from the granite mountains that never had startled before the chamois themselves; and the shell exploding amid the far-off answers of rock to rock, produced a glorious confusion of sounds—more rare, if not more windy than all the orations of the day combined, and the inebriate, but hearty shouts of excited multitudes.

Then we marched, and as usual on this day, found it exceedingly hot: the sunshine every where reflected by rock and white sand, might have barbecued an ox,—or at least killed a horse, if exposed long enough.

We found our party in the same place; their horses a little, and the beeves not at all improved: but two buffaloes had been killed, and two big-horns: one of the former, “the largest that ever was seen,” received twenty-one shots: they have cured its scalp for me; no cushion is deeper or denser; it would make a fine winter saddle cover, were it not too cumbrous. We came eight more miles by meridian; when, finding grass, the heat drove us to encamp.

Speaking of governments, Oregon is now, perhaps, the only pure democracy existing in Christendom, (I have heard nothing of late of San Marino,) and is practically independent:—may she so continue! The fear is they cannot do so without us, (as well as we without them.) Let us only proclaim in their behalf—“Hands off gentlemen!” in our biggest capitals of diplomacy; and, if needs be, fire the big guns too;—but in Heaven’s name let us fight on Christian ground; Oregon would be worse than Florida, and our contest with those Swamp Parthians, the Seminoles. The only—*quasi*—colony we have is Liberia; and that is nearer than Oregon—in time. The Oregon railroad is, and will remain for half a century, a notable humbug: that over the isthmus of Panama, or the Nicaragua canal, is the great hope, or work of our generation.

I have now visited the regal province of Canada;—the domain of democratic Oregon, (three

feet deep in the boggy “bowels of the land;”) also the problematical regions of Texas, (to whose revolutionary war my military “countenance” was willingly lent.) I have visited, too, Mexico, (horrid compound despotism of priest and soldier.) I hope Texas will revisit her “province” of New Mexico and give us an opening; for I long to have a hand in relieving the Mexican millions of the galling yoke of her grinding oppressors; a crusade worthy the banners of Liberty! (But the poor, ignorant devils, could they understand and keep freedom? Liberty, like manhood, requires education to be worthily worn.)

I have also visited the courts of very many “sovereign nations”—of Indians; (where human nature is nearly as sophisticated as at other courts.) Thus I am quite an *American* traveller, and might one day give the public the cream of my adventures; but as a titled and private foreigner is the exclusive pet of us republicans,—so America is a subject that can in no way excite, interest or tickle us, but through foreign malevolence and ignorance, or the delightful praise of cockney condescension. If the book be European, and larded with sonorous titles,—treat of antiquities, (venerable in guide books,)—of the stereotyped romance of ruins, converted by a prurient imagination from dens of robbers to seats of chivalry, and abodes of beauty,—then, all success to it!

How stale, flat and *unprofitable* in comparison, the primitive grandeur of our native land;—the sternest frowns and sweetest smiles of virgin nature;—our beautiful prairies,—and sublime as ocean, on which the sun rises and sets in solitary glory;—our own glaciers and avalanches, cata-racts and volcanoes—unknown, unnamed! And our independent red men, (*gentlemen*, that never work!) our Indian chieftains, who rise to power and influence solely by mind and daring;—democrats, but not the less distinguished by knightly bravery in numberless combats. They have genealogies too, *beyond all record*. (older than William the Conqueror;—how often *was* England conquered?) Truly our never conquered Indians offer noble subjects; it is a rare mine of romance, not wholly unworked. And the proud, dignified and eloquent Indian—even surpassing the old knights in the romantic vigils and peual vows of *religion*—seldom falls so far short of romance as his white brother, the tame subject of civilization. But, alas! he *does* lack a vital element—devotion to women! But nature seems at fault in so generally refusing them beauty; and gives him a poor excuse, which white millions have not, for the same beastly conduct.

All this shakes not our morbid mental dependence—our foreign-fashion loving public taste,

And then the infernal trash—much of it from the stews of Paris and London—utterly undersells us, to the almost total suppression of native labour; and to the robbery of the best foreign authors, whose works would command a copyright.

So much for the fourth of July,—and a dry one!

July 5th. We have paid to-day for our short ride yesterday, 28 miles, mostly over sand ground to impalpable powder by the innumerable emigrants, whom we are meeting.

About four miles from the camp, we took a lingering, farewell look—at 80 miles—at the glittering snow peaks.

I more particularly examined, this afternoon, the remarkable geology of the vicinity of Devil's Gate. The granite masses erupted for forty miles above, from the very bed of the river—but throwing it always to the south of the principal chain—here turn to approach the forest-covered ridge which bounds the valley on that side; but in thus leaving the river, they had stopped its course, but for the chasm, or "gate," in some parts not more than forty feet wide. The road leads over a very narrow gap, a hundred feet high, commanded by the lofty granite;—on one side a chaotic pile of boulders, ten and twenty feet in dimension, through which is a great vertical vein of trap-rock.

Thus liberated, the river enters a vast sunburnt plain; and as if to take a last farewell of the romantic ridge, runs five or six miles to the foot of the solitary Independence rock, thrown out like a grim sentinel upon the Desert's boundary; then, as if warned of the salt and lava desolation beyond, turns again, and hastens to join the Platte, to aid in the evident struggle before it, with all the rocky powers of chaos and volcano.

Having thus, as from impulse, surrendered name and identity—the excited contest over, they emerge from the secret and sublime mountain passes, in dreary unity upon the boundless flatness of barren plains,—though some fleeting enjoyment of flowery savannahs succeeds—before both are lost in Missouri's dark and turbid flood.

Farewell to thee, then, sweet daughter of Mountain! Thou smile upon our mother's melancholy face! Go,—with thy bright and blithe innocence,—like many another victim;—go purring merrily when you may, ignorantly happy, to the chequered course of thy destiny. Thus do the silent Fates prepare for our warped life-threads their sombre woof!

The baggage to-morrow takes the road which we came, through the desert; and we are to explore our way to the most accessible point of the Platte, and thence follow it through the wild, ro-

mantic Buttes. We hope to find grass,—almost hopeless on the wagon route.

My poor heath-cocks are dead! They had begun to eat a little, and every care was taken with them; but they were untameable;—they seemed to pine for their native freedom, and to die broken-hearted.

I have got an ancient "bighorn," or chamois skull, with the horns, weighing eighteen pounds; but they are said to be quite small.

The emigrants are unexpectedly thriving. I saw, however, one poor woman, who had within a few days lost her husband, now driving a waggon. But it was somehow understood, that she was particularly desirous of an immediate successor to said husband and driver deceased;—or, for a conveyance back with us;—perhaps both boons would have been accepted.

I am told that by the time our rear passes their companies, toward what they will ever consider their homes, the women generally are seen to weep. Heaven help them!

July 6th. We took a course over a desert plain, and soon after found ourselves ascending a gentle slope; and so we continued for twelve or thirteen miles,—reaching insensibly a great elevation; and then—unexpectedly as suddenly, arrived at a precipice.

Then all press forward to the brink absorbed, or uttering exclamations of astonishment or delight. The nerves are filled with the sublimity of depth and space;—sight, without a barrier, seems to lead us over a just discovered world. Recovered a little from our giddy surprise, the first object beyond the void of a thousand feet, which compels attention, is a rose-red wall of mountain height, to which a profusion of cedars gives a softening shade of beauty: then we begin to observe a circular amphitheatre, twelve miles over, where Nature in pleasant mood, seems to have scattered lavishly as carelessly, objects of beauty and grandeur; mountain and rock are coloured as a flower-bed;—evergreens have been showered over them. Silvery gleams attract our sight—there is water—it is the river! In the midst of its secret, fierce course, a sweet glen has tempted it to a gentle pause on its soft bosom.

It is then a river valley! Truly, close to our right, through an unsuspected chasm of wondrous depth, the happy Platte, having been somewhere secretly united to Sweet Water, has come to meet us, as witnesses to its triumph, or shares in the excitement of a pleasure tour.

Lowly, but bright and joyous in its life of motion and cumulative power, it advances, courting first all sweet and quiet recesses—yet daring all opposition to its wilful course. How we watch it now! Yonder, it sweeps in curves of beauty;—but suddenly lost, we gaze conjecturing

where it may next appear; unexpectedly it has paid a smiling visit to a grim mound, that stands modestly far aside; satisfied it comes forth to new discoveries;—a determined barrier seems opposed; but carelessly yet, it sports in some little meadows which can scarce be seen. Then it advances more seriously to a green hill, which seems bent in homage—but no! Nothing less than the loftiest mountain of proud rock, must give it passage! and though a narrow—a sublime chasm, it fiercely rushes forth to new labyrinths beyond. That is the Hot spring gap; was earthquake then called to its aid?

I was charmed,—and lingered;—what time I know not. The guide had sought some possible, winding, or zig-zag descent. The Colonel was at my side. I had heard him exclaim, “Poor Mac. ought to have seen this!” When he called me to action, we dismounted and led our horses to follow the guide. I cannot tell how we got down;—there was a rocky chasm of a dry stream, or waterfall,—a ledge of rock now gave us a giddy path—the roots and branches of cedars now lent us support;—there were momentarily dangers, surprises—new beauties.

I was thinking why nature had hid away since creation, as if in a secret storehouse, such treasures for sight and soul. We were discoverers: it is certain that white men had not been here. But then, her favoured, untamed children! Ages back, their leading spirits had drunk in here the inspiration of noble thoughts for eloquent expression, or high resolve!

When fairly down,—near the river bank,—I looked back and saw for a while a moving picture of men in long file, leading horses down the bright coloured face of the precipice: Beautiful! Now dapple greys are passing in front of blood-red wall, and blacks are relieved by white, or light grey rock;—parts of the long procession would disappear,—or, be dimly seen amid shrubbery; or would suddenly emerge from the concealment of some nook of clustered evergreens.

We had struck the river too high up;—and had soon to ascend again; and it was at forty-five degrees that we scrambled up one ridge of loose round stones, from the size for street-paving, to two feet in diameter;—then for miles along the face of a precipice, by the narrow paths of buffalo. Soon after—forced to cross the river, nearly swimming, we came suddenly to a high steep mountain, sundered to the base, forming a chasm where the torrent forced to break desperately on shapeless rocks, gives to the sublime walls the echoes of its torment.

Unwillingly we turn away, to seek a circuitous outlet, guided by buffalo paths over a lower mountain of confused and many shaped peaks.

At the highest part two monstrous buffaloes suddenly met us in the way; the gaunt keepers of the pass paused in astonishment; and seemed to stare the question, “What did we there?” or, “Where are we safe?” thought they—if buffaloes think. But they were spared! Our pleased excitement as explorers brooked no interruption, or needed no addition. There we trod our path on beautiful feathery crystals of gypsum in red clay; and white and gray varieties resembling lava. Safely over, we again had to cross the river; it was very deep and muddy: for the sublimity of our passage through these fastnesses, where white man has, rarely, if ever trod, was heightened by black clouds, thunder and rain.

Then we were in another circular opening, or valley, fifteen miles wide, quite surrounded by mountains—the chosen abode of desolation and grim silence!

At the eleventh hour of our toils,—generally leading the horses,—we stopped for the night in a little open space by the river, where we rescued some dry grass from a gang of hungry buffaloes; one of which maintained his ground until slain. We have had to-day, five alternations of cloudy coolness and rain and oppressive heat.

I was joined, after our frugal supper of dried meat, at the watch-fire of the bivouac, by my friend Frank, who came, I suppose, to while a dull hour; but to give him his due, he brought up some coffee, and we made in tin cups refreshing and strong sleep-dispelling draughts.

“Heaven knows,” he said, “why guards should watch in this valley of desolation, with world-forbidding battlements; we might sleep a month, safe from aught save grizzly bears.”

We discussed our day’s adventures;—disappointed of grass for the poor horses; but delighted with unexpected beauty and magnificence of scenery. We had evidently struck the Platte too high; much above where our only known preceding party had passed.

A busy time, he thought, for journalists; and wondered how I mustered industry or energy to write after great fatigues.

It was a pleasure, I told him:—often it occupied me while the difficult preparations of supper went on; or passed the dull hours of a night-watch; and of bright mornings I sometimes wrote when others slept, perhaps, the hour or two when horses were tended, breakfast got, or baggage packed. But new and beautiful scenery, though never tiring to the eye, I began to think dull to describe, or duller to be read—the pen lacking so much, even the feeble pencil’s power.

F. “Ah, it is very true! Tell me to-night some story of men—not matter: a military one I suppose it must be.”

C. “Men!—they are my aversion. It is an

unpleasant animal:—the female, however—

F. "Ah! no more of that, Hal, an thou lovest me."

C. I love Nature best;—nature in her virgin wildness. But I have been reminded somehow of a very pleasant day's service in the South West; of scenes, or scenery, in which men took a part; and being in action, were a suitable and picturesque addition."

F. "It may do then: let us abstract ourselves from this sad gloom, and cheat the leaden hours."

C. "It was three years ago;—an episode, or more accurately a sequel to the Florida War. We were in camp near Fort Gibson; an express came in the night with information that 300 Seminoles, lately landed south of the Arkansas, had become rebellious, and crossed to the forbidden side. At reveille, while a thunderstorm was bursting, the squadrons received orders to march at eight o'clock. Eight miles down, we ascended with difficulty the Menard Mountain, where it abuts on the Arkansas; then after a few miles of fine open forest, we found ourselves passing through large prairies fringed and beautifully interlocked with oak groves. There was little sign of man; the rich Cherokee had been careless; in twenty-two miles we saw but one dwelling, and an unfinished house, which promised far to excel in comfort those of the western whites. We encamped at dusk on the river bank, under the leafy domes of a majestic forest.

"Early next morning, the leader of the Seminoles, who were near, was induced to appear in camp. The colonel, by interpreter, asked him what he had to say for himself. The proud chief wore a sash, which we believed had belonged to some officer slain in the unfortunate Florida war; and in it was thrust a great dirk, which he freely fingered; he had not been asked to sit. He answered, 'In Florida we were promised to be sent to Fort Gibson. This promise is broken: we are now forbidden. We shall go. Our friends Alligator and Coacooche, and their bands, are on this side. We shall meet them here in council. In Florida we were treated with more friendship and consideration. I am accustomed to sit, when I have business to transact.'

"The colonel replied—'If you received this promise, it was unauthorized. You shall *not* go! This day you shall recross the Arkansas, and set out for your lands on the Canadian.'

"The chief at last had met his more than match. He endeavored then to temporize; he was astonished, but with skill felt his ground, to be assured if boldness and cunning could foil him now. And so it seemed;—he promised to obey,

and was dismissed;—the colonel taking measures to be informed of any unnecessary delay.

"Soon after noon, the trumpets called 'to horse!' The squadrons were speedily arrayed; the Indians had refused or failed to obey.

"The colonel said to us, in his cold way. 'If we come to blows, put your sabres well in: but on no account strike woman or child:' then we marched. My squadron led. Two miles down on the skirt of the Indian camp, a lad, who was mounted, attempted to pass out; the colonel himself seized his rein, and gave him in charge to two dragoons: but such was his indomitable obstinacy and boldness, that he persisted in efforts to elude this arrest, utterly regardless of the sabres flashing about his head! Until, seeing that but few men remained in the camp, the colonel, rather than that the boy should be sacrificed, commanded his release. We found on the Illinois river, at its mouth, the chief, and about a dozen men and their families. Nothing but their weakness saved them. Their tents were torn down,—they were seized and forced to an Arkansas ferry, close by.

"It soon appeared that the Indians had taken possession of the flat, and had been crossing the Illinois river. An armed party was sent over in a canoe, loaded the boat with their baggage, returned, and took the chief and party over the Arkansas.

"Very near sundown, it was ascertained that the band were nearly all beyond the Illinois river—a hundred yards wide, and booming full; and I received rather a singular order to cross it with my squadron;—with discretionary powers beyond.

"If I had stopped to reason on it, I should soon have pronounced the order impracticable; for the full banks of the river were vertical; there was only a small canoe; the sun was setting: However, it was to be done; I had faith, and—perhaps the Col. too; and so—in half an hour I was over with above half my horses and three-fourths of my men."

F. "Come now, no romance; you must tell how that was done."

C. "A mounted Cherokee made his appearance at that moment: how it happened, I did not stop to enquire: I learned from him that a mile or two above—through the dark forest—there was a trail and a ford, in low water. I sent a division of the squadron under an energetic officer—who took him as guide—to cross there, if he could risk it. I immediately sent a party to the Arkansas to find and bring round the flat-boat; and meanwhile, crossed over a dozen men in the canoe; just as it was upset on its third trip—losing some arms, and very nearly some lives—the flat was brought: I rode into

it, followed by as many horses as could find room; filled up the interstices with dismounted men; pushed over, and landed safely.

"I found that a Cherokee lived in the vicinity, and he told me that the woods were full of Indians. There was little daylight left; but ordering him to guide me, I advanced with my few horses, and the dismounted platoon following: for a time we only picked up a straggler or two, and found scattered baggage. Then I met my mounted division; they had swam the Illinois—loaded with arms and equipments—in military array!

"Soon after the guide pointed out a little bushy prairie, where, he said, a large number of Seminoles were concealed: it was nearly dark: I threw out my mounted division as skirmishers, and soon after signaled the "charge, as foragers:" when the "rally" was sounded, they with difficulty found their way back to the foot reserves, and not an Indian had been flushed!

"Then, of course, we marched back to the river bank; and lay down in our cloaks, supperless. But this is all introduction; I have tired you before the day is begun!"

F. "No, it is not very late; I was rather amused at your account of those spoiled Seminoles.

"Your bivouac was marvellously like this present one! But go on; and—if you do not stop at a dream or two—you will doubtless soon come to the cream of the story."

C. "Amigo mio.—My dreams are—not what they were! Well, the night passed quickly enough, 'though I was disturbed by the coming in of women and children; and right early I got over my other horses and men, and—a breakfast.

"I sallied forth then, ripe for adventures. I "scoured," as was right, the three miles of open forest. We have to borrow this word from the scullery, while the French say, euphonesely, *éclairer*—and emerged upon prairies, when I soon reached a lofty hill-top.

"O! how beautiful and fresh was all before me! It was a surprise; not a trace of man blurred the expanded view, where free Nature had tried her genial hand. It was the year's prime; sparkling under the early sun, were meadows and murmuring streamlets; glades, where sported the antlered herds; grassy slopes swelling to smooth hillocks: old oaks here expanded in solitary magnificence; there disposed, like garlands, on the gentle hills; and again, gathered in imposing groves. Strangely beautiful in the midst were two hill-cones, rising, like a triumphal gate, from forest bases. Far extended hill and dale and plain, until lost in the blue slopes of a mountain range; and about its airy outline clustered the rosy morning clouds.

A free and exultant feeling of power—a joyous

buoyancy of spirits—a rising romance was then fast swelling my heart, and sending the blood in happy currents, when I saw my advanced guard galloping over the plain below, and received by the escort of fifteen captured Indians, a report that their main body was in a wood which was pointed out; it was at the foot, and on the side of a bluff, which sent an arm—like that of an L—to be merged in the eminence on which I stood; the wood was on the outer slope, and extended round the angle, out of view.

Ah! then, I was transformed to a General, with my four admirably instructed, powerful platoons for regiments, and my trumpet signals for field and staff!

I immediately sent another platoon, swiftly to search the woods of the near slope—approaching always the advance guard—whilst I hastened round the hilltops, to head the Seminoles, and gain a commanding and central point of observation. Excitement and rapid motion only increased my enjoyment of the rare scenery of that secluded district where, every moment, new combinations of beauty enchanted the eye. It was thus that my only half warlike operations and slender means, were magnificent to a charming effect.

My detachments were then lost to view—engaged in the forest below: passing slowly round the brink of the precipitous bluff, I faced the more distant and longer side,—and, having waited a proper time, led my men in extended order, abruptly down the descent; how steep it would prove we could not see, so dense was the undergrowth; blindly we forced our way; the horses maddened by tangled vine and brier, leaping uncontrollably downward.

The wood had been abandoned, and a fresh trail led into the prairie beyond; the advance guard had taken it rapidly, and the support had more slowly followed. Soon I saw the first gallop along elevated ground, to disappear in the forest toward the Arkansas, and thither I directed the latter by trumpet signal. When I reached the wood, I found they had charged through a camp, whence every soul fled to a near swamp: while they were entangled there, I ascertained that these fugitives were Seminoles of an earlier migration; and soon drew out my skirmishers—not without some captures.

Our spirits were all up; and returning to the prairie, I made other combinations—mauaged by signals—armed its hills and groves; we over-run many miles of country, and made numerous prisoners, giving but one sabre wound. But—

———"I will not tire
With long recital of the rest."

It was dark again when we returned to the Illinois. Frank! he was sound asleep!

Sketches of the Flush Times of Alabama.

(Not found in Pickett's History.)

MY FIRST APPEARANCE AT THE BAR.

HIGGINBOTHAM }
 vs. } Slander.
 SWINK. }

Did you ever, reader, get a merciless barrister of the old school after you when you were on your first legs—in the callow tenderness of your virgin epidermis? I hope not. I wish I could say the same for myself; but I cannot: and with the faint hope of inspiring some small pity in the breasts of the seniors, I now, one of them myself, give in my lively experience of what befell me on my first appearance on the forensic boards.

I must premise by observing that, some twenty years ago—more or less—shortly after I obtained license to practice law in the town of H——, State of Alabama, an unfortunate client called at my office to retain my services in a celebrated suit for slander. The case stands on record, *Stephen O. Higginbotham vs. Caleb Swink*. The aforesaid Caleb, “greatly envying the happy state and condition of said Stephen,” who, “until the grievances,” &c., “never had been suspected of the crime of hog stealing,” &c., said, “in the hearing and presence of one Samuel Eads and other good and worthy citizens,” of and concerning the plaintiff “you,” (the said Stephen meaning,) “are a noted hog thief, and stole more hogs than all the waggons in M—— could haul off in a week on a turnpike road.” The way I came to be employed was this: Higginbotham had retained Frank Glendye, a great brick in ‘damage cases,’ to bring the suit, and G. had prepared the papers, and got the case on the pleadings, ready for trial. But, while the case was getting ready, Frank was suddenly taken dangerously drunk, a disease to which his constitution was subject. The case had been continued for several terms, and had been set for a particular day of the term then going on, to be disposed of finally and positively when called. It was hoped that the lawyer would recover his *health* in time to prosecute the case; but he had continued the drunken fit with the suit. The morning of the trial came on; and, on going to see his counsel, the client found him utterly prostrate; not a hope remained of his being able to get to the courthouse. He was in collapse; a perfect cholera case. Passing down the street, almost in despair, as my good or evil genius would have it, Higginbotham met Sam Hicks, a tailor, whom I had honored with my patronage

(as his books shewed) for many years; and, as one good turn deserves another—a suit for a suit—he, on hearing the predicament H. was in, boldly suggested my name to supply the place of the fallen Glendye; adding certain assurances and encomiums which did infinite credit to his friendship and his imagination.

I gathered from my calumniated client as well as I could, the facts of the case, and got a young friend to look me up the law of slander, to be ready when it should be put through, if it ever *did* get to the jury.

The defendant was represented by old Cæsar Kasm, a famous man in those days; and well might he be. This venerable limb of the law had long practised at the M—— bar, and been the terror of this generation. He was an old-time lawyer, the race of which fortunately is now extinct, or else the survivors “lag superfluous on the stage.” He was about sixty-five years old at the time I am writing of; was of stout build, and something less than six feet in height. He dressed in the old-fashioned fair-top boots and shorts; ruffled-shirts; buff vest, and hair, a grizzly grey, roached up flat and stiff in front, and hanging down in a queue behind, tied with an eel-skin and pomatumed. He was close shaven and powdered every morning; and, except a few scattering grains of snuff which fell occasionally between his nose and an old-fashioned gold snuff box, a speck of dirt was never seen on or about his carefully preserved person. The taking out of his deliciously perfumed handkerchief, scattered incense around like the shaking of a lilac bush in full flower. His face was round, and a sickly florid interspersed with purple spots, overspread it, as if the natural dye of the old cogniac were maintaining an unequal contest with the decay of the vital energies. His bearing was decidedly soldierly, as it had a right to be, he having served as a Captain some eight years before he took to the bar, as being the more pugnacious profession. His features, especially the mouth, turned down at the corners like a bull-dog’s or a crescent, and a nose perked up with unutterable scorn and self conceit, and eyes of a sensual, bluish grey, that seemed to be all light and no heat, were never pleasing to the opposing side. In his way, old Kasm was a very polite man. Whenever he chose, which was when it was his interest, to be polite, and when his blood was cool and he was not trying a law case, he would have made Chesterfield and Beau Brummel ashamed of themselves. He knew all the gymnastics of manners, and all forms and ceremonies of deportment; but there was no more soul or kindness in the manual he went through, than in an iceberg. His politeness, however seemingly deferential, had a frost-bitten air, as if it had lain out over-night and

got the *rheumatics* before it came in; and really, one felt less at ease under his frozen smiles, than under any body else's frowns.

He was the proudest man I ever saw: he would have made the Warwicks and the Nevilles, not to say the Plantagenets or Mr. Dombey, feel very limber and meek if introduced into their company; and selfish to that extent, that, if by giving up the nutmeg on his noon glass of toddy, he could have christianised the Burmese empire, millennium never would come for him.

How far back he traced his lineage, I do not remember, but he had the best blood of both worlds in his veins; sired high up on the paternal side by some Prince or Duke, and dammed on the mother's by one or two Pocahontases. Of course, from this, he was a Virginian, and the only one I ever knew that did not quote those Eleusinian mysteries, the Resolutions of 1798-9. He did not. He was a Federalist, and denounced Jefferson as a low-flung demagogue, and Madison as his tool. He bragged largely on Virginia, though—he was not eccentric on this point—but it was the Virginia of Washington, the Lees, Henry, &c., of which he boasted. The old dame may take it as a compliment that he bragged of her at all.

The old Captain had a few negroes, which, with a declining practice, furnished him a support. His credit in consequence of his not having paid any thing in the shape of a debt for something less than a quarter of a century, was rather limited. The property was covered up by a deed or other instrument, drawn up by Kasm himself, with such infernal artifice and diabolical skill, that all the lawyers in the county were not able to decide, by a legal construction of its various clauses, who the negroes belonged to, or whether they belonged to any body at all.

He was an inveterate opponent of new laws, new books; new men. He would have revolutionized the government if he could, should a law have been passed, curing defects in Indictments.

Yet he was a friend of strong government and strong laws: he might approve of a law making it death for a man to blow his nose in the street, but would be for rebelling if it allowed the indictment to dispense with stating in which hand he held it.

This eminent barrister was brought up at a time when zeal for a client was one of the chief virtues of a lawyer—the client standing in the place of truth, justice and decency, and monopolizing the respect due to all. He, therefore, went into all causes with equal zeal and confidence, and took all points that could be raised with the same earnestness, and belabored them with the same

force. He personated the client just as a great actor identifies himself with the character he represents on the stage.

The faculty he chiefly employed was a talent for vituperation which would have gained him distinction on any theatre, from the village partizan press, down to the House of Representatives itself. He had cultivated vituperation as a science, which was like putting guano on the Mississippi bottoms, the natural fertility of his mind for satirical productions was so great. He was as much fitted by temper as by talent for this sort of rhetoric, especially when kept from his dinner or toddy by the trial of a case—then an alligator whose digestion had been disturbed by the horns of a billy-goat taken for lunch, was no mean type of old Sar Kasm, (as the wags of the bar called him, by nickname, formed by joining the last syllable of his christian, or rather, heathen name, to his patronymic.) After a case began to grow interesting, the old fellow would get fully stirred up. He grew as quarrelsome as a little bull terrier. He snapped at witnesses, kept up a constant snarl at the counsel, and growled, at intervals, at the Judge, whom, whoever he was, he considered as *ex officio*, his natural enemy, and so regarded every thing got from him as so much wrung from an unwilling witness.

But his great *forte* was in cross-examining a witness. His countenance was the very expression of sneering incredulity. Such a look of cold, unsympathising, scornful penetration as gleamed from his eyes of ice and face of brass, is not often seen on the human face divine. Scarcely any eye could meet unshrinkingly that basilisk gaze: it needed no translation: the language was plain: "now you are swearing to a lie, and I'll catch you in it in a minute;" and then the look of surprise which greeted each new fact stated, as if to say, "I expected some lying, but really this exceeds all my expectations." The meek politeness with which he would address a witness, was anything but encouraging; and the officious kindness with which he volunteered to remind him of a real or fictitious embarrassment, by asking him to take his time and not to suffer himself to be confused, as far as possible from being a relief; while the air of triumph that lit up his face the while, was too provoking for a saint to endure.

Many a witness broke down under his examination, that would have stood the fire of a masked battery unmoved, and many another, voluble and animated enough in the opening narrative, "slunk his pitch mightily," when old Kasm put him through on the cross-examination.

His last look at them as they left the box, was an advertisement to come back, "and they would hear something to their advantage;" and if they

came, they heard it, if humility is worth buying at such a price.

How it was, that in such a fighting country, old Kasm continued at this dangerous business, can only be understood by those who know the entire readiness—nay, eagerness of the old gentleman, to do reason to all serious enquirers:—and one or two results which happened some years before the time I am writing of, to say nothing of some traditions in the army, convinced the public, that his practice was as sharp at the small sword as at the cut and thrust of professional digladiation.

Indeed, it was such an evident satisfaction to the old fellow to meet these emergencies, which to him were merely lively episodes breaking the monotony of the profession, that his enemies, out of spite, resolutely refused to gratify him, or answer the sneering challenge stereotyped on his countenance, "Now if you can do any better, suppose you help yourself?" So, by common consent, he was elected free libeller of the bar. But it was very dangerous to repeat after him.

When he argued a case, you would suppose he had bursted his gall-bag—such, not vials but demijohns, of vituperation as he poured out with a fluency only interrupted by a pause to gather, like a tree-frog, the venom sweltering under his tongue into a concentrated essence. He could look more sarcasm than any body else could express; and in his scornful gaze, virtue herself looked like something sneaking and contemptible. He could not arouse the nobler passions or emotions; but he could throw a wet blanket over them. It took Frank Glendye and half a pint of good French brandy, to warm the Courthouse after old Kasm was done speaking: but *they* could do it.

My client was a respectable butcher: his opponent a well-to-do farmer. On getting to the courthouse, I found the court in session. The clerk was just reading the minutes. My case—I can well speak in the singular—was set the first on the docket for that morning. I looked around and saw old Kasm, who somehow had found out I was in the case, with his green bag and half a library of old books on the bar before him. The old fellow gave me a look of malicious pleasure—like that of a hungry tiger from his lair, cast upon an unsuspecting calf browsing near him. I had tried to put on a bold face. I felt that it would be very unprofessional to let on to my client that I was at all scared, though my heart was running down like a jack-screw under a heavy wagon. My conscience—I had not practised it away then—was not quite easy. I could'n't help feeling that it was hardly honest to be leading my client, like Falstaff his men,

where he was sure to be peppered. But then it was my only chance; my bread depended on it; and I reflected that the same thing has to happen in every lawyer's practice. I tried to arrange my ideas in form and excogitate a speech: they flitted through my brain in odds and ends. I could neither think, nor quit thinking. I would lose myself in the first twenty words of the opening sentence and stop at a particle;—the trail run clean out. I would start it again with no better luck: then I thought a moment of the disgrace of a dead break-down; and then I would commence again with "gentlemen of the jury," &c., and go on as before.

At length the judge signed the minutes and took up the docket: "Special case—Higginbotham vs. Swink: Slander. Mr. Glendye for pl'tff.; Mr. Kasm for def't. Is Mr. G. in court? Call him, Sheriff." The sheriff called three times. He might as well have called the dead. No answer of course came. Mr. Kasm rose and told the court that he was sorry his brother was too much, (stroking his chin and looking down and pausing,) indisposed, or otherwise engaged, to attend the case; but he must insist on its being disposed of, &c.: the court said it should be. I then spoke up, (though my voice seemed to me very low down and very hard to get up,) that I had just been spoken to in the cause: I believed we were ready, if the cause must be then tried; but I should much prefer it to be laid over, if the court would consent, until the next day, or even that evening. Kasm protested vehemently against this; reminded the court of its peremptory order; referred to the former proceedings, and was going on to discuss the whole merits of the case, when he was interrupted by the judge, who, turning himself to me, remarked that he should be happy to oblige me, but that he was precluded by what had happened: he hoped, however, that the counsel on the other side would extend the desired indulgence; to which Kasm immediately rejoined that this was a case in which he neither asked favors nor meant to give them. So the case had to go on. Several members of the bar had their hats in hand, ready to leave the room when the case was called up; but seeing that I was in it alone, suffered their curiosity to get the better of other engagements, and staid to see it out; a circumstance which did not diminish my trepidation in the least.

I had the witnesses called up, posted my client behind me in the bar, and put the case to the jury. The defendant had pleaded justification and not guilty. I got along pretty well, I thought, on the proofs. The cross-examination of old Kasm didn't seem to me to hurt any thing—though he quibbled, misconstrued and bullied mightily; objected to all my questions as leading.

and all the witnesses' answers as irrelevant: but the judge who was a very clever sort of a man, and who did not like Kasm much, helped me along and over the bad places, occasionally taking the examination himself when old Kasm had got the statements of the witness in a fog.

I had a strong case; the plaintiff showed a good character: that the lodge of Masons had refused to admit him to fellowship until he could clear up these charges: that the Methodist church, of which he was a class-leader, had required of him to have these charges judicially settled: that he had offered to satisfy the defendant that they were false, and proposed to refer it to disinterested men, and to be satisfied—if they decided for him—to receive a written retraction, in which the defendant should only declare he was mistaken; that the defendant refused this proffer and reiterated the charges with increased bitterness and aggravated insult; that the plaintiff had suffered in reputation and credit; that the defendant had declared he meant to run him off and buy his land at his (defendant's) own price; and that defendant was rich, and often repeated his slanders at public meetings, and once at the church door, and finally *now justified*.

The defendant's testimony was weak: it did not controvert the proof as to the speaking of the words, or the matters of aggravation. Many witnesses were examined as to the character of the plaintiff; but those against us only referred to what they had heard since the slanders, except one who was unfriendly. Some witnesses spoke of butchering hogs at night, and hearing them squeal at a late hour at the plaintiff's slaughter house, and of the dead hogs they had seen with various marks, and something of hogs having been stolen in the neighborhood.

This was about all the proof.

The plaintiff laid his damages at \$10,000.

I rose to address the jury. By this time a good deal of the excitement had worn off. The tremor left, only gave me that sort of feeling which is rather favorable than otherwise to a public speaker.

I might have made a pretty good out of it, if I had thrown myself upon the merits of my case, acknowledged modestly my own inexperience, plainly stated the evidence and the law, and let the case go—reserving myself in the conclusion for a *splurge*, if I chose to make one. But the evil genius that presides over the first bantlings of all lawyerlings, would have it otherwise. The citizens of the town and those of the country, then in the village, had gathered in great numbers into the courthouse to hear the speeches; and I could not miss such an opportunity for display.

Looking over the jury I found them a plain,

matter-of-fact looking set of fellows; but I did not note, or probably know a fact or two about them, which I found out afterwards.

I started, as I thought, in pretty good style. As I went on, however, my fancy began to get the better of my judgment. Argument and common sense grew tame. Poetry and declamation, and, at last, pathos and fiery invective, took their place. I grew as *quotations* as Richard Swiveller. Shakspeare suffered. I quoted, among other things of less value and aptness, "He who steals my purse steals trash," &c. I spoke of the woful sufferings of my poor client, almost heart-broken beneath the weight of the terrible persecutions of his enemy: and, growing bolder, I turned on old Kasm, and congratulated the jury that the genius of slander had found an appropriate defender in the genius of chicanery and malignity. I complimented the jury on their patience—on their intelligence—on their estimate of the value of character; spoke of the public expectation—of that feeling outside of the box which would welcome with thundering plaudits the righteous verdict the jury would render; and wound up by declaring that I had never known a case of slander so aggravated in the course of my practice at that bar; and felicitated myself that its grossness and barbarity justified my client in relying upon even the youth and inexperience of an unpractised advocate, whose poverty of resources was unaided by opportunities of previous preparation. Much more I said that happily has now escaped me.

When I concluded Sam Hicks and one or two other friends gave a faint sign of applause—but not enough to make any impression.

I observed that old Kasm held his head down when I was speaking. I entertained the hope that I had cowed him! His usual port was that of cynical composure, or bold and brazen defiance. It was a special kindness if he only smiled in covert scorn: that was his most amiable expression in a trial.

But when he raised up his head I saw the very devil was to pay. His face was of a burning red. He seemed almost to choke with rage. His eyes were blood-shot and flamed out fire and fury. His queue stuck out behind, and shook itself stiffly like a buffalo bull's tail when he is about making a fatal plunge. I had struck him between wind and water. There was an audacity in a stripling like me bearding him, which infuriated him. He meant to massacre me—and wanted to be a long time doing it. It was to be a regular *auto da fe*. I was to be the representative of the young bar, and to expiate his malice against all. The court adjourned for dinner. It met again after an hour's recess.

By this time the public interest, and especially

that of the bar, grew very great. There was a rush to the privileged seats, and the sheriff had to command order,—the shuffling of feet and the pressure of the crowd forward was so great.

I took my seat within the bar, looked around with an affectation of indifference so belying the perturbation within, that the same power of acting on the stage would have made my fortune on *that* theatre.

Kasm rose—took a glass of water: his hand trembled a little—I could see that; took a pinch of snuff, and led off in a voice slow and measured, but slightly—very slightly—tremulous. By a strong effort he had recovered his composure. The bar was surprised at his calmness. They all knew it was affected; but they wondered that he *could* affect it. Nobody was deceived by it. We felt assured “it was the torrent’s smoothness ere it dash below.” I thought he would come down on me in a tempest, and flattered myself it would soon be over. But malice is cunning. He had no idea of letting me off so easily.

He commenced by saying that he had been some years in the practice. He would not say he was an old man: that would be in bad taste, perhaps. The young gentleman who had just closed his remarkable speech, harangue, poetic effusion, or rigmarole, or whatever it might be called, if, indeed, any name could be safely given to this motley mixture of incongruous slang—the young gentleman evidently did not think he was an old man; for he could hardly have been guilty of such rank indecency as to have treated age with such disrespect—he would not say with such insufferable impertinence: and yet, “I am,” he continued, “of age enough to recollect, if I had charged my memory with so inconsiderable an event, the day of *his* birth, and then I was in full practice in this courthouse. I confess, though, gentlemen, I *am* old enough to remember the period when a youth’s first appearance at the bar was not signalized by impertinence towards his seniors; and when public opinion did not think flatulent bombast and florid trash, picked out of fifth-rate romances and namby-pamby rhymes, redeemed by the upstart sauciness of a raw pop-injay, towards the experienced members of the profession he disgraced. And yet, to some extent, this ranting youth may be right: I am not old in that sense which disables me from defending myself *here* by words, or *elsewhere*, if need be, by blows: and that, this young gentleman shall right well know before I have done with him. You will bear in mind, gentlemen, that what I say is in self-defence—that I did not begin this quarrel—that it was forced on me; and that I am bound by no restraints of courtesy, or of respect, or of kindness. Let him charge to the ac-

count of his own rashness and rudeness, whatever he receives in return therefor.

“Let me retort on this youth that he is a worthy advocate of his butcher client. He fights with the dirty weapons of his barbarous trade, and brings into his speech the reeking odor of his client’s slaughter-house.

“Perhaps something of this congeniality commended him to the notice of his worthy client, and to this, his first retainer: and no wonder, for when we heard his vehement roaring, we might have supposed his client had brought his most unruly bull-calf into court to defend him. Had not the matter of the roaring soon convinced us the animal was more remarkable for the length of his ears, than even the power of his lungs. Perhaps the young gentleman has taken his retainer, and contracted for butchering my client on the same terms as his client contracts in his line—that is, on the shares. But I think, gentlemen, he will find the contract a more dirty than profitable job. Or, perhaps, it might not be uncharitable to suggest that his client, who seems to be pretty well up to the business of *saving other people’s bacon*, may have desired, as far as possible, to save his own; and, therefore turning from members of the bar who would have charged him for their services according to their value, took this occasion of getting off some of his stale wares; for has not Shakspeare said—(the gentleman will allow me to quote Shakspeare, too, while yet his reputation survives *his* barbarous mouth-ing of the poet’s words)—he knew an attorney ‘who would defend a cause for a starved hen, or leg of mutton fly blown.’ I trust, however, whatever was the contract, that the gentleman will make his equally worthy client stand up to it: for I should like, that on one occasion it might be said the excellent butcher *was made to pay for his swine*.

“I find it difficult, gentlemen, to reply to any part of the young man’s effort, except his argument, which is the smallest part in compass, and, next to his pathos, the most amusing. His figures of speech are some of them quite good, and have been so considered by the best judges for the last thousand years. I must confess, that as to these, I find no other fault than that they were badly applied and ridiculously pronounced; and this further fault, that they have become so common-place by constant use, that, unless some new vamping or felicity of application be given them, they tire nearly as much as his original matter—*videlicet*, that matter which being more ridiculous than we ever heard before, carries internal evidence of its being his own. Indeed, it was never hard to tell when the gentleman resorted to his own ideas. He is like a catbird—the only intolerable discord she makes being

her own notes—though she gets on well enough as long as she copies and cobbles the songs of other warblers.

"But, gentlemen, if this young orator's argument was amusing, what shall I say of his pathos? What farce ever equalled the fun of it? The play of 'The Liar,' probably, approaches nearest to it—not only in the humor—but in the voracious character of the incidents from which the humor comes. Such a face—so wo-begone, so whimpering, as if the short period since he was flogged at school, (probably in reference to those eggs falsely charged to the hound puppy,) had neither obliterated the remembrance of his juvenile affliction, nor the looks he bore when he endured it.

"There was something exquisite in his picture of the woe, the wasting grief of his disconsolate client, the butcher Higginbotham, mourning—as Rachel mourned for her children—for his character *because it was not*. Gentlemen, look at him! Why, he weighs twelve stone *now*! He has three inches of fat on his ribs this minute! He would make as many links of sausage as any hog that ever squealed at midnight in his slaughter-pen, and has lard enough in him to cook it all. Look at his face! why, his chops remind a hungry man of jowls and greens. If this is a shadow, in the name of propriety, why didn't he show himself, when in flesh, at the last Fair, beside the Kentucky ox; that were a more honest way of making a living than stealing hogs. But Hig is pining in grief! I wonder the poetic youth—his learned counsel—did not quote Shakespeare again. 'He never told his'—woe—but let concealment, like the worm i' the bud, prey on his damask cheek.' He looked like Patience on a monument smiling at grief—or beef I should rather say. But, gentlemen, probably I am wrong; it may be that this tender-hearted, sensitive butcher, was lean before, and like Falstaff, throws the blame of his fat on sorrow and sighing, which 'has puffed him up like a bladder.' (Here Higginbotham left in disgust.)

"There, gentlemen, he goes, 'larding the lean earth as he walks along.' Well has Doct. Johnson said, 'who kills fat oxen should himself be fat.' Poor Hig! stuffed like one of his own blood-puddings, with a dropsical grief which nothing short of ten thousand dollars of Swink's money can cure. Well, as grief puffs him up, I don't wonder that nothing but depleting another man can cure him.

"And now, gentlemen, I come to the blood and thunder part of this young gentleman's harangue: empty and vapid; words and nothing else. If any part of his rigmarole was windier than any other part, this was it. He turned himself into a small cascade, making a great deal of noise to

make a great deal of froth; tumbling; roaring; foaming: the shallower it ran all the noisier it seemed. He fretted and knitted his brows; he beat the air and he vociferated, always emphasising the meaningless words most loudly; he puffed, swelled out and blowed off, until he seemed like a new bellows, all brass and wind. How he mouthed it—as those villainous stage players ranting out sustian in a barn theatre mimicing—'Who steals my purse, steals trash.' (I don't deny it.) 'Tis something, (query?) 'nothing,' (exactly.) 'Tis mine; 'twas his, and has been slave to thousands—but he who filches from me my good name, robs me of that which not enricheth him.' (not in the least.) 'but makes me poor indeed;' (just so, but whether any poorer than before he parted with the incumbrance, is another matter.)

"But the young gentleman refers to his youth. He ought not to reproach us of maturer age in that indirect way: no one would have suspected it of him or him of it, if he had not told it: indeed, from hearing him speak, we were prepared to give him credit for almost *any length of ears*. But does not the youth remember that Grotius was only seventeen when he was in full practice, and that he was Attorney General at twenty-two; and what is Grotius to this greater light? Not the burning of my smoke house to the conflagration of Moscow!

"And yet, young Grotius tells us in the next breath, that he never knew such a slander in the course of his practice? Wonderful, indeed! seeing that his practice has all been done within the last six hours. Why, to hear him talk, you would suppose that he was an old Continental lawyer, grown grey in the service. H-i-s p-r-a-c-t-i-c-e! Why he is just in his legal swaddling clothes! His PRACTICE!! But I don't wonder he can't see the absurdity of such talk. How long does it take one of the canine tribe, after birth, to open his eyes?

"He talked, too, of *outside* influences; of the *public* expectations, and all that sort of demagogueism. I observed no evidence of any great popular demonstrations in his favor, unless it be a tailor I saw stamping his feet; but whether that was because he had sat cross-legged so long he wanted exercise, or was rejoicing because he had got orders for a new suit, or a *prospect of payment for an old one*, the gentleman can possibly tell better than I can. (Here Hicks left.) However, if this case is to be decided by the populace *here*, the gentleman will allow *me* the benefit of a writ of error to the regimental muster, to be held, next Friday, at Reinhert's Distillery.

"But, I suppose he meant to frighten *you* into a verdict, by intimating that the mob, frenzied by his eloquence, would tear you to pieces if you

gave a verdict for defendant; like the equally eloquent barrister out West, who, concluding a case, said, 'Gentlemen, my client are as innocent of stealing that cotting, as the Sun at noonday, and if you give it agin him, his brother. Sam Ketchins, next muster, will maul every mother's son of you.' I hope the Sheriff will see to his duty and keep the crowd from you, gentlemen, if you should give us a verdict!

"But, gentlemen, I am tired of winnowing chaff; I have not had the reward paid by Gratiano for sifting *his* discourse: the two grains of wheat to the bushel. It is all froth—all wind—all bubble."

Kasm left me here for a time, and turned upon my client. Poor Higginbotham caught it thick and heavy. He wooled him, then skinned him, and then took to skinning off the under cuticle. Hig never skinned a beef so thoroughly. He put together all the facts about the witnesses' hearing the hogs squealing at night; the different marks of the hogs; the losses in the neighborhood; perverted the testimony and supplied omissions, until you would suppose, on hearing him, that it had been fully proved that poor Hig had stolen all the meat he had ever sold in the market. He asseverated that this suit was a malicious conspiracy between the Methodists and Masons, to crush his client. But all this I leave out, as not bearing on the main *subject*—myself.

He came back to me with a renewed appetite. He said he would conclude by paying his valedictory respects to his juvenile friend—as this was the last time he ever expected to have the pleasure of meeting him.

"That poetic young gentleman had said, that by your verdict against his client, you would blight forever his reputation and that of his family—that you would bend down the spirit of his manly son, and dim the radiance of his blooming daughter's beauty.' Very pretty, upon my word! But, gentlemen, not so fine; not so poetical by half, as a precious morceau of poetry which adorns the column of the village newspaper, bearing the initials J. C. R. As this admirable production has excited a great deal of applause in the nurseries and boarding schools. I must beg to read it; not for the instruction of the gentleman, he has already seen it; but for the entertainment of the Jury. It is addressed to R*** B***, a young lady of this place. Here it goes."

Judge my horror, when, on looking up, I saw him take an old newspaper from his pocket, and, pulling down his spectacles, begin to read off in a stage-actor style, some verses I had written for Rose Bell's Album. Rose had been worrying me for some time, to write her something. To get rid of her importunities, I had scribbled off a

few lines and copied them in the precious volume. Rose, the little fool, took them for something very clever, (she never had more than a thimbleful of brains in her doll-baby head)—and was so tickled with them, that she got her brother, Bill, then about fourteen, to copy them off, as well as he could, and take them to the printing office. Bill threw them under the door; the printer, as big a fool as either, not only published them, but, in his infernal kindness, puffed them in some critical commendations of his own, referring to "the gifted author," as "one of the most promising of the younger members of our bar."

The fun, by this time, grew fast and furious. The country people, who have about as much sympathy for a young town lawyer, badgered by an older one, as for a young cub beset by curs; and who have about as much idea or respect for poetry, as for witchcraft, joined in the mirth with great glee. They crowded around old Kasm, and stamped and roared as at a circus. The Judge and Sheriff in vain tried to keep order. Indeed, his honor *smiled out loud once* or twice; and to cover his retreat, pretended to cough, and fined the Sheriff five dollars for not keeping silence in court. Even the old Clerk, whose immemorial pen behind his right ear, had worn the hair from that side of his head, and who had not smiled in court for twenty years, and boasted that Patrick Henry couldn't disturb him in making up a judgment entry, actually turned his chair from the desk and *put down* his pen: afterwards he put his hand to his head three times in search of it; forgetting, in his attention to old Kasm, what he had done with it.

Old Kasm went on reading and commenting by turns. I forget what the ineffable trash was. I wouldn't recollect it if I could. My equanimity will only stand a phrase or two that still lingers in my memory, fixed there by old Kasm's ridicule. I had said something about my "bosom's anguish"—about the passion that was consuming me; and, to illustrate it, or to make the line jingle, put in something about "Egypt's Queen taking the Asp to her bosom"—which, for the sake of rhyme or metre, I called "the venomous worm"—how the confounded thing was brought in, I neither know nor want to know. When old Kasm came to that, he said he fully appreciated what the young bard said—he believed it. He spoke of venomous worms. Now, if he (Kasm) might presume to give the young gentleman advice, he would recommend Swain's Patent Vermifuge. He had no doubt that it would effectually cure him of his malady, his love, and last, but not least, of his rhymes—which would be the happiest passage in his eventful history.

I couldn't stand it any longer. I had borne it to the last point of human endurance. When it came only to skinning, I was there; but when he showered down aquafortis on the raw, and then seemed disposed to rub it in, I fled. *Abii, erupi, evasi*. The last thing I heard was old Kasm calling me back, amidst the shouts of the audience—but no more.

The next information I received of the case, was in a letter that came to me at Natchez, my new residence, from Hicks, about a month afterwards telling me that the jury (on which I should have stated old Kasm had got two infidels and four anti-masons) had given in a verdict for defendant: that before the court adjourned, Frank Glendye had got sober, and moved for a new trial, on the ground that the verdict was against evidence, and that the plaintiff had not had justice, *by reason of the incompetency of his counsel, and the abandonment of his cause*; and that he got a new trial, (as well he should have done.)

I learned through Hicks, some twelve months later, that the case had been tried; that Frank Glendye had made one of his greatest and most eloquent speeches; that Glendye had joined the Temperance Society, and was now one of the soberest and most attentive men to business at the bar, and was at the head of it in practice; that Higginbotham had recovered a verdict of \$2000, and had put Swink in for \$500 costs, besides.

Hick's letter gave me, too, the *melancholy* intelligence of old Kasm's death. He had died in an apoplectic fit, in the courthouse, while abusing an old preacher who had testified against him in a *crim. con.* case. He enclosed the proceedings of a bar meeting, in which "the melancholy dispensation which called our beloved brother hence while in the active discharge of his duties," was much deplored; but, with a pious resignation, which was greatly to be admired, "they submitted to the will," &c., and, with a confidence old Kasm himself, if alive, might have envied, "*trusted* he had gone to a better and brighter world," &c., &c., which carried the doctrine of Universalism as far as it could well go. They concluded by resolving that the bar would wear crape on the left arm for thirty days. I don't know what the rest did, I didn't. Though not mentioned in his will, he had left me something to remember him by. Bright be the bloom and sweet the fragrance of the thistles on his grave!

Reader! I eschewed *genius* from that day. I took to accounts; did up every specie of paper that came into my office with a tape string; had pigeon holes for all the bits of paper about me; walked down the street as if I were just going to bank and it wanted only five minutes to three

o'clock; got me a green bag and stuffed it full of old newspapers, carefully folded and labelled; read law, to fit imaginary cases, with great industry; dunned one of the wealthiest men in the city for fifty cents; sold out a widow for a twenty dollar debt, and bought in her things myself, publicly, (and gave them back to her secretly, afterwards;) associated only with skinflints, brokers and married men, and discussed investments and stocks; soon got into business; looked wise and shook my head when I was consulted, and passed for a "powerful good judge of law;" confirmed the opinion by reading in court, all the books and papers I could lay my hands on, and clearing out the courthouse by hum-drum details, common place and statistics, whenever I made a speech at the bar—and thus, by this course of things, am able to write from my *sugar plantation*, this memorable history of the fall of *genius* and the rise of solemn humbug!

J. C. R.

THEBES.

From the "Curse of Sin," an Unpublished Poem.

BY J. CLEMENT.

See Thebes, so spacious, in her palmy days,
She spans the broad green valley of the Nile;
On either side, far up the mountains, blaze
Her golden porticoes, beneath the smile
Of morning; and, behold! a glorious pile,
Her hundred pillared palace, towering, stand.
With harps and cymbals see her priests, meanwhile,
Benighted souls! at Error's blind command,
Their gods from Carnac bear through temples tall and grand.

But God on image-worship darkly frowns,
And lets his thunderbolts of vengeance fall:
"Wo, wo to Thebes, her riches and her crowns!
Sands of the desert! rise and bury all!"
'Tis thus methinks I hear Jehovah call,
And sands three thousand years have driven o'er
Gigantic propylons, in ruin's pall,
And broken obelisks, which stood before
Her hundred glittering gates, which swing alas, no more!

Cambyzes led the Persian legions on,
And Plunder garnered to its full content;
The wrath of Ptolemy came down anon,
When all the temples of her gods were rent,
And dome and catacomb, in ruins blent,
Licking the dust, in swinish meanness dozed.
Lorn, starving Arabs now, on pillage bent,
From mud-huts crawl where priests their labor closed,
And dogs usurp the tombs where royalty reposed.

Buffalo, N. Y.

Scenes and Incidents in the Old Dominion.

NO. 2.

BY E. KENNEDY.

Non-Jurors in America a Century ago.

It was upon the morning of a bright, joyous day in June,—the year one thousand seven hundred and twenty-five, that a more than usual stir was manifested at the old St. — church, lying sweetly embosomed in the primeval shade of a cluster of reverend oaks, which grew upon the bank of — river in Eastern Virginia.

'Tis a good while ago — the year *anno Domini*, 1725.—verily a century and somewhat over, as we reckon it by the simple process of arithmetic: but even at that early day the "King's Colony of Virginia" was prosperous and promising. But even still further back into the dim distance of time does the record of the ancient Dominion extend. True, we cannot trace her annals so far as to the time of the "Conqueror," neither was the contest of the White and Red Roses permitted to disturb the silence of these then unbroken forests; but she dates her earliest attempted settlement in the Elizabethan age—(Virginia was named after the *Virgin* Queen!)—and it was very early in the reign of James I., her successor, that a well-appointed colony was actually planted at Jamestown on the James river,—these names being all significant of times and of circumstances. From 1607, when the famous Capt. John Smith, together with a goodly company besides, landed and established a government, until near the close of the reign of the first George, when our sketch opens, there had intervened more than a century of vicissitudes for poor Virginia. Indian fights, and massacres, and civil wars had been neither few nor bloodless, and many "traitors" had paid the penalty of their rashness upon the gallows. Charles II. said of Sir William Berkeley, who had been Governor of Virginia, off and on for full thirty years, "the old fool has hanged more men in that naked country, than I have done for the murder of my father!" At the opening of the last century the colony had increased to one hundred thousand, including slaves; these last forming an aggregate of one-fourth part of the population. Perhaps, in some respects, the days of "the good Queen Anne," and those of the first Hanoverian monarchs, were the palmiest days of the Old Dominion. Her territory was circumscribed, it is true; but prosperity seemed to mark the progress of things in her midst. Now-a-days, when her map calls for a monstrous slice

of land and rivers, including mountains and sea-shore, with towns and villages spreading themselves even upon the borders of the far distant Ohio, we can hardly conceive of any extraordinary prosperity as attending the settlements clustering about the rivers and the coast of the Chesapeake bay and the Atlantic. But yet it was so. Prosperity in trade seemed to crown the efforts of the self-denying, industrious emigrants. Tobacco was the grand staple of export, and all the smokers and snuffers of the old world—chewing had not yet come into vogue—looked with feelings of tenderness toward the distant shores of "Young America," whence the supply of the luxury was to be derived. In old times Virginia was a land of "necks." Men naturally settled upon the rivers in order to possess themselves of good *bottom* lands for farming purposes, and also to be near to a convenience for market. Unlike Robinson Crusoe, when he built his big boat, and could neither get it to the water, nor bring the water to it, the honest cavaliers of Virginia, in the early day we speak of, were cautious to have their tobacco hogsheads packed up directly upon the shore of the river, whence some lazy vessel could transport them to England within two or at most three months from the time of setting sail. Of these "necks," there were four. The first settled was between the James and York rivers. Another neck was south of the former of these memorable streams. A third was between the York and the Rappahannock, and still another and a fourth lay stretching itself broadly from the last named of these veins and arteries of the "Colony," even to the far northern waters of the rolling Pawtowameck, which was the Indian name for that same stream on the shores of which the "father of his country" was both born and died; and upon the northern bank whereof the present majestic capitol of this nation rears its ample dome. So much for the "necks" of Virginia—a name which seems to be lost in these our days. And now, as it is about the church that our sketch leads us to speak at this present,—that is, if we ever reach it, one word as to its weal: All the world knows, or may know if they will consult the truth-telling pages of history, that lamentable as men's deficiencies are in spiritualities in these our own days, there existed a deficiency still more lamentable in the day and time of our great-great-great-grandfathers and grandmothers. "The traveller, in his journeyings through the colony," we quote the language of an esteemed historian, "might see on every hand the neat spire of a substantial church lifting its head amid the foliage of the forest in which it was placed: his eye rested on the cultivated grounds which surrounded the comfortable habitations of

the clergy: and he might, from these tokens, have hastily concluded that he was in the bosom of a deeply pious population, but such was not the case. The 'form of sound words' which embodied devotion was there, and the beautifully chaste and simple ritual of the church, to which the colonists belonged, was scrupulously held to, but in the use of that form, it is to be feared, too many rested. There was a deficiency of spirituality in the religion of that day."

Such, we say, having been premised,—and most tediously, as we fear,—the subject matter of Bishops, and the effort to obtain them, opens more understandingly before the eye of the writer, as well, perchance, as the reader of "Scenes and Incidents in the Old Dominion:" and more particularly as to that same bright June Sabbath morning,—for it was the Sabbath as referred to upon the day and date aforesaid.

Carriage after carriage,—or perhaps we should rather say, after the nomenclature of the times, "Chariot" after "chariot" rolled up with their out-riders and servants in livery, and a goodly display of the pomp and circumstance of "Old Virginia." There was also, as we may suppose, all that aristocratic rattle of the "steps" of these vehicles, such as even in our own degenerate ears is sometimes heard, whilst depositing the gaily attired burthens upon the church green. A contemporary writer speaking of the customs among "gentle folk," even as late as the latter years of the reign of George II., designates the "periwig" as their distinguishing badge:—much more so, therefore, was this outward, and to our notions, absurd and inconvenient garniture, the indispensable "top-dressing" of those living thirty years previously. Here then, was to be seen a stately old gentleman in a full bottomed wig of Queen Anne's time, with his coat of ample skirts descending to the calves, his flowery waistcoat with flaps far below his middle, and his knee-breeches, and shoe buckles and three-cornered hat;—and there, in all the grandeur of Virginia in these same palmy days we speak of, stood a matron in hooped petticoat, and with a head-dress that soared as loftily even, perchance, as the tone and temper of the very fair one herself, whose natural proportions, both perpendicularly and as to circumference, were so unnaturally increased.

There were groups of these;—and scattered about beneath the pleasant shade of those wide-spreading—not beech, but oak—trees, were to be seen divers of an humbler order in society—men with hair cropped close, *a la roundhead*, in buckskin breeches, and clogs, and linsey-woolsey jerkins:—and tidy looking women, too, as nice as new pins, in their homely caps and high-heeled shoes, and doubtless feeling "mighty fine" in their "petticoats and short gowns."

It was, as before observed, an assemblage of unusual interest and importance. Ordinarily the solemnities of the day brought no exhibition of feeling upon the countenance; and, sad to say, men's hearts were unmoved and unmolested in those far-off times when the work of grace, if done at all, was, according to their theory, only effected through the medium of the baptismal water, or the partaken eucharist. If there could be any such thing as religion that was not religion, we can suppose a climax of the kind to have been reached in the days of the first of these Georges. The excesses of the Cromwellian period had been succeeded by an awful departure from even the common decencies of Christian behaviour: and the dissolute court of Charles II. gave tone to a practical ungodliness in every part of "his majesty's dominions." At the period here referred to there had been some small change for the better. The commoner "decencies" of Christian decorum were beginning to be observed. Men attended church, and they "read prayers," or at least they held the prayer book in their hands when the "parson" read them, and they learned to pronounce "Amen" quite audibly, and to become considerably *au fait* in the responsive service, but—not wishing, however, to indulge in scandal at the expense of our hooped petticoated ancestry—in all respects as to experimental piety the deficiency was lamentable indeed. Of course we speak in generalities, not doubting that there were truly pious and excellent people in that, as in all other ages of the Christian Church. They thought that it was the part of a "good subject" to reverence "king and law;" and as the church was ordained by law, men exhibited their loyalty to the king by an outward and open observance of Church ordinances.

In addition to this low state of religious discipline, some other topics of a more strictly political character came to be mixed up with men's notions of faith, and it fell in with the grand object of the present assemblage of the gentry and yeomanry of the "Northern neck" at the old St. — church, as before stated, to give countenance or to express disapprobation of said measures accordingly.

"Dost think he'll come?" enquired Martin Hathcomb of his neighbor Higbee.

"Yea, in truth, I think he will," was the reply of the honest rustic, "he was to have reached the Hall yestre'en, so the Dame was tellin' of me."

"In full canonicals, neebour Higbee, is it your opinion? Ah, me," sighed the old man, "it's a lang while sin' I hae seen a Bishop in his lawn sleeves, and wi' his holy hands upon their heads a blessin' of the young folk, which kneel around the chancel rail on confirmation days. It would

be a welcome sound to my old ears once more : 'Defend, O Lord, this thy sarvent wi' thy heavenly grace'—dunna ye think so, John ?"

"Aye, its lang sin' we've both heard the like, as ye say," coolly answered the more thoughtful Higbee : "they've a plenty of Bishops in the old country, and I'm sure they might graciously grant us a leegeetimate one instead of this Jacobite usurper that's coming to St. — parish to-day. Ah, neebor Hathcomb, I'm fearful of the consequences of this transaction ! If only our present Governor, Hugh Drysdale, was but the man that Alexander Spotswood was, I'm a thinkin' this 'Bishop Talbot,' as the *non-juring* gentry are pleased to call him, would not have had leave so much as to enter the borders of his Majesty's Colony of Virginia, canonicals or no canonicals,—at least such is my opinion, which may be isn't worth a great deal."

"Hoot awa' man," said the other, lowering his voice a little, and casting a glance around to observe whether he might be overheard in giving utterance to "treason," "is not a Bishop a Bishop whether he swears allegiance to one king or to anither ? I've had serious doubts myself, man, whether this Hanoverian they've got upon the throne now, is a just, and true, and lawful successor of the honored line of Stuart kings"—

"But ye'er no papist, Martin, are ye ?" enquired his companion.

"Ye may well say that, neebor Higbee," rejoined the unsettled Scotchman, "ye may well say that, indeed, for there's never a drop of the blood of Mistress Babylon in any of the veins of the Hathcombs. Humble folk they be, I'm free to confess, but they abhor papistry. Some, indeed, think a man can hae no doubts in his noddle without being a papist, sure. I wish o' my heart the Bishop would be comin' along—I long for a sight of his reverence."

"I doubt na ye'll see nathing but a man when he does come," said Higbee, "and an unco weak one too, if all accounts one hears about him be true. But see, neebor, yonder comes his honor's chariot, and your Bishop of doubtful pretences, as I hold it, is with him."

And sure enough, as the blunt spoken rustic had said, there came rolling upon the church green the princely "chariot" of one of the neighboring esquires,—a man notoriously tainted with Jacobitism, and there descended from it a tall, commanding looking individual, a clergyman from his apparel, as was evident, and to appearance, about forty years of age. A few of the neighbouring "gentle-folk" pressed forward for the distinguished honor of an introduction to "Bishop Talbot," as he was pompously entitled by the "'Squire :'" and it seemed to be the earnest wish of the patron to render these saluta-

tions as general as possible. But the majority of the parishioners present stood aloof, and did not seem to be anxious to come forward to press the hand of the new "Bishop." There were besides expressive glances cast from eye to eye, as if all was not right and proper. In fact, there were more people than John Higbee, assembled beneath these reverend oaks, who seemed to have distrustful doubts in their minds as to the propriety of committing themselves in a point of so much interest and manifest importance.

Poor Martin Hathcomb belonged to a different cast of society, and however he might have been rejoiced in heart to have his own hard hand squeezed by the hand of "his reverence," such an honor was denied to him as a matter of course. The *yeomanry* of Virginia, a century ago and more, were a class distinct and separate, and they made no approaches towards "amalgamation :'" but since the Revolutionary war, and since every man's vote has come to count one, the "hard-handed peasantry" are lifted up in the scale of importance, ostensibly at least, and "liberty, fraternity, equality," reign.

* * * * *

That the Rev. John Talbot was essaying to practise a very dangerous experiment upon the credulity of these sturdy churchmen, there can be no manner of doubt;—no more doubt, indeed, than that such occurrences as is here recorded actually took place. From the day and date of the first settlement made in Virginia, up to the year 1725, the English church had given over these colouists to utter and entire neglect. The Church of England was established by law, it is true, but a regularly appointed Episcopal head was never vouchsafed to "his majesty's subjects" here in America. The hands of a Bishop in Confirmation were never placed upon the heads of our ancestors in "lang syne :'" and from 1607 until 1725,—yea, even further onwards—down to the close of the Revolutionary struggle, even to the year 1790, there never was a Bishop's foot upon the soil of our State, nor his hands upon the head of any native born Virginian. This was a fact that was sufficiently deplored by every sincere hearted churchman, but it seemed to be an evil for which there was no remedy. In vain had private applications again and again been made ; in vain had many of the Archbishops of Canterbury moved in the matter, and endeavored to send abroad the blessings of the Episcopate ; in vain had the monarchs of England expressed their wishes upon the subject and their readiness to co-operate ;—it *never was done* ; and the fact stands out in the history of the times as equally strange and unaccountable.

Now this same John Talbot, who was an excellent and worthy man in his way, unfortunately,

and in an evil hour, conceived the idea of a remedy for this long standing blemish upon the Church. He was a missionary sent out by the Venerable Propagation Society, and had labored for some years with entire fidelity and trustworthiness in the Colony of New Jersey. He was one of those clergymen who had long seen and long lamented the consequences attending an Episcopal Church without the presence of an Episcopal head; and having despaired at last of ever seeing a duly consecrated Bishop upon these American shores, he came to the most imprudent and unwarrantable conclusion, that he himself would be personally instrumental in the introduction of an *unduly* consecrated line.

Did ever man, in his senses, indulge so preposterous an idea before!

We have alluded to certain political tendencies in operation at that early day and time. The student of English history is well aware that when James II. fled, an exile from the throne of his ancestors, and took refuge under the wing of *le grand monarque* of France, a great number of conscientious people refused to abandon him and his cause. The parliament of England, which established the succession in William and Mary, decreed that every man should swear allegiance to them. But this many were unwilling to do, seeing that they had already sworn allegiance to one monarch, James II., who, as they averred, was unjustly driven from his throne. These were the *non-jurors*,—they refused to swear: and thence a party sprung up in England, called by this name, or “Jacobites,” from the name of the monarch to whom they adhered. This party increased and continued even after the death of James II., steadfastly refusing to acknowledge Queen Anne, and after her, the first George, but pinning their political faith to the sleeve of the “Pretender,” as James’ son was popularly called.

Even here in Virginia there were to be found “Jacobites,” although their number was few:—it was the grand political schism of the day, and as the subject was agitated, men’s minds became calisted, as they always do, and they espoused the one side or the other as fancy dictated, and as mortal man is ever so prone to follow and obey.

Now it entered into the head of John Talbot, we say, to cast himself into the meshes of this political net and so achieve a momentary greatness for himself. But perhaps we do the poor man injustice: he may have been a conscientious *non-juror*, and he may have been equally conscientious in his desires for the welfare and prosperity of the Church. He may have been all this, and still unjustifiable, even on the score of common prudence, in the rash step that he took.

What therefore did John Talbot do, but quietly embark for Old England in a vessel sailing from some one of the Atlantic sea-ports, and whilst in England obtain consecration, by hook or by crook, from the *non-juring* Bishops there? We say, by hook or by crook, meaning that he was self-nominated, self-appointed, and self-delegated for the work. After his consecration as “Bishop,” and remaining in England for a year or so, he returned to America, and commenced the “laying on of hands.”

At the early day and time here alluded to Episcopacy had but a faint hold upon the more northern of these American colonies. New England was the home of the Puritans: Pennsylvania was settled and first populated by Quakers: the Hollanders of New York were of the Reformed Church, and in Maryland and Virginia alone was there as yet a strong foothold of Episcopalians. It is to the Missionaries of the “Venerable Society” that the Church of England owed the origin of Episcopacy, as a distinctive branch of the Christian fold, within the bounds of those colonies lying to the north and east of what we call Mason’s and Dixon’s line. When John Talbot re-visited America, in the equivocal capacity just referred to, he found but little sympathy among the missionaries. He was received in the churches of some few where he assumed the Episcopal robes, and exercised the authority and office of a Bishop, confirming some, and perhaps ordaining others to the work of the ministry. There are not many individual facts left upon record as to the particular cases of such a use and abuse of ill-gotten prerogative. That he so, of his own accord, went over to England, and that he so came back again to America, is abundantly attested by contemporary authorities, but how it was, whether through laxity of the government, or through carelessness of the consequences, that he was permitted to continue for a year or two, and perhaps longer, in the discharge of these Episcopal functions, none now can tell. It was most natural, however, that he should turn his attention southward to those colonies where the Episcopal Church, being the *established* religion, was most prevalent amongst the people, and where it is very probable the greatest number of *non-jurors* were to be found. That Mr. Talbot had officiated thus in Maryland there is sufficient testimony to prove, and, for the purpose of our present sketch, we will suppose him to have pass unmolested through that colony; nor should this be considered a matter of surprise, seeing that “papiests” abounded there more numerous than in any other part of the English settlements in America, and that it is also a fair presumption that the *non-juring* influence were likely there to prevail: but in the

Ancient Dominion there was but a small hold for a political heresy so rank as this was esteemed to be.

"Loyalty to king," was, as has already been remarked, the chief of human virtues among a people proud of their hereditary fealty, and but indifferently instructed in the obligations of a virtue of a higher sort. And, in truth, to our mind, there is something touching and romantic in the disinterested devotion of the cavaliers of Virginia to the throne. True, *nous avons changé tout cela*, we have experienced a change upon the spirit of our political dreams, and we now rather repudiate "king-craft" in the abstract, being democrats and republicans in these days, but all this does not hinder that we should admire the blunt, straight-forward honesty of our law-abiding ancestry. And for what purpose did they "reverence the king,"—was it for the royal virtue necessarily flowing as by divine right from beneath the crown, or was it not rather that the occupant of the throne was the embodiment of law and order, and that in him the majesty of the law was personified? The latter we must believe; and therefore it is that we admire and honor these men,—these our grave and dignified ancestors, who wore periwigs on their heads, reaching broadly and widely over their shoulders, who held their personal dignity very closely associated with the quality of their shoe-buckles and their knee-buckles, who never wore a coat which was not made by a London tailor, and who never had on a pair of pantaloons in their lives.

Mr. Talbot had exercised his assumed office and authority in various places up to the present auspicious hour—inauspicious, however, it proved for him. The sin, in its political aspects, of being a *non-juror* did not consist in refusing allegiance *in foro conscientie*, as the lawyers term it, but in making a deal of fuss about it. Great Britain has, for many centuries, graciously granted to her subjects the right of private judgment when inwardly indulged, which is a very considerable boon when taken properly—more appreciated, however, in the days of the Tudors than it is now. No man could be arraigned before a public tribunal, and put into hindrance in regard to

"the common air,
And common use of his own limbs,"

for refusing in his own heart, and in the depths thereof, to acknowledge George the First of the line of Hanover, as the lawful and legitimate sovereign of England, but the difficulty lay in this: The Church had laid down a formula of faith for men to subscribe when they met together upon the Sabbath day, a form of faith

political as well as religious,—he must needs pray for the king, and for the sons and daughters, sisters and brothers, aunts and uncles of said monarch, inclusively. It was this the *non-jurors* could not conscientiously or consistently do,—it was what they would not do—it was what they pertinaciously refused to do. But the sin did not even lie here;—they might have been silent, they might have said No! in their hearts whilst they held the book in their hands, or they might have sat still with their closed books lying in their laps before them, and so have "saved their bacon;"—but the sin—a gross and shameful sin it was in the eyes of all good cavaliers—lay in the fact of openly, and with "malice aforethought," praying prayers for the "Pretender," and this was "treason" outright. For this, when suspicion of the same was lodged upon him, a man was liable to "attainder," and for such a praying of prayers he was held to be in jeopardy as to life and limb.

The scenes and the circumstances, as well as the times, have all undergone so entire and radical a change since the days of the American Revolution, that the reader needs to be reminded of all these things, in order to be fully alive to the critical position in which this newly arrived "Episcopus" was placed; and how that the solemnities of religion and the rigid acts of Parliament, the ordinances of God and the ordinances of men, were joined together, and were made to present an undivided front.

With us the case is widely different, as we well know. It would appear constrained enough in a Christian congregation in these, our days, to witness a parade of justice, and perhaps the presence of the "king's officers," to overawe a worshipping assembly, and to straighten its "flow of soul," by such a palpable presentation of the "square and compass" of legal enactment, requiring this to be done and said, and this other to be left unsaid and undone. But it was so in those days, and men were held responsible, legally responsible, for their acts and deeds when within church walls; and their devotions and the nature, if not the degree of them, were noted down; and so a human accountability, as well as a divine, was pressed upon men's minds and consciences. Some forty years later than the events we are here supposing to have taken place, this subject of ecclesiastical dominion upon the reason and judgment, as well as over the consciences of men, became a prominent topic in the Colony of Virginia, and it helped, as some think, to bring on the great political crisis of the day—a crisis which separated us forever from the rule and sway of Great Britain. The cause of the "people," versus the "parsons," as rendered memorable by the eloquence of Patrick

Henry, in the Hanover Court House, as early as 1763, was a contention of prerogative even then, and the result, as bound up in that issue, was, whether an unspiritual priesthood should "lord it" over the heritage of God's creatures; whether the strong arm of law should be brought in to sustain an ecclesiastical dominion, allied to, and conjoined with the secular power! Thirteen years later still, the whole fabric, cumbersome and really useless as it was, went by the board: and from 1776, when the church establishment of Virginia tumbled into ruins, until the year 1785, when a re-organization of Episcopacy took place, there was a condition of anarchy and of confusion exceedingly confounded.

Not so, however, in the year 1725, when the reins of ecclesiastical discipline were held tightly as to politics, and loosely as to the true worship of God. The coming of Mr. Talbot into Virginia, had not been unnoticed or disregarded, as our honest yeomen had supposed. Gov. Drysdale, although less rigorous in the discipline he exercised than others of his "illustrious predecessors," was by no means so slack in his hold upon the reins of justice, as to permit absolute "treason" to stalk abroad within the bounds of loyal Virginia. He had heard of Mr. Talbot's pretensions—indeed, he had been apprised of the same by the watchful authorities of the "fatherland," and a writ of *premunire* had actually been forwarded for the protection of the king's cause against all such sinners in church discipline, and against "one John Talbot" most especially. But all this was a profound secret to the friends of Mr. Talbot, and they went on helping him officiously forward, with as much confidence and self security, as if the "ungodly Jacobites" had possessed all power and authority within their own grasp. There was one remarkable circumstance which should have been held significant, had Mr. Talbot and his friends been disposed to take wisdom into the account: the "parson" in charge of the parish was *not* upon the ground. A sudden indisposition was alleged to be the cause of such absence, but the knowing ones were shrewd enough to attribute it to other and more far-seeing motives. "Parson" Hanway was a prudent man and a close observer, and was not likely to allow fancies of any kind to get the better of his judgment. Some considered him as disaffected to the reigning family; but if so, it was deeply concealed within his own breast: and, as to politics, he took care that his "left hand should never know what his right hand" was disposed to exercise itself withal. He prayed for king George with most decided emphasis, and his clerk responded with a nasal "amen," so long and so loud, that none bearing could doubt that both master and

man were the very embodiment of loyalty and good-citizenship. "No, no," said the politic Mr. Hanway, "let others, and those who will—let them embroil themselves in difficulties, as for myself, I shall keep out of them. I'll have no *writs of king's council* to dispossess me of this goodly glebe, and to drive me and mine from the comfortable 'parish living.'"

The morning was wearing away, and the warm June sun had already mounted aloft above the tree-tops. Mr. John Talbot, or "Bishop" Talbot, whichever we choose to call him, attended by his officious friend and patron, moved towards the vestry door, and at the signal, the congregation ascended those old stone steps, and passed beneath the elaborate carving of the substantial door-way, and trod the flags of those well-laid aisles, and seated themselves within the ample square enclosures, called pews. The church was filled: for expectation was upon tip-toe, and many were there who evidently had come to see only what was to be seen, and to hear what they might hear.

How grandly solemn these old churches are! Infinitely more so, according to our fancy, than the gingerbread structures of the present twenty-four hours duration. It may be from the charm of "old antiquity"—the dust of hoary centuries, that falls upon the heart as something so solemnly grand and mysterious! One wanders amid relics of the "olden time," with a degree of superstitious awe about him; he thinks of the past, and of the fleeting forms of human kind that "coming like shadows and so departing," have trodden these aisles, and have filled these seats, and have listened to the voice of heavenly instruction from yonder desk, and he asks, where are they all, and how do they appear, and "with what body do they come?" and the echo sends forth no reply:

"The answer is a silent one,
More eloquent than words."

* * * * *

The chancel door opened, and the tall attenuated form of the "Bishop" appeared; and Martin Hathcomb had his old eyes "gladdened," as he expressed it, by the longed-for sight of lawn sleeves once again. It was in the full and flowing robe of a dignitary of that high order, that Mr. John Talbot now stood before the Churchmen of the ancient Dominion. The duty of the day appeared to be the "reading of prayers," preaching and confirmation; and as there was no welcome attendance of parish priest to aid in these services, "Bishop" Talbot was fain to proceed in the performance of them all without assistance. Never within the walls of St.—— church, until

this same Sabbath forenoon, in the month of June as aforesaid, in the year one thousand seven hundred and twenty-five, our most gracious sovereign, lord king George the First being the ruler of land and sea, and the acknowledged Britannic head of "these American Colonies"—never had it been so before, that prayers were openly and treasonably read, within the hearing of all and sundry who might sit there present, for the "arch rebel James," Pretender to the British throne! The step was a most daring and imprudent one, and involved political results of such seriousness, that none but a rash man would care to encounter them,—the present functionary, however, was that same rash and unthinking man, and he took the step, "uncaring consequences." As the deep and well tuned voice of the "Bishop" arose from the sacred desk in those time-honored services of the church, the eager ears of the congregation were intent to listen whether he would dare to pronounce the forbidden formula; and a positive thrill of offended loyalty passed through the assembly as the words of supplication for "James," instead of "George," were read, together with an additional expression of hope, that he would soon be restored to the throne of his ancestors! Every one felt it to be a grievous fault, even to sit still and listen to the spoken language of bare-faced "treason," and the Jacobites themselves, of whom there were not a few present, gave an inaudible Amen, responsive to so disloyal a petition. A sermon was then preached, and the rite of confirmation was afterwards administered.

It was indeed, the very first time in the Colony of Virginia, and that too, in the one hundred years' existence of the church, within the bounds of the same, that the "laying on of hands" was exercised. That same unmotherly feeling which had prompted the authorities "at home" to prohibit, under severe penalties, even so much as the manufacture of a horse-shoe nail by the colonists, was influential in debarring them from the benefits of an Episcopal head, as already stated. Strange harshness it was; and judging of mankind according to the rules we now estimate them, such a procedure seems unaccountable! "Bishop" Talbot—and we wish in our heart he had been a *bona fide* and duly constituted head and father to the infant church, instead of being liable to the imputation of all such as "climb up by some other way" into the sheep-fold—"Bishop" Talbot was the first to pronounce the words of Episcopal authority within the bounds of "his majesty's" colony of Virginia; and he, too, was the last, for a period of full seventy years further, until Bishop Madison, in our times, succeeded by popular right to the exercise of the functions of the office. The last

time! Yes, it was the first occasion, and it was also the last, that the words of Episcopal confirmation were heard in the bounds of Virginia, under the old regime, as when George was king.

But the services were ended, and the few who had gathered around the chancel for this holy rite, had scarcely retired to their seats, before a voice less melodious than that of the reverend gentleman, was heard. It, too, was the voice of authority; but not the mild, and gentle, and persuasive tone in which ecclesiastics of these latter times exercise their rights withal; it was the harsher notes of civil authority, that now rose upon the ears of the congregation who had risen up to separate for the day. Far back among the heretofore silent but not unobservant spectators, was a deputed officer of the "king's majesty," sent thither by the Governor of the Colony. A stern, forbidding look had he, and with an air of offended dignity, he now arose, and in a stentorian tone, commanded the congregation, "in the king's name," to be seated. Nor was he disobeyed, but each individual, saint and sinner, loyalist and Jacobite, yeoman and gentleman, each and every one shrunk back into his seat, as though the word of command had fallen from other than earthly lips: then drawing from his pocket a formidable looking instrument of writing, sealed with the king's seal, he proceeded to read the same within the hearing of the astonished as well as affrighted parishioners. The document was one which men might not, in any sense, lightly regard or affect to disdain. It was a writ of the king's council, and was directed against "one John Talbot," who "feloniously and with malice aforethought had, upon this fifteenth day of June, in the year one thousand, seven hundred and twenty-five, within the bounds of the said Colony of Virginia, presumed to decline and refuse, before a public congregation, met together for the worship of God, to read the prayer for the king's majesty, as in such cases made and provided: and more than all, and worse than all, had with violent words in his mouth and wickedness in his heart, made open declaration of treason against the majesty of the reigning monarch of Britain; and thus presuming and thus daring, had, in violence of the statute of parliament, offered public prayer for James, the Catholic, so called 'the Third,' and son of James the Second, late sovereign of Britain, who, together with his heirs male, were, by act of parliament, in the year 1688, absolved from all connection with the crown, and were declared to be aliens thereto. And for such reading of prayers for the 'Pretender,' in place of supplicating the majesty of heaven for the rightful and legal occupant of the British throne, the said John Talbot is hereby declared chargeable with the crime of

TREASON, and should accordingly, in strictness of justice, be adjudged worthy of condign punishment."

Whilst the reading of the writ of the king's council was going on, the individual most nearly interested with the issue of the transaction, had quietly thrown himself into a chair without leaving the chancel, and he sat listening to the array of weighty charges as made against his own person, and aiming at his own life, should the officers of the law be "extreme to mark what had been done amiss," upon this eventful day.

The eyes of all, as may be supposed, were turned upon the "Bishop," as the hoarse tones of the unfeeling official thundered forth the words of *civil anathema*. He sat unmoved and almost motionless. He spoke not a word, nor by sign gave he any outward evidence that he was the guilty individual named in that same paper which had been read in their hearing. An ominous silence ensued. The man had not yet finished the reading of the "writ," nor were any measures instituted for the apprehension of the reverend offender; and the people were too much astonished to take any step in the affair whatever. They sat gazing upon the august parties,—the majesty of the king, on the one hand, as represented in the stern officer of the law, and the dignity of the church, as shewn forth by the reverend gentleman in Episcopal robes, who sat there in the chancel, upon the other.

Besides, the offence was a palpable one, and it had been committed in the presence of many witnesses. There could be no possibility of evading the penalty of the law, if the law in its severity should be enforced. Should mercy interpose? It was the unhappy man's only hope. The silence was becoming painful to all, when the voice of the "man in authority" was again heard, as he read from the paper before him.

"But the king's council, ever jealous for the majesty of the law, have also such an estimation of the dignity of the church, as will not vainly and wantonly permit her officers to be degraded or cast down. And, although the offence of the said John Talbot has been a grievous one, and such as should otherwise merit nothing but justice unmingled with mercy; yet, in consideration of his former services as a self-denying minister and missionary of the church, as well as out of regard for the clerical office and its sacred character, together with other and extenuating circumstances, such as the mental imbecility which these assumptions and pretensions on the part of the said John Talbot, would seem to indicate, therefore, his majesty's council, with the assent and agreement of the Governor of this Colony, have hereby adjudged and determined,

that no violence be done to John Talbot for the offence so committed, but that he be mercifully forgiven for the same. And it is also further ordered and decreed, that liberty be allowed the said evil-doer to depart and shake off the dust from his shoes beyond the borders of this Colony; and not only is permission hereby so given, granted and allowed, but an express command is made to that effect; for if, within the space of one week from this date, he, the said Talbot, otherwise called Bishop Talbot, be found lingering within these borders, he shall be deemed and held an outlaw, for whom there shall be exercised no further mercy."

The bluff officer of justice paused in his work of passing sentence upon a "Bishop," and the people breathed more freely when they came to learn that the sacredness of the church was not to be visited with unhallowed hands, and that the reverend wrong-doer might have permission to depart as he came.

But he had not yet done with the doomed and devoted John Talbot, who having been forgiven for one offence, must now be punished for another; and he forthwith proceeded to pronounce a further sentence, namely, a sentence of deposition in the name of the "Society for the Propagation of the Gospel in Foreign parts," against the said Talbot, a "Missionary in the employment of the same." For the offence of rashly taking upon himself the name and office of Bishop, the Society was justly offended, and felt greatly indignant, and without any ado, had dismissed this missionary from their service. Owing to the secrecy with which the Episcopal functions had hitherto been exercised by him, the Society had not been officially informed of their Missionary's flights of fancy; and were therefore blind as to his misdeeds; but now retribution had come at last; and with a stricken heart did the misguided man learn of his degradation: it was a fall like Lucifer's, from which he could never rise again.

No further word was said or spoken, but the assembly was allowed to disperse: and men mutely, and as if conscious of having been accessory to some ugly work, separated and departed for their homes. Our poor "Bishop," shorn of his office, and of his ill-gotten dignity, put off his Episcopal robes to resume them no more. He, too, obedient to the stern sentence of the law, departed and made haste to remove out of harm's way. Disappointed and disgraced, he had nothing left but to go to his home in the colony of New Jersey, and there in quietness to submit to the consequences of his deed of indiscretion. John Talbot died at Burlington, N. J., in the year 1728, and was buried in the parish churchyard of St. Mary's, in that city.

AN APPEAL FOR MOUNT VERNON.

BY MARGARET JUNKIN.

Go stand within the minster pile,
Where England's glorious dead are laid;
Go wander through each solemn aisle,
Dim with its deep, historic shade:—
Gaze on the time-defying roof,—
On sculptur'd arch, and tomb, and wall,
And find imperishable proof
Of that most reverent love, in all,
Which crowns with art's immortal grace,
Her heroes' hallowed resting place.

Tread where the stormy heart whose throb
Once shook a continent—hath found,
In peace no battle-shock can rob,—
Brave sepulture on Gallic ground:
With lingering step and moisten'd eye,
Through Santa Croce's cloisters stray,
And learn how grateful Italy
Enshrines *her* proud ones past away;—
Rearing memorials above,
Unfading as her fadeless love.

Turn then with pious, pilgrim air,
And seek Potomac's lapsing tide;—
Stand with a throbbing bosom where
Our patriot-hero lived, and died:
Thread the neglected paths where falls
The echo of his footsteps still,—
Look upward to the sacred walls,
Which time, unhindered, mars at will,
And in the wreck that years have strewed,
Behold—a nation's gratitude!

With cheek which shame has crimsoned deep,
Turn from the humbling sight away,
And see if holier feelings keep
Kind watch above his honored clay:
No clustering columns' bound should shade
The spot whereon his ashes lie,—
No arching roof bend o'er his head,
Save the blue stretch of silent sky:
In Nature's minster, vast and free,
'Tis meet his burial-place should be!

Nay, shrink not—though a thrill of pain
Jars rudely each subduing thought:
Recall your questioning gaze again,—
This is—the hallowed shrine you sought!
Choke down the throb,—dash from your eyes
The indignant tear;—see how a brave,
Free, generous people testifies
Its homage at—its father's grave:
There—on the unburied coffin—shame
Perhaps may let you—read his name!

Haste from the desecrated spot
Where tender memories all are dumb
With profanation,—where no thought
Awe-laden, or serene, can come;
Seek out the quiet slope he chose,
Withdrawn amid the sylvan gloom,
For his last, dreamless sleep's repose,—
And there, beside the rifled tomb,
Muse proudly, reverently of him,
'Till with sweet tears, your eyes are dim.

'Tis *not* enough that in our heart,
We keep his memory fresh and fair,—
And rear with love's untiring art,
A cenotaph's memorial there;—
'Tis *not* enough that with his name,
Comes every loftier impulse blent,—
Or that a nation's pride and fame,
Should be his only monument;
Pleading humanity demands
A simpler tribute at our hands.

It bids us rescue from the rust
Of slow decay, the halls he tread,
It bids us lay his precious dust
Once more beneath the chosen sod:
That so when stranger-pilgrims come,
No longer we shall blush to say,—
"This was our Patriot-father's home,—
Here, his great spirit passed away;
And where yon sheltering branches wave
In guardian beauty—lies his grave."

Notices of New Works.

PIERRE: OR THE AMBIGUITIES. By HERMAN MELVILLE. New York: Harper & Brothers. 1852.

We know not what evil genius delights in attending the literary movements of all those who have achieved great success in the publication of their first book: but that some such companion all young and successful authors have, is placed beyond dispute by the almost invariable inferiority of their subsequent writings. With strong intellects, there is little danger that the influence of this unhappy minister will be lasting, but with far the greater number it continues until their reputation is wholly gone, or as the phrase runs,—*they have written themselves out*. Mr. Melville would really seem to be one of this class. Few books ever rose so rapidly and deservedly into popular favor as *Typee*. It came from the press at a time when the public taste wearied and sickened of didactic novels and journals of travel through fields explored many hundred times before. It presented us with fresh and delightful incidents from beyond the seas, over which was thrown an atmosphere soft and glowing as that hung above the youthful lovers in the enchanting story of *St. Pierre*. In a word, it was a novelty, and a novelty in literature, when it offends not against rule, is always to be commended. But from the time that *Typee* came from Mr. Melville's portfolio, he seems to have been writing under an unlucky star. The meandering nonsense of *Mardi* was but ill atoned for even by the capital sea-pieces of *Redburn* and *White Jacket*; *Moby Dick* proved a very tiresome yarn indeed, and as for the *Ambiguities*, we are compelled to say that it seems to us the most aptly titled volume we have met with for years.

The purpose of the *Ambiguities*, (if it have any, for none is either avowed or hinted,) we should take to be the illustration of this fact—that it is quite possible for a young and fiery soul, acting strictly from a sense of duty, and being therefore in the right, to erect itself in direct hostility to all the universally-received rules of moral and social order. At all events, such is the course of *Pierre* the hero of the story, from the opening chapter, without one

moment's deviation, down to the "bloody work" of the final catastrophe. And our sympathies are sought to be enlisted with Pierre for the reason that throughout all his follies and crimes, *his sense of duty* struggles with and overcomes every law of religion and morality. It is a battle of the virtues, we are led to think, and the supreme virtue prevails.

To show how curiously Mr. Melville proceeds in his purpose, (supposing him to have one,) it will be necessary for us to give some hurried sketch of the story. Pierre, then, the hero, is the sole male representative of the family of Glendinning, a sprig of American Aristocracy, the idol of his proud and accomplished mother and the plighted lover of Lucy Tartan, who is every thing that she should be, either in or out of a story-book. The course of true love runs without a ripple for these pleasant young people, until one day there appears an obstacle in the person of a fair unknown, with eyes of jet and tress of raven hue, who demonstrates to the entire conviction of Pierre that she is his sister—the illegitimate offspring of the paternal Glendinning. To Pierre then, here was a dreadful disclosure—a bar sinister upon the family escutcheon—an indisputable and living reproach upon the memory of a sainted father. Pierre was therefore perplexed. How to reconcile the obligation which rested upon him to protect his father's fame with the equally binding obligation to love his newly found sister, was indeed a puzzle, and one which he proceeded to solve in a very extraordinary manner. Pierre affects to marry the dark-eyed one, the sister, by name Isabel; by which agreeable device he accomplishes three things—

1st. He drives his mother to the horrors of lunacy, in a paroxysm of which she dies.

2nd. He brings upon himself and sister penury and anguish, while endeavoring to live by literary labor; and

3rd. He involves in wholesale assassination by pistols, poison and other diabolical means, the rest of the characters, making as much work for the Coroner as the fifth act of Romeo and Juliet, or the terrific melodrama of the Forty Thieves.

This latter state of things is thus brought about. Pierre having been driven off by his relatives, sets up a small establishment of his own. Lucy Tartan, recovering from the earliest burst of grief into which she had been thrown by Pierre's pretended marriage, and still, most unaccountably, clinging to the belief that Pierre is not wholly unfaithful, determines to live in his presence at all hazards. But her brother, and a new suitor to her hand, a cousin of Pierre, attempt to wrest her by violence from Pierre's household. Frustrated in this, they write to Pierre, calling him some rather hard names, such as liar and seducer, whereupon Pierre,—in no very good humor from having received a communication from his publishers, declining to purchase his last novel,—arms himself, seeks his cousin, and kills him several times with two pistols. But Pierre is "no sooner out than taken by the watch" and escorted to jail. Here he is visited by Isabel and Lucy, and the latter discovering that Isabel is the sister and not the mistress of Pierre, there ensues a fainting scene, after which these amiable ladies, for no adequate motive that we can see, proceed to drink each other's healths in prussic acid, though not exactly with the air of Socrates pouring off his hemlock for immortality. Here fitly ends the volume, for surely in its 'shocking department' we have "supped full of horrors," and yet the tragic effect of its perusal does *not* end here, for Lucy's fate, and supposed infamy 'leave to the imagination of the reader' any desired quantity of despair among the surviving relatives.

Such is the outline of the Ambiguities, hurriedly given. The observant reader will see at once the absurdity of the principle upon which it has been constructed. Pierre dis-

covers a sister whose very existence is evidence of a father's sin. To treat that sister with kindness and to cover over the father's shame, is without doubt a most laudable thing. But to accomplish it, Pierre is led to do things infinitely worse than it would be to neglect it. He not only acts like a fool in severing the most sacred ties and making the dearest sacrifices to purchase what he might have obtained at a much lighter expense, but he justifies his conduct by a sense of duty, false in the extreme. He wishes to uphold the just and true, and to do this he commences by stating a lie—his marriage with Isabel. It is in the cause of affection and consanguinity that he is content to suffer, and for this cause, he breaks off the closest and holiest bond that exists on earth, the bond of filial love, thus causing the mother that bore him to die a maniac. For every duty he performs, he is compelled to commit a dozen outrages on the moral sense, and these are committed without hesitancy or compunction. The truth is, Mr. Melville's theory is wrong. It should be the object of fiction to delineate life and character either as it is around us, or as it ought to be. Now, Pierre never did exist, and it is very certain that he never ought to exist. Consequently, in the production of Pierre, Mr. Melville has deviated from the legitimate line of the novelist. But badly as we think of the book as a work of art, we think infinitely worse of it as to its moral tendency. We have not space left us to enter upon this view of the volume, and we must therefore leave it with the remark that if one does not desire to look at virtue and religion with the eye of Mephistopheles, or, at least, through a haze of *ambiguous* meaning, in which they may readily be taken for their opposites, he had better leave "Pierre or the Ambiguities" unbought on the shelves of the bookseller.

We have received the volume from A. Morris.

A JOURNAL OF SUMMER TIME IN THE COUNTRY. By the Rev. ROBERT ARIS WILLMOTT. New York: D. Appleton & Company. 200 Broadway. 1852.

An acceptable reprint of an English work of very rare and delicate beauty. The pictures of country life which the author places before us, are as shifting as the phases of the great banks of evening cloud that August piles up against the southern sky. Here we have a bright landscape, there a gem of antique poetry, again a fragment of literary criticism followed by a historical reminiscence—all tastefully combined to produce a most pleasing effect. The author is evidently a reading man and a thinking man, and we think we may add to this, that he is a 'man of feeling.' The "Journal of Summer Time in the Country" is the latest issue of the "Popular Library."

It is for sale by A. Morris.

THE MEN OF THE TIME, or *Sketches of Living Notables*. Redfield. Clinton Hall. New York. 1852.

We have not the remotest idea who the author of this volume may be, but we highly approve the design of it, and think it very well executed. The facts, as far as we have been able to examine them, are correctly stated, and a vast deal of useful information is given of men concerning whom every body at times desires to know something. The one glaring fault of such books gotten up at the north, stands out prominently, however, in this—that a very insignificant figure is made in it by Southern men. Such 'Notables,' for instance, as W. C. Rives, Minister to France, Prof. W. B. Rogers, Dr. Bachman, James H.

Thornwell, D. D., all of the first rank in their several departments and of European reputation, are omitted to make room for P. T. Barnum and other Yankee characters of like distinction. Every little New England author finds his place, too, while scarcely one is allowed to come in from the Southern States. With this exception, the book is a good one.

Randolph has it for sale.

UP COUNTRY LETTERS. Edited by Professor B——, National Observatory. 12mo., pp. 331. New York: D. Appleton & Co.

We take it for granted the "Professor B——" of this volume is a pseudonym, for we never heard of such a person, and we very much doubt if the officials of the National Observatory can ever find the time to indulge in the *dolce far niente* so gracefully described by the writer. In any event Professor B—— need not be ashamed to affix his real or his full name to *Up Country Letters*. The style is indeed often careless and sometimes incorrect, and there does seem, here and there, to be an imitation of Willis's *A L'Abri*; but there is so much of healthful philosophy in the writer's lucubrations, such a tone of cheery music keeping company with his thoughts, and so sunny and beautiful a serenity imparted to the scenes described, that we are content to overlook the errors of the author in enjoying the companionship of the genial valetudinarian. We commend "Up Country Letters" to the reader with great satisfaction.

A. Morris has it for sale.

NINEVEH AND ITS PALACES. The Discoveries of Botta and Layard, applied to the Elucidation of Holy Writ. By Joseph Bonomi, F. R. S. L. London. Office of the London Illustrated Library. 227 Strand.

This beautiful volume is the first of a series which it is proposed to publish under the general name of the "London Illustrated Library." The leading feature of the *projet* is the more copious and satisfactory embellishment of works, excellent in themselves, by wood engravings in the highest style of English art. That there will be a great demand for this series no one can doubt, when the exceeding cheapness of the volumes is taken into consideration. They are to be sold at six shillings each.

The present treatise is an interesting and labored collation of the facts ascertained by the recent inquirers at Nineveh, as connected with the Scriptural record. The illustrations are very numerous and the typography is exquisite. We have received the volume from Messrs. Bangs, Brothers & Co., of New York, the American agents, through J. W. Randolph of this city.

LOTUS-EATING: A Summer Book. By George William Curtis. Author of 'Nile Notes.' New York: Harper & Brothers. 1852.

Barring the affectation of the title, this book is worthy of all praise. Between the exquisite descriptions of our pleasant Howadji and the beautiful illustrations of Ken-sett, it is almost like taking a Northern trip to read the book through. We could wish such a poet and artist to visit the Southern section of the United States, out of which excursion we think quite as fascinating a volume

might be made, and yet such seems to be the neglect of home works on the part of the Southern people that we very much question whether it would sell. The Howadji, we predict, will meet with generous encouragement everywhere for "Lotus Eating," and well does he merit it.

For sale by A. Morris.

THE CLIFFORD FAMILY; or, A Tale of the Old Dominion. By One of her Daughters. New York: Harper & Brothers. 1852.

A novel of the old school, with chapters of prescribed length, each prefixed by a scrap of recondite poetry—a plot moving on steadily to its *denouement*, unaccompanied by any extravagant incidents—and a full and complete 'poetic justice' at the close. We are altogether ignorant of the author, and know not in which direction around us to look for that gifted daughter of Virginia, but we have no hesitation in saying, that few of either sex in the commonwealth write in a more pleasing and flowing style. The form of the story is somewhat antiquated and cumbersome to suit the taste of the day, and the "Clifford Family" may not, on that account, have as many readers as it deserves, both for its natural and animated representations and the high moral it conveys. A more attractive and commendable novel has rarely been published.

It may be obtained of A. Morris.

Our thanks are due to the authors respectively for several excellent addresses recently published. "*Virginia, Her Past and her Future*," is the title of one of these, pronounced February 22d, 1852, before the Phenix Society of William and Mary College, by Oliver P. Baldwin, Esq. It abounds in manly sentiments eloquently expressed. "*The Reformation the source of American Liberty*," is the theme of another, delivered June 9th, 1852, at Hampden Sydney College, by the Rev. T. V. Moore, of this City. We have so often had occasion to lend our humble testimony to the genius and learning of Mr. Moore, that we need only say of his present effort, that it is in all respects worthy of the man. "*The Law of Work*" and "*The Choice of Professions*," are topics exceedingly well treated by T. Bibb Bradley, Esq., of Huntsville, Ala., one of our contributors, in two Lectures, each of which was given to more than one audience by special request. Mr. Bradley wields a practised pen, and brings to the consideration of the subject he discusses, a rare mine of varied and profound learning.

From William Gowans of New York, we have received a package of his recent publications, among which are several works of established excellence. *The Biographia Literaria* of Coleridge, is one of these. As the revelation of a most remarkable existence, this journal of the poet-philosopher is very curious and interesting. *The Maxims of Rochefoucauld*, every body knows to be a remarkable book, as showing with what cold and cynical distrust a man of intellect can look upon his fellow beings. A steel engraving prefixed to this volume, presents us with the features of the satirical Duke. *Elements of Thought* and *The Physical Theory of Another Life*, from the pen of Isaac Taylor, are works of a very different character, and have long been read with interest, by students of mental and moral philosophy. All these volumes are beautifully printed, and are for sale by J. W. Randolph.

SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—JNO. B. THOMPSON, EDITOR AND PROPRIETOR.

VOL. XVIII.

RICHMOND, OCTOBER, 1852.

NO. 10.

MILDRED.

FROM "MY COUSINS."

Fair as the moonbeam, but oh! as cold,
With her eyes of blue and her curls of gold.
A cheek of roses, a lip whose smile
Could e'en from a cynic his sneer beguile;
Such Mildred was, and yet heartless she,
In the zenith of all her witchery.

Rife with mirth was her silvery tone,
It seemed the echo of music's own—
Graceful her form, as the queenlike swan,
As she glides o'er the wave in her plumage wan;
But less reckless and fickle the waves than she,
In her hey-day of wealth and of vanity.

A stranger came,—and so proud a mien
Rarely in Lindore's halls was seen—
His voice was gentle—never loud—
Its very softness awed the crowd.
He knew not the tongue of flattery,
He breathed no sigh, and bent no knee—

Which Mildred her bosom of ice within,
Would have given the half of her lands to win.
But—he departed as he came,
They knew not either his home or name,
Yet his eye was the star of her destiny,
And never again was her spirit free.

HOUDON'S STATUE OF WASHINGTON.

The most interesting object to the stranger visiting Richmond, is the majestic figure of George Washington in marble, which stands in the central hall of the Capitol, midway between the entrances to the Senate and House of Delegates. There has been and now is but one opinion as to the merit of this statue. Those who were contemporaries of the illustrious original, have testified to its accuracy as a likeness, and all who look upon it for the first time, feel impressed with a larger and juster conception of the imposing person of the Father of his Country.

Monsieur N. Houdon, the author of this Statue, was a French sculptor of great celebrity, whose works began to attract the attention of European *connoisseurs* about the close of our Revolutionary War. His sitting statues of Voltaire and his Diana gained for him a wide reputation, which was afterwards worthily sustained by many fine efforts of the chisel. Among these may be mentioned as most excellent, the statue

of Cicero, which represents the orator as denouncing to the assembly the traitor Cataline. Houdon also made numerous busts of distinguished persons, among whom were Rousseau, Marshal Ney, the Emperor Napoleon and the Empress Josephine. Houdon's most remarkable faculty as a sculptor lay in the exact imitation of whatever he undertook to represent, apart from the general effect of the statue as a work of art. Every point of the subject was faithfully reproduced, down to the minutest particular. This faculty was wonderfully exhibited by M. Houdon, in two models of the human frame, executed for the use of the French Academy, wherein the muscles were shown without the covering of the skin; and the delicate and beautiful chiselling of the sword knots, the epaulettes, the cane and the fasces in the statue of Washington, abundantly evidence the exceeding cunning of the sculptor's right hand. In recognition of M. Houdon's genius, he was made a Member of the Institute and of the Legion of Honor.

The Virginia Legislature, desirous of paying some suitable honor to Washington, in the lifetime of that illustrious man, by a resolution of June 24th 1784, requested the Executive to take measures for procuring a statue "of the finest marble and best workmanship." Mr. Jefferson was then in Paris, and to him was entrusted the selection of an artist. He chose Houdon, and accordingly in July 1785, Houdon came to this country to take his model from life. He was accompanied by Dr. Franklin and remained with that great philosopher in Philadelphia, until it could be ascertained at what time his presence would be agreeable to the family at Mount Vernon. A letter of Washington to M. Houdon, contained in the collection of Mr. Sparks, under date of the 26th September, 1785, sets forth the gratification that M. Houdon's visit will afford the writer, and gives a graceful proof of that sweet and unaffected modesty which was the crowning grace of his character, by the expression of the wish that "the object of your mission had been more worthy of the masterly genius of the first statuary in Europe." M. Houdon remained at Mount Vernon long enough to take a perfect model of Washington, with which he returned home. Three years afterwards the statue was received in Virginia.

From Mr. Jefferson's correspondence we learn that M. Houdon, in visiting America, had in view

a more important object than the fulfilment of his contract with Virginia: he wished to be employed by Congress to make an equestrian statue of Washington, to be erected at the seat of government. The *Biographie des Contemporains* states that an order for such a work was actually given by Congress. Whether this is so or not, and if so, why the work was never accomplish-

ed, we have not been able to learn. It is to be regretted, at all events, that so magnificent and invaluable a piece of sculpture as would have been an equestrian statue by Houdon, was lost to the world.

On the pedestal of the statue in the Capitol of Virginia, is the following beautiful inscription from the pen of James Madison:

The General Assembly of the Commonwealth of Virginia have caused this Statue to be erected as a monument of affection and gratitude to
GEORGE WASHINGTON.

who uniting to the endowments of the *Hero* the virtues of the *Patriot*, and exerting both in establishing the Liberties of his Country, has rendered his name dear to his Fellow Citizens and given the world an immortal example of true *Glory*. Done in the year of
CHRIST

One thousand seven hundred and eighty eight and in the year of the Commonwealth the twelfth.

The lithographic print of this statue which we now give to our subscribers, was engraved from a daguerreotype by Messrs. W. A. Pratt & Co., of this city. The very bad light in which the statue is seen, as it now stands in the Capitol, was not at all favorable to obtaining a perfect picture of it, and while our artist has succeeded in representing the striking attitude of repose and the lofty bearing which distinguish the figure, he has not brought out, as we could wish, the lineaments of that noblest countenance of all time. Still, we feel assured that the engraving will be in the highest degree acceptable to those for whom it is designed.

It has long been to us a matter of much concern, that this gem of art should be allowed to remain in a building which is liable, at any time, to be destroyed by fire. More than two years ago, before the design for the State Monument had been chosen, we mentioned this fact in our editorial columns, and suggested to the Commissioners the propriety of providing an appropriate pedestal for it in the new structure, where it might not only be seen to advantage, but placed beyond the reach of harm. No attention was paid to our suggestion, and the statue yet stands where it may be laid in ruins. For, should the Capitol burn, by no human possibility could it be removed. The State of North Carolina lost Canova's Washington by the burning of the State House at Raleigh, and a fine statue of Alexander Hamilton was destroyed in the Merchant's Ex-

change during the great fire at New York in 1836:—could we hope to be more fortunate? When we consider that the world contains no other faithful effigy of Washington, and that therefore the loss of this one would be utterly irreparable, the failure of our Legislature to erect an indestructible temple for its reception, is altogether unpardonable. An attempt was made last winter, we believe, by the worthy Superintendent of Public Edifices and a few other gentlemen, to get a bill through the Legislature making an appropriation for erecting a suitable shrine in some part of the Capitol grounds wherein it might be placed, but the sapient Senate of Virginia laid the whole matter on the table! There is not even a plaster cast of the statue within the limits of the Commonwealth, and although six copies in plaster were ordered by the General Assembly to be presented to several of our literary institutions, the first step has not yet been taken for procuring them. Certain citizens of Boston, lovers of art, did cause a cast to be made of it, some years since, by Legislative consent, and that cast now adorns the magnificent Athenæum of the metropolis of New England, but it is, by no means, an exact copy of the original. We do hope that our wise law-makers, at their approaching session, will repair their folly of the last winter by voting a sufficient sum of money to build a handsome and worthy shrine for Houdon's statue, where it may stand to keep alive a veneration of Washington in the breasts of our children's children unto the latest generation.

Notes and Commentaries, on a Voyage to China.

CHAPTER XIII.

THE STORY OF HEINRICH BRUNNER.

About five and twenty years ago, I was returning one night from the opera, hurrying along the Rua d'Ouvidor towards the palace stairs, to escape a shower of rain, which had just commenced. The street was dimly lighted, the pavement rough and plentifully supplied with small pools; besides the rain, there were streams pouring from tubes projecting from the eaves of the houses. I could find shelter nowhere. I heard some one near, who, from the rapidity of his pace, seemed to be in as much haste as myself. Full of the stories about robberies and assassinations which were happening almost nightly in the streets, I felt rather disposed to redouble my steps; and this disposition was increased by the sounds of a sabre clattering over the stones; but I soon found that the feet of my pursuer moved as rapidly as my own. Determined, perhaps by fear, to discover at once whether there was any cause for apprehension, I slackened my speed near a lamp, and in a few minutes, I was overtaken by a gentleman in an Austrian military uniform. I was a good deal relieved to find that I should neither have to run, nor fight, nor get my brains blown out on the dark, wet pavement.

"Friend," said the officer in French, "you are unprotected from the rain; a share of my umbrella is at your service, as far as our way lies together." As he ceased speaking, he offered his arm with so much kindness of manner, that I did not hesitate to accept it; and without waiting for further introduction, which, as an American, or as an Englishman, I ought to have done, we fell into conversation, and in a little while, I almost forgot that my companion was unknown to me.

When we arrived at the landing-slip, the boat had not yet arrived from the ship; the rain still poured in torrents, so that I was glad to accept my new acquaintance's invitation to shelter myself in his quarters, till it should abate.

He conducted me to a house near the palace. We stepped into the hall or vestibule, which was dirty, and lighted by a tallow candle stuck against the wall by its own adhesive property. Yet, unpromising as the whole aspect was, I was gratified to escape from the streets, which were now inches deep in water. A rain in the tropic regions falls as if it would drown the whole earth.

A broad flight of stone stairs, with an iron bal-

ustrade, led from the basement to the upper part of the house. On the bottom step a stout slave was watching; that is, he was snoring over his *marinha*, an African instrument, that had dropped from his hands; its music had probably lulled him asleep. I followed my host up stairs and into a small room, which presented few conveniences or comforts. An odd fashioned table stood in the centre, and upon it a lamp, which seemed to be one of Necessity's inventions, composed of a saucer of black-looking oil, which fed the smoky blaze that drooped over its edge. As if to dispel the gloom which this melancholy light shed over the apartment, a bottle and glasses were placed beside it. A mattress stretched upon the tile floor, and three or four decrepid chairs, completed the furniture. From nails driven into the plaster, were suspended against the discoloured wall, a cloak, coats, spurs, a saddle, bridle, holsters, and a sword, which were evidently some of the professional implements of mine host.

As soon as the wick was properly adjusted, and began to burn more cheerfully, my friend took my cap, placed me a chair near the table, and seated himself on the opposite side of it. The cobweb was brushed from the bottle, and he filled for each of us, a glass of generous Vinho d'Oporto, and drank to my *bonne santé*.

My host was a man of about thirty winters, and stood full six feet high. A first glance remarked nothing but the soldier in his military air, elevated front and moustached upper lip; but a second look discovered a high, broad, polished forehead, shaded by dark clustering hair, arranged in a large ringlet in the centre. He possessed a flashing blue eye, jetty brows slightly arched, a mouth of fearless and generous expression; his chin, the finishing and key-stone feature of the face, was full and slightly dimpled. Though his complexion acknowledged the influence of a tropic sun in its tint, I know some young ladies who would think him "a marvelously proper man." His tones were persuasive, and his urbanity was such as quickly finds its way to the heart, and facilitates acquaintance. Good looks and good manners, are positively influential in advancing a man's fortune in the world; under some circumstances, they are almost as valuable as ability and intelligence.

"To a man of the world," said he, setting down his glass, "it will not be necessary to apologize for the condition of my quarters; I have been too short a time in town to be ready for, or even to expect visitors."

"I never look for apologies; where hospitality is so kindly and unreservedly extended as it is now, a man would be ungrateful to expect them. A soldier's ever-changing life during war,

does not permit him to think of pleasure, or preparing a permanent establishment for the reception of friends."

"*C'est vrai*; nevertheless," he continued, "every man, be his circumstances what they may, owes to society and himself, provision for the reception of friends. I have been here only two days; I move in two more, and from the entire absence of sociability among the Brazilians of this place, I did not anticipate a visit."

"I am told there is very little social intercourse even among themselves?"

"There is, in fact, none, unless it be with persons of the same family; but the families here are generally extensive, for cousins of the remotest consanguinity, are always reckoned amongst the kindred. The existing war and party politics might excuse any other people. Society here, is shackled by the stiff mannerism that characterized the Portuguese a hundred years back; though fond of amusement they dislike expense, and no matter how many entertainments they may accept from foreign residents, they seldom ever think of repaying such civilities."

"Then a residence in Rio offers few attractions to foreigners?"

"For a man of social propensities, it is an exile. Europeans are retained here only by interest. Though I am somewhat in favor and expect preferment, that consideration alone would not induce me to remain an hour. I came here with her Imperial Highness, the Empress; and from necessity, together with some little loyalty to her house, I continue in her service."

After a pause, he continued:

"There are circumstances in which we are sometimes placed at an early age, beyond our control, that determine the course of future life, and cast a shade over the feelings and hopes, which, even the sunshine of prosperity cannot dispel."

"Perhaps that may be due to want of conduct in ourselves, rather than to the circumstances of which we complain. The habit of controlling our own passions, and of perceiving what is favorable to us when in difficulty, is calculated to alleviate, and finally to obliterate those sorrows which spring from disappointment."

He answered in a deep sigh; began to beat the Devil's tattoo, and looked up to the ceiling interrogatively, for something to say. It was evident from his tone and expression of countenance, he had unintentionally touched a chord of sad remembrance. To relieve him of my presence, I suggested that my boat must be at the stairs; yet, I confess curiosity bade me linger in my movement to depart.

To cover his embarrassment, he filled the glasses, saying, "Come, drink your wine; you

have a long pull to your ship." He set down his empty glass and opened a window on the veranda. He seemed to contemplate the weather during a few moments, and said, as he resumed his seat, "The rain does not abate; if you will not bivouac for the night, at least remain till it is over. Your boat must have gone; it will be a pleasure to share my quarters with you, and to endeavor to help off the time. You have perceived that I have touched a train of not very pleasing recollections, and I will gratify a curiosity which I suspect in you, by relating the outlines of a little history. It will be like confessing to an unknown priest, for it is not probable we shall meet again after to-night."

I expressed my thanks for his frank confidence, and hoped that this meeting might be the beginning of more intimate relations than commonly exist between a veiled penitent and an unknown confessor, and as a step towards better acquaintance I handed him my card. He gave me his own in return, observing, "now we are introduced without making any one responsible for the consequences." My host proved to be an Austrian, named Heinrich Brunner. He hesitated for a moment, ran his fingers through his hair, as if to collect his scattered memories, and then related, as well as I can recollect it, the following story:

"I was educated at Vienna; my studies were directed, (in accordance with my own inclination which my parents supposed indicated my peculiar genius,) with a view to a military career. It is not necessary for my present purpose, to dwell upon my scholastic pursuits, or to consider the correctness of my choice of a profession. After the conclusion of my pupilage, I returned to Felsperg, my native village, where I remained many months unemployed. Ardent in my disposition and passionately devoted to the society of ladies, my whole delight was to converse with them. One attracted my undivided admiration. She was known as the Rose of Felsperg, and was the most beautiful woman I have ever seen. She was not too tall, nor were her years too few. Her hair was black and worn in an Italian style. Thoughts seemed to be always on her lips, waiting for words to usher them into the world. Her eyes were sparkling, vivid, roguish, yet timid in expression. She danced with infinite grace, and sang with exquisite skill, and seemed to feel the sentiment of her music. She spoke English without much accent, and her German rivalled Italian in sweetness; she seldom spoke the Austrian dialect, which is considered rough and uncouth even by ourselves. She had been educated at Vienna, and had mingled in society there long enough to acquire all the social accomplishments of that metropolis. Such is an imperfect sketch of Katerina, the Rose of Felsperg, a small

village counting less than three hundred families in all.

"Though my feelings acknowledged the influence of this lady, my reason did not entirely forsake me. In my school-boy visions and vagaries, I had frequently traced an ambitious path, which vanity led me to suppose I would follow, even in opposition to destiny. Devotion to one woman had never entered into my scheme of life, unless it might be 'to amuse me for an idle hour, or to please my senses;' but no dishonorable thought ever invaded my imagination—the winning of a heart, for the sole object of seeing it won, was not part of my amusement. I never thought for a moment that my attentions could inspire love in any woman, and it was my settled belief, that I was ever unsuccessful in pleasing the sex. My personal appearance I always rated low, and I considered my qualities very different from those calculated to charm a lady. Entertaining such notions, I never indulged in *tête-à-tête* conversations, nor did I, as I supposed, ever expose my true feelings when in the society of Katerina. My preference for her society, scarcely known, or rather not admitted to myself, was not unobserved by others. When I railed at the sex, it was supposed I was in jest or practising to hide my real sentiments. At last, an intimate friend accused me seditiously of being in love, and from him, I learned that the eyes of her relatives were turned upon me. I at once resolved to break off the intimacy, but in such a manner as to conceal, if possible, the reason for my conduct.

"I visited, in the most social manner, the house of her only sister, the wife of a professional gentleman, for whom I entertained the strongest feelings of respect and friendship. We hunted, dined, drank, played and smoked together, so that much of our time was spent in each other's company. He was decidedly deficient in personal appearance; and was more addicted to conviviality and the pleasures of the field, than was agreeable to the lady, who was young, accomplished, and very beautiful. They had one son. In my reflective moments, which were few, I used to think if I ever should marry, I should select a wife, in all respects, like Frederica.

"Business often occupied her husband during the morning, and I was as often thrown alone into her society, and for my entertainment, she sang, or played, or read aloud. Katerina frequently made visits of a week at her sister's house, and then she joined in to help off the morning hours. When Geismar returned home, we rode on horseback or visited our friends; but after dinner, the ladies were put aside for wine, or for some gymnastic exercise.

"Thus several months had passed, when I

was called to Vienna to receive a commission in the army, but I was informed that my services would not be immediately required. One morning, about two weeks previous to my departure from Felsperg, I expressed myself warmly to Frederica against military men encumbering themselves with wives. 'What then,' she exclaimed, in a tone of surprise, 'is to become of Katerina?'

"I was truly amazed. My visits to Katerina had then become rare, and my conduct for more than two months, was, I thought, sufficient to remove any suspicion, that might have previously existed, of a design on my part to seek her as a wife. I therefore affected not to understand there was any connection between my opinions and her sister's matrimonial prospects.

"'Then, am I to learn, indeed,' she asked in astonishment, 'that your attentions to my sister were prompted by politeness?'

"I replied that my attentions to Katerina were paid without any view to marriage, and I did not believe they would fairly bear any such construction. On the contrary, our intercourse was purely platonic, of an every-day sort, on my part, at least, both in word and action, whatever might have been my mental reservations on the subject. I believed Katerina regarded me as a commonplace acquaintance, fond of expressing bizarre notions; indeed, she once told me my eccentricities were infinitely amusing. I frequently said to her, as I have said to others, my wedding-day was included in some one of the very many years to come. She would laugh, and say that she was confident I would be married before her. I remarked further, there was no woman I admired more, or for whom I entertained more respect; but, independently of other objections, I did not believe myself to be altogether agreeable to Katerina. As a military man, as one who had set his heart upon travel, as one whose means were far too limited to maintain the matrimonial state in the rank I held in society as a single man; as one who, in selecting a companion for life, preferred that his bride should not be richer than himself, I had again and again expressed my resolution never to marry while I pursued my present profession. I viewed a wife rather as a clog, an obstacle in the way of advancing in great enterprizes, whether of virtue or of mischief. Yet, were all such objections removed, I confessed Katerina would be my choice, provided I were convinced of her sincere attachment.

"'Then,' she sobbed, 'I fear my poor sister's heart will be broken.'

"I was gratified; my heart thrilled. I asked, 'have I, indeed, gained the esteem of so admirable a woman?'

"'Esteem is a cold term. She loves you; her

frequent presence here is attributable solely to the circumstance that she always meets you. She watches for you at the window; she is familiar with the tones of your voice, and the sound of your footstep, her whole happiness seems to be associated with your presence. If a day pass without seeing you, she seems miserable; suggests that you may be ill, or wonders what can keep you away. Inclement weather is not a reason, in her estimation, for your absence; she declares you are heedless of cold and storms. I have ever thought you too generous to trifle with the heart's affections; and I confess I have been foolish enough to encourage her hope that you were sincerely attached to her. Every member of the family has anticipated the match with pleasure. Geismar and I have long regarded you as our future brother; yet we have all been most sadly mistaken.'

"My plans vanished. New scenes flitted before me. I fancied myself already bound to the fair Katerina. I expressed my abhorrence at the idea of trifling with the affections of a woman; but I did not feel myself chargeable with such a base act, nor did I perceive that I should be held responsible because a lady had bestowed her heart before it was asked. Prudence forbade me, under the circumstances, from marrying at the moment; yet, I could not determine at once what I would do, and it was agreed that our conversation should remain unknown to all persons without exception, until we should meet again.

"I hurried home and shut myself up. I endeavored to investigate the condition in which I stood. At first, I accused myself of imprudence in conducting myself in a manner to win a heart I did not wish to wear; but I acquitted myself on the plea that I had not courted, or flattered, or complimented Katerina. She must not make me the victim of her folly; nothing but vanity, thought I, would induce a woman to yield her affections to a man, before he had clearly manifested love for her. At that moment I resolved I would not marry her. She had no right to know that I was acquainted with her sentiments; indeed, I was not bound to believe Frederica's account of them. If she deceived herself, I was not answerable for the deception: admitting, thought I, that I know, she does love me, this knowledge does not bind me to sacrifice myself to her fancy. She may love me as much as she pleases, but she can not tell me of it until I give her an opportunity. I felt safe; it is the man's exclusive privilege to ask; but the right to refuse is the woman's still higher prerogative. Yet why may not a woman feel love first? The passion is involuntary; it is unjust to chide a poor girl for transgressing a conventional rule in a matter of involuntary feeling. Katerina has not

hinted to me in any manner, the state of her heart. I have no right to know it; Frederica has conjectured merely; she did not assert that Katerina told her. Then a question forced itself upon my attention. If Frederica were absolutely certain that her statement was true, has she not over-stepped the limits of delicacy, of right and of respect to both, by her communication? Or, has she, regardless of these considerations, attempted to practise on my feelings, to secure a husband for her sister! I felt ashamed of the suspicion which I soon placed to the account of my own vanity. I argued that if she were merely playing to obtain a husband, she would seek a man whose worldly means were more ample than those of one who ventured to be shot at for a monthly stipend. Besides, I recollected a common impression prevailed, that Katerina would some day inherit a sufficient estate. In short, upon the anvil of fancy, imagination forged a pruning hook out of my sword: I looked through a short vista of future years, and saw myself at the end, in quiet possession of my *chateau en Espagne*, with wife and children and all, strange to say, without cares or difficulties of any kind. What is fame to me?

"What shall I do to be forever known,
To make the age to come my own—"

"Shall I squander the most vigorous of my years in efforts to make people say agreeable things of me when I cannot hear? Should I earn a monument and epitaph, they will not be paid until after I cannot see the one or read the other. What, thought I, if I should become a veteran at last, covered with scars and glory, and receive the world's applause; even then, it will be useless; I cannot be happy left all alone in my heart, singing my own praises to myself. The laurels of a soldier can be kept green in his eyes, only as long as he knows there are smiles—and if need be, tears—of affection enough to preserve them fresh.

"In the evening, self-satisfied and buoyant, I walked towards the dwelling of the Rose of Felsperg. She resided with her father, who at that time, was a retired attorney of considerable reputation and some fortune. The mother of Katerina had died in giving her birth. The step-mother possessed an amiable disposition, and was thoroughly educated; she was regulated in her conduct by a high sense of duty, rather than by any kind of affection. She had the entire confidence of her step-daughters, who seemed to regard her as their true mother.

"By the time I had reached the door, the cool air of a winter evening had calmed my thoughts in a measure, and instead of entering the house I passed on, determined to revolve the matter

once again before committing myself for life. I continued my promenade; and had I not stopped to gaze upon the moon, I should not have gone back—"

"The Devil's in the moon for mischief," said I, interrupting the narration, and lighting a cigar; "but I beg you to proceed."

"Yes, sir; the moon played the Devil with me. All my afternoon visions returned, and I retraced my steps.

"Katerina appeared more beautiful than ever. As I entered she pushed aside her harp, and the last line of her song fell upon my ears:

"Non, non je n'aimerai jamais."

But I thought her looks and tone were inconsistent with the words.

"In a very short time, we were *tête à tête*. I was delighted; ambition and reason were melted in the furnace of passion. I could restrain myself no longer, and—I said what came uppermost. She burst into tears, and sobbed faintly—'Do not jest with me—I never loved any but you—nor can I—.' She recovered herself in a moment. She looked up; and there was so much affection and goodness in the look, as she falteringly said—'I have parents—you have mother and father,' that I shall not soon forget it; I believe my capacity of bliss was in that moment filled.

"Late that night, the father—a man of few words—entered the room. I informed him of what had occurred. For a while, he remained silent; but his countenance was free from any shade of displeasure, and yet it was cold and unconcerned, as if he were examining the merits of a cause for which he would receive no fee. My anxiety was at last relieved; he said slowly—'If Katerina is satisfied, I cannot at present see any objection.' After another pause, he demanded by, what means I proposed to maintain a wife, and whether I had become aware of the fact, that, however angelic and *spirituelle* young spinsters are, married ladies have a very great many human necessities which can be relieved only by human means. I replied that I was a soldier, and beyond a soldier's pay, I had no resources.

"Small, sir! small; very: matrimony is a romance, if founded on fact—do you understand; but if you travel into it on dreamy conjectures, touching the ethereal nature of love and ladies, it is a sterner reality than was ever brought to light in a British chancery suit. It is well that Katerina's mother provided four thousand golden ducats as a marriage dower for each of her daughters; my affection for my child will not end because she becomes a wife.'

"I returned home full of joy. Before break-

fast the next morning, my aged mother, whom may God bless and cherish, cordially approved of my choice. My father did not object. He had been a sailor in his youth. 'Marry, my boy,' said he, 'to be sure. A pretty woman under your lee, looking to you for protection, will keep you from running risks by carrying your light sails in the dark. She will be to you as an azimuth, always showing your variation, and thereby guiding you through life; but you must keep her like a long boat, always snug within her chocks!'"

When he spoke of his parents, my narrator seemed much affected, and paused to trim the light.

"You got happily through your courtship," said I, "in spite of your reason and ambition."

"You shall hear. The same day I visited Frederica; on whom I now looked as upon a sister. She received me joyfully; her eyes sparkled, and she seemed to participate in my feelings:

'Se voir aimé, c'est la le vrai bonheur.'

"Two weeks were passed in a dreamy elysium. A thousand plans of happiness were drawn and rejected. Katerina drew pictures of a retired country life, and seemed to long for some spot, like the famed lake of Geneva, where to place her cottage, and pass a life of love and charity; while I was to be the John Speisshammer of the neighborhood, and act over the deeds of that worthy burgomaster.

"The engagement was known to all Felsperg; every body said, heaven had designed us one for the other. At last the day of my departure came. I set out, followed by blessings, and charges of Katerina to write often.

"From every post on my route, I briefly informed my friends of my progress. From Vienna, my letters were records of my enthusiastic love mingled with tender reproaches that I was either forgotten or neglected. Two days after my arrival, I received a letter from Katerina; but it was cold and studied, and weighed heavily on my heart. I at once charged her in reply, with a change of sentiment, and released her from an engagement, because it seemed to me irksome to her, and because it might have been entered into unreflectingly. But I implored her to relieve my anxiety by stating faithfully the condition of her heart. A response came, and never did paper breathe more sweetness and affection. She dreaded to think she might never heal the wound inflicted by her first letter. She feared that excess of feeling would make her unhappy. She longed for nothing except my return; and, to prevent future misunderstanding, she prayed that we might never be separated again. But besides

this one, I did not receive another letter until my return home, which was at the expiration of five weeks.

"While hastily despatching dinner on the very day of my arrival, that I might hasten to Katerina, I received a third letter. She knew not, she said, how I might bear what she was about to communicate. She regretted that it was her misfortune, during my absence to change her sentiments. She had met another whom she regarded as my superior in every particular, and to him she had transferred her dearest affections. Yet she esteemed me and hoped that the circumstance of not having known her own mind would not deprive her of my friendship. She felt herself a perjured woman, but was sure that her present resolutions were the result of dispassionate reflection! She said her first letter, dated only two days after my departure, was written with her present impressions; and her second was written because she felt that my affections deserved such a return, and my letter such a reply, and concluded by invoking heaven's blessing upon me.

"Without discovering to my family that this precious epistle contained anything of an unpleasant nature, I ended my meal, but with much less impatience and much less gusto than I had begun it.

"I hastened to Geismar's. In a short time Frederica entered the drawing-room alone, bearing in her hand a pretty casket. Her eyes filled with tears as they met mine, and I inquired what had happened to cause her to weep. 'Oh,' she exclaimed, 'who could have dreamed of such conduct in Katerina?' I still affected ignorance and composure and asked, 'What has she done?' She brushed away her tears, and demanded with effort, 'Have you, or have you not received a letter from Katerina to-day?'

"I replied affirmatively; but until that moment I had doubted it was truly from Katerina. I said it was a bitter disappointment, and perhaps might exert an unhappy influence on my future life.

"I now learned that soon after I had gone to Vienna, Katerina attended a ball given in honor of the birth-day of our Princess. She met there an officer who, though a soldier of admitted courage was a noted libertine. He was considered a very handsome man among ladies, and his manners were graceful, and his voice and language were most persuasive. He seemed to possess a power which is attributed to certain animals of fascinating the objects of their prey, and when his admiration rested upon a lady, it boded ill. She became enamoured of this man and seized every opportunity to throw herself in his way; and, upon a very slight invitation, spent several days at his father's house, situated in a romantic

spot about two leagues from Felsperg. His sister was a woman whose disposition was similar to his own, and was generally regarded as a coquette of many years' experience. A passing acquaintance, but of long standing with Katerina, was, at the birth-night ball, suddenly ripened into intimacy. This lady readily enlisted under her brother's banner, and practised every female art and blandishment to assist the Captain in gaining the heart of Katerina, for whom she believed he really entertained some honest affection; and she thought, if a marriage could be effected, it would be the means of reclaiming the only person whom she truly loved. She believed with him, that 'all is fair in love and war.' With a view to increasing an intimacy already begun, a sleighing party was got up, and a dance was given at the Captain's; for they were aware that Katerina's disposition had not been strongly towards them, a circumstance which served to stimulate pursuit. In a short time Katerina was brought to listen complacently to his suit, in spite of many and various representations made to her of the impropriety of being in the society of such a man. At that period no one supposed his attentions were agreeable to her; and she was once asked by Frederica whether she did not perceive an indelicacy in forming an intimate acquaintance with any man during my absence, and particularly with one of doubtful reputation. She was angered by the question, and claimed to be still her own mistress, and to associate with whom she pleased.

"Katerina visited Frederica that morning for the first time during three weeks, and had left for me two parcels; one contained the letters I had written, and the other several gifts I had made at different times. The package of letters, without breaking the seal, I put at once into the fire; the presents thus cast back upon my hands I retained. I gave Frederica the three communications, all I had ever received, and gave her my permission to read them. She wept, and declared it grieved her to see me bear such a disappointment without a tear. I told her it was not an occasion of sorrow; that I should be congratulated that heaven had delivered me from the misery which must have followed a union with a faithless woman.

"I assured Frederica, however, that the conduct of Katerina could not affect the esteem I entertained for her and Geismar, or influence my intercourse with society generally, and much less interrupt my visits to a house where I had always experienced affectionate consideration. I expressed a hope that my prospects in life were not blighted by unkind treatment of one of the many ladies who honored me with regard.

"The following day I called on the father of

Katerina, but met her stepmother. Our conversation was general, though on her part constrained, for she was piqued to know the state of my feelings, yet she refrained from asking any question till I was about to take leave. She then observed, 'I suppose you will *now*, (emphasising the monosyllable,) be quite anxious to join your regiment.'

"I replied, not more so now than I ever had been, and I begged her not to imagine I was to be driven from friends and family by a woman whose conduct had rendered her indifferent to me.

"When I met her father, he pressed my hand warmly and his eyes filled with tears. 'How can I express my grief and disappointment?' said he. 'Perhaps you think I might have prevented it; but I acted upon a resolution, long since formed, never to encourage or oppose any matrimonial arrangement of my children, unless it were clearly disgraceful. You are not the first man who has been jilted. This will not trouble you long; it is not much worse than losing on a favorite horse, or choosing a wrong sauce at dinner. I once came nearer wedlock than you have done. I furnished a house and went to bring home my wife; but she very coolly told me she had just changed her mind. I felt then I presume, very much as you do now, very much surprised and a little indignant; but in two years I was married, and then I wondered how I could have thought of the jilt at any time. Keep your feelings out of sight, and you will soon get them out of mind.'

"You may imagine the effect of such a sermon. It certainly did not soothe my pent-up irritation; but I was too proud not to smile, to keep the feeling out of sight.

"I could not avoid meeting Katerina in society. But I refrained from all manifestation of resentment, and deported myself towards her as I did to all ladies with whom I had merely an acquaintance. She contrived to communicate to me through a friend that she expected a reply to her last letter; and for this reason I wrote a note stating that Madam Geismar was in possession of the letters she had addressed to me, and in reply to her declaration that she felt like one who was perjured. I said, that as far as it rested with me she was acquitted of so serious a charge, but its truth could be determined only by her own conscience. Her change of sentiment I set down to her innate nature, and being a woman, she should not hold herself seriously responsible for insincerity. As to friendship, she would learn it is not to be obtained at the low price of asking it, and concluded my really savage note by wishing her proposed marriage might be as satisfactory to herself and friends as it was perfectly indifferent to me.

"The day after she received this letter, I entered the boudoir of her sister rather abruptly, and had advanced to where Madam Geismar stood, looking over some drawings, before I observed that Katerina and one of her fair cousins was also in the apartment. I bowed to the ladies, and hastening forward extended my hand to Katerina, and expressed a hope she had been well since we met last. She received my hand, grew pale, but did not speak. I turned and addressed her sister gaily. The effect was to send Katerina half swooning from the room; and I learned afterwards, and I fear with satisfaction, that she was obliged to keep on a bed for several hours. She complained that my deportment fell like ice upon her heart. But it soon melted before the fire of her new love. At the end of four weeks she married and I felt relieved. My revenge died upon the altar before which she became the bride of an unworthy rival. The story does not end here; but you are fatigued?"

"No, no," said I, "go on; but before we proceed, let us try that Port again. You know,

'Every drop we sprinkle,
O'er the brow of care
Smooths away a wrinkle!'"

"True, true," he rejoined; "but it is not the wise way to get rid of sorrows:—*Allons; qui n'a pas des vices, n'a pas des jouissances.*"

Having emptied our glasses and trimmed the lamp, Brunner continued.

"I visited Geismar's very constantly, and I met there so much sympathy that I almost wished my departure were more distant. I regarded Frederica in the light of a sister; and opened to her and her husband for whom I entertained great esteem, all my plans and prospects. At length I was called to join the regiment, and learned I was to accompany Leopoldina, now the Empress, to Brazil.

"When I communicated this news to Frederica, she seemed to be shocked. I was much affected by such a manifestation of attachment, and expressed myself gratified—but I said, 'I shall soon be forgotten perhaps, and be no more thought of than the rose you admired this morning in the vase; it will wither and die, and its place will be supplied by another, destined to enjoy all the esteem and admiration of its predecessor.'

"No no, Heinrich! You are mistaken; indeed you are. You think my feelings have their origin in congeniality, in the mutual exchange of kindness; that I have taught myself to see you as a brother—but alas, it is not so. We shall never meet again—Hear me to the end: then despise me if you will. While I encouraged an alliance with my sister, I was guilty of loving, and looked forward to your marriage with horror.

Still. I thought I might extend kind attentions to her husband and thus soothe a consuming fire which might then burn forever in secret. I was and I am still aware of the guilt of the thought. But my affections are not subject alone to my will. I make this disclosure at this moment, because I cannot bear that you should leave us without knowing that, though one heart has played you false, there is still another whose every pulse is yours, which beats only for you, yet will never yield to any act in conflict with my marriage vow. I pledged more than was in my power. Love is not voluntary; it cannot be forced. Had I never seen you, or heard you speak, I should have been content; but now I am wretched. Yet, dear Heinrich, I have an excuse. When young I loved, as I love now, a man who was the very counterpart of yourself. Through the influence of my parents, who were prejudiced against him solely because he was poor, he was sent abroad and never returned. Through persuasion I married Geismar. He loves me as much as he can love any thing, but he is cold and incapable of ardent affection such as I require. I have lived happy for a time; but now I have a grief I cannot communicate. While a sunny smile is wreathed on my countenance, my breast is torn with sorrow and anguish.'

"Her tears fell fast; and her utterance was embarrassed. I endeavored to console her; promised to be her friend, her brother, every thing I could be honorably, and urged that my absence would enable her to regain control of her feelings. She labored under great excitement; but she at length recovered somewhat from her agitation and said, 'you are right, Heinrich; this passion must be crushed. I am sensible of it; pardon my weakness; recollect I have trusted my very existence to your honorable keeping.' At this moment, Geismar himself was heard approaching; she composed herself to a surprising extent, and I took an affectionate leave of both, and the next day left Felsperg. I soon embarked at Leghorn for this country, and have now been here more than nine years.

"Soon after my departure Geismar died; and his widow, in less than two years married again. Such has been my experience with women; and that experience has filled my heart with melancholy suspicions, which no effort of mine has been able to dispel. Before I knew those women, I believed that beauty was naturally the shrine of truth and purity; I did not fancy that kind looks and sweet tones could ever mean to deceive. When I found myself cajoled and cheated in my judgment of Katerina, I did not regard her as the type of her sex, but as a monstrous exception. I still believed Frederica was sincere, and when I discovered she was false and

inconstant in her attachment to Geismar, I pitied her condition, and was silly enough to fancy that to me her affection was pure and unalterable. But when I knew that in less than three years after her solemn confession of love for me, she pledged herself to be true to a third, my capacity to confide in women perished, and I became a miserable, sceptical misanthrope in all that relates to the sex. I am unhappy because I am affectionate; I seek affection and demand it ardently, but dare not believe that it exists in woman."

As he concluded, Brunner arose and paced the room for a few moments; and then, as if to conceal his emotion, he sang gaily,

Ce n'est plus Næris que j'aime,
Et Næris s'en fait un jeu.
De ces ardeurs infideles
Ce qui reste, c'est qu' enfin,
Depuis, à l'amour des belles
J'ai mêlé le goût du vin.

I was very much interested in the simple, and really very common-place incidents of Brunner's narrative. He appeared to me to be a generous, over-sensitive soul, full of truth and honor, and until his eyes were opened by rude experience, believed all the world to be as simple in heart and mind as himself. He had nursed his sorrows too long in the solitude of his own bosom, where they assumed exaggerated shapes; and he needed freely to expose them to the eye of a friend to reduce them to mere nothings.

I remarked, "your acquaintance with ladies has indeed been unfortunate, but, my dear sir, you should not forever think there is 'not a Leah left thy recompense to be.' If you persist to judge of all women by the specimens you have known best, you can find no pleasure in female society. Suspicion must remove it from you as a source of happiness. You will excuse me for saying you are wrong. Your opinions are formed without sufficient experience, without sufficient data, and your sentiments naturally flow from indulgence in this disappointment. Though Katerina and Frederica proved not to be what you estimated them to be, I assure you there are females without number who possess all the virtues even poets attribute to them, and who are as pure and true as it is possible for humanity to be. It is not just to suspect all, because in your narrow experience you have found two who are not immaculate. You do not reject a fruit because you have found some of its kind unsound; nor all roses, because you were stung by a bee concealed in the first flower you plucked; nor all men, because some are known to be dishonest, nor all women because some have proved to be unworthy.

"Possibly you have confided too implicitly on your own discernment, in your own ability to perceive all the merits and demerits united in a woman. A closer observer than yourself might have detected the natural inconstancy and frivolity which characterized your Felsperg beauties, and recognised in them exceptions, rather models of female excellence. Some allowance must be made too for the influence of education on the natural mental frailties. To marry advantageously, is the grand object of female education and blandishment; and with this object it sometimes terminates, leaving out of the programme all the requisites of living happily after a husband has been acquired. Marriage, it has been said and perhaps truly, is the grand climax of a woman's life in civilized communities, towards which all her natural impulses, secret aspirations and ambition tend—and there her ambition often ends. We should not take it amiss, therefore, if she should select a profligate, a butterfly of fortune, and break her pledge with a simply virtuous, high-toned gentleman. With man on the contrary, marriage is a mere episode in existence, which may engross him for a few months, seldom for years, when he finds, only too often, that the lady ceases to be an attractive companion, and he feels at liberty to leave her, time after time, in pursuit of business or amusement. And this too, when he imagined that his honey-moon should never wane, and that her society alone would compensate him for the whole world. Man should be too proud, to be the play-thing, the mere ruin of an unsuccessful love, almost ephemeral in its nature and duration, the gratification of which might have rendered him happy only for a brief period.

'Bisogna uniformarsi al destino.'

He must accommodate himself to circumstances when he cannot control them, and not reject happiness altogether, because he was unable to grasp it at the first attempt, or in the manner he may have desired. Life without woman would be to man a blank as great as if immortality were beyond his comprehension. And take my word for it—

'The charm of life that's lost in love,
Is never found in fame.'

"The very effort to forget serves as a memento, a rallying point for the memory. It is absolutely necessary to happiness that the heart should have somebody, or something upon which to pour out and receive its affections. It will not flourish alone, and its tendencies must not be restrained, but encouraged to expand and embrace all that can awaken its pure sympathies."

It was late when we closed the conversation; our parting glass drained a second bottle of *Vinho d'Oporto*. The rain had ceased, and the clouds had disappeared. Brunner accompanied me to the palace-stairs, where I shook him again by the hand, stepped into one of the boats of the country, and was soon gliding over the phosphorescing waters of the bay under brighter stars than twinkle in the north. I reclined in the stern of the boat and was lost in reflections on the story I had just heard, when a sentinel's shout of "Boat ahoy" brought to mind the realities of my present position.

On subsequent visits, in after years, I met Brunner, and learned from him that my remarks had opened to him a new train of thought, which resulted in his quitting the Brazilian army, soon after the death of the Empress, which occurred in December 1826, and in establishing himself as a merchant. He married, and had no cause to regret it. During my present visit, I learned that he had retired to his native country with an income amply sufficient for all his desires. I may add, I have no doubt that all the incidents of the narrative are absolutely true, and in the hands of a professed *litterateur*, they would be sufficient, simple and common-place as they are, to form a modern romance.

HYMN.

The following beautiful Hymn, from the pen of the late Francis S. Key, has been sent to us for publication, by a distinguished gentleman of Virginia, who has other unpublished poetical gems of the same author, which he has been kind enough to place at our disposal. Our readers shall have them in due time.—[*Ed. Mess.*]

Oh! where can the soul find relief from its foes?
A shelter of safety, a home of repose?
Can earth's highest summit, or deepest hid vale,
Give a refuge, no sorrow, or sin can assail?
No! No! There's no home—
There's no home on earth—the soul has no home!

Shall it leave the low earth and soar to the sky?
And seek for a home in the mansions on high?
In the bright realms of bliss, will a dwelling be given,
And the soul find a home in the glories of Heaven?
Yes! Yes! There's a home—
There's a home in high Heaven—the soul has a home!

Oh! holy and sweet, its rest shall be there,
Free forever from sin and sorrow and care,
And the loud hallelujahs of angels shall rise
To welcome the soul to its home in the skies!
Home—home—home of the soul!
The bosom of God is the home of the soul!

A Line of Steamers from Virginia to Europe.

The following correspondence commends itself to the attention of every man who has at heart the commercial independence of the South. Too long have we delayed action in a matter of such importance, and it now becomes us to consider well the means by which the desired end may be accomplished. That sooner or later the city of Norfolk must become a vast commercial *entrepot*, second to none in America, no one who will cast his eye upon the map and trace the lines of railway converging towards it as the nearest point upon the seaboard, and at the same time weigh well the advantages of its climate, the security of its ample harbour and its proximity to the open ocean, can doubt for an instant. But we may hasten the day of its prosperity by our own exertions, and the first step in the movement cannot be taken too soon.

[Ed. Sou. Lit. Mess.

RICHMOND, 10th Sept., 1852.

D. H. London, Esq.

Sir: Mons. de Maupertuis and myself have read with care the petition that in 1851 you addressed to the General Assembly of Virginia, and the several documents which accompany it: we have also read the report of the Secretary of the Treasury of the United States on the Commerce and Navigation of the Union.

We have given the more attention to this subject, as important interests at present attach us to the State of Virginia, and as we have made the necessary declarations to enable us to become her citizens; it is therefore in this double relation, that we now beg to submit to you some considerations to which the perusal of the documents has given rise.

We have seen with surprise the wonderful increase of the Commerce and Navigation of the United States, their immense resources, and the glorious future of prosperity in store for them.

We have extracted from the voluminous report of the Secretary of the Treasury, the proportion that each State contributes to this amount of prosperity, and we found with sorrow, that Virginia, our new country, was left far behind by other States of much less importance.

We have taken the figures; arguments which cannot be controverted.

The General Exportation from the United States in 1850, was \$151,898,720.

The General Importation, \$178,138,318.

Out of these amounts what portion does Virginia claim? We hesitate to write it, for already we feel our Virginian hearts beat with vexation! Virginia in 1850 exported only \$3,415,446 or about 1-45th of the whole; and she imported

no more than \$426,599, or about 1-350th of the whole!

To what must be attributed this much-to-be-regretted falling off? Why is it, that while all around Virginia is progressively improving, she alone, from year to year, decreases in commercial prosperity?

In 1769 Virginia imported \$4,085,472: at the present time, 80 years afterwards, she imports only 1-8th that amount.

In 1821 Virginia imported \$1,078,490: in 1850 not one-half that amount.

In extent, the State of Virginia holds the first rank among her sisters; in population the fourth. Her agricultural produce is foremost for tobacco, flax and hemp; third for Indian corn, and fourth for wheat.

I do not allude to her vast forests or mineral riches;—we have traversed the western part of the State during the last three months, and there can be no doubt that she holds the first rank for these blessings of Providence, which are yet of no utility to her.

Notwithstanding her population and her territorial importance, Virginia remains the eighth State for her exportations, and the twelfth for her importations!

Let us, for a moment, compare her with New York, the giant of the United States, and modest South Carolina, the latter her immediate neighbor.

New York has a population of a little more than double that of Virginia; she exports fourteen, and imports two hundred times as much! Her tonnage is 942,649, and 3,163 vessels are entered in her ports, carrying 1,145,321 tons; while she alone exports 1-3rd, and imports nearly 2-3ds as much as all the other ports of the Union.

South Carolina, in extent one of the smallest States, with a free population of 1-3rd that of Virginia, exports four, and imports four-and-a-half times more. Her exportation amounts to \$11,447,800; her importation to \$1,933,785. 178 vessels are entered in her ports, carrying 96,619 tons; while at Richmond there are 8 vessels! at Norfolk 74!! carrying 16,092 tons.

You will pardon our having so minutely detailed the commercial relations of these three States; we have extracted them from the reports with which you have furnished us, and of whose accuracy you are well acquainted. Our object has been solely to state distinctly the backwardness of Virginia, in order to find means to restore her to her legitimate rank among the other States of the Union.

Your feelings of patriotism must have been much wounded in perusing these documents, and we know how strong must be your desire to have them much altered in future.

We ask ourselves this question:—To what must be attributed the falling off of the Commerce of Virginia?

We must remember always that it is only in this respect that she is below her sisters in the great confederacy.

First in point of political influence, it is she who has given to the Union the largest number of those Presidents who have contributed so much to the glory and power of the American people.

The national independence was cradled in her bosom, and she may ever boast of having given birth to the immortal Washington, so justly named the Father of his Country.

But does it suffice that her name should be glorious in history alone?

May not her political influence itself be the cause of her commercial inferiority?

Do not her citizens, more occupied in public affairs than their personal interests, employ in political debate, the energy and activity which might be devoted to their domestic affairs? They toil for the general good and neglect their own. This philanthropy, highly honorable it is true, is prejudicial to themselves; they forget that if the interests of the Union must be defended by all the States, still, each should also think of her own preservation.

These reflections, which have been awakened solely by our sympathy for the State of Virginia, induce us to endeavor to discover a remedy for this sad state of affairs; it is not sufficient to be aware of a disease, we must seek means to cure it.

The immense superiority of New York may be attributed to her railroads, and her relations with the continent of Europe, principally with France and England, 9 10ths of her importations coming from those countries: it must be therefore by the same means that Virginia must regain her former position.

To intersect in all important directions the State with railroads;—To enter into commercial relations with Europe;—To create for herself a Marine of her own;—these should be the objects towards which all her efforts should be directed, and the results would be certain fortune and power.

The tide of emigration, now so rapidly flowing into New York, would, in such a case, find an outlet in the vast territory of Virginia, fresh openings for industry would be made, and she would enter upon a new Era of Greatness and Prosperity.

Every facility of communication exists between the ports of America and England, but between France and America the means are very insufficient.

The Report of the Treasury states that the merchandize imported from France at a duty of from 5 to 40 per cent., amounted to \$2,148,415, and that imported from England, at the same duties, amounted to \$1,852,069. Great portions of this merchandize is consumed in Virginia, and it at once points out the necessity, as well as advantage, of augmenting her relations with France: nor is a favorable opportunity for this wanting.

No less than three rival companies were commenced at Havre-de-Grace to establish a regular line of Steamers to New York; and the capital, and all things necessary obtained. One of these obtained the preference, and the other two remain still in a state of organization with large means of credit;—why not establish a line direct to Norfolk and Richmond? Although from the official returns we know that Virginia has at present but little exterior commerce, still she does not consume an unimportant amount, which she obtains through the medium of New York.

A line of steamers direct between Havre and Richmond would therefore be certain to succeed. Europe would send her merchandize and her emigrants, and in exchange, Virginia would find a ready market for her tobacco, her linens, and the thousand other articles of produce that a new outlet would cause to spring up.

Germany, that at present concentrates her emigrants at Bremen and Liverpool, and furnishes no inconsiderable proportion of the number flocking to this country, would choose this route in preference to any other, not only from the geographical situation of Havre, but also, on account of the numberless advantages Virginia offers to the emigrants, which are not to be found in New York.

The Post Office relations between the United States and Europe as at present established, from New York and Boston, considerably favor the Northern, to the detriment of the Southern States: but from the central situation of Virginia, there can be but little doubt that the Federal Government would, as guardian of the interests of all, encourage this undertaking on this account, if on no other.

Is there no possibility of forming in Virginia a Company, in conjunction with one in Havre? Six steamers of 800 horse power would be enough for this line; three built at Havre under French superintendence, and three in Virginia under American direction. Of these, four should perform the regular trips, while one remained at each place to be ready in case of accidents.

These steamers might certainly be completed at a cost of \$250,000 each, and might serve in war in case of need. The appliances of every kind to be met with at Norfolk would much fa-

cilitate this scheme, which, if carried out, must not only be a powerful resource for the country, but would change its very aspect.

The South would see with enthusiasm this new era, that would free her from the despotism of the North: The Federal Government, in its impartiality, would grant a subsidy, which already it has deemed it a duty to grant to New York, and this would not be at any cost, for the increase of commerce which this scheme would cause, must very soon make up the outlay, which would thus be productive of immense prosperity. The amount of this subsidy cannot precisely be named, but \$25,000 each voyage would be the least amount.

We submit to you these observations in a somewhat crude and superficial manner; time has been wanting to make a deeper study of this question in all its bearings; but you, Sir, who have begun it—who have simplified the voluminous reports that we have perused with so much interest;—you must achieve this great work and bring it to a successful issue, and we feel that in your hands it cannot fail. We should be too happy, if, with our limited means we could in any way contribute to the desired end, and be assured that at all times we shall be ready, whatever may be the fate of this project, to aid in any thing that may be useful to France, the country of our birth, or to Virginia, that of our adoption.

Signed— E. LACOUTURE,
A. DE MAUPERTUIS.

—
RICHMOND, Sep. 20th, 1852.

Gentlemen:—Your esteemed and very interesting letter of the 10th inst. is before me, and after reflecting on your views upon a line of Steamers from the ports of Virginia to Havre, touching at the port of Southampton, England, I beg to submit these farther considerations:

The consumption of goods of foreign growth and manufacture (other than those produced or made in the United States of America) in the State of Virginia, is Ten Millions of Dollars; of this—as you will see by the official statements in the “Commerce and Navigation of the United States for 1850”—not more than one half of one million is *imported directly*; the whole of nine and a half millions of dollars reaches us through other ports. Our exports, you will see by the same authority, *direct*, is \$3,415,446: say three and a half millions of dollars; but through other ports it is greatly augmented, inasmuch as a very large part of the productions of Virginia is sent, in the first instance, to New York or New Orleans, and is then sent to such foreign market as may be thought most advantageous. By the most reliable estimates, the consumption of Virginia annually of productions which come from foreign countries, and the States of the American Union together, amounts to Thirty Millions of Dollars.

I have stated these facts, not to explain why this state of affairs does exist, but merely to give to you the true

basis for your estimates. Now, the question to which I shall address myself is simply, would a line of steamers, running regularly from Havre by Southampton to Norfolk—our chief seaport town in Virginia—remedy the evil and restore our foreign direct trade? I think it would be the chief and most plausible remedy: but another question of equal magnitude to you is, whether, in the natural course of events, sufficient of freights and passengers could be had to sustain such an undertaking? To find out this, it is necessary, first to enquire into the expenses of such vessels, and the probable amount of money which would be received from the freights and passengers, if the vessels were now at work, and what probable increase might be anticipated. If the contractors for Maryland and Virginia tobacco could be induced to enter into a contract with this line of steamers, for the transportation of the tobacco for the French government to Havre, it would be an item worthy of note. This, with the mail pay of (\$25,000) Twenty-five Thousand Dollars per trip, and the receipts from the transportation of emigrants, would be exclusive of the freight upon merchandize, and the receipts which would accrue from passengers who would take this direction in preference to any other. After the line was established, the latter items of passengers and freights would be greatly augmented. I have not hesitated to express to you the opinion that as the trade of the State is now done, the steamers would not sustain themselves without large mail pay from the General Government. With mail pay something like that now given to the Collins' steamers, it would be a judicious undertaking to organize this line from Havre, for the reason that within a few years, there will terminate at Norfolk a complete line of railroads to the Ohio river on the northwest, and to the Mississippi river at Memphis; these two roads when completed, will traverse the *very* richest country, for the same extent, in the world. My opportunity for speaking correctly as to the natural wealth of the various countries of the world, justifies me in saying that the country through which the line of railroads now being constructed through Virginia, Tennessee and Mississippi passes, has no superior anywhere. These roads, it is estimated, will be completed in the next five years; then this line of steamers will not only sustain itself, but will pay well. As to the cost of the steamers and the running of such vessels, you are better advised than I am.

A political consideration of some moment, will here be of value: since the foundation of the Federal Government, its whole capacities has been applied to build up the commerce of the northern cities: I think that tendency is changing, and that we may safely estimate a change in the deportment of the Federal Government; whether it will ever be just to Virginia, remains to be seen.

Upon the question which you propound, whether a sufficient subscription can be had in Virginia, to place on the line three steamers, I beg to hand you herewith the copy of a letter from Judge John Y. Mason, formerly Secretary of the Navy for the United States during Mr. Polk's administration, and now the President of the James River and Kanawha Canal Company. You will see by the letter of Judge Mason, that a bill has passed one branch of the Legislature of Virginia, incorporating a Company, to which the State of Virginia is to be a subscriber of three-fifths of the capital stock, and it is expected this bill will pass the other branch in November or December next. By our laws, foreigners are permitted to subscribe as natives, in any joint stock company. The means to organize this company, I hear, will not be wanting. May it not be as well to arrange the charter so as that the steamers from Havre can be permitted to enter into this company with the same advantages as those going to Antwerp? The Commonwealth of Virginia being a share-holder, will

be a guarantee to all the contributors, that justice and fairness will be awarded to all the parties interested. Besides this, the Federal Government will find itself obliged to respect the application for mail services, and award to the line such terms as might not be so easily obtained by private individuals.

The standing of Judge Mason, you can learn certainly, by calling on Mr. Rives, our Minister at Paris, who will confirm many if not all of the views and opinions which are advanced in Judge Mason's letter. The natural advantages of Virginia are amongst the very first of all the States of the world. The wealth of her population individually, is greater by actual statistics, than that of any population in any of the States in the American Confederation, notwithstanding the absence of foreign commerce. The intelligence and worth of her citizens, is best asserted by the historical facts connected with the rise and progress of the country amongst us. There is a more sacred regard for principles, a higher morality, and a juster appreciation of the duties of man, than can be duly appreciated by a short stay amongst us: in short, to any one who would wish to seek a home in the western world, I cannot hesitate to say, that no place has so many features to interest a foreigner who desires to render his own existence honorable and respectable, as Virginia; her climate is nearly the same with that of France; her soil is not unlike it in many respects; but your citizens may never expect to find in a new country, the same fascinations that exist in Paris: nor can your people find the same vices or the same necessities; for, with hospitality and friendship our citizens are not indifferent to duty to others, and the sacred obligations which are every where due to God.

I forbear any expressions of interest in the establishment of a line of steamers from Norfolk with the Continental ports of Europe and England. For years I have desired it, and now that it seems so near completion, I can only express my satisfaction at the near approach of a favorite anticipation.

With consideration and esteem, I have the honor to be most respectfully, your ob't servant,

D. H. LONDON.

Messrs. E. LACOUTURES
and
A. DE MAUPERTUIS. }

RICHMOND, Sept. 18th, 1852.

D. H. London, Esq.:

Dear Sir—I have read with much interest the communication of Messrs. Lacouture and Maupertuis, of the 10th inst., which you have done me the honor to submit to my perusal. The facts extracted from the official papers of the Federal Government, exhibit the unfavorable state of the Foreign Trade of Virginia, and the necessity of a remedy has been so impressed on my mind, that I have anxiously directed my attention to the subject for some years. I have observed with great satisfaction, your active exertions in the attainment of the same object. The richness and abundance of the agricultural and mineral productions of Virginia are not over estimated by your correspondents; but the capacity of the State in these productions is not yet developed, and can-

not be until the difficulties of transportation from the interior of the State to the sea-board have been removed by works of improvement. The Canals and Railroads executed and projected and in process of construction, will produce this great result: but these works cannot be profitable unless they are freed from all unnecessary restraints in the shape of charges. The competition with the canals and railroads of New York, Pennsylvania and Maryland, cannot be successfully maintained unless the freight passing over our lines of improvement can be placed at the point of departure for the foreign market, burdened only with the charges of transportation from the interior. The coasting trade constitutes an enormous charge against our trade in such articles; for, while the books of the Treasury of the United States exhibit the foreign or export trade of Virginia as of the value of \$3,415,446, there can be no doubt that the value of the staples of foreign trade actually produced in Virginia at least quadruple that sum: these are sent coastwise, and seek foreign markets from other ports, principally from New York. Our canals and railroads principally tend westward, and are designed to furnish means of transportation for the rich productions of the inland States, contiguous to the western border of Virginia; and to the freight from this source, we must look for the compensating returns from the large investments made in works of improvement. The amount of trade to be brought from the northwestern and western States, which do not touch the ocean, in articles for Foreign Commerce, and the return of articles from abroad for the consumption of the inhabitants of these States, will be enormously large. The James River and Kanawha Canal alone, has been constructed with a capacity to carry three millions of tons annually, and the railroads crossing the State from East to West, will have a large capacity. The ability of these improvements to compete with similar works of other States for this rich commerce, depends on the unfettered and direct transmission of the staples of foreign trade to their foreign market, and the return, equally free, of the foreign goods taken in exchange. The means of this direct interchange with foreign markets, constitute a necessary part of the system of Internal Improvement of Virginia. With an investment on the part of the State and her citizens of nearly fifty millions of dollars when the works shall be completed, there can be no doubt that her Legislature and her enlightened citizens will regard the duty as indispensable, to provide means to relieve the Export and Import trade from the burthens under which both now languish. The effects of such measures cannot be satisfactorily stated in this communication. It will increase the busi-

ness and profits of our canals and railroads; it will promote the interests of the farming, mining, and producing classes, by increase of profit from reduction of charges; it will benefit those engaged in commerce, by giving to them the profits now monopolized by northern Exporters and Importers; it will relieve our currency by giving to our citizens and banks the benefit of Foreign Exchange, and by enabling them to pay for importations with the money received from the consumer for purchases made in our towns; it will promote the navigating interest of Virginia and benefit the mechanic arts, by establishing ship-building within the State, and open new and profitable employments for our people in building and navigating ships, as well steamers as sail vessels: in short, it will increase the wealth of the State and of every class of industry. As I mentioned to you, I have taken a deep interest in the assistance by the State in such an enterprise; and at the last session of the Legislature, a bill passed the Senate, and I think will pass the House of Delegates, giving to Mr. Thompson and his associates, a charter, with a contribution, on the part of the State, of means to establish a line of steamers between Norfolk and Antwerp. I can do nothing to embarrass that measure; and while I am thus situated, I can only express my appreciation of the advantages of a direct intercourse from the same port with France, and that I think an association may be formed to promote that object. The prospect of a contract for mail pay from Congress, is affected by the claims of Baltimore for a line of steamers from that point to some port on the continent of Europe; but the chances would, in my judgment, be improved by the State having an interest in the line.

The profit of the importation of immigrants, the increase of population of the State, and the settlement and cultivation of lands in Virginia now uncultivated, are advantages of vast magnitude in favor of the project. No State in the Union presents greater advantages to respectable emigrants, as a place of profitable settlement than Virginia. The Alleghany Mountains crossing the State from North to South, have heretofore formed a barrier difficult of passage, and have retarded settlements on their western slope; but they will be levelled by our improvements, and the minerals, especially of iron and coal, with which the country abounds, can be mined and brought to market. Its salubrious climate and fine lands for farming and grazing, with convenient means of access to market for surplus products, will present so many advantages that the country now thinly inhabited, must soon become crowded with a healthful, prosperous and happy population.

As the terminus on this side, Norfolk possesses

great advantages. It has a fine and secure harbor of easy access to the sea, with bold water and in a mild climate. It is connected with Baltimore, Washington and Alexandria, by the Chesapeake Bay and Potomac River; with Richmond, Petersburg and Lynchburg, by the James River; and with North Carolina, by the Dismal Swamp Canal, and the Seaboard Railroad. It is in contemplation and measures to that end, are now before Congress, to establish a line of large and swift Steamers between San Francisco and China—there can be no doubt that the possessions of the United States on the Pacific, will be connected with the Atlantic States by railroad; and the geography and topography of the intervening country, affords strong reason to believe that this great connecting road will cross the Mississippi at Memphis, in Tennessee, from which point there are now constructed or in process of construction, connected lines of railroad to Norfolk: if these anticipations should be realized, the rich commerce of China may, in the course of a few years, find its place of warehousing on its transit from the East to Europe, at Norfolk. With a direct steam communication to the Pacific border of California, and a line of steamers thence to China, and a similar line from Norfolk to the Continent of Europe, an adventure could leave London, Havre or Antwerp, for China, and the return be realized in four months; while the voyage around Cape Horn or the Cape of Good Hope to the same point and back, would take from nine to twelve months. The advantage of such a saving of time, can readily be estimated by mercantile men. It must be controlling and give direction to an immense and most valuable trade; and the experience of the past will justify the anticipation that a very few years may realize results which, to some may seem now to be scarcely less than the dreams of a visionary.

These results, so full of public and individual advantage, are to be promoted by the establishment of a direct communication with our great customer, the continent of Europe; and I regard such a measure as will secure that object, of the highest importance and with the deepest interest.

I am, very truly and respectfully,

your ob't serv't and friend,

J. Y. MASON.

The Truth and the Love of it.

Magna est veritas et praevalabit.

What is the truth, seems to be the grand interrogatory of the universe—truth physical—truth scientific—truth political, moral, and religious. And, for more than six thousand years, the whole world has been in travail with the answer to this momentous question. God hath spoken from Sinai; Prophets have touched their hallowed lips with fire; Plato, Aristotle, Socrates, Seneca have lived and delved for the truth; the Son of God has left his home in the skies to proclaim to man the truths of morality and religion, and point out to him his true destiny here and hereafter; martyrs have died at the stake to attest the truth; oceans of ink and hecatombs of paper have been expended in its demonstration; and, yet, when a single finite mind undertakes to give a mere definition to the term, it finds itself utterly lost and bewildered. In a survey of its realm, we feel like the ant in the "Evenings at Home," who set out to view the world, to whose infinite littleness of ken, small things were made great, and who could only take in at a glance an infinitesimal of the field which he had to explore.

Richardson's Dictionary altogether refuses the task of definition. "Truth," says a distinguished Encyclopædia, "is the opposite of falsehood;" and "falsehood," says a second Dictionary, "is the opposite of truth." And yet, after all, can a horse be better described to him who has seen one, than by saying, "it is a horse?" However signally we may fail, our object in this essay, will be to demonstrate that there is such a thing as truth; that there is an idea of which this term is the representative; that, though men of sane minds have differed "toto coelo," as to what constitutes the truth on any one point; though advocates of every theory find their followers, thus seemingly indicating that the truth is what men choose to make it, yet there is a truth, *a seorsum*, a reality—Protean in form—differently refracted by the different mental media through which it passes, but, for all that, one though composite, and emanating from the Deity as the light, to which we have indirectly compared it, from the sun.

We will endeavor to suggest some of the distinctive features of the two main divisions of truth; to state their relative value to man, and their relative appreciation by the Creator. We will throw out a few hints as to the proper mode and spirit of its cultivation, and mention some of the considerations which urge us to an increased love and a more diligent pursuit of it.

In the beginning, we deem it expedient to as-

sume—and we accordingly shall assume—as proven, the existence of the Deity. We do this, because no discussion can be commenced with the mind in a state of *néant* or annihilation. "Ex nihilo nil fit," is as true of minds as of matter. Even those who go furthest towards the prime origin of things, still assume some data, and reason forward from them. We choose to take our stand on the postulate stated above; because it has been sufficiently proved by others, and because to return always to first principles, would retard our progress. It would be recurring to the axioms in order to demonstrate every proposition.

We shall leave out of view in this discussion, the ordinary acceptation of truth as signifying fidelity, conformity between words and facts, i. e., the opposite of lying, and restrict ourselves to the objective meaning of the term. Premising this much, we would define Truth to be the development of the mind of God in all his works. Our definition would then include all the multitudinous and ramified relations of form, magnitude, color, chemical composition—in fine, every thing that goes to make up the domain of Physical Science, or rather the domain of the objects of Physical Science. It would also include the thousand metaphysical relations and capacities that exist in the mind of man himself, and which are as certainly the creations of Divinity, as the mountain that looms upon our view, the fire that burns us, or anything that is obvious to our outward senses. It would include, too, all those relations of man to man, and of all to God, the knowledge of which is moral, political and religious science. Our definition, then, though rather vague, seems to embrace all objective truth as well as the subjective mind, which acts upon it; and we shall accept it not as the best, but as the best and most comprehensive that strikes our mind.

This definition, if admitted, would go far to prove at once the existence of that objective truth—that *res*, which exists by the fiat of Jehovah, "without variableness or shadow" of change, or changing uniformly and in obedience to fixed laws which rob change of its reproach. Truth, we say, is the development of the Divine mind. Now can we imagine such a being as God to act without developing his mind? Can we believe that he, infinite as he is, in power, benevolence, and foresight, would create a system of things without design of his running through it all, without his image and superscription every where stamped upon it? Are we not, then, justified, (starting as we do,) in believing, from "a priori" reasoning in the existence of this objective truth? But "a priori" inference is not sufficient unless confirmed and justified by reasons "a posteriori."

Now, so far as we discover any thing, we do find this supposition of design, of regular system borne out by the phenomena of created things. Abstract Mathematics demonstrates that a figure of a certain form is capable, at the same time, of sustaining the greatest pressure and containing the greatest solidity. Observation shows, at length, that the unconscious bee, an engineer taught of God, has, from the time when it first sucked the sweets of Eden, built its cell in exact accordance with this pattern. Here was of an intention on the part of God—a part of his mental development—*itself*, a truth—the knowledge of it, a fragment of science. The general contraction of material substances under the influence of cold, and their expansion under the action of heat with the reversal of those laws. (just when such reversal is needed,) in the formation of ice, is another of the thousand examples that might be culled from every field of human knowledge—all exhibiting uniformity of law, or change instigated by a benevolent and intelligent mind. It is true that there are apparent irregularities and discrepancies, but the increase of our knowledge both in breadth and profundity, has shown that many of these, once the strong-holds of the sceptics, who would make chaos and chance of every thing, have been reconciled to fix principles, and made to bear still further testimony to the doctrine of an eternal truth. But enough on this point. It is not here that the sceptic erects his strongest redoubt or makes his most desperate resistance. Few deny the existence of truth in the sense which we attribute to it in our definition, as the development in creation (and creation taken in its broadest significance, and not restricted to mere material existences) of an all-pervading mind and will. Even those who assert that everything is the result of chance, acknowledge this; for chance is but a term substituted for their own ignorance, meaning that a certain effect has proceeded from an unknown cause, and not that it had no cause at all. Now it is impossible to conceive of a set of prime causes put in motion without intelligence, design and power. And this intelligence, design and power, or that in which they cohere, is what we denominate God—whose expression is truth. So that even such as these, grant all we are disposed to ask. Their Chance is God. The Romans did not err in deifying “Fortuna” or the “Goddess of Chance.” They mistook in placing the bandage on *her* eyes: it is over those of her worshippers.

The most dangerous class of sceptics are those who acknowledge all that we have endeavored to express, but deny the adequacy of the human mind to the investigation of this divine development: who, looking at the numberless sources of

human error, and the conflicts of human creeds, regard attainment as impossible, and rush into that recklessness which in ancient times was the root that fed the baneful tree of Epicureanism, and which developes itself, in modern days, in carelessness of knowledge—in a disbelief in all political systems on the part of some, involving a want of patriotism—a hopelessness of ascertaining orthodox religion on the part of others, producing a failure of duty towards God.

Let us examine some of the grounds on which such a sceptic would found his suicidal belief, this belief that nothing must be believed. He will cite you instances in which the senses, believed by many to be the original inlets of all our ideas, are at variance with each other and with our reason, as in delirium tremens, and other cases of ocular illusion, and hence he concludes they are not to be relied on. If a sense has erred once, why may it not err again; and, if again, why not every time; and if every time, is not our whole sensuous existence an illusion. With such an one we would employ the Socratic mode of argumentation. If your senses are not to be relied upon, how comes it that you have at any time a consciousness that they have deceived you? If there be no real coin, how comes it that you or any other man can detect the counterfeit? You acknowledge the general accuracy of the senses in the very terms in which you couch your denial of them; for it is by a want of conformity on the part of any sense with the evidence of its fellows, or with its own ordinary action, that you infer it to be in error. Thus, in the case of ocular illusions, they are always found to vanish when tested by the parallel evidence of the other senses or of reason,—or, if they remain they lose all credence in the mind which entertains them, and that from the fact that it rationally accords its faith to the majority of testimony. Again, we frequently find that a single sense is capable of correcting itself by being allowed to act in many different ways, or, as it were, from many different origins. Thus, we see in the distance, a circle suspended in the air. The eye at first gives us no evidence that it is anything but a circle. Viewing it, however, on every side, the unaided vision assures us that it is a sphere. Again, the evidence of our senses are found to be in accordance with the general system of things and with our ideas otherwise derived. Thus we may have business with a friend who resides on the side of the river opposite to us. Guided by the land-marks made known to us by our vision, we descend to the bank, and see in the stream a boat; we seize the oars, and they do not elude our grasp and contradict our eyes. We row ourselves across and ascend the green lawn to the mansion of our friend. We see his smile of

welcome, and feel his hearty grasp. We transact with him the business which memory and reason had represented as awaiting us. Here are a large number of sensations, emotions, and ratiocinations entering into one compound mental action, and yet each chiming with and dovetailing into all the rest. Can any be false? This consistency, too, we observe as not only holding in the sensations of a single day, but of all lifetime. Morn after morn the same glowing orb of day rises in the East, the same mountain clad in verdure greets our view, the same familiar faces meet us at our early meal. All is consistent and harmonious. Since then, our senses in the main support each other; since each sense is found to be generally consistent with itself; since they are generally sustained by reason; since we observe their conformity with some broad and general *arrangement*, we conclude that the subjective states produced by them are in correspondence to their objective correlatives; and do, as far as they go, perceive the truth such as the Almighty designed it to be. The last objection of the sceptic, and one which it is scarcely necessary to notice, might then be this. May it not be that although God has given uniformity of evidence to the senses, although he has made it inevitable for us to believe their testimony, yet he has (as it was certainly in his power to do,) so constructed us as not to see things as he sees them, and that our truth is not his truth, or, in other words, is "falsehood." Now, does it not seem highly improbable, from all known analogies, that a being infinite in power, knowledge and *benevolence*, should, in a mere freak, make a living machine, which should act in dissonance to his own mind? We cannot believe that our Heavenly Father would set the hearts of his children so as to make it necessary for them to believe a lie.

But the sceptic may grant all this—may bid us trust to our senses and our senses only, and close our minds to all other forms of consciousness. He may urge us to walk upon the earth and enjoy its pleasant sounds and sights and odors; to be the unthinking brute that feeds upon God's bounty, and looks not up to the source from which it comes—and that, forsooth, because it is impossible to get any clear revelation of his mind and will. He instances theory after theory exploded—theories which challenged and obtained the belief of a large number of earth's denizens. He cites the long list of the Heathen Philosophies—the many systems of the Physical Universe, each in turn giving way to others. He quotes the conflicting opinions of intelligent and honest men on subjects where there are two antipodean alternatives, and where the mind of one must be in error. And if so, who shall deter-

mine where the error lies, since both minds are allowed to be equally strong and equally fair? By an extension of this argument, he would sap the foundations of our confidence in reason, as a means of eliminating truth. Here too, we would adopt the Socratic answer. We would ask the sceptic: how he came to entertain these ideas of true and untrue, (about which he reasons, and to a consciousness of which he, as other men, must plead guilty,) unless there is something about him which is capable of detecting these attributes of things. And if he can determine the truth in one particular, then no amount of error on other subjects can invalidate that truth. Here is a rock on which he may stand secure, though clouds and darkness reign around—a peak (if I may be allowed the figure) of that submerged world over which human passion and human interest, human pride and human weakness, roll their concealing waves; but which, nevertheless, is there, to be revealed to the patient diver after its treasures. Do we not find that while men disagree about many things, there are many facts and theories, so common as hardly to attract our notice, which receive universal assent, and with regard to which, the sceptic's argument drawn from the conflict of human opinion, falls to the ground. Do we not find too, that these ideas are uncontradicted by our notions on other subjects; that they work out uniform results, and exhibit that same correspondence "*inter se*," which we supposed in the beginning to be characteristic of the development of the divine mind, thus arguing that these ideas, convictions, or whatever they may be called, are the counterpart in the mind of man of the oft repeated development in the mind of his Maker. Thus who can doubt that the theory of the planetary system, built up from man's reason and observation, accounting for a wide range of phenomena; for "the moon that in full-orbed splendor rolls through the dark blue depths," and the tiny crescent that shows its pale horns in the West; for the changing seasons, seed-time and harvest, winter and summer—who can doubt that this theory is the reflex (as far as it goes) of the idea of that planetary system as it appears to God and to the cohorts of angels who surround his throne? Who can doubt that what is truth to us in this matter, is truth to him; or is, by our definition, *the truth*. The same remarks might be extended to our knowledge of truths, moral and religious, from which such conscious blessings flow, that we cannot doubt that they, too, are part of that same infinite and benign system, and that God is pleased to allow our perceptions of them to be correct. It is true, that on many of these points, the human mind has continued for centuries involved in error, but we are encouraged to hope for increased success in our

investigations, from the fact that the source of error in many of these cases, is capable of detection. Often it has been insufficiency of data; and, yet, even in error from this cause, we observe a conformity of the result to the data, and a regular evolution from premise to conclusion, which we term justness of reasoning, and the acknowledgment of which is itself a tribute to the truth-attaining power of our minds. Often, too, (particularly in questions of a moral nature,) although the intellect and conscience may be competent judges, they may have a portion of the data or evidence suppressed and kept back by prejudices and bigotries, which are the results of early impressions or later interests. A knowledge of the nature and influence of these draw-backs, tends to disarm them of their power, and encourages us to hope for ultimate success. Again, we find that our assurance of truth varies between the limits, zero and infinity, and that, as we begin to approach the bounds of the infinite, our views become more hazy and indistinct, and we differ more from each other; because, like the two knights who quarrelled about the shield, though each may see a portion of the truth, we do not all see the same portion. Thus we find that, while the elementary propositions of geometry are assented to by all, as we proceed on towards the abstrusities of the calculi, our powers begin to fail us, and the learned disagree. Thus the fact that there are different degrees of certainty, the certainty decreasing as the truth approaches the infinite, exhibits growth, progress, and is another reason why we should hope that he "who bindeth the sweet influences of the Pleiades and looseth the bands of Orion, is revealing deep things out of darkness, and making himself more manifest unto men." Infinity is only a relative term. We have all been conscious in our own lives, of the recession of the line which divided our finite from its infinite, the certain from the uncertain. Now, when progress has been going on, we are justified in believing that it will continue to go on, and thus we derive fresh testimony to the onward march of mind in its search after truth.

We come now to the consideration of the different kinds of truth, and although the subject admits of a variety of divisions and subdivisions, it is sufficient for our purposes to note only two of these. We would divide truths into *moral* and *intellectual*, according as they address themselves to the purely intellectual powers or involve a moral feeling. Not that both attributes do not frequently co-exist, but because in order to define, we must regard classes where their divergence is greatest, and not where they intersect. The main difference between the two divisions of our subject, we think to be this. An

intellectual truth is one which receives its assent from the strictly intellectual powers, judgment, reason, &c., and which, when perceived and acknowledged, does not involve the idea of a duty to be fulfilled, or a sin to be avoided. Thus the perception of the intellectual truth that the square on the hypotenuse is equal to the sum of the squares on the other two sides, brings with it no moral approbation or disapprobation. To know it or not to know it, makes us no better and no worse.

A moral truth on the contrary, (although in arriving at it we may have performed a process purely intellectual,) does involve the sense of duty, and requires action. It is worthy of notice, that those truths of this sort which are necessary to ensure right action, under ordinary circumstances, are comparatively of easy attainment—such as the necessity of telling the truth in its popular sense, of refraining from injury to the property of others, &c., while those which address themselves to but few, or on which we seldom have to act, require a longer ratiocination in order to realize them. Thus it is that God strews man's food and fuel on the surface of the earth, while gold, (and poison too,) lie buried in its depths.

Under the head of moral truth, may be classed the truths of religion, at least all that part of them, conformity to which, when perceived, becomes a duty, and which, as they do require moral action, are most intimately connected with man's elevation or depression in the scale of virtue, and with his temporal and eternal happiness.

It follows, as a matter of course, that if we were restricted to the pursuit of a single branch of truth, we would accord the palm to that which casts its shadow farthest into the eternal world. Besides moral emotions form the greatest source of happiness even here. "Seek ye first the kingdom of Heaven, and all things else shall be added therewith." God himself has indicated a preference for this portion of his mental domain. In all that he spoke to the world of old through his prophets, in all the revelations which he commissioned his son to make to man, he demonstrates no physical, no mathematical truth—no science. The sun is still allowed to roll around the earth. Even the innocent superstitions of men are left untouched, in order to dwell upon those truths which begin here, but, like Jacob's ladder, terminate in the skies.

God leaves the problem of human science to be solved by man's own ingenuity. He gives him the intellect to reason and believe, and sends to furnish him with data. He places him in the grand laboratory of nature that he may become a chemist—amid its vast collection of forms, its

magnificent heights and distances, that he may make *himself* a mathematician. But he did not permit him to look *only* "through *Nature* up to *Nature's God*," for man by nature knew not God. How darkly we had wandered, had he left us to discover our *moral* relations, by decyphering the hieroglyphics of nature—by reading the earth's autobiography in the ribbed rocks, or in the wonderful strata which encrust her! Thanks be to him! he did not so. He has descended to earth and talked with man as one communing with his friend. Angels and holy inspired men have uttered his oracles and delivered his messages to our race, and (glorious condescension!) he has sealed the final testimony of his truth with the blood of his own incarnate self.

Since, then, there is an objective truth, the subjective knowledge of which, and adaptation to which, makes truth in man—since we are capable of making attainments in it—attainments eternally progressive, what are the considerations that urge us to its pursuit? 1st. The investigation of intellectual truth is desirable as it exercises the instrument with which it is prosecuted, the immortal mind. 2nd. As it preserves from coarse and sensual indulgences, whose fruits are bitterness—and again, as the knowledge thus arrived at, contributes to the physical comfort and prosperity of our race. Look at the flying car, the lightning-tongued telegraph, the steamer that cleaves the deep—at the numberless blessings born from the union of art and science, and then ask if such truth be worth the toil that purchases it. And if this be valuable, of how much more value is that to which God has affixed the seal of his own special approbation—is that which, neglected, entails the curse of sin, but which, if obeyed, rewards with the approval of our own conscience and the smile of Heaven. If mere science exalts and expands the mind, while in its tenement of clay, and is therefore precious to us, who shall estimate that spiritual truth which shall loose our wings—to explore all the wondrous works of God; which shall place us where, in a moment, in the twinkling of an eye, knowledge shall rush upon us, far surpassing the ken of the profoundest of Earth's Philosophers: where our vision—microscope and telescope at once—shall see molecule embracing with molecule and descry the remotest nebula, embryo world, that floats near the Universe's shining wall, and when looking into Jehovah's face we shall behold that unutterable love and benevolence which is at once the beginning and the ending of all truth. And how shall we gird ourselves for this mighty work of exploration? By diligent toil and perseverance. In the case of intellectual truth by close observation and induction, rather than by preconceiv-

ed theories. Since truth is the development of the mind of God—let us not distort it by erecting before our mind's eye some creation of our own. Let the Almighty speak, and let us listen.

In morals and religion the first step should be taken by the intellect. Reason should lead us to the foot of the mount, and then Reason and Faith should ascend hand in hand to the summit. We should weigh in the nicest balances the evidence, external and internal, that the Bible is the authentic production of the Deity and contains his moral will, and, that fact once established, we are ushered at once into the presence of the great Teacher whose words are the words of eternal life.

In both classes of truth the man of sober and upright life and conversation, possesses a great advantage. The law of his mind triumphs over the law of his members. "His soul is not clothed by the body's contagion." No unhallowed lusts, no strong passions bribe his moral judgments, to give a false decision that conscience may be quieted. "Who shall dwell in thy holy hill?" "He who hath clean hands and a pure heart." "He that walketh uprightly and worketh righteousness."

And this truth which we have been considering, comes not altogether to bring peace upon earth. Its votaries have their duties as well as their privileges. The truth they have learned in secret, that they must proclaim upon the house-tops. Even mere intellectual truth has had its martyrs in Galileo and others, while those who to moral and religious truth have borne witness by the sacrifice of all they held dear—even to life itself, can scarcely be enumerated. But he who permits not a sparrow to die unheeded, has not permitted them to suffer in vain. Where a martyr falls, as from the dragon's teeth of old, ten thousand armed men—aye, ten thousand flaming angels arise to vindicate the truths he had sown in his blood.

With us in America, the "*vultus instantis tyranni*" has long passed away, but the "*civium ardor prava jubentium*" in religion, in morals, in politics, has succeeded to its place. We may yet be called upon to assert the truth, and perchance to suffer for it. Manfully we should prepare for the contest. What fools are we, if, for the fear of what man can do, we deny or pervert the truth, and thus give the lie to the great Being whose utterance it is!

Let, then, all, who feel aught of Divinity stirring within them, seek the truth in all places of her dominion,—in the gentle heart of woman, in the majesty of man, in the Christian's closet, in the felon's cell, from prattling infancy, at the feet of age, from the earth beneath them and the stars above—but most of all, let them seek it on

that page which is clearer than the scroll of nature—where alone it is unmingled with error,—let them seek it on the page of God's own word.

VIOLANTE.

SKETCHED FROM "MY NOVEL" BY BULWER.

Alack! for Violante—

We've sought for her in vain,
Beneath the lime-tree's pleasant shade,
In every walk and lane :
The proud old house is desolate,
Its inmates sad to see—
That bright Italian maiden,
Alas! where can she be?

The beauteous Violante,
Alone, was latest seen,
Just where the marble fountain
Tossed up its sunset sheen—
But when the darkness gathered fast
The lofty halls along,
She came no more to gladden them
With love and grace and song:

The cruel Violante!
Her father's face is pale,
And ever-faithful Giacomo
Can only 'weep and wail,'
Now, Holy Mother guard us!
It were a grievous wo,
The darling child should blindly trust
The father's deadliest foe.

The hapless Violante!
Could *she* avoid the snare,
Which wily, wicked hands had set
For innocence so rare?
Alas for gentle girlishness!
When first it shall begin
To hear, but too confidingly,
The charmed voice of sin.

The saint-like Violante
Yet walks from harm secure,
The demon Count can work no ill
Unto a thing so pure:
For all her soft humanities,
Which kept us in control,
Are but celestial messengers
That wait upon her soul.

The queenly Violante
Shall come to us again,
With troops of gallant gentlemen,
And nobles in her train;
And we will twine a bridal wreath
And deck the festal hall,
For she shall wed in honor there
The noblest of them all!

Σ.

Life, Letters, and Literary Remains of John Keats.

EDITED BY RICHARD MONCKTON MILNES.

It has been now nearly three years since this book was first re-published in this country; nevertheless, we have been so much gratified by its perusal, that we feel constrained, even at this late day, to say something about it.

We are greatly obliged to Mr. Milnes for the modest service he has rendered the memory of John Keats. The affectionate zeal he has manifested in gathering up the scattered memorials and relics of that ill-starred Poet, and the unobtrusive manner in which he has laid them before us, entitle him to the highest praise. He does not pretend to have performed the duty of a biographer, as the title page shows; and we are glad in this instance, that he has been so free from the ordinary ambition of book-makers. His preface gives us to understand that "his business has been almost entirely limited to the collection and arrangement of the materials:" he has left "the memorials of Keats to tell their own tale."

The latter half of this volume comprises the "Poetical Remains"—hitherto unpublished. For these, Mr. Milnes is indebted to Mr. Charles Brown, in whose family the poet was an inmate for several years, and who ever proved himself a kind and devoted benefactor. This gentleman had carefully collected the literary relics of his lamented friend, and was about giving them to the world, when his plans were changed, and he suddenly determined to transfer himself and his fortunes to the nascent colony of New Zealand. Before leaving England, he confided his collection of Keats' writings, together with a biographical notice, to the care of Mr. Milnes.

Although these poetical remains bear the undoubted impress of the author's genius, and may be read with delight by every lover of true poetry, we do not think they can add anything to his fame. That splendid fragment "Hyperion," so touchingly emblematic of the Poet's life—so mournfully significant in its mighty incompleteness, must ever be considered the noblest monument of his poetic power. We shall say, therefore, very little about the poetry of this volume. The time for a criticism upon the *poetry* of Keats has gone by. His fame is secure. He drank the bright elixir and has become immortal. Like his own Apollo, upheld by Mnemosyne, he endured the transfiguring pangs, and "died into life." No earthly hand can quench his light: he dwells amid the stars.

But what had chiefly delighted us in examining the result of Mr. Milnes' labors, is the an-

ple indication the book affords of the real life and character of a man long misapprehended, and of whose true personality we have hitherto had but a vague and false conception. However we had admired Keats the *Poet*; we had never entertained exalted ideas of Keats the *man*. His *inspiration* we had never doubted, and we were inclined to regard the beautiful "Elegy" of Shelley, and the generous praise of Leigh Hunt, as tributes to his genius, rather than to his worth. The information concerning him, derived from other sources, was anything but favorable. The impression left upon us by the sneering notices of his contemporaries—by Byron's sarcastic letters and contemptuous epigram—by Gifford's caustic reviews, and even by the obscurity of the Poet's life as well as by his inglorious death—was a mingled feeling of pity and contempt. If happy in the indulgence of that faculty, which it is said can bring "spirits from the vasty deep," we at any time conjured up this Poet's shade, we beheld in our mind's eye the sickly phantom of *John Keats*—a mawkish apothecary's boy—destitute of all manliness and dignity. Adopting the common notion of his death, we were ready to believe with Lord Byron, that "he who would die of an article in a Review, would have died of something else equally trivial." Such a portrait, possesses not even the merit of a caricature; for a caricature is a resemblance, although a distorted and an exaggerated one. Every page of this book demonstrates the injustice of such a representation. We have here an opportunity of undeceiving ourselves; and we are not required to make up our judgment from the special pleading of a partial biographer, but from the undeniable documentary evidence of the Poet's inmost life. His private letters, written without the remotest suspicion that they would ever be made public, admit us, at once, to his most secret thoughts. The affectionate and confiding nature of the writer, make them doubly reliable; they are the unreserved outpourings of his feelings; confessions whispered to the sacred ear of friendship. They read to us like pages torn fresh from the red-leaved volume of the heart, and they contain a rich heart-history. As specimens of epistolary writing, they possess the highest merit. Eminently original, lively and natural, they are, by turns, grave, gay, or melancholy; ever ranging with the writer's lively fancy and susceptible nature. We regret that our limits forbid our giving a few extracts; we hope, however, the reader will feel sufficient interest in this work to peruse it and judge for himself. Let us now trace briefly the outlines of the Poet's life: He was born in Moorfields, London, Oct. 29th, 1795. His father, who was the proprietor of a large livery-stable, was killed by a fall from his horse before John

had completed his tenth year. Keats had two brothers, George, older than himself, Tom, younger, and a sister, the youngest of the three. At an early age, the brothers were sent to Mr. Clarke's School, at Enfield. At school, the biographer tells us: "John was always fighting; he chose his favorites among his school-fellows, from those that fought the most readily and pertinaciously, nor were the brothers loth to exercise their mettle even on one another. This disposition, however, in all of them, seems to have been combined with much tenderness, and in John, with a passionate sensibility, which exhibited itself in the greatest contrasts. Convulsions of laughter and of tears, were equally frequent with him; and he would pass from one to the other almost without an interval." His skill in all manly exercises, made him extremely popular, and his extraordinary animation and ambition, impressed them all with a conviction of his future greatness: "but rather," writes one of his school-fellows, "in a military or some such active sphere, than in the peaceful arena of literature."

Many years after this period, we find him displaying his pugilistic prowess and his generous impulses, to the admiration of a crowd of lookers on, in a provincial town, by giving a severe drubbing to a butcher whom he saw mal-treating a little boy.

In 1810 he left school, and his mother having died the same year, he was apprenticed by his guardian, for five years, to a surgeon, at Edmonton. This place not being remote from Enfield, he was enabled to keep up his connection with the family of Mr. Clarke, his old schoolmaster. Of the son of this gentleman, the biographer thus speaks: "In Charles Cowden Clarke, Keats found a friend capable of sympathising with all his highest tastes and finest sentiments; and in this genial atmosphere, his powers gradually expanded. He was always borrowing books, which he devoured rather than read. From his friend Clarke, Keats borrowed Spencer's "Fairy Queen;" and the effect it produced upon him, is said to have been "electrical:" "It was the great impulse of his poetical life. And the stream of his inspiration remained long colored by the rich soil over which it first had flowed." When his apprenticeship terminated, Keats went to London for the purpose of walking the hospitals. There he was introduced to a circle of distinguished literary characters, and became intimate with Leigh Hunt, Hazlitt, Haydon, Shelley, and many others of note. Soon after entering on the practical part of his business, he determined to abandon a profession which became every day more repulsive, and accordingly he left London, and for the sake of his health, as well as to give

himself up to undistracted study, he retired into the country. The letters written during his absence, are exceedingly interesting, particularly those addressed to his friend, Mr. Reynolds. About this time, he commenced "Endymion." The small volume containing his earlier poems, which he had put forth a short time before, had met with little encouragement. This, however, did not affect him; he only felt stimulated to higher exertions. Endymion at length appeared. The Reviewers attacked it fiercely. How he bore this second failure, his letters show. He thus writes to his publisher:

"You are very good in sending me the letters from the "Chronicle, &c. * * * I cannot but feel indebted to those gentlemen who have taken my part. As for the rest, I begin to feel a little acquainted with my own strength and weakness. Praise or blame has but a momentary effect on the man whose love of beauty in the abstract makes him a severe critic on his own works. My own domestic criticism has given me pain without comparison, beyond what 'Blackwood' or the 'Quarterly' could inflict: and also when I feel I am right, no external praise can give me such a glow as my own solitary re-perception and ratification of what is fine. * * * * *

The genius of poetry must work out its own salvation in a man. It cannot be matured by law and precept, but by sensation and watchfulness in itself. In 'Endymion,' I leaped headlong into the seas, and thereby have become better acquainted with the soundings, the quicksands and the rocks, than if I had stayed upon the green shore, and piped a silly pipe, and took tea and comfortable advice. I was never afraid of failure; for *I would sooner fail* than not be among the greatest."

We fully agree with the biographer, that the noble candor and simplicity of this answer is sufficient to place the question in its true light, and to silence forever the exclamations either of honest wrath or contemptuous passion.

While the critics were busy discussing the merits of 'Endymion,' its author was tending with anxious solicitude, the bedside of his brother Tom, who was languishing in the last stage of that fatal malady to which the Poet himself was destined so soon to fall a victim. Keats mourned the loss of his brother most bitterly. Indeed, nothing can be more engaging than the fraternal fondness, the deep and lasting tenderness he ever manifested towards his brothers and his youthful sister. He writes to his friend Bailey: "My love for my brothers, from the early loss of our friends, and even from earlier misfortunes, has grown into an affection passing the love of woman."

After the death of his brother, Keats took up his abode with his friend, Mr. Brown: here he wrote 'Hyperion,' and several of his minor poems. The pressure of his pecuniary circumstances, and the insidious approaches of disease began now to weigh upon his spirits and embitter his life. While devising schemes of relief and struggling against poverty and pain, he was suddenly prostrated by a violent outbreak of his disease. There was no alternative but to remove to a milder climate. With gloomy forebodings, he set out with his friend Severn for Italy. They repaired to Rome, where, after a painful illness, Keats died. He was buried in the Protestant Cemetery, amid the ruins of the eternal City, and on his grave-stone was placed, at his request, this inscription: 'Here lies one whose name was writ in water.'

We have thus lightly touched upon the more important incidents in the life of Keats. How far he reminds us of the Johnny Keats scoffed at and derided by scribblers, we leave the reader to judge. There is no one, we venture to say, that will not feel willing to endorse the sentiment of his brother George, expressed in a letter to one of the Poet's surviving friends: "John was the very soul of courage and manliness, and as much like the *Holy Ghost as Johnny Keats*."

There is a beautiful simile of human life, which we find in one of his letters to Mr. Reynolds; we will extract it for the sake of its intrinsic beauty, if for nothing else:

"I compare human life to a large mansion of many apartments, two of which I can only describe, the doors of the rest being as yet shut upon me: the first we step into we call the Infant, or Thoughtless Chamber, in which we remain as long as we do not think. We remain there a long while, and notwithstanding the doors of the second chamber remain wide open, showing a bright appearance, we care not to hasten into it, but we are at length imperceptibly impelled by the awakening of the thinking principle within us. We no sooner get into the second chamber, which I shall call the Chamber of Maiden-thought, than we become intoxicated with the light and the atmosphere. We see nothing but pleasant wonders, and think of delaying there forever in delight. However, among the effects this breathing is father of, is that tremendous one of sharpening one's vision into the heart and nature of man, of convincing one's nerves that the world is full of misery and heart-break, pain, sickness and oppressions; whereby this Chamber of Maiden-thought becomes gradually darkened, and at the same time, on all sides of it, many doors are set open; but all dark; all leading to dark passages. We see not the balance

of good and evil; we are in a mist; we are in that state; we feel the Burden of the Mystery."

Poor Keats! he was not permitted to irradiate those dark passages with the light of genius; a darker passage had to be undergone, even that which leads through the valley of shadows, and whence there is no return. But—

"He has out soar'd the shadow of our night;
Envy and calumny and hate and pain,
And that unrest which men miscall delight,
Can touch him not and torture not again;
From the contagion of the world's slow stain
He is secure, and now can never mourn
A heart grown cold, a head grown grey in rain:
Nor, when the spirit's self has ceased to burn,
With sparkless ashes load an unlamented urn."

THOMAS HOOD.

The writer, whose name appears at the head of this article, enjoyed during his life, a popularity as great in extent, as it was peculiar in kind. His first distinction was attained as an humorist, and almost all his productions were ushered into the world in the pages of periodicals. Hence, the rapid spread of his reputation, from the moment that he acquired his earliest celebrity. Newspapers and Magazines multiply and circulate in the nineteenth century, beyond the wildest conjecture that any man would have hazarded an hundred years ago. The habits of locomotion in the human race have increased also, to a degree no less surprising. Emigration and travelling, tours of business and pleasure, journeys for every purpose and for no purpose, have become merely ordinary incidents in the life of a large portion of mankind. With this multiplication of readers, came, naturally, a great and growing demand for reading, suited to the wants of the time. Stage coaches, steamers and railway cars are ill adapted for serious study or sober thought. Professor Porson or Doctor Parr might indeed carry, if they pleased, a pocket full of Greek dramatists, wherewith to confound some unlucky passenger, guilty of a casual misquotation. But such prodigies of learning are rare. For the multitude, something light and entertaining is required—something to be read without an effort—to be laid aside or resumed without the painful labor of recovering a train of thought—to be repeated to and enjoyed with a cheerful neighbor of tolerable parts and education.

Now, of all literary laborers, Thomas Hood was the laborer for this field. The age called for him, and he came. It was "the Hour and the

Man." Full of playfulness that never tired, overflowing with a perennial stream of puns, possessed of an inventive instinct which shaped the driest and dullest subject into a figure of fun—his quainthumor and his sparkling wit illumined every aspect of society and manners, like summer lightning amid the evening clouds. Flashing out for an instant in one quarter, he disappeared only to show himself in another, the "*Two Faces under a Hood*," beaming every where with an expression of drollery, always varying, and yet always the same. Through all his changes, some features were constant. You could not but see the boyish merriment which laughed at its own work, and the kindly sympathy which restrained and governed his love of the grotesque. He tickled with such consummate skill, that his finger never touched a morbid place in the human anatomy. A fat old woman, in an agony of alarm, rocks in a little boat upon a chopping sea, with the pathetic suggestion to the reader, that "*She is far from the Land*:" but you feel assured all the while that she is not to be drowned. Another ponderous dame is startled from her easy chair by the horrified nurse-maid, who snatches up the "*Spoiled Child*" and presents it *edgeways*. Nevertheless, we have an abiding confidence that the little innocent endured no such "mental sufferance." A luckless sailor is lashed to a palm tree by a boa constrictor, while an eagle plays at "last tag" with his pig tail, and a grim tiger watches the sport from a jungle hard by. It is justly described as "*an embarrassed situation*;" but who doubts that

"The sweet little cherub which sits up aloft,
Will watch o'er the fate of poor Jack?"

If we turn from the pictorial illustrations to the letter press, the numberless "whims and oddities" that crowd upon us in prose and poetry, attest the fertility and variety of his comic resources. There are "*The Pugsley Papers*—the letters on the Great Conflagration of the Parliament House—the Earthquake Correspondence of 1842—*The Demon Ship*—*The Lost Heir*—*Miss Kilmansegg*—*The Tale of a Trumpet*—and scores of others—essays, narratives and epistles—which evidence a genius no less prolific in his own peculiar vein, than that of the great novelist in the loftier department of historical romance. Nor must we forget that with Hood this was original. He has been followed by Thackeray, and a horde of imitators, far less worthy than Thackeray. From *Punch*, down to the compilers of Comic Almanacks, a whole army of copyists have taken Hood for their exemplar, and worked with greater or less success upon his patterns. Many of them do not scruple at plagiarism: and numbers of his good jokes have become so hack-

neyed, that they are daily repeated, like proverbs from Shakspeare, without the least recollection of the source from whence they came.

There are other lights, moreover, in which our author deserves to be remembered. Sometimes he comes before us with memories of childhood, simple, natural and touching. He steals away from the weary, week-day toils and cares of the present and the actual—from bodily sickness and mental anxiety—to the happy and joyous past, to the breezy freshness of the morn of life, to those bright scenes of flowers and sunshine, in which we see ourselves as if in some long forgotten state of existence. Take, for example, the following stanzas, from his "Retrospective Review":

"Oh! when I was a tiny boy
My days and nights were full of joy,
My mates were blithe and kind!
No wonder that I sometimes sigh,
And dash the tear-drop from my eye
To cast a look behind!

"A hoop was an eternal round
Of pleasure. In those days I found
A top a joyous thing:
But now these past delights I drop,
My head, alas! is all my top,
And careful thoughts the string!

* * * * *

"Oh! for the lessons learned by heart!
Ay, though the very birch's smart
Should mark those hours again:
I'd 'kiss the rod,' and be resigned
Beneath the stroke, and even find
Some sugar in the cane.

"The Arabian Nights rehearsed in bed!
The Fairy tales in school-time read,
By stealth, 'twixt verb and noun!
The angel form that always walked
In all my dreams, and looked and talked
Exactly like Miss Brown!"

And these others, which are so beautiful, that our readers will thank us for giving them entire:

"I remember, I remember
The house where I was born,
The little window where the sun
Came peeping in at morn.
He never came a wink too soon,
Nor brought too long a day:
But now I often wish the night
Had borne my breath away.

"I remember, I remember
The roses, red and white;
The violets and the lily cups,
Those flowers made of light!
The lilacs where the robin built,
And where my brother set
The laburnum on his birth day,—
The tree is living yet!

"I remember, I remember
Where I was used to swing,
And thought the air must rush as fresh
To swallows on the wing:
My spirit flew in feathers then,
That is so heavy now,
And summer pools could hardly cool
The fever on my brow!

"I remember, I remember
The fir trees dark and high;
I used to think their slender tops
Were close against the sky:
It was a childish ignorance,
But now 'tis little joy,
To know I'm farther off from heaven,
Than when I was a boy."

We are strongly tempted to dwell upon other poems of Mr. Hood, in which he displays feelings of a graver and deeper character. "The Elm Tree," appealing to superstitious fancy, stirs us into a strange and mysterious sympathy with inanimate, or at least unconscious, nature. "The Haunted House," presents a picture not inferior to that which Tennyson has developed out of the "Moated Grange," which was the residence of the dejected Mariana. And the "Dream of Eugene Aram," laying bare to view the black and dreary chambers of a ruined human heart, reveals to us with terrible truth and power, the fear, the anguish, and the hopeless despair, that wait upon the lonely hours of guilt, unknown and unsuspected. There are other productions, too, in which the woes of suffering humanity have found a voice, crying aloud for relief—relief from degradation and poverty and famine; from evils, of which the causes are so rooted in the constitution of society, that it is easier to weep for their existence, than to contrive how they may be eradicated. Nevertheless, it is most true that the sympathy of the statesman must be aroused, before his mind can be stimulated to study the disease of the body-politic, and to seek its cure. Hood and his fellow-laborers have done much in awakening the public of Great Britain to the duty and necessity of solving these sad problems: the time may be nearer than is suspected, when the older States of our Union will have the same task to perform. The "Song of the Shirt," and the "Bridge of Sighs"—alas! are they not already echoed from the workshops and the garrets of our great cities? Do they not shadow forth the want, the toil, the temptation and the ruin, from which so many weak and helpless women have already sought refuge in the grave?

"Mad from life's history,
Glad to death's mystery,
Swift to be hurled!
Any where, any where,
Out of the world!"

But we must make haste to reach that poem, which is the main object of this article; because, while it is less known (as we believe) than most of his other works, it is by far the most imaginative and brilliant of them all. It brings out our favorite in the character of a worthy follower—a modest and loving, and therefore the more worthy, follower—of Shakspeare, in one of his triumphal progresses through the realms of fancy. Its very title—"The Plea of the Midsummer Fairies"—is an acknowledgment of homage to the author of the "Midsummer Night's Dream," and a herald of the rich tribute that one of his true lieges is about to pour out at his feet. When we publish our edition of Shakspeare—and we shall do so as soon as we are convinced that the literary world is prepared to appreciate our critical merits—most assuredly we shall insert the poem as a fit companion to the play. A companion—not an equal: the offering of an humble and faithful friend, who reverences Shakspeare, and would fain utter what he feels: not of a supple slave, betraying selfishness and servility, even in his parrot-taught flattery—but of an honest heart, which judges and approves before it loves, and only then gives assurance of a life-long attachment—

"Master, go on, and I will follow thee,
To the last gasp, with truth and loyalty."

The poet's design, to use his own words, is "to celebrate, by an allegory, that immortality which Shakspeare has conferred on the Fairy Mythology by his *Midsummer Night's Dream*." The allegory itself is a noble one; but we were so carried away at the first reading, by the vivid description and exquisite feeling of the poem, that we forgot all but its literal sense, and never thought of the metaphorical. Let us take a look at the spot to which the story—for it is *a story*, a right Fairy Tale,—first leads us—

"It was a shady and sequestered scene,
Like those famed gardens of Boccaccio,
Planted with his own laurels evergreen,
And roses that for endless summer blow;
And there were founting springs to overflow
Their marble basins,—and cool green arcades
Of tall o'erarching sycamores, to throw
Athwart the dappled path their dancing shades,—
With timid conies cropping the green blades.

"And there were crystal pools, peopled with fish,
Argent and gold; and some of Tyrian skin,
Some crimson-barred;—and ever at a wish
They rose obsequious till the wave grew thin
As glass upon their backs, and then dived in
Quenching their ardent scales in watery gloom;
Whilst others with fresh hues rowed forth to win
My changeable regard,—for so we doom
Things born of thought to vanish or to bloom.

"And there were many birds of many dyes,
From tree to tree still faring to and fro,
And stately peacocks with their splendid eyes,
And gorgeous pheasants with their golden glow,
Like Iris just bedabbled in her bow,
Besides some vocalists, without a name,
That oft on fairy errands come and go,
With accents magical; and all were tame,
And peckled at my hand where'er I came."

Is not this the place of all places, to look for the "good people in;" and is it not the most natural thing in the world, that the poet, rambling there in a soft, dewy, moonlight, Autumnal eve, should find himself in the presence of "Queen Titania," with her pretty crew—

"All in their liveries quaint, with elfin gears"—

and should hear her giving orders for the evening's sport?

"'Ah me!' she cries, 'was ever moonlight seen,
So clear and tender for our midnight trips?
Go some one forth, and with a trump convene
My lieges all!'—Away the goblin skips
A pace or two apart, and deftly strips
The ruddy skin from a sweet roses' cheek,
Then blows the shuddering leaf between his lips,
Making it utter forth a shrill small shriek,
Like a frayed bird in the gray owl's beak.

"And lo! upon my fixed delighted ken
Appeared the loyal Fays. Some by degrees
Crept from the primrose buds that opened then,
And some from bell-shaped blossoms like the bees,
Some from the dewy meads, and rushy leas,
Flew up like chafers, when the rustics pass;
Some from the rivers, others from tall trees
Dropped like shed blossoms, silent, to the grass,
Spirits and elfins small, of every class.

"Peri and Pixy, and quaint Puck the Antic,
Brought Robin Goodfellow, that merry swain,
And stealthy Mab, queen of old realms romantic,
Came too, from distance, in her tiny wain,
Fresh dripping from a cloud,—some bloomy rain,
Then circling the bright moon, had washed her car,
And still bedewed it with a various stain:
Lastly came Ariel, shooting from a star,
Who bears all fairy embassies afar."

A goodly company, truly, and one that promises much delight. But alas! for the poor little elves, their Queen is oppressed with sad forebodings of some impending evil, which ever and anon bring the tears to her eyes, in spite of all their merriment. By and by they become infected with her melancholy, and give o'er their amusements, clustering about her, while she unfolds the secret cause of her unhappiness. She reminds them that their lives are "loosed upon the fickle faith of men"—that they exist only upon condition of being remembered and cherished by the human race; and that although they have been thus far preserved by the friendly aid

of poesy, she feels misgivings that their extinction is at hand. This apprehension it is, which has haunted her waking and her sleeping hours all day, gathering confirmation from many evil omens that she observed: till at last, while she is bribing a raven with acorns to hush his dreary croaking, she is appalled by the sight of

—“The horrid shape that ever raised my awe,
A monstrous giant, very huge and tall,
Such as in elder times, devoid of law,
With wicked might, grieved the primeval ball,
And this was sure the deadliest of them all!

“Gaunt was he as a wolf of Lauguedoc,
With bloody jaws, and frost upon his crown;
So from his barren poll one hoary lock
Over his wrinkled front fell far adown
Well nigh to where his frosty brows did frown
Like jagged icicles at cottage eaves;
And for his coronal he wore some brown
And bristled ears gathered from Ceres’ sheaves,
Entwined with certain sere and russet leaves.

“And lo! upon a mast reared far aloft,
He bore a very bright and crescent blade,
The which he waved so dreadfully, and oft,
In meditative spite, that, sore dismayed,
I crept into an acorn cup for shade;
Meanwhile the horrid effigy went by:
I trow his look was dreadful, for it made
The trembling birds betake them to the sky,
For every leaf was lifted by his sigh.

“And ever as he sighed, his foggy breath
Blurred out the landscape like a flight of smoke:
Thence know I this was either dreary Death,
Or Time, who leads all creatures to his stroke!
Ah! wretched me!”—

Titania’s narrative is suddenly cut short by the entrance of the dreadful apparition. The fairies, panic stricken, huddle together, incapable of flight. The queen alone, as becomes her station, has the courage to address him; which she does, entreating for mercy to her harmless followers, in strains so moving, that they must needs have prevailed with any foe, except stern and unsparing Time. But what mercy can be expected of the tyrant, who hath always delighted to devour his own children? He makes no answer to her prayers except a scornful and malignant sneer, and proceeds to whet his terrible scythe, as for instant execution. At this, Titania, descending from her throne, casts herself at the feet of the destroyer, and renews with plentiful weeping, her appeal to his pity and forbearance. She beseeches him to seek a prouder spoil, in razing the palaces and cities of ambitious kings and conquerors—to pass by her feeble subjects, whose brief and uncertain lease of life must soon run out, and whose daily employment it was, meanwhile, to dispense, unseen, the sweet charities of nature. She beckons her attendants to enforce her petition, by some account of their re-

spective tasks. One after another, the little elves come forward trembling, and repeat the labors of love which they have performed. It is a long list of benefits conferred upon the sons of men, for which it is to be feared too little gratitude is returned, either to the fanciful agents employed, or to the Divine Author of all-good. Some regulate the melody of field and grove, teaching music to the lark at heaven’s gate, and the nightingale upon her twilight thorn: some “tend upon buds’ birth and blossoming,” and dress the earth in verdure and flowers: some wait upon young lovers, and surround them in their hours of courtship, with all happy sights and sounds—or watch by the cradle of sleeping infancy, and beguile the mother’s heart of its care, as they

—“Touch the dimpled cheek with roses red,
And tickle the soft lips until they smile”—

others—“small foresters and gay”—have charge of the merry greenwood, training vines and bending branches for the shelter of nature’s tenants, shaping vast halls and shady galleries of living architecture, and grafting the “dried oaks” with mistletoe, for the cheer of the coming Christmas. Then there are those who teach all creatures their appointed instincts, working beside them in shapes like their own, and causing men to marvel at the intelligence of ants and bees and silk-worms—and there are the spring-keepers, that hold the keys of nature’s fountains, and cause their cool streams to flow, refreshing the parched earth, and reviving the languid dwellers by land and by water. But most touching of all are the stories of human suffering succoured and relieved: of the gloomy wretch, intent on suicide, who is diverted from his fell purpose by the gambols of the fairies, disguised as fish, until he falls in with a gentle brother of the angle, whose “sweet wisdom gathered from the brooks” converts his heart from its despair: of the helpless babe, exposed in the fields by its cruel mother, and saved from death by an honest rustic, who was led to the spot by an unusual chirping of fairy grass-hoppers—

“A little, sorrowful, deserted thing,
Begot of love, and yet no love begetting;
Guiltless of shame, and yet for shame to wring;
And too soon banished from a mother’s petting,
To churlish nurture and the wide world’s fretting,
For alien pity and unnatural care;
Alas! to see how the cold dew kept wetting
His childish coats, and dabbled all his hair,
Like gossamers across his forehead fair.

“His pretty pouting mouth, witless of speech,
Lay halfway open like a rose-lipped shell:
And his young cheek was softer than a peach,
Whereon his tears, for roundness, could not dwell,
But quickly rolled themselves to pearls, and fell,
Some on the grass and some against his hand,

Or haply wandered to the dimpled well,
Which love beside his mouth had sweetly planned,
Yet not for tears, but mirth and smilings bland.

"Pity it was to see those frequent tears
Falling regardless from his friendless eyes;
There was such beauty in those twin-bluespheres,
As any mother's heart might leap to prize;
Blue were they, like the zenith of the skies
Softened betwixt two clouds, both clear and mild:
Just touched with thought, and yet not over-wise,
They showed the gentle spirit of a child,
Not yet by care or any craft defiled.

"Pity it was to see the ardent sun
Scorching his helpless limbs—it shone so warm;
For kindly shade or shelter he had none,
Nor mother's gentle breast, come fair or storm.
Meanwhile I bade my pitying mates transform
Like grasshoppers, and then with shrilly cries,
All round the infant noisily we swarm,
Haply some passing rustic to advise—
While providential Heaven our care espies,

"And sends full soon a tender-hearted hind,
Who wondering at our loud unusual note,
Strays curiously aside, and so doth find
The orphan child laid in the grass remote,
And laps the foundling in his russet coat,
Who thence was nurtured in his kindly cot:
And how he prospered, let proud London quote,
How wise, how rich, and how renowned he got,
And chief of all her citizens, I wot."

This is the well-known story of Sir Thomas Gresham, founder of the Royal Exchange, which

"Still bears, in token of his grateful breast
The tender grasshopper, his chosen crest."

We would gladly introduce other quotations from the exquisite speeches, in which the little pleaders recount their adventures. But *Time* forbids; as inexorable now as then—when he scoffed with increasing bitterness at every word, and grew more and more savage at each new petition.

The cause is suddenly brought to an issue by the mischievous antics of Puck. This famous wight, maugre the danger in which he stood, with all his tribe, had not ceased to play the harlequin, making a jest of old Saturn himself, and mocking at the grief and dismay of his own comrades—

"Turning their solemn looks to half a smile,
Like a straight stick shown crooked in the tide."

But at last, as will happen sooner or later to the most cunning of those who think to laugh at *Time* and elude his grasp, the joker is caught, (as one might clutch a fly.) in the very act of plucking the old tyrant by the ear and sticking straws in his long forelock. Puck, in his extremity, begs as piteously as the others: but, having no useful business to boast of, nor any kind deeds to rehearse, he is obliged to own himself

an idle practical joker—full of harmless pranks—a lover and promoter of fun—mirthful himself, and the cause of mirth in others. This confession seems to fill up the measure of old Saturn's wrath and impatience—

—————"Shaking his crooked blade
O'erhead, which made aloft a lightning flash
In all the fairies' eyes, dismally frayed!
His ensuing voice came like the thunder crash—
Meanwhile the bolt shatters some pine or ash—
'Thou feeble, wanton, foolish, fickle thing!
Whom naught can frighten, sadden, or abash,—
To hope my solemn countenance to wring
To idiot smiles!—but I will prune thy wing!

"Lo! this most awful handle of my scythe
Stood once a May-pole, with a flowery crown,
Which rustics danced around, and maidens blithe,
To wanton pipings; but I plucked it down,
And robed the May Queen in a churchyard gown,
'Turning her buds to rosemary and rue;
And all their merry minstrelsy did drown
And laid each lusty leaper in the dew;
So thou shalt fare—and every jovial crew!'"

So saying, the hoary giant lays hold of his scythe with both hands, and makes ready to sweep off in one swarth, like a cluster of field flowers, the group of trembling creatures at his feet. But, in the very crisis of their fate, they are reprieved—the impending stroke is arrested—and the fearful scythe drops harmless to the ground.

"For just at need, a timely apparition
Steps in between to bear the awful brunt;
Making him change his horrible position,
To marvel at this comer, brave and blunt,
That dares *Time*'s irresistible affront,
Whose strokes have scarred even the Gods of old;
Whereas this seemed a mortal, at mere hunt
For conies, lighted by the moonshine cold,
Or stalker of stray deer, stealthy and bold,

"Who, turning to the small assembled fays,
Doffs to the lily queen his courteous cap,
And holds her beauty for a while in gaze,
With bright eyes kindling at this pleasant hap;
And thence upon the fair moon's silver map,
As if in question of this magic chance,
Laid like a dream upon the green earth's lap;
And then upon old Saturn turns askance,
Exclaiming, with a glad and kindly glance,—

"'Oh! these be Fancy's revellers by night!
Stealthy companions of the downy moth—
Diana's motes, that flit in her pale light,
Shunners of sun-beams in diurnal sloth;
These be the feasters on night's silver cloth—
The gnat with shrilly trump in their convener,
Forth from their flowery chambers, nothing loath,
With lulling tunes to charm the air serener,
Or dance upon the grass to make it greener.

"'These be the pretty genii of the flowers,
Daintily fed with honey and pure dew,—
Midsommer's phantoms in her dreaming hours,
King Oberon, and all his merry crew,

The darling puppets of romance's view;
 Fairies, and sprites, and goblin elves we call them,
 Famous for patronage of lovers true,
 No harm they act, neither shall harm befall them,
 So do not thus with crabbed frowns appal them."

It is with unspeakable reluctance, that we turn away from the rich, luxuriant, glowing language of our author, to stitch together, in our slipshod style, the fragments thus torn out of the poem for the embellishment of our narrative. It would delight us, as it has done more than once, to read it from end to end with some chosen associate, who "has wit for such worship." But at present, we must curtail the indulgence of our poetical affections; or we should repeat every one of the one hundred and twenty-six stanzas—for we believe not one can be omitted, without losing some harmony that the ear will not voluntarily forego. So proceed we, like the Prologue* before Duke Theseus, to announce the coming action of the Lion.

Saturn, recovering from the surprise into which he had been thrown by the sudden interference of the stranger, again essays to execute his fell design, but is again foiled by the protector of the fairies, who turns his blow aside—and now Titania, with all her train, forsaking the spot where they had in vain implored the mercy of the destroyer, hastens to take refuge with her noble defender, appeals to his generosity and valor, and promises him many a fairy guerdon for his services—

"Nay, by the golden lustre of thine eye,
 And by thy brow's most fair and ample span,
 Thought's glorious palace, framed for fancies high,
 And by thy cheek thus passionately wan,
 I know the signs of an immortal man—
 Nature's chief darling, and illustrious mate,
 Destined to foil old Death's oblivious plan,
 And shine untarnished by the fogs of Fate,
 Time's famous rival till the final date!

"O shield us then from this usurping Time,
 And we will visit thee in moonlight dreams;
 And teach thee tunes to wed unto thy rhyme,
 And dance about thee in all midnight gleams,
 Giving thee glimpses of our magic schemes,
 Such as no mortal's eye hath ever seen,
 And for thy love to us in our extremes,
 Will ever keep thy chaplet fresh and green,
 Such as no poet's wreath hath ever been!"

How SHAKESPEARE responded to this appeal, is matter of joy and pride, not to those alone who share in the birth-right of his mother-tongue, but to the lovers of genius and taste all the world over. Thus, on the spot, he rebukes the truculent and threatening spectre—

* Perhaps the reader may trace a further resemblance—
 "He hath rid his Prologue like a rough colt—he knows no stop."

"Though haggard Sin, go forth and scoop
 Thy hollow coffin in some churchyard yew,
 Or make th' Autumnal flowers turn pale and droop,
 Or fell the bearded corn, till gleaners stoop
 Under fat sheaves—or blast the piny grove;
 But here thou shalt not harm this pretty group,
 Whose lives are not so frail and feebly wove,
 But based on Nature's loveliness and love.

"For these are kindly ministers of nature,
 To sooth all covert hurts, and dumb distress;
 Pretty they be, and very small of stature—
 For mercy still consorts with littleness,
 Wherefore the sum of good is still the less,
 And mischief grossest in this world of wrong;
 So do these charitable dwarfs redress
 The tenfold ravages of giants strong,
 To whom great malice and great might belong.

"Wherefore with all true loyalty and duty
 Will I regard them in my honoring rhyme,
 With love for love, and homages to beauty,
 And magic thoughts gathered in night's coolclime,
 And studious verse trancing the dragon Time,
 Strong as old Merlin's necromantic spells:
 So these dear monarchs of the summer's prime,
 Shall live unstartled by his dreadful yells,
 Till shrill larks warn them to their flowery cells."

So bearded and defied, TIME turns upon his opponent with accumulated wrath, resolved to annihilate the only mortal that dared withstand his power: but against that charmed life, his strength is impotent, his malice harmless.

"Look how a poisoned man turns livid black,
 Drugged with a cup of deadly hellebore,
 That sets his horrid features all at rack—
 So seemed these words into the ear to pour
 Of ghastly Saturn, answering with a roar
 Of mortal pain and spite and utmost rage,
 Wherewith his grisly arm he raised once more,
 And bade the clustered sinews all engage,
 As if at one fell stroke to wreck an age.

"Whereas the blade flashed on the dinted ground,
 Down through his steadfast foe, yet made no scar
 On that immortal shade, or death-like wound;
 But Time was long benumbed, and stood ajar,
 And then with baffled rage took flight afar,
 To weep his hurt in some Cimmerian gloom,
 Or meaner fames (like mine) to mock and mar,
 Or sharp his scythe for royal strokes of doom,
 Whetting its edge on some old Cæsar's tomb."

And now succeeds a pageant of joy, and gratitude, and love. Titania commands her subjects to do honor to their preserver, and vies with the humblest of them in grateful homage and affection. She enjoins upon them to be ever on the watch, that they may minister to his pleasure, and reveal to him the sweet secrets of nature, which it is his delight to study. Finally, she waves her wand thrice about his head, and crowns him with a radiant glory,

"To show the thoughts there harbored were divine,
And on immortal contemplations fed:
Goodly it was to see that glory shine
Around a brow so lofty and benign!"

So did SHAKESPEARE rescue from oblivion the airy shapes of Fairy Land, and make them sharers in his own deathless inheritance of fame. So have they been maintained in their ancient franchises of turf and twig, of flowers and moonlight, of mossy banks and crystal waters. So do they continue the rightful tenants of forest, field and meadow, when the garish light of day is withdrawn, and the soft, shadowy hours of night bring back the glorious reign of old Romance.

But their charter, as of old, limits their tenure to the witching hours of darkness. Their lease ends at cock-crow. Even the presence of Shakespeare could not avail to stretch the privilege beyond the break of day—

——"Now bold Chanticleer, from farm to farm,
Challenged the dawn creeping o'er eastern land,
And well the fairies knew that shrill alarm,
Which sounds the knell of every elfish charm.

"And soon the rolling mist, that 'gan arise
From plashy mead and undiscovered stream,
Earth's morning incense to the early skies,
Crept o'er the failing landscape of my dream.
Soon faded then the Phantom of my theme—
A shapeless shade, that fancy disavowed,
And shrank to nothing in the mist extreme.
Then flew Titania,—and her little crowd,
Like flocking linnets, vanished in a cloud."

COUNTRY NOTES.

WRITTEN UNDER LEAF AND CLOUD-SHADOW.

SUNSHINE.

—Above, the deep blue sky of August, with its wealth of snowy clouds:—all around the rustling emerald woods:—at my feet the cool grass, green and tender, rolling out its rich carpet, embroidered with fairest flowers! Above, around, through all (as I sit here in the shade writing with a luxuriously idle pen) breaks the everlasting sunshine!

With sunshine, how can one feel other than blest—most happy! I suspect Lamartine scribbled that beautiful historical romance of his in the shadow of some joyless day instead of on the sea-shore, lit with the sunlight,—with the fair purple sky and rosy islands of the Inland Sea before him;—or the end would never have been so sad. Sunshine is but another word for joy, heart-lightness, merriment of spirit! Whatever sort of sunshine it may be: whether in chilly

winter when it pours its white splendor on the snow, or in spring when it laughs above the flowers; or as now in beautiful August when it plays at hide and seek with the far stretching fields, and lies asleep upon the rolling woodlands, and blesses all it shines on!

Many persons prefer a rainy day:—"a nice drizzly, uncomfortable, delightful morning, when you may look out and see the sky dreary and the grass drenched—and sitting snugly with a book or work before you, while away the time." I willingly grant that this is a most philosophical way of spending a rainy morning:—but to say that any indoor enjoyment of the sort, compares with that of idle, happy wandering in the far sunlight is heresy! This fair sunlight is now around, above, within me;—refining every happy thought; laughing gaily in the face of gloom; whispering through every leaf above my head, its cheering words;—the happy, merry sunshine!

Flowers are not flowers without it—trees not trees; but waving, gloomy spectres, murmuring their complaints of the chill, sunless world. Let the sunshine come again, from behind the envious clouds, and "mark what splendor follows." The flowers look up and smile, the merry leaves are dancing for very joy and brim with delicate laughter—the distance smiles, the green grass sparkles with its rain-jewels, bright and many-colored; and all nature once again "in good spirits" murmurs her happiness and peace—as now she does—around.

"God's blessing on the sunshine!"

CLOUDS.

And then the clouds! Those beauteous harbingers of cooling rain are yonder on the blue;—floating in lazy magnificence and with a dreamy, thoughtful air, such as they always *will* assume in August! They are thoughtful—for do they not think ever of the beauteous world they roll above, when the soft winds come onward to them: dreamy too are they, since so many emerald fields have been swept by them, so many mountain brows overshadowed but to make the returning sunlight more gay! They must, perforce, dream of that glorious *past*, of its lifeful beauty, and its quiet eyes still bent upon them. They never look upon the present—that is, what is here beneath them now:—the fruitful fields, and dancing streamlets, melted into haze afar, are only in their thoughts, and dreaming of them all, the clouds are well content!

The morning, noon, and evening are not the same in Cloudland. The dawn comes in with light, red, circling, rosy snow flakes: the noon is one great mass of lazy, wind-carved alabaster:

and when the great sun goes down, dragging another day into the gulf of years, the azure sky spreads out its scroll for that high poetry written on it by the long red lines of evening, sun-flushed, melting in the purple twilight. They make you think—these clouds! And those are mostly happy thoughts:—they are so beautiful, piled up and rolling over, changing every moment in the veering wind, and dazzling sunlight!

Polonius was not, after all, so wholly the courtier in his answer to the Prince. They are “very like a whale”—then like a camel! But not alone do they change as you gaze. Often in gazing on these beautiful embroideries of heaven’s azure, have I felt that gloom was folly, and so come back to trust in heaven—and feel that life was bright and hopeful.

THE WINDS.

SILENCE is one of the awful things of this earth: well has Mr. Poe in his unintelligible “*Siöpe*” represented that cheerful landscape there drawn, as “cursed with the curse of silence.” Just fancy a mighty world of forest lying under the blue heavens, with no stir in them; never any rustling of leaves, nor any sway of boughs! Think of no whispering grass and sighing reeds, no lapping water, no murmurous sound of flowers nodding up and down in happy airs!

This is what earth would resemble had no winds been born among the old mountains, and come down with their deathless thirst for travel, to the lowlands!

Winter and summer, winds are musical and sweet. I like to hear them applying at the key-hole for admittance in the winter time, when logs are roaring and all hearts are warm:—I love their low, sad sighing for the perished glories of the golden year, when waning autumn goes into the trackless woods with both hands full of many colored leaves, treading—poor fellow!—on a mat of “pine-tags” which soon shall crisp beneath his tread no more! The day is always waked, in our Virginia, with the stir of winds; and day must have a murmur in the leaves to go to rest by; and clouds at noon would sleep forever on the azure vault, but for their merry breath. It is the winds which chase those orient days we love toward their western death; which close their eyes with rosy curtains;—which deck them out with sun and shadow in the emerald fields, when the cloud armies come up and at their command, step forward; sometimes like an army charge the horizon.

Not without reason, have the poets told us so much of the winds:—especially Shakspeare, that bright lover of tender April, whose winds

scatter so many showers upon the grass, for the pleasure of drying them up. But the prettiest verses I have seen for many a day, are found in “*Queechy*,” written by “Fleda” professedly—certainly by one with the vision and the faculty divine. The first verse has a fine beauty which few can mould. I hope “Hugh” will find this much of criticism to her taste!

Not without reason have the winds delighted so many poets from Chaucer to Tennyson—to say nothing of our American masters in the joyous science:—and here I have you at my mercy, for on my mind, or rather from my memory, come flocking numberless “quotations,” in proof of my position. I have no intention of wearying you or—myself, this golden day. That oncoming murmur yonder in the pines—it is here while I write!—is more than any poet’s cunning music.

“QUEECHY.”

—Having scribbled of the winds, clouds and sunshine, I know nothing better to go on with than a book which is made up of those very things;—wherein, as in nature, the sunshine comforts you for the darkest clouds and the chilliest winds.

I have just been reading “*Queechy*,” by the authoress of that beautiful tale “*The Wide, Wide World*,” which so many children (and grown people too, for that matter,) have been laughing and crying over, through a score of editions. “*Queechy*” I like even better than the first work—since “Fleda” has (in some inexplicable way, without having) more character than “*Ellen*.” The book is also more artistic than its elder sister; “*Carleton*” is more entertaining than “*Mr. John*,” and those interminable conversations leading to nothing which swell the “*Wide, Wide World*” beyond all bounds, are not so frequent or so inconclusive here. Still there is entirely too much of this vague and inartistic “talk”—as all readers agree;—and I can perceive some repetitions which strike me as very strange in a writer of such uncommon powers,—both of invention and description. This, I believe, is all I have to say of “bad” about “*Queechy*.” True, I have not finished it; but I have no hesitation in saying that Miss Warner, or whatever lady may be the authoress, has produced a work which will be read with interest and advantage “any time these hundred years” to come. I can scarcely recall to mind at this moment any delineation of a similar character, at all comparable to “Fleda;” such remarkable and uncommon power has this authoress in reading the child mind. “Fleda” will be as much of a fa-

vorite, I suspect, as "Ellen" was before her. What do I say! Much more, inasmuch as she is more carefully and powerfully delineated. I am quite sure that more than one (or a thousand) young (and old) bachelors sigh for a flesh and blood reality of their favorite:—that favorite who is so unreachable, far off in Queechy land, which since little "Fleda" lived there has been known as Fairy land!

And now if you feel disposed to laugh at my criticism, you may do so. I can afford to be laughed at, with the trees murmuring above me, and the beautiful clouds rolling across the sky, with the cicada singing summer in the flowery grass, and—should I wish something more, or rather less—there on the rustic seat, the "In Memoriam," a magazine, and "Queechy!"

—
BY THE BROOKSIDE.

One of the most graceful things about Tennyson, is his acquaintance with, and love for, all description of flowers. As witness (from memory) his "the little speedwell's darling blue"—"the faint, sweet cuckoo flower"—"the fox glove cluster dappled bells"—"heavily hangs the tiger lily"—"laburnums dropping wells of fire"—and his sunflower, which "rays round with flame its disk of seed:" all such perfect descriptions. All poets who love nature—how superfluous the clause of exception!—love thus to study flowers, those stars fallen on our cold earth. But I am thankful that other than poets may enjoy them;—all; the rich exotics of the green-house, the full radiant beauty of the garden queens, and the little meadow flowers which sun themselves on every bank, and on the margin of every purling stream.

Many days have I spent "by the brookside," and they have not been the least happy of my life. True, it was not to look for little meadow flowers that I bent my steps toward the meadow, through which the brook chases the shadow of the floating clouds: I sought those rich, soft, grassy banks with fishing rod on my shoulder, intent on bringing home a full willow stick. But when the sun had become too warm, or I had become weary, what more delightful than to lie upon that deep, cool grass, under the old white armed sycamore leaning over the stream and shadowing the clear, cold water, from the sunshine—and there please myself with sun and wind and cloud, while merrily singing birds and tender-hued flowers, completed the witchery of the scene and time.

Much more than

— "in the golden prime
Of good Haroun Alraschid,"

was everything bright and beautiful, and instinct with a joyous and dreamy splendor! The very little ladyslipper I held in my hand—with its dappled lining, and its small heel, and the delicate tendril curling above the toe, like the velvet shoes of olden time—spoke to me of the fair life we have to live, if we will only choose it, and fill it with simple things and pleasures, not drain fiery draughts that burn the heart and make the brain delirious. The brookside is a pleasant place for thought; the waves seem so merry and rejoicing; the water-flowers, flags, hollyhocks and others, bow their heads so pensively, dipping their chalice blooms in the clear stream, then rising up; the pebbles shine so brightly; the soft breeze is so cool.

With a book there you may while away such a long summer day as this, so pleasantly; but my own thoughts then, for me, more than any book, or more than any company!

—
"THE GOLDEN LEGEND."

It is a fine artistic work, which, after all, no one but Longfellow could have written; and on the whole, not overrated. Blackwood, you know, says it is quite equal to the "Faust"—of which I cannot judge, having only read that much praised performance in a translation:—still if you consider the great renown of Goeth's drama, this is more than favorable.

There is much poetry here which delights at once the mind and ear; and what is more, goes to the heart. Elsie is one of those pure creations with which poets, from time to time, "enrich the blood of the world," that blood so liable to become diseased in the low atmosphere of daily shift and toil. Of Prince Henry, not much good can be said:—rich as he is represented, it was horrible to make him even *seem* to accept the young girl's sacrifice, and his declaration at last, that it "was all in fun"—not the Prince's words—is rather doubtfully made out. The hero of the book is the celebrated minstrel of the old time, Walter of the Vogelweid, and Mr. Longfellow has, in a few pages, hit off his character in a masterly manner:—not less clearly does he rise to the outward eye—

"A beautiful but bearded face
That now is in the Holy Land."

Having eloped with the lady Irmingard, (a very reprehensible thing in the bard, be it said,) and having sustained a "headlong fall," in the encounter with her father, he repents, and bends his steps in knightly harness, to Palestine, and on his way meets Henry. But here I am telling you

what you know as well as myself. I meant to say, that his meeting with the Prince, is, in my opinion, one of the finest passages in the "Legend."

The rest of the characters are very good. Lucifer is natural and artistic, (acting in a very ungentlemanly, but perfectly polite way.) and the "Golden Legend" cannot but add to Mr. Longfellow's reputation.

A MOCKING BIRD.

How that Mocking Bird filled the wood! crying like a cat-bird;—sending forth the clear gradually dying cloud note of the kildoe, the chirping of the robin, the monotonous song of that crested idler, the pewit, all manner of rich notes and joyful warblings! I left him in the middle of his concert, filled with song, and sailing on to sleep.

Strange that there is a bird which utters distinctly and naturally, such dissimilar sounds. It is far more difficult, surely, than for a man to acquire a language, and yet the mockingbird does it so carelessly! I have long had my suspicions of him, however, and I think now, that he is but a bungler after all. Some old greyheaded savans may be perfect in pronunciation, but many would be hooted at by the birds they imitate. Still, I do not complain of the Virginia mocking bird. He is a good fellow, and delights me; but he ought to practise more!

THE MUSIC OF THE HARVESTERS.

Not long ago, I stood just at sunset on the summit of a pretty knoll, and looking eastward, saw the harvesters cutting into the tall, brown-headed, rippling wheat. I heard the merry whistle of the whirling scythes; I heard their songs; they were so sweet! And why are these harvest melodies so soft-sounding and so grateful to the heart? Simply because they discourse of the long-buried past; and, like some magical spell, arouse from its sleep all the beauteous and gay splendor of those hours.

As the clear, measured sound floated to my ear, I heard also again, the vanished music of happy childhood—that elysian time which cannot last for any of us. I do not know what the song was—whether some slow, sad, negro melody, or loud sounding hymn, such as the forests ring with at camp-meetings; but I know what the murmuring and dying sound brought to me again, living, splendid, instinct with a thoughtful but perfect joy. Fairyland never with its silver-twisted, trumpet-flower-like bugles, rolled such a merrymournful music, to the friendly stars! The

Past is either a dreadful or a blissful word, and as there is far more of the blissful in my memory. (Thank heaven for the gloom that wraps the rest.) I love to have the old days back again:—back with their very tints, and atmosphere, and sounds and odors—now no more the same. Thus I love to hear a young girl's low, merry song, floating from the window of a country house, half broken by the cicada, the swallow's twitter, or the rustling leaves: I love to hear the joyous ripple of the piano, bringing back with some old music, times when that merry music stamped the hours and took possession of them—in the heart—forevermore! I love a ringing horn—yes, even the stage horn, now alas! no more a sound of real life, only memory; the thousand murmurs of a country evening; the far cry of wild geese from the clouds; the tinkling bells of cattle; every sound which brings again a glimpse of the far glimmering plains of youth. And that is why, standing on this round knoll beneath the merrily rustling cherry-trees, and listening to the murmurous song, I heard my boyhood speak to me, and felt again the old breath on my brow!

The sun died away across the old swaying woods; the rattling hone upon the scythe; the measured sweep, the mellow music; all, were gone away! The day was done, and the long twilight came; twilight which mixes the crimson of the darkened West, the yellow moonlight in the azure East, and the red glimmering starlight overhead, into one magic light.

And so I went home merrily, with pleasant thoughts and talk—such pleasant thoughts I wish to all!

SEPTEMBER.

September has at last routed and driven from the field, our beautiful August—beautiful, though the flowers and fruits which clustered above her imperial brow, were wet with constant raindrops; and with her have departed many of those resplendent clouds which threw their shadow on field and stream, where, by the idler who now addresses you, the foregoing notes were jotted down. The clouds are gone for the most part; but not the sunshine, or the foliage, or the merry wind! The sunshine is rather softer through that mellow haze which droops along the river, and swims above the far horizon; and the winds are fresher; and the foliage is even more beautiful than before: for does not the far away glimmering Autumn hint of his approach? He is coming, mounted like the emperors of old, upon a magnificently caparisoned steed, and before him fly the elfin breezes blowing horns, and merrily his bridle reins are jingling, and his many-

colored garments flash ever and anon upon the sight! flash even with a brighter radiance, as coming on in pomp and pride, he strikes the languid summer with his glittering lance, and coming forth at last triumphant, flutters his banner of yellow and fawn and crimson, over the golden woods!

But that is in October, and this is but the first of September.

Roaming through the woods yesterday, I gathered a nosegay of wild flowers, and many of them were very beautiful. They were old friends, and known many long years before their names. Towering above the lesser flowers, was the Golden Rod, which Bryant has placed as the index of Autumn, in his melancholy but beautiful verses: the Golden Rod, that tall, palm-like plant that clusters such a wealth of yellow buds upon its slender stalk. Then there was the wild Primrose, fragrant and saffron pale; its chalice gemmed with dew: the Marygold which somehow wandered thither from the garden: the Lady's Slipper, swaying on its crimson stalk: the thousand yellow and flaunting, or white and modest blooms that star the glades and flash upon the sight with every glance of sunlight. Weeds! you say—these last. Well, yes, they are; but such weeds as charm the eye, refresh the spirit, and tell us that no hand of chance could shape their wondrous beauty!

So much for Autumn flowers; though Autumn is far from being here!

THACKERAY.

What a terrible satirist is Thackeray! with what merciless sarcasm is his cool jest winged, and how deep his insight into the weaknesses and contemptibilities of poor humanity!

I have been reading "Vanity Fair" again; and, thanks to a very careless first reading, have gone through every word of the bulky volume. It is a more powerful work than "Pendennis," that diffuse and sketchy novel which dragged its slow length along through so many numbers, and gained for its hero so much praise and abuse. The old Major, in that work, it is true, would redeem any volume from oblivion, and many of the characters are drawn with great force; the foppish young Pen, the insipid waxwork actress, and especially Blanche, the charming, *spirituelle*, unique Miss Blanche; but "Vanity Fair" is a work of far more strength. As a satirist, Thackeray ranks with the very first writers in that department of letters which the English Language boasts. Juvenal wields no more coolly-cruel scalpel, nor with smiling, careless face, cuts deeper into the foibles of those who have moved his ter-

rible ire. No doubt his long connection with that bitterly radical organ, "Punch," has given Thackeray the knack of the thing; but he seems to have the most genuine and extreme hatred for every species of titled weakness or depravity. The foibles of everyday people might escape him, but the Lord Steynes, and Pitt Crawleys, never escape. In the "Kickleburys on the Rhine," the author's satire on titled insipidity and servility in the lower classes, is positively savage; and from this, as from all Thackeray's works, one takes up the impression that English society is rotten to the core. Juvenal appeared only when the times were ripe to lash the monstrous iniquity and contemptibility of profane, old, crumbling Rome. Is the British Empire ripe for such a satirist also?

GUNS AND BIRD-BAGS.

The mornings have become cool, and a few blazing twigs in the fire-place, are not unpleasant. The noon is warm, and the great sun pours undiminished heat through the somewhat hazy air; but in the evening fall heavy dews, and the nights are deliciously cool, and the early dawn pours such delight into the veins, refreshed by sleep, that one might almost wish that such should be the weather always, and the whole round year be one September!

For some time, forlorn sportsmen have gone out with hanging guns, listless, and dull, to slay a few unhappy doves, or cow-birds, or bats—that pleasantly flavored butter-ball, so acceptable at breakfast: or they have strolled into the woods to hunt squirrels with languid movement and lazy glances around them; or filled with thoughts, inimical to every flying thing, have taken up the long disused gun—then despairingly laid it down. This is all changed now, and every true sportsman is now furbishing up his shooting accoutrements, and making ready for partridges and turkeys. They say it is a waste of time, unworthy of men of thought, except as a recreation after thought. But this is a fallacy. Hunting has been a respectable thing since the days of Nimrod, and it is well known, that to shoot grouse is an indispensable portion of the English statesman's education. That is surely enough.

"PHYSIOLOGY" OF THE NEGRO CHILD.

He is small for his age, but cherishes the hope that after a while he will be a man and live on terms of intimacy with Mas' Buck—now seven years old; he being but five. He tyrannizes over Mas' Buck, who is fond of him: he

thinks that young gentleman his natural playmate and protector. His name is John, corrupted into Jack: he does not believe John to be his name.

He makes his appearance (around the rose bush which is much taller than himself) when the carriage drives to the door; and when it rolls away, he suddenly jerks his thumb from his mouth and mounts (after much running) behind. He is ambitious of opening gates without climbing up for that purpose on the fence. Having been dislodged from his favorite position, behind the carriage by a "cut behind," he stands in the road, gazing upon the receding vehicle and contemplatively sucking his thumb.

His favorite amusement is to join Mas' Buck on the lawn at sunset, and doubling his fist, run at his young master, calling to him bombastically to "come on!" and hit him as high up as possible, viz: upon the knee. If Mas' Buck throws him down and "mashes" him, he says in a tone of surprise and indignant remonstrance, "Mas' Buck, stop! you hut me." His chief duty is to drive, with a long switch, the cows toward the milk-maid, in the field near the stable, in accomplishing which, he is often completely lost to sight among the high weeds, from which his shrill African laughter is heard. Having performed this, he again challenges Mas' Buck to "come on!" or thoughtfully sucks his thumb.

He goes bathing with his young master, but declines entering the water, alleging that he is wearing "galluses"—one only. He remains upon the bank sucking three fingers. He debates the question as to whether the pantaloons he wears (not handsome or new) were formerly Mas' Buck's. He shows a disposition to throw Mas' Buck down and so end the argument, by catching that young gentleman by the knees. He believes his mother to be the greatest of women—next to her he admires himself—next Mas' Buck and the rest. He is in politics no free soiler, and in religion no bigot. He hopes only to live and die "in clover."

PHILOSOPHY OF PIPES.

Much might be written on this subject; and no one will deny that it is full of interest. We shall yet have our classic on the subject—we who are as a nation such enormous smokers.

Pipes may be divided into two great classes:

I. Good Pipes.

II. Bad Pipes.

And this classification has the advantage of being perspicuous and simple. Some have further added:

III. Handsome Pipes.

IV. Ugly Pipes.

But this is discountenanced by the best authorities. In truth, a good pipe can never be ugly, and under no circumstances can a bad pipe be handsome. The shape and name of this useful article, has varied in different ages and nations; and has only arrived at perfection in Virginia. The following is a true classification in point of merit:

I. Corn-cob Pipe, (Virginian.)

II. Clay Pipe, (from Powhatan.)

III. Meerschaum, (German.)

IV. Narghilé, (Persian.)

V. Hookah, (Hindoo.)

VI. Calumet, (N. A. Indian.)

VII. Chibouque, (Turkish.)

VIII. "Yard of Clay," (English.)

IX. Common Chalk Pipe, (Cosmopolite.)

X. Stone (Indian) Pipe.

It will be seen that the "corn-cob" pipe is here placed first; and this is no more than just. For sweetness, lightness and endurance, it surpasses all. It remains for one of our poets to write us an epic on Pipes, since Milton has not done so; and as Mr. Tennyson is the most inveterate smoker of the age, this is, perhaps, the subject of his new poem just announced.

SUNSET.

A vast crimson drapery rolled across hill and plain—beautiful orange clouds drooping down from the deep blue sky upon the far horizon—a deeper glow of crimson as the round red disk sinks slowly—then a rosy effulgence in the beautiful West—and the long twilight—this is my sunset.

I have often thought that this sunset hour should be given up to memories—to casting the thoughts into the roseate past, or the untried future—for fathoming in a word the mysterious connection between the Has Been and the Yet To Be. Many persons bend over their books, whether counting house, or other, striving to catch the last struggling beams of the sun—careless of the beautiful West. Others scarcely pause in some idle conversation to gaze upon the hackneyed spectacle. I do not envy such. For the whole day I would not give the one soft hour of evening before sunset.

And with this my orange sunset cresting the fair clouds with burning gold, I shut my portfolio. I have another memory.

P. I.

September 6th, 1852.

UNWRITTEN MUSIC.

Could I but all the glorious sounds combine
That sometimes fill the chambers of my soul,
Songs of this earth and melodies divine,
In one majestic whole—

A brave composer I might be confest,
And round the world my humble name might ring,
With richest honours and ascriptions drest,
For what I then should sing.

All jocund, jubilant, rejoiceful airs—
The elfin mirth of fair Titania's train—
The laugh of L'Allegro, dispelling cares,
Should sweetly swell the strain.

The tinkling bells of cattle homeward bent,
Wafted o'er fragrant meadows, should unite
With childhood's loud, capricious merriment,
In many-toned delight.

The lull of falling waters, and the store
Of feathered music, from the Asian trees,
Should meet and mingle with the distant roar
Of everlasting seas.

The silvery voice of woman, such as oft
In mystic dream-land round about us swims,
Should join with tones descending full and soft
From saintly choral hymns.

The clang of trumpets, ere the combat cease,
War's proudest note, to sweet accord should come
With that dear anthem of abundant Peace—
The labourer's Harvest-Home.

• • • • •

Alas! *I never shall* these sounds combine,
This new "Creation" is not yet for me,
These richest honours I can but resign;
Another's may they be!

Still shall I praise the Giver of all Good,
That, in my waking and my nightly dreams,
Upon my raptured sense this glorious flood
Of wondrous music streams.

J. R. T.

Southern Agricultural Congress.

The great interest which we feel in every movement connected with Southern progress induces us to transfer to the pages of the Messenger, the following able Circular of the "Southern Central Agricultural Society." We cannot doubt that the Agricultural Congress proposed in this Circular will be called at an early day, and that such measures will be adopted at the Macon Convention, as will ensure the fullest representation in that Congress of every portion of the Slaveholding States. The clear and manly style of the Circular does credit to the author, and expresses with great felicity, the patriotic emotions of his heart.—[Ed. Sou. Lit. Mess.

The Southern Central Agricultural Society of Georgia, taking into consideration the great advantages which may reasonably be

expected to flow from periodical meetings of persons representing the planting interests of the slave-holding States, invite the cultivators of the soil, in every section and district of the same, to send delegates to Macon on the 20th day of October next, for the purpose of adopting measures preliminary to the assembling of an Agricultural Congress of the slave-holding States, at such time and place as may be deemed most acceptable to the States to be represented in it.

The reasons which have prompted this appeal to our fellow-laborers engaged in the fulfilment of the sublime command of God to man, which involves at once his obedience and his happiness, may readily present themselves to those we address. We will therefore mainly speak of some of the purposes and objects which it is expected would claim the attention of the proposed Congress, and which we deem of sufficient moment to enlist the patriotism, intelligence and talents of those to whom we appeal. Our proposition embraces a representative association of those engaged in a common pursuit, for the purpose of advancing that pursuit, and harmonizing a great interest which supplies five-eighths of the exports of the United States—to give to that interest a community of feeling, sentiment and thought—and to impart to it a weight, dignity and stability commensurate with its importance to the State, to the United States, and to the world.

Probably nothing is more characteristic of the age in which we live, than the prevalence of voluntary associations in all the ramifications of society. Everywhere we see organized, and apparently actively alive, associations for religious, moral, literary, professional, scientific and charitable purposes. If the want of intercommunion among those engaged in a common pursuit be in proportion to their separation by space from each other, certainly few classes of society may be said to stand more in need of associations than the cultivators of the soil in the slave-holding States. If the amount of industry, skill and science involved in the advancement of agricultural knowledge be considered, strong inducements for voluntary associations are presented to us. And if we are

mindful of the calumnies which some of our political brethren of the North have been so long propagating against us, both at home and abroad, we are sternly admonished to come together to strengthen our defences and fortify our assailable points; to establish amongst ourselves a public opinion just to ourselves, and strong enough to harmonize all our social elements, and save us from the evils of an ignorance of the beneficent workings of our system, in which alone consists our danger.

If, returning good for evil, we are prompted to increase and multiply our staple productions for the use of our enemies, to whom they are as necessary as they have been fertilizing; or if, following their example, we look alone to their fructifying influences upon ourselves; or, if, taking a wider view, we behold the commerce of the world in no inconsiderable degree, dependent upon the products of our slave labor; on which reposes, to no small extent, the peaceful character of our age; and through which civilization is extended, and Christianity propagated—we are impelled, by numerous and exalted considerations, to organize such associations among ourselves as will best enable us to meet the requirements of our position, and fulfil the destiny which is in store for us.

In the peculiarities of our staple productions, their necessity to the demands of commerce and to the progress of civilization, and in the isolation to which a Pharisaical world would subject us on account of the peculiar character of the labor by which we produce these indispensable staples—we find the strongest arguments to unite us in maintaining and vindicating that labor against the aspersions of those who condemn it from malice or ignorance, and consume its products from interest.

If reliance may be placed on the history of the past, agriculture has no royal road to success. Man has now, as in early times, to earn his bread by the sweat of his brow. There is certainly no pursuit which invokes the aid of more of the sciences, and renders tributary more of the departments of knowledge acquired by the toilsome investigations of Nature. Whilst progress in the acquisi-

tion of that knowledge has been steady, and of late years with a constantly accelerated step, it will not be denied that much is yet unsettled, and perhaps much more to be explored. Agriculture has not been unmindful of that progress. If she has been sometimes distrustful of the applicability of recent discoveries to her purposes, she has, at others, accepted the proffered aid with a precipitancy not justified by the result. It is through the agency of agricultural associations over a broad surface, supplying the means, intelligence, and skill, that we are to derive a knowledge enabling us to discriminate between the true and the false in the teachings of science. Wherever such associations have acquired the confidence of the public by the character and elements of their organization, agriculture has advanced, and the earth has yielded a greater increase. It is for such an organization that we now appeal to the cultivators of the soil in the slave-holding States.

The chief objects of such an association, it is presumed, would be:

To improve our own agriculture, yielding peculiar productions, through the agency of a normal labor, requiring a distinct economy, and dependent on a climate of its own.

To develop the resources, and unite and combine the energies of the slave-holding States, so as to increase their wealth, power and dignity, as members of this confederacy.

To establish and fortify a public opinion within our borders in antagonism to that without, in relation to ourselves and our institutions—the emanation of our own intelligence, power and energies—a national sentiment—a great truth, established by the experience of the past, founded on a sound morality, a broad humanity, and that Christianity, which especially inculcates a sincere humility, and a boundless charity.

To enforce the growing sentiment that those who are to come after us and inherit our institutions, and the dangers which threaten them, shall be reared at home, and educated in a full knowledge of their rights, duties and responsibilities—and to establish

fully in the public mind the two-fold value of a higher and a higher standard of education, which will impose such application on the part of the pupils, and demand such qualifications on that of the teachers, as will establish industrious habits in the former, and enable the latter to instil and confirm in them a taste in after life for what has been learned in youth—thus supplying the two most efficient agencies to prompt to a career of usefulness and honor—industry and cultivated and refined tastes—and making our seats of learning effulgent centres of piety, science, literature and refinement—illuminating and harmonizing all interests, and blending all classes—the pride and glory of the country.

To enlist and foster those scientific pursuits which reveal to us the elements and character of our soils—instruct us in the presence of those magazines of fertilizers which Nature has with so bountiful and considerate a hand provided for the uses of the undustrious and enterprising—and search out the histories and habits of the insect tribes which destroy (it is believed) annually a fifth of our crops, and supply us with a knowledge of them which may enable us to guard against their future ravages.

To promote the mechanic arts directly and indirectly auxiliary to agriculture—and by a generous confidence and liberal patronage, raise those engaged in them to a social position, always the just reward of intelligence, industry and good conduct.

To direct, as far as may be done, public sentiment against the barriers which have been artfully raised to cut off our commercial intercourse with distant countries, save through such outlets as are supplied by Northern marts, exacting tribute upon what we produce and consume.

To exert an influence in establishing a system of common school instruction which will make Christians as well as scholars of our children—which, in arming the rising generation with the instruments of knowledge, will instruct them also in their proper uses—impressing upon them, from first to last, that (especially under our form of government) private worth constitutes the aggregate

of public good—and that no one can disregard his duties to those around him without positive injury to himself.

To cultivate the aptitudes of the Negro race for civilization, and consequently Christianity—so that, by the time that slavery shall have fulfilled its beneficent mission in these States, a system may be authorized by the social condition of that race here, to relieve it from its present servitude without sinking it to the condition, moral, mental and physical, into which the free negroes of the Northern States and West Indies have been hopelessly precipitated, by imposing upon them the duties and penalties of civilization before they have cast off the features of their African barbarism.

These constitute the main purposes for which we appeal to the individual and aggregate interests of the slave-holding States to meet us in an Agricultural Congress. In that, let us assemble, and confer and consult, as in a great family re-union—having a common object, and actuated by a common patriotism.

It is believed that such an association as is here recommended to our brethren of the slave-holding States, with local societies, with like objects, would achieve the most valuable victories over our stubborn soil, and the still more stubborn ignorance of our opponents beyond the pale of our institutions. It may be that this latter expectation will not be realized, and that they who have heretofore closed their eyes to all the testimony which we have freely and earnestly offered to them, will still keep their minds also closed against all future efforts which may be made to vindicate ourselves against the grossest misrepresentations of us and our institutions, with which the public opinion, at home and abroad, has been supplied in the greatest profusion.

Should this apprehension be unfortunately realized, the conclusion will be forced upon us, that there have been other purposes to serve, in the deliberate and calculating policy pursued, of endeavoring to render us the heathen people of modern times, in the belief of all christendom, than merely to rebuke an imputed error, or correct

a vicious morality which is ascribed to us—and we shall be confirmed in the belief, already taking some root, that the monopoly of our trade is at least an element in their calculation of the results which are to flow to them by impressing upon the public mind of christendom, that slavery has not merely enervated our bodies, but has also made us an infidel people, regardless of our duties, faithless to our engagements, and perfidious to our friends.

The application of slave labor to the cultivation of the earth, gives to that agriculture a distinctive character. It imparts to the proprietors special privileges and enlarged duties, and imposes upon them diversified cares and peculiar responsibilities; and whilst it sets them apart from the rest of the world, it enjoins the strongest motives for combination of purpose and concert of action.

If the institution of slavery is to be maintained—if it is to have with us, as elsewhere, in past times, its old age, and to descend in due course of nature to an honorable grave—the reward of a useful and well-spent life—it must rely on its own powers and energy to maintain its rights, establish its security, and vindicate its dignity. It is not by legislation, nor by statemanship, that slavery is to be sustained. It can repose in security only on its own merits to those who have inherited it, and will abandon it, as all before them have done, whenever, in the progress of population, its evils shall outweigh its benefits—and on its power to those who, having for their own purposes raised one standard of morality for themselves and another for us, without the sanction of the Bible to either, denounce us for coercing our slaves to labor by the same means that they constrain the obedience of their apprentices and children, and coolly say to their free laborers, “work or starve,” with the ability and the will to enforce the alternative.

Whoever doubts the sure mercies of slavery to the negro race, may satisfy an honest pursuit after truth, by looking at the condition of the race in Africa, whence our negroes have been derived, and comparing our slaves with the free negroes of the

Northern States and of the West Indies.

The broad surface of the earth does not supply such another country of the same extent, with so much that is desirable and so little to object to—so much of good and so little of evil. Such is the home with which a merciful Providence has blessed us; and He has from an African race supplied a labor which has called these resources into action, as alone could have been done, and certainly much to our advantage, and much more to the improvement of that race. Here, slavery is civilizing the savage, and doing more to christianize the African than has been done by all the missions to Africa, since the days of the Apostles. As no savage can understand, and consequently appreciate and adopt christianity, so has the self-sacrificing missionary, with all his devotion to the great cause, habitually reaped a return very disproportioned to his labors in that field. With the negro race, slavery has been, by far, the most successful missionary. It has made the black man in America, in a few centuries, what thousands of years had failed to accomplish for him at home—and it may be safely declared that the most certain and effective mode of forcing him back to his former condition and making him more a savage than ever, is to throw off the wholesome restraints which our slavery has imposed upon him, before he has become fitted for a higher sphere. The mental and physical condition of the African slave has been improved within the recollection of many now living, and with that improvement has been a corresponding amendment in his management and treatment—the one the direct and certain consequence of the other—and this will and must continue. And it may be safely affirmed, that whenever the African, in the instructive and wholesome pupilage to which he is subjected by his slavery, shall, in the course of many generations, reach a point of civilization rendering that pupilage useless to him, he will cease to be a slave, as naturally and certainly as the training of a child merges gradually his minority into manhood, and for a like reason. As all the fruits do not ripen on the tree at the same time, no more will all our negroes become fitted at

once for release from slavery. But as they do become qualified, they will be liberated, as many already have been. In many slaveholding communities we see negroes who have become free, because, having acquired the essentials of civilization, by an irresistible law which man cannot, if he would defeat, they are raised from slavery to freedom, without detriment to the master or man. Such has been the operation of slavery generally, throughout christendom; for there has been a time in which slavery existed in each European country, and history scarce reveals when it terminated in any of them—so natural was its death—expiring of old age—dying out by insensible degrees. This is the death to which slavery is doomed in the United States. This is the only termination which it can reach, consistent either with our own rights or with our duties to the African race transplanted here, whose reasonable labor has enriched the land, and whose subjection will have prepared it for civilization, and consequently christianity. In speaking of the natural termination of slavery, we connect it necessarily with that civilization, the child and foster parent of christianity, which has superseded the barbarisms and idolatries of paganism—the civilization of modern times. Other and inferior civilizations which have worn themselves out, did not and could not exercise so beneficent an influence, for want of the elements of our lasting and progressive civilization. Inasmuch as our civilization is founded upon christianity, its essentials will be as durable as that faith, however it may become modified and improved in its progress. Christianity is the first faith which has inculcated, as a first duty, love to our neighbors; and the civilization which has grown up under its illuminating power, is the only one that the world ever knew, which has been established upon a broad humanity. It is that humanity which gives to it a vitality to lift all the races of men up to a higher and a higher condition, and to prepare them in transition for their new duties in their recent relations.

To the Slaveholding States, a bountiful Providence has supplied every element of power and greatness. We have climates and

soils which advantageously furnish the cereals and the grasses—hemp and flax. The best tobacco climate lies within the Northern line of our dominion—and cotton, sugar and rice find the most suitable temperatures and soils further South. Many of the tropical fruits grow well on our Southern borders. Our country is abundantly watered by the noblest rivers. Bays, inlets and harbors, indent our coasts. Our mountain ranges, with their rich table lands, abound in coal, metals and marbles. We have the best climates for every season of the year; and now the enterprise of our State governments and numerous private corporations are carrying the Rail-Road with accelerated progress in all directions, uniting our East with our West, combining our North with our South; all these afford capacity, facility and dispatch to reward the cultivators of the soil, on whose labors repose the prosperity—the very lifeblood of every other pursuit. These, all these invoke us to consult together, to devise and concert measures best calculated to elevate us and aggrandize our power, and to combine our energies and vindicate ourselves, our institutions and our country—and make it what God has decreed it shall be—great, powerful, and beneficent to the purposes of civilization and christianity, and consequently to the great cause of humanity. Should we, heedless of the bounties of Providence to us, and unmindful of our high responsibilities, with coward hearts shrink from the stern duties which they impose, and prove ourselves unworthy of so eminent a destiny, may not He, who has made nothing in vain, inquire of us—Why cumber ye the Earth?

AN OLD POINT EPIGRAM.

"Why is it," one evening said Henry to Jane,
As they walked on the ramparts together,
"That you never can here a good prospect obtain,
No matter how pleasant the weather?—
The reason I'll state, 'tis as plain as my hand,
If you're puzzled to give a reply—
'Tis because, my dear charmer, wherever you stand
You have always a *meat* in your eye." X. Y. Z.

POETRY AND RELIGION.

No. XI.

*Christian heroism as an element of Poetry—
Characteristics of vulgar heroism considered—
The qualities which constitute the Christian
hero—The "code of honor" and the character
of the Duellist analyzed—Contrast presented in
the higher virtues of Christian heroism.*

Poetry not only embalms the emotions and sentiments of the soul, and consecrates the beautiful and sublime scenery of nature; but it also celebrates the noble deeds and heroic achievements that transpire in human history. This last department presents a wide field before the genius of the poet. In considering the beneficial influence of Christianity, we are next to inquire what materials of this class it supplies to poetry, or what is its legitimate influence in producing the heroic in character and conduct?

If we adopted, as a definition of heroism, the vulgar conception ordinarily attached to the term, of course there would be no propriety in discussing the question. If this be the only true heroism, then it must be frankly admitted, that Christianity has nothing to do with its production. What is the heroism most readily recognized by the mass of mankind? the heroism, which has been crowned with wreaths of triumph, and hailed by acclamations of applause—whose praise has been sung by enraptured poets, and whose exploits have been emblazoned on the page of history? Is it not a heroism which consists mainly in one quality, viz: *physical courage*, which is displayed only in one pursuit, viz: *war*; and which acknowledges but one law for its guidance, viz: *public opinion*? A heroism, which, if carried to its legitimate results, would place the highest elevation of humanity in the act of mutual destruction, and would realize its crowning achievement in universal extermination?

But no intelligent or virtuous mind in the present age, will consider this the noblest form of heroism. Although the transforming spirit of Christian love has not so far prevailed as to realize the prophetic vision of its final triumph: when "the sword shall be beaten into the ploughshare, and the spear into the pruning hook, and nations shall learn war no more;" yet, under its widening sway, attended by the increasing light of science and the growing arts and refinements of civilization; the lustre of mere military heroism is fast fading away. "War," said one of the greatest heroes of this class that the world has ever known, "war is the science of barbarians." In its naked realities, it can never form a captivating picture to engross the homage of

genius, or excite the admiration of mankind. Disguise, concealment, or false coloring of some kind, must be employed, in presenting an image of war, which fails to shock our sensibilities; or, in portraying the character of the mere warrior in any other form than that which is painful and abhorrent to the soul. The name of such a hero may be (as it too often is in reality) "linked to one virtue and a thousand crimes." His reckless daring may lead on a train of ignoble passions—the foul brood of a selfish and bloody ambition. But by the flattering art of the poet who celebrates his praise, his one virtue is arrayed in such dazzling splendor, that his thousand crimes are eclipsed. We gaze on the exploits of his courage, and see not the corruption of his vices. And he who may be but a man, with the passions of a brute, rises before our imagination an idol endowed with every conceivable excellence. A similar delusion is practised in those glowing representations of war, which so often fascinate the readers of romantic literature. The war may be unjust in its origin and terrible in its results; but sympathising, perhaps by accident, with one of the contending parties, we lose sight of all the revolting horrors of the scene, and behold only "the pomp and circumstance of glorious war." We see only the imposing array and the brilliant colors, the rapid evolution and the impetuous assault. We hear only the martial music, the thundering artillery, and the thrilling shout of triumph. But the dark and hideous after-scene is omitted. We see not the maimed and mangled bodies of the dead. We hear not the groans and shrieks and blasphemies of the dying. The eye looks not over that dark Aceldema, so lately alive with all the splendid pomp and sublime tumult of contending armies, now covered with the carcasses, and drenched in the gore of slaughtered thousands; and as the tidings of victory are sounded in joyful acclamations abroad, the ear hears not that awful undertone of lamentation and wailing, which arises from broken hearts and bereaved families all over the land which has been desolated by the scourge of so terrible a calamity. A time-serving literature, which employs its alluring arts to emblazon the splendore of war and disguise its terrors, which follows with fulsome adulations the train of the military hero, and sheds a false but fascinating glory over his career, is mainly responsible for the prevalence of those perverted tastes and false sentiments in the present day, which extend so prompt a patronage to this barbarous policy. The public mind, however, is gradually recovering from this perversion. And there are indications of the approach of that bright era—that truly heroic age—when the rational soul and its triumph shall be regarded as the highest honor of humanity.

and when mental power conjoined with moral excellence, shall be recognized as the essence of true heroism. But, in the present disordered moral condition of mankind, amid the turbulent elements which still mingle in the general ferments of society, defensive war will, perhaps, for a long period, continue to be a dark necessity among the nations of the earth. And when such a necessity is forced upon any people, he who, animated by pure and patriotic motives, proves himself, by the exploits of his military prowess, to be "his country's stay in the day and hour of danger," is worthy of the grateful homage of a generous people. Christianity itself crowns the triumphs of such a hero, having already furnished the principles which formed his character, and supplied the motives which sustained his career. But while Christianity supplies the virtues which alone constitute the glory of such a hero, and thus furnishes the elements of all true greatness in war, when alone war is truly great, because it is just; yet, in addition to all this, Christianity produces a new and nobler heroism peculiar to itself. That heroism was exhibited in its perfection by Him, who on earth, "was despised and rejected of men." And those who take his character as the object of their faith, and the model for their imitation, approach, by degrees, the highest standard of human greatness. We are aware of the prejudices which beset this subject. But we believe it may be demonstrated to the satisfaction of all who are capable of reasoning, however uncongenial it may be to the tastes, and however offensive to the prejudices of those who are destitute of piety—that Christianity secures and produces the highest elevation of character. If a man be great from qualities possessed by himself, and not merely from the opinions entertained of him by others—great in the permanent structure of his own character, and not in the fluctuating impressions of it cherished by the ignorant multitude—if the qualities of the mind hold a higher rank than those of the body—if intellectual and moral elements constitute nobler ingredients in human greatness than those that are merely physical—if heroism is to be estimated according to the dignity of its powers, the elevation of its motives and the grandeur of its results, and not according to its mere external circumstances, the magnificence of its parade, the popularity of its career, and the noise of its triumphs—then, with these terms and conditions of true heroism conceded, we may confidently assert the claims of Christianity to an unqualified preëminence. For whatever the prejudices and passions arrayed against it, however unimposing its attitude and quiet its sphere, however unpretending may be its march, and unapplauded may be its triumphs; yet, enthroned in the inner chambers of the soul, it presides over the intellectual and moral energies of man, and supplying the loftiest motives, conducts to the noblest results.

Let us examine some of the qualities which Christianity supplies to human character; and, if these be admitted as essential to our estimate of heroism, we shall find that wherever the name or pretence may be assumed, here at least, the reality exists.

1. A certain sense of superiority—a conscious elevation of nature, is conceived to be an ingredient of heroism. Without this, man is supposed to be unequal to the fulfilment of a glorious destiny. Christianity secures a lofty consciousness of the dignity of our nature, even while it enjoins humility as one of its primary virtues. But humility is not a mere crouching instinct; it is a rational sentiment, based upon self knowledge. Humility indeed, springs from the lofty consciousness of the native dignity of the soul, contrasted with our actual attainments. Pride arises from low, meagre, contracted conceptions of our present sphere, and our ultimate destiny. Everything truly great in man is, at the same time, humble. Wisdom is humble, because in proportion to its elevation, it perceives more clearly the wide distance that intervenes between the narrow confines of its knowledge, and the boundless range of its capacity. Genius is humble, because in proportion to its delicate taste and prophetic intuition, it becomes more keenly alive to the contrast between the reality of its execution and the ideality of its vision—between the measure of its attainment and the standard of its aspiration. In a far higher sense, Religion also is humble, because in proportion as the soul, awakened by its power, becomes conscious of its wonderful capacities, its exalted relations, and its immortal destiny, it perceives the deviations of its past career, and the distance of its present attitude from that exalted sphere, which it was originally formed to occupy, and towards which at length it now ardently aspires. There is no want of self respect; there is no defect of conscious dignity; there is no particle of depressing meanness, in christian humility. It is not a disparagement of our nature; but a disavowal of our merit. It is because the soul is awakened to realize its native dignity, its high relationship, and its glorious destiny, that it sinks in self-condemnation under the consciousness of having bartered away so priceless a birth-right. It is because it aspires to regain an eminence so exalted, that it bows in humble prayer for grace to sustain its ascending career. Christian humility presupposes an elevated consciousness and a quickened aspiration. It does not indicate the character of one, who, struck by a sense of inferiority before his fellow-

mortals, droops in passive despondency, and shrinks away in silence to hide the shame of his comparative insignificance. But it marks the new career of him, who awakened from the apathy of nature to a just discernment of his moral attitude before God, regardless of the opinions and the habits of men, consecrates his immortal energies in the pursuit of a prize infinite in value and eternal in duration. Pride, arrogance and vaunting self-sufficiency, belong to the devotee of a low, earthly ambition, whose views and motives are confined to the present life, and whose highest aim in existence, is to gain a transient notoriety in the applause of the multitude. He has no purer taste, no brighter vision, no loftier aspiration, and consequently, no standard sufficiently exalted, to exhibit in contrast, the meagreness of his own attainments.

Christianity invigorates and exalts the intellectual and moral energies of man. "Touched by the Cross, we live." The transition is from darkness to light, from bondage to enlargement, from debasement to dignity. The field of vision is enlarged. The theatre of existence rises to a higher level, and expands to a wider circumference. Life is animated by nobler motives, and directed to loftier ends. The soul, awakened to the consciousness of spiritual life, swells with the aspirations of a worthier ambition, and exhibits the magnanimity of a truer heroism. Impelled by considerations that derive their force from the throne of God, the Cross of Christ, and the "powers of a world to come," the character assumes a stability and a loftiness unknown to those whose career is swayed by the feeble and fluctuating impulses of earth. Such a character is prepared to act his part to the highest advantage in every relation of human life. In every social virtue, in every moral excellence,—as a friend, a parent, a citizen, a patriot, a statesman, or a soldier—he is furnished with motives which ensure fidelity and conduct to preëminence. "Whatsoever things are true, just, honest, lovely, and of good report; if there be any virtue, and if there be any praise," in his life, they find their brightest exemplification. So that in every form of mere earthly heroism, which is not marred by something radically wrong in its principle, or fatally ruinous in its results, the true Christian may be expected to be, of all men, the most proficient.

But beyond this, he exhibits a heroism of which the world knows nothing. He is enlisted in a *spiritual warfare*. His career is attended with no outward parade. His struggles are unseen and unapplauded. "His warfare is within." There unfatigued,

"His fervent spirit labors. There he fights,
And there obtains fresh triumphs o'er himself,

And never withering wreaths, compared with which,
The laurels that a Cæsar reaps are weeds."

In loyalty to truth and to the God of truth, enlisted under the banner of the Prince of Peace, he goes forth in a life-long battle against error and sin in every form. Each day is signalized by new exploits, as he advances on to final victory. And he pauses not to lay down his arms, until his enemies are all vanquished, until his rebel passions are all subjected to the laws of moral harmony; and perfect purity is enthroned supreme over his entire nature. In conducting this spiritual warfare, the Christian contends against mightier enemies, and under darker discouragements, heavier trials, and a stronger ride of opposition; he displays greater fortitude, independence and courage, than are ever exhibited by the earthly warrior. The one but obeys the instigation of his evil passions—the other opposes them. The one is surrounded by a multitude of exciting and encouraging influences, and moves in the midst of a mighty army to battle—the other goes forth alone to face the terror of his enemies, and encounters adverse influences at every step of his progress. The one is greeted in his career by the applause of an admiring multitude—the other encounters, always, indifference, and often reproach and persecution, from his fellow-men. Nay, allegiance to this sacred cause has not unfrequently produced a martyr and a hero in the same person.

But the Christian hero, not only has espoused a nobler cause, he is impelled by *higher motives* than those which actuate the hero of the sword. Animated by a spirit of universal benevolence, he seeks to advance the well-being of the world around him. His affections are not confined to his immediate relations, or special friends. There may be closer bonds of intimacy and stronger ties of endearment connecting him with these, but at the same time, his heart expands with a wider love. He may be a friend, a father and a patriot; but, at the same time, he is a philanthropist. He is kind, not only to the meritorious and the amiable, but also to the unthankful and the evil. He loves, not only where he approves, but compassionates even where he condemns. He is patient towards all men. He returns pity for malice, blessings for curses, and prayers for imprecations, even to his enemies. And amid the perplexities, provocations and insults of daily life, he aims to maintain a lofty frame of serene, unruffled benevolence, superior to the vile passions of the vulgar throng. Now, we affirm, that this heroism of Christian charity, both in the moral qualities of which it is composed, and the noble purposes to which it is directed, is of a far higher grade than that of the mere warrior. He who prefers what is true and right, to what may be

fashionable or popular, and maintains his attitude, regardless of consequences.—he who, amid the strifes and wrongs and slanders of the world, still preserves the law of kindness on his lips, and the spirit of charity in his heart,—he who, indifferent to the applause or censure of the world, and in spite of the ingratitude, treachery and baseness which he encounters, still devotes his time, his means, or his talents, to instruct the ignorant, to relieve the afflicted, and reform the vicious of mankind: such a character, in all the mental and moral attributes of human greatness, rises immeasurably superior to the vulgar hero of violence and blood. The Missionary of the Cross, who forsakes the endearments of kindred and home, and bears the glad tidings of mercy to some degraded heathen land; and there, by his benevolent efforts, causes the intelligence, the order, and the social virtues of the gospel, to prevail around him, instead of pagan darkness and debasement; manifests a heroism, far above that of the stern soldier, who carries fire and sword into a foreign province, lays waste towns and cities, destroys the monuments of civilization, and spreads desolation and death over the scene of his triumphs!

But after all our legitimate reasoning from the intellectual and moral qualities, that constitute Christian heroism, yet the notorious fact remains, that such heroism meets with but little sympathy or appreciation from the world at large. This moral anomaly stands out in bold relief through all the history of the race. The fiery champion of the sword has always commanded the spontaneous admiration and homage of the human heart. The sage is esteemed as wise; the saint is approved as good; but the warrior alone is *honored* as great, and worshipped as a hero. The heroism of romantic and poetical literature, is mostly of this low and savage character. And it is truly astonishing that genius should consent to adopt a model so unworthy of its homage. The hero of the modern novel and poem is generally one whose noblest sentiments are contained in a so-called "code of honor," and whose highest exploits consist in fighting a duel with a friend, or commanding an army on a field of battle. True, it may perhaps be plead, that the diseased cravings of the popular taste demand the stimulus of such corrupt ingredients for its gratification; that a higher heroism would fail to be appreciated; and that the writer who attempted its vindication must sacrifice his popularity, and fall into neglect. But surely, genius should not, for the sake of present notoriety, tamely surrender its high prerogative to correct, to improve, nay, to create a public taste that will appreciate its brighter revelations of superior excellence! Surely, at least, genius should not

meanly consent to sacrifice, at the same time, its independence and its truth; and prostitute its powers to adorn, to gild, and paint up, in false and gaudy colors, low and mean materials, which in their naked deformity, would fail to pass current in public esteem. It is in this last respect, not only in selecting unworthy models, but in adorning them with unreal attractions, that the culpability and corrupting power of perverted genius, is most strikingly displayed.

Here we must advert to a process of self-deception in connection with this subject, which arises from the transforming power of prejudice, aided by a want of candid discrimination in the observance of qualities, and of honest accuracy in the use of epithets. The qualities of that true heroism, which commends itself to the conscience and judgment, are vaguely blended with imaginary defects and vices, which seem to justify its repudiation; while, on the other hand, that false heroism which, in its naked reality, cannot but be condemned, is clothed in unreal attributes of excellence, in order that the world may, with some show of propriety, continue to adore so unworthy an idol. The qualities of the Christian character, which have already been enumerated, when fairly presented before the mind, would command its instantaneous approval. But when the perverting power of prejudice begins to operate, in associating and confounding these with other and meaner qualities, the entire character is transformed from an object entitled to our admiration, to one that justifies the secret recoil and aversion of our hearts. Under this process, the various Christian virtues become changed into so many moral deformities. That elevated consciousness of the dignity of our nature, which gives rise to Christian humility, is transformed into an abject, crouching, cowering sense of servility and meanness. That pure and lofty aspiration which rises from the earth in pursuit of infinite excellence, and wages through life an inward war with adverse influences, becomes a mystic, moping, melancholy mood of austere fanaticism. That sublime spirit of universal love, which, rising superior to selfish considerations, and swelling beyond sectional limits and social classifications, embraces the entire race in the bond of a common brotherhood, and labors in its appropriate sphere to promote the well being of the whole human family; this, in its general manifestation, is represented as the vapouring day-dream of utopian sentiment. As it puts forth efforts to enlighten the ignorant, reform the vile, and save the lost, it is stigmatized as superstitious bigotry. As it manifests patient good will toward the wayward and vicious, it is pronounced destitute of moral discrimination. As it exercises forgiveness toward enemies, it is de-

clared wanting in self-respect and manly courage. In this manner, human prejudice transfuses and commingles the virtues of the Christian character with certain contemptible qualities, from which they stand totally distinct. In like manner, the faults and vices of vulgar heroism, are transformed and arrayed in the garb of certain lofty virtues, which bear the sanction of universal approbation. So that what may be but a combination of stupid pride, corrupt passion, savage ferocity, and reckless hardihood, is represented as an assemblage of all sublime sentiments of honor and patriotism, crowned with generous magnanimity, patient fortitude, and a chivalrous contempt of danger and death. But contrast the qualities of this vaunted heroism, with those which Christianity supplies; and the former will be evidently surpassed, even on its own terms and conditions. In some points, the contrast has already been presented. Others remain to be noticed. In the ordinary conception of the character of a hero, it may be said to include the following qualities: *a sense of honor, patriotism, magnanimity and courage*. In each of these attributes, the Christian hero excels.

1. *Christianity supplies a higher and truer sense of honor.* No term is of more frequent application to the character of a hero, than that of honor. It would seem indeed, from the perpetual recurrence of the phrase, to constitute the grand pervading element of his nature. His whole existence is professedly governed by a peculiar system of laws, entitled "the code of honor." But what constitutes this "sense of honor?" What is the origin and character of this "code of honor?" What does it enjoin, and what forbid? What is the nature of its authority and the extent of its requirements? If it be real in its obligation, it is surely quite indefinite in its form. It is embodied in no tangible shape. It is reduced to no permanent record. It exists, if at all, in such a state of indefinite elasticity, as to afford an easy opportunity of indulging a flattering self-delusion. The image is veiled in such obscurity, that one may readily mistake, in conceiving his own features to wear a corresponding likeness. Existing in the shadowy form of thought and sentiment; and being, as otherwise expressed, an inward "sense of honor," it may be asked, is it found by a reference to the intuitive standard of each individual mind, and is each man thus "a law unto himself?" Or is it found by a reference to the average standard of opinion and feeling in surrounding society? and is it a mere index of public sentiment in the community? There is an invariable coincidence, if not an identity, between the two standards. The "sense of honor" in the individual, includes only what is esteemed honorable in the public mind.

Does this "sense of honor" then, mean only a perception of what is held reputable in general society; and is it a mere prudent regard to personal popularity? If this be so, then this sense of honor is only a sort of moral barometer, which each one carries about his person, to indicate the state of the surrounding atmosphere. It must be perpetually fluctuating and variable, changing with every change of scene and society. For no two communities agree on all points of honor and virtue. And as the man moves from one society to another, this barometer alternately rises and sinks along all the degrees of its scale, from that which indicates the pure, serene, and bracing air of virtue, to that which marks the heavy, murky, and stormy atmosphere of vice. But this view will not be admitted. It is contended that this sense of honor is an independent, personal prerogative; that each individual mind possesses its own standard, and exercises its own moral judgment, as something distinct from a time-serving accommodation to the tone of public sentiment. If this be so, what is the precise nature of this faculty or exercise of mind? If it has not exclusive reference to public opinion: if it does not regard merely what may be popular or unpopular in society; to what then, does it refer, and what qualities does it demand in an action, in order that it may be approved? If it does not refer to the mere accident of popularity, it must refer to the essence of duty, virtue, or rectitude. It must refer to the *moral* qualities of an action. And this sense of honor must be but another term for the faculty of *conscience*. When, therefore, we speak of one man as having a higher sense of honor than another, if there is any propriety in the terms employed, we mean that he has a more enlightened and faithful conscience. If it mean anything distinct from a time-serving obsequiousness to public sentiment, it must mean the faithful exercise of a pure, unperturbed, unbiased conscience. Taking the term, then, in this, the only sense in which it will bear investigation, we think it is clearly manifest that the Christian possesses a higher and truer sense of honor than the mere worldly hero. It is implied in the very process of his conversion, that his conscience is enlightened. It is rendered faithful in the discharge of its entire office. It extends its supervision over the whole range of obligation and duty. It recognizes not merely the relations between man and man in society, but also the higher obligations of piety that connect the soul of man with the character of God, and the invisible realities of a future state. It fosters not merely the lovely virtues that adorn man as a citizen of earth, but those nobler, spiritual graces, that prepare the soul for a residence in heaven. It enforces not only external propriety in the visible actions of

life, but real purity in the secret motives of the heart. In contrast with this, the conscience or sense of honor in a worldly hero is limited and practical in its exercise. We are not disposed to deny to the nature of man the possession of many instinctively noble and generous sentiments, even when a stranger to the spirit of true piety. But they are confined to his visible deportment in social intercourse—his achievements on the low theatre of this world. The spiritual obligations of faith and the unseen realities of a future world, are practically ignored. The supervision of conscience in such a case, extends over a low and limited scene of human life: and whatever may be pretended as to its independence of popular sentiment, yet, practically, its operation is confined within the same narrow circle of objects, and it moves on the same level in its approbation or censure. If it be not completely swayed by public opinion, it follows at least directly in its wake: but even this claim to independence, proves, in many cases, to be unfounded. Especially in those forms of heroism developed in a large class of modern novels, this vaunted sense of honor is discovered, on closer inspection, to be but a mere pliable servility of spirit, which bends to every caprice of popular opinion, and takes its character from the state of the surrounding social atmosphere. In proof of this, we refer to that *interesting dilemma* in which such heroes are so invariably thrown at some stage or other, in the works which describe them. Scarcely a novel, of the class to which we refer, is to be found, in which there is not introduced some scene of violence and blood in the form of a duel: or at least some practical vindication of the propriety of duelling. Now, what is the standing plea—the stereotyped apology of the duellist? He commits an act confessedly wrong in itself, but justified, he conceives, by the circumstances under which it was performed. He takes the life of a fellow-being, and pleads as a reason, the force of public opinion. He violates the law of God, and urges in his defence, “the law of honor.” Every duellist, not dead to the feelings of humanity, will deplore the deed, as contrary to his own convictions of rectitude, and the solemn injunctions of divine authority; but he feels constrained by the force of public sentiment to do what he disapproves, in order to maintain an honorable reputation. What becomes of the *independence* claimed for this sense of honor, in such a case? His personal convictions and feelings all confessedly rebel against the act. The motive originates *ab extra*. He yields to a foreign force. He bends before a wind that blows upon him—the breath of the vulgar multitude. This is the only efficient law that operates in the experience of the duellist.

Its sway is so supreme that it not only controls the entire man, but controls him in opposition to all other laws that operate upon him, in defiance of the laws of God, and the combined dictates of conscience, humanity, and self-interest. But this plea, servile as it is, is at the same time self-contradictory and absurd. The Duellist fights to sustain his reputation. He has received an insult. He has been charged perhaps, (for this is the usual form of provocation—the one insult which demands blood for its expiation,) with *falsehood*, which implies cowardice—a fear of facing public opinion by uttering the truth. Hence, lest society should give credit to the accusation, and his reputation be impaired, he proceeds forthwith to act under precisely the same motive, which, when previously charged upon him, had been resented as an insult; and in taking the life of another, to vindicate himself from the charge of cowardice in one form, he fastens the same charge upon himself in another and more aggravated form. Why is he sensible of the evil in the one case, and not in the other? Why does he take fire so promptly at the one charge of falsehood, which implies an unworthy fear of the face of man, and yet voluntarily subject himself to the charge of murder, prompted by the same unworthy fear? Is falsehood so much more base and wicked than murder, that the one may be perpetrated in order to blot out the suspicion of the other? The truth is, the man lays aside all independent, personal convictions on the subject; and because, from a savage and brutal prejudice, society may frown upon the one act and sanction the other, he yields obsequiously to its sovereign decree. Such, in substance, is the sense of honor; such the supreme, moral standard, acknowledged by that form of heroism which stands opposed to the spirit and motives of the gospel. Its avowed practical creed amounts to this and nothing more, viz: *Public opinion is the supreme authority on all questions. Regard to reputation is the first of all duties. Every other interest must be sacrificed, every other principle violated, every other tie trampled under foot, rather than suffer a reproach to be cast upon the character!* Under all his blustering airs and arrogant self-gratulations, the sense of honor that swells the breast of such a hero, as he struts before the gaping crowd, includes nothing higher than this. Are we wrong then, in asserting that Christianity supplies a nobler standard? Is there not a higher rule of life, than the variable and conflicting decrees that issue at different times from the tribunal of public sentiment? Have the vast majority of those who compose society, been invariably so wise and pure—so intellectually and morally elevated, that their capricious tastes and passions may be taken as an equiva-

lent substitute for the only true standard of rectitude? Rather, have not the truly wise and good been, in every age, an obscure minority compared with that mighty mass of moral corruption, whose lawless tide, as impelled by gusts of prejudice and passion, constitutes the sway of public opinion? Are there not higher interests at stake than personal reputation—treasures more closely identified with the well-being and dignity of man's nature, which should be held firm at the sacrifice of every earthly consideration? Nay, has it not often been necessary, in order to maintain truth, virtue and piety, that the purest and best of men, "of whom the world was not worthy," have had to suffer the loss of reputation, and to endure suspicion, contempt, persecution and death, in the midst of a perverse generation? And who will hesitate to admit that such men, by their bold integrity in the midst of temptation, by their patient fortitude under trial and suffering, and by their sublime devotion to principle before an opposing world, exhibited a far nobler style of heroism than has ever been displayed by the most flattered favorite of a corrupt and fawning multitude?

2. Christianity secures a *pure and noble patriotism* in the character of a hero. Because the gospel is adapted in its provisions to the entire race of man, and inculcates a spirit of universal benevolence, it does not forbid a special and ardent love of our own country. Our blessed Saviour, in his own person, has exemplified the spirit of his gospel. The warmest sympathies of his heart, and the most active labours of his life, were devoted to Jerusalem, a city sacred to the affections of every Jew: over it he shed the tears of his tenderest commiseration, and uttered the pathetic acclamation of his deepest sorrow as the vision of its coming desolation rose before him. When he sent forth the first heralds of that gospel which was designed to illuminate and transform a benighted world, at the head of every commission, to "go into all the world and preach the gospel to every creature," was inscribed this significant direction—"beginning at Jerusalem."

True patriotism implies not only an affection for the scenery of our native land, but a regard for its civil institutions and a just appreciation of its social advantages. A rational love of freedom, a consistent devotion to the rights and liberties of the subject, together with a loyal regard to constituted authority, are intimately connected with an enlightened love of country. Christianity, in its conservative and yet progressive spirit—in the obedience it enjoins to the powers that be on the one hand, and the value it attaches to the rights of conscience and the dignity it confers on individual man, as an heir to an immortal destiny on the other—in its calm sub-

mission to an overruling providence, and its cheerful contentment with our earthly allotments—in its humble, quiet and patient benevolence, uniting in the bonds of a common brotherhood, and in the infirmities and trials of a common probation, all classes and conditions of men; and yet in the high personal prerogative, it demands for the soul's development and "freedom to worship God,"—in a word, in its harmonizing influence over all the circles of earth, and in its elevating attraction toward the glories of heaven, Christianity fosters and promotes the only rational, consistent and enlarged spirit of liberty and patriotism. It produces

"Men, true-hearted men,
Men who their duties know, and know their rights."

There have been patriots in pagan lands. In every age there have been men who have displayed a lofty self-sacrificing devotion to their country. But while we admire their heroic ardour, we mourn over their vices and lament the reckless violence of their measures, which blasted their efficiency for permanent good. Apart from the harmonizing influence of the gospel, a love of our own land is prone to degenerate into jealous hatred of all the world beside, and a devotion to liberty is liable to run into a wild demand for universal license. The fiery impulses of nature, guided alone by the speculations of human reason, may produce a reckless agitator or a disorganizing revolutionist under the title of patriot. A feverish impatience of restraint, an indiscriminate defiance of all authority and a blind enthusiasm for universal change, are the prominent attributes of such patriotism. But whatever obsequious homage it may for a time receive, yet, in the end, the unhappy land which claims only such patriots for its defence, will be called to deplore the ravages of madmen instead of honoring the memory of heroes. In the present age of reforms and revolutions, such disastrous patriotism seems, in many places, to be in the ascendant. A restless spirit of insubordination rules the day. The incessant cry is "RIGHTS—LIBERTIES!" The old correlative terms—*duties, obligations*—have grown obsolete. An insane expectation is indulged that perfect fruition will flow from unbounded license. Hence, law, order and authority seem to be viewed as a flaming angel guard stationed with two-edged swords at the gate, to forbid all entrance to the earthly paradise. But the world will at length learn that society advances in true reform, and humanity rises in real development, and nations rejoice in genuine liberty, only when the spirit of the gospel, which holds as its motto—"peace on earth, good will to men, and glory to God in the highest," guides the march of human improvement.

3. Again, Christianity imparts a *higher magnanimity* to heroism—the *magnanimity of forgiveness*. Quick resentment and crushing revenge are prominent attributes of worldly heroism. In contrast with this, the Christian hero displays higher moral qualities, assumes a loftier attitude, and imitates a nobler model of character. Christian forgiveness does not imply insensibility to insult, or a want of firmness to resist injury. There may be a firm determination to maintain our dignity and our rights by all proper measures. And yet there may be in our hearts a patient and pitying benevolence toward those who have injured us. Charity and conscience wielding their authority over the character, may keep in abeyance the blind and hasty impulses of resentful passion. Thus man may achieve the triumph of ruling his own spirit, by bringing higher principles of action to suppress those that are inferior. This sublime Christian virtue is not responsible for that absurd abuse to which it has sometimes been perverted by ignorant enthusiasts who have carried it to the extreme of absolute non-resistance. But using its own arms only for self-defence, it seeks in all other cases the shield of human law, or patiently submits the issue to the tribunal of Him who has said, “vengeance is mine, I will repay.” The two-fold duty of love to our neighbor and submission to the will of God, forbids the indulgence of vindictive passion against an enemy. And instead of seeking to crush him by instantaneous violence, we must look with compassion on his rage, and seek to overcome it by kindness. He who manifests such a spirit and maintains both his piety and his charity unruffled before provocation, while he refuses to reciprocate the blind lusts and brutal passions that actuate his enemy, stands confessedly on a higher moral elevation, and his superiority is painfully felt in the mortifying consciousness of his antagonist. He maintains the highest principles of his nature in their ascendancy. His better self predominates; and thus he obtains a double triumph over the low impulses of his own breast and the baser passions of his enemy. Instead of being “overcome by evil, he overcomes evil with good!” He stands on an eminence above the weakness and meanness that assail him. He refuses to sink to the same level, or to contend against malignity with its own unworthy weapons. By yielding to the instigations of revenge, man sinks to the same attitude with his enemy, meets him on his own ground, and assumes for the time, the same character of savage rage and violence: and should he conquer or fall in so disgraceful a contest, the same result of increased malice, confirmed by competition, will mark its termination.

Consider, moreover, the contrast in the model

of character which is imitated. The heroism of revenge is a quality which finds its original type and prime perfection among the brutes that perish. Every feature of this magnanimity, its entire aspect, the full pomp of all its glory is displayed, not only in the blustering airs and rioting bravado of the drunken bully who sinks the nature of man in the character of a brute, but is displayed equally by the pompous cock that crows and struts supreme upon his dunghill, and by the majestic cur that growls and bristles and dilates with exultation over a vanquished foe! Such are the models of that magnanimity—such the types of the heroism which forms the proud distinction of vulgar minds! In contrast with this, how truly noble is the moral dignity of Christian heroism! One is the heroism of principle, the other the heroism of passion: one is the heroism of love, the other the heroism of hate: by the one, man imitates God—in the other, he resembles the brute!

4. Finally, we claim that Christianity secures *the highest degree of genuine courage*, as an element of heroism. This is regarded by the world at large, as the first of virtues. Among the ancients it held the very name of all virtue. True, there is something imposing even in the rudest forms of human courage; and a character of meanness is inevitably attached to excessive timidity. To cower in fear, before the face of man—to shrink from the post of duty, from a dread of danger—to tremble in constant apprehension of death as a mere physical evil, is contemptible, under all circumstances. There may be occasions in which death, in any form, should be welcomed, as the least of evils. There may be interests involved, which demand the sacrifice of life for their preservation. Indeed death, as a mere physical evil, ought not to be unduly dreaded. Christ has commanded “Fear not them which kill the body, and after that have no more that they can do.” But death is something more than a physical evil. It is not a termination, but a transition of life—a passage from time into eternity—from a scene of probation to the presence of God, and the bar of judgment. Viewed in this its true character, there is only one form of *rational* courage possible to man in the hour of death, viz. *that which rests on a foundation of genuine piety*. Whatever general skepticism may be entertained with regard to a future state, yet no man, without piety, can encounter death, with *rational* composure. The conscious helplessness, if not the conscious guilt, which must be realized, as man sinks amid the vacancy and darkness of death, cannot but be appalling to a mind, capable of reflection and yet destitute of hope. We speak of a *rational* courage and a *rational* composure in facing death. There

are different kinds and degrees of courage. Men, not only destitute of piety, but notorious for habits of profligacy and vice, have met death with undaunted defiance. But such cases have been examples, not of rational courage, but of blind, unthinking, reckless hardihood. Such insensibility to danger may arise, either from gross stupidity of soul, as man sinks alone under the power of disease: or from the blinding, bewildering excitement of angry passion, as he engages in personal combat with his foe; or from the dreams of ambition, and the thousand thrilling associations, which cast such an inspiration over a field of battle, as armies engage in deadly conflict. But in each of these cases, the absence of fear is owing to the stupifying effect produced by these several causes. Thought is suspended. The mind is blinded. The soul is lulled into forgetfulness of the realities of its condition. You search in vain, to find in such courage the slightest trace of an intellectual or moral quality. It is a gross compound of blind, physical, animal impulse. Yet this courage is esteemed a virtue so high and sacred, that its exhibition at the closing scene of life, will cancel a long list of previous crimes: And "a bold, bad man" appeases his offended maker, by daring to rush unprepared into his awful presence! Lofty defiance of danger! Heroic contempt of death! The bear, the lion, or the wild boar of the forest, when brought to bay by their pursuers, display precisely the same virtue, in all its elements and proportions! A virtue that springs from a suspension of all the higher faculties of man's nature—a virtue, into the composition of which there enters not one intellectual or moral ingredient—a courage which is located exclusively in the blood and nerves and muscles of the body, in a state of excitement—a courage, in the exercise of which the mind has no agency. The man neither thinks nor feels, remembers nor anticipates, with reference to the event. His intelligent consciousness is laid aside; and he displays the firmness, having first assumed the stolidity of a rock. And *this* is that crowning virtue, which, when it graces the departure of a hero from the stage of action, will call forth the plaudits of attending angels, as they conduct his spirit to its home on high; and secure the approbation of his judge?—which will cause his memory to be honoured by eulogies and monuments, while eloquence and poetry unite to hang garlands over his grave, and hold up his example to incite the young and aspiring to deeds of renown! But what, after all, is the amount of this boasted virtue? Is it a quality appropriate and suitable to man's nature? Is it the real and rational courage of an intelligent moral agent, in the full exercise of his faculties? What is true

courage in such a being? Not the blind stupidity of ignorance—not the blustering madness of passion—not the reckless foolhardiness of an irrational animal, which rushes blindfold upon its fate! But the calm, collected, deliberate, determined fortitude of a soul, awake to its true position, aware of the realities it is called to encounter, looking danger full in the face; and yet undaunted—bold in conscious security and triumphant hope! To one destitute of the consolations and hopes of true religion, such courage as this is, in the nature of the case, impossible. There may be a blind brutal courage of the kinds above named. But there can be no rational courage. The man cannot think honestly of the awful transition of death—he cannot reflect fully on the endless issues involved—he cannot exercise appropriately his rational faculties, and meet death with his eyes open on all its consequences, without apprehension and dread. He may have sufficient command over his nerves and muscles to conceal his emotion under an aspect of indifference. He may assume an air of levity and defiance. He may "die, and give no sign." But if he thinks, he must fear. If he exercises a rational mind, he must feel a rational dread of death. Such a dread is rational, to one destitute of piety. The nature of the event is such, the character of the transition is so peculiar, that, apart from the sustaining hopes of religion, death must be appalling on any supposition, as to the realities which lie beyond it. Investing the future in dim uncertainty, and considering death as "a leap in the dark;" yet the eminence from which that leap is taken is so high, and the darkness into which it plunges is so vast, vacant and profound, that the conscious soul must shudder in the descent. But even this gloomy vacancy of unbelief is forbidden. Reason itself teaches that the soul is immortal, and that, when separated from the body, it enters the presence of its Maker and Judge. Nor will any general reference to the mercy of God suffice to sustain in peace the departing spirit of him, who has lived without God in the world. To such an one He is "an unknown God"—a mysterious and awful stranger—perhaps an enemy—or if perchance a friend, his presence has been unrecognized, his kindness unrequited with gratitude, his companionship and favour unsolicited, during a life of dependence on his protection; how can it be otherwise than fearful to a soul, conscious of past alienation, thus to form its first acquaintance with God, as it is forced to stand before his bar of judgment! But in addition to this, when conscience, at length awakened to faithfulness, fastens a sense of guilt upon the soul, in view of a life thus spent in forgetfulness of its divine author, the demands of his law violated, the invi-

tations of his mercy disregarded, and the soul passes unreconciled and unreprieved into his holy presence, how can it avoid trembling solicitude and agonizing fear? We have said, the mercy of God affords no alleviation to the terror of such a prospect. For if, under the earthly revelation of that mercy, the soul remains unreconciled, no transforming efficacy can be expected to ensue from its heavenly manifestation. But under aggravated guilt and confirmed habits of impiety, the moral nature, diseased and disordered, perverted by evil tendencies, in discord with the laws of eternal harmony—cut loose from the source of all light and the centre of all order, must wander in the blackness of darkness forever and ever—must carry in its inherent wretchedness its own curse—must contain within itself the elements of its own perdition!

But shall a virtue be made of necessity? Shall recklessness arise from despair? And shall it become an act of heroism to brave unmoved a doom that is inevitable? Are apathy and inactivity our highest achievement in a crisis of danger? When threatened with fire and shipwreck in a burning vessel on the deep, is he esteemed the greatest hero, who, with folded arms stands unmoved and listless, without an effort to escape the danger or deliver those dependent on his protection? Perhaps a life-boat approaches—perhaps with promptness and energy, the means of deliverance are at hand. In such a case, he whose generous and noble efforts succeed in delivering the helpless from danger—he is hailed as the true hero of the scene. The reckless apathy of despair, in view of death, is not a becoming virtue, but a ruinous infatuation. For if the soul, awakened to its obligations, should at length come to itself, and even at the eleventh hour should honestly relent and return, divine mercy waits, with open arms, to welcome the prodigal. Yea, even in the last extremity of danger, amid the storm and darkness attending the hour of shipwreck, the life-boat is at hand to rescue all who fly to it for safety. To stand paralysed by despair, and regardless alike of danger and deliverance, instead of rational courage, is suicidal madness—instead of closing the scene of life with an air of noble dignity, crowns a career of folly with an act of self-destruction.

But if a regard to future interest and safety be deemed an unworthy motive—if a dread of the wrath of God, and the endless ruin of the soul, be thought too sordid a consideration to affect the mind of a hero: yet there is a consideration that appeals to high and honorable principle, and which alone should render the approach of death terrible to one living in impiety. It is deemed right and honorable, for instance, when an error has been committed, to confess and correct it—

when favours have been received, to cherish becoming gratitude, and when an injury has been done, to make prompt restitution and amendment. He who has lived in impiety is chargeable before God with a long array of evil deeds and sinful habits. The sudden approach of death puts an end to the privilege of penitent confession and pious reformation, and the man falls with his moral blemishes sealed forever upon his character. Surely *this* at least is a consideration that should strike the soul of honour with dismay, and invest the hour of death with unmitigated terror!

But will it be asked, “would you have a hero to grow craven and timid in a crisis of danger? would you desire a soldier to turn coward and deserter on the field of battle?” By no means! Let him stand at his post and discharge his present duty as best he may. But if, as must be the case with such a character, he suspends his reason in order to exercise his courage—if he blinds his mind in order to banish fear—if, under any influence, he lays aside the high faculties of a rational and moral agent, in order to assume the blind and blustering boldness of a brute; then verily, let him have his reward! But let not such a low unworthy courage as this be exalted and magnified in our estimation, as the crowning glory of human greatness. Let not a mere unconscious, irrational state of insensibility—a state produced by a combination of brutal stupidity with reckless impiety—a mere *collapsed condition* of the soul, be esteemed a virtue so rare and sublime, as to entitle its possessor at the same time to the honors of a hero, and the beatitudes of a saint! And when poetry would find a model of heroism to hold up as a bright example to incite to lofty sentiments and noble deeds, and allure mankind to a career of glory; let it turn to a different quarter and select its model hero from a higher level of character. Especially when it would teach a lesson of noble triumph in death, let it point to the deportment of the dying Christian. There it will find an exhibition of genuine courage. He confronts the king of terrors with a heart undaunted, not because he is ignorant of the power of his enemy, but because he is confident in his own superior resources. Nor is it the reckless confidence of self-righteous presumption, by which he is sustained. Weak in himself, he is strong in the Lord. His faith rests on a solid foundation, which the more it is inspected, imparts a higher assurance of safety. “A peace that passeth understanding,” and “a hope full of immortality,” are the wings on which his spirit mounts in triumph when released from the fetters of flesh. Humble under a sense of manifold imperfections, yet conscious of pure aspirations ever tending upward, his faith clings to the cross of his Redeemer, as the great anchor of

all his hopes, and finds in his atoning blood a fountain to wash away all the stains of his nature. In the hour of his departure there beams upon his believing vision the radiant form of that same divine and loving Saviour, "standing at the right hand of the throne on high." He exclaims, "Into thy hands, O Lord, I commit my spirit." Then in the calm confidence of the only true courage, the departing saint whispers to himself, "Though I walk through the valley and the shadow of death, I will fear no evil," "For I know in whom I have believed, and that he is able to keep that which I have committed to his hands against that day."

Such are the sentiments which sustain the Christian hero in death. Such are the rational sources of Christian courage. They are the only sentiments worthy of man's nature. They are the only sources of true courage in death. Let others aspire to imitate the vulgar hero, who imitates the brute. But, when the final conflict comes, "let me die the death of the righteous, and let my last end be like his!"

We have pursued our reflections to a length which many will regard as unnecessary and wearisome. But we have traced the subject into its minute details and various ramifications, in order to hunt out and dislodge from every retreat a pernicious delusion, which prevails widely over the popular mind, under the term *heroism*; and at the same time to vindicate the character of the true Christian hero from those foul aspersions and absurd imputations which vulgar ignorance and prejudice have cast upon it. We have attempted to show the superiority of Christian heroism, by adverting to the intellectual and moral qualities which enter into its composition. In the lofty consciousness of the dignity of his nature, which gives rise to Christian humanity; in the noble cause which he has espoused, the spiritual warfare in which he is enlisted; in the exalted motives by which he is impelled; the spirit of love that pervades his life, and the benign results that flow from his efforts; and then, in those qualities which, in name at least, have been appropriated to vulgar heroism; but which in reality are exhibited alone by the Christian hero—in a high and worthy sense of honor—in a sound and healthy patriotism—in a just and noble magnanimity—in a genuine and rational courage—in all these attributes of heroism we have shown that the Christian hero stood preëminent. And if we have failed to carry the convictions of every reader along with us to the conclusions we have reached; we feel assured that we have at least suggested the materials which if properly constructed, would form a conclusive and irresistible argument in support of the position we have endeavored to maintain.

W. C. S.

THE DREAMER.

BY L. I. L.

The silent glory of the friendly stars
Fell on the upturned forehead of that dreamer;—
The dying day hurled back its golden bars—
A long cloud, sun-flushed, wavered like a streamer.

This was all in an island past Japan;
In a far island of the Indian Ocean:
And as his thoughts, faint, memory-sickened, ran
To his old life so full of dire commotion,

He blessed the storm that cast him on that shore,
Far from the vain world and its idle fashions—
Far from the awful phrenzy and the roar
Of horrible sufferings and conflicting passions.

Manhood was still for him in its first prime:
Youth on his brow seemed bursting into blossom:
Yet fate had struck him with all darts that time
And human life can bury in the bosom.

He loved her so!—as God means we should love—
With the whole heart—with nought of reservation:
Her eyes, her hair, were sacred; even her glove;
He would have risked life for its preservation.

He floated far above the dull, cold earth
In an empyrean faint with blissful splendor;
From his pure love great strivings had their birth—
A thousand noble fancies, bold and tender.

Long he lived thus, wrapped in a golden cloud:
With such a love life could not be embittered.
Then the end came.—The dreamer turned and bowed
His pale, cold forehead, and his eyeballs glittered.

Another took his place in that false breast:
Mad with despair his life was spent in scheming:
He would have killed them both,—then gone to rest
After them: he was spared this: he was dreaming:

Dreaming in that far island past Japan.
The gay-careering breezes did caress him;—
A shipwrecked, soon to be a dying man,
The vast, wide solitude did seem to bless him.

He looked upon the crags—on the lagoon
Fringed with its poisonous flowers: his eyes were steady;
And as like a wan ghost uprose the moon,
The Dreamer murmured calmly, "I am ready."

THE PRIMEVAL FOREST.

BY CHARLES LANMAN.

It is an established fact that the natural productions of the United States are not surpassed by those of any other country in the world. But when we come to consider the magnitude and variety of our forests, we claim to be more richly endowed than all the world beside : and we deem it a pleasant pastime occasionally to take a retrospective view of our extensive and superb country as it appears to the mind's eye in the light of the olden times.

When the earlier discoverers and navigators along the Western Atlantic first landed upon the several spots with which their names are inseparably associated, they all found shelter from the summer's heat or the winter's cold, in forests, whose very shadows at the sunset hour mingled with the surges of the ocean. Far as their visions could penetrate, they beheld a wilderness of woods, and they were all deeply impressed with the imposing aspect of nature as she revealed the wonders of her luxuriance ; but though undiscovered and unexplored, there then existed an almost boundless country of forest. Excepting one single, but truly extensive, section of prairie or desert land, lying westward of its centre, our country was then all forest, even from the Atlantic to the Pacific oceans, and from Lake Superior and its Daughter Seas to the Gulf of Mexico. Our country was then an empire of monarchs, throned upon a thousand mountains and in a thousand valleys, and their diadems of luxuriant green, leafy and fragrant, were often times bathed in the clouds of heaven, and burnished to a surpassing brilliancy by the sunbeams. The forests which then existed were probably as ancient as the world itself—primeval in all their features—and one thing is certain, they were not planted by the hand of man. Like the antediluvians, the trees which composed them were buffeted by the storms of centuries, but remained virtually uninjured and unchanged ; they were, in truth, the emblems of superior might and power. Indeed, then as now, only a portion of them were ever subject to the destroying and regenerating influences of the seasons ; for while the forests of the South were bright with a perpetually verdant foliage, and always laden with delicious fruits, the evergreens of the North afforded a comfortable shelter from the snows and winds to the human and subordinate denizens of the wilderness world. Aside, too, from their immense extent, their magnificence and strength,

these forests were remarkable for their density, since we have every reason to believe that but for the intervening streams, they presented continuous fields of foliage, receding to the four corners of the horizon. Hence the gloom and solitude which ever pervaded their recesses. And when we think of them, brooding under the pall of night, in the mellow light of the moon and stars, or swaying to and fro, and moaning, as it were, under the influences of summer and winter storms, the mind becomes impressed with emotions that are truly sublime.

But there was also much of the beautiful and the peaceful associated with the forests of the olden times. How could it have been otherwise since it is ever more the province and the delight of our mother nature to fill the hearts of her children with love rather than with terror and awe ? Flowers of loveliest hue and sweetest fragrance nestled in countless numbers around the serpent roots of every patriarch tree ; vines of every size and every shade of emerald encircled with their delicate tendrils the trees which they had been taught to love, and when the lightning chanced to make a breach in the continuous woods, these vines ventured boldly into the sunshine, and linked together the adjacent masses of foliage ; and every where were the rank and damp, but velvety mosses, clinging to the upright trees, and battenning upon those which were fallen and going to decay, and covering, as with a mantle, every rock and stony fragment within their reach. And there too, were the streams which watered this great forest world, sometimes a mile in width, and sometimes thousands of miles in length, and sometimes of such limited dimensions as only to afford bathing places for the wild fowl and her brood. But they were all beautiful, for their waters were translucent to a degree that we seldom witness in these days, and their chief enjoyment was to mirror the flowers and drooping boughs that fringed their borders, as well as the skies which bent over the land, which was then a land of uninterrupted peace. And throughout the length and breadth of this sylvan domain was perpetually heard the singing of unnumbered birds, which built their nests wherever they listed, while none were there, for the most part, to molest them or make them afraid. Of four-footed creatures too, the primeval forests gave birth to, and securely harbored immense numbers. Like the forest-trees themselves, they flourished and multiplied, and with them, with the birds, the streams, the flowers, and the combined magnificence of nature, they performed their secret ministry of good for the benefit of the Red man, who had inherited this matchless wilderness directly from the all wise Creator himself.

And what were the figures which naturally made their appearance in the picture we have drawn? The smoke from Indian wigwams arose from unnumbered valleys and the sides of unnumbered mountains, and as the products of the forest were more than sufficient to gratify every necessity, the aborigines had nothing to do but pursue the even tenor of their lives in contentment and peace. For shelter, when the forests themselves did not suffice, they resorted to their rude bark wigwams; for food, to the simple arts of the chase, and the fruits of the land; for clothing, to the skins of captured animals; for religion, to the Great Spirit whom they beheld in the elements, the heavens, and the revolving seasons; and for unalloyed happiness, to the Spirit of Freedom, which canopied their forest home. But alas! like the aborigines, the glorious forests are rapidly passing away, withering year by year from off the face of the earth; and while we would implore the devotees of Mammon to spare as much as possible the beauties of our forest land, we would repeat the appeal to Providence of our forest-loving Bryant, when he says that for many years to come

"Be it ours to meditate
In these calm shades thy milder majesty,
And to the beautiful order of thy works
Learn to conform the order of our lives."

AUTUMN DAYS.

BY L. I. L.

The work of gorgeous Autumn is to strew
The hills with Golden Rod and Primrose sweet:
His work is done: Summer is at his feet.—
The breeze is purer, and the tender blue
Of the grand sky is softened by a veil
Of golden mist which hangs above the hills
And lies along the merrily-dancing rills
Which sparkle down the flower-enameled dale!
A child, I loved the Autumn for his brand
Of gold and crimson on the ancient woods—
His bright leaves scattered on the galloping floods
By winds that roll'd their music through the land.
'Tis dearer now: present and past are mine—
That beauteous past brighter than amber wine!

1852.

Notices of New Works.

UNCLE TOM'S CABIN; *Or Life Among the Lowly.* By Harriet Beecher Stowe. Boston: Published by John P. Jewett & Co. Cleveland, Ohio: Jewett, Proctor & Worthington. 1852.

Macaulay, in the opening paragraph of his Essay on the Life of Addison, discusses the question whether lady authors should or should not be dealt with according to strict critical justice. The gallant reviewer gives as his opinion, that while lady writers should not be permitted to teach "inaccurate history or unsound philosophy" with impunity, it were well that critics should so far recognize the immunities of the sex as to blunt the edge of their severity towards the offenders. And he instances, as pertinent to the critic's position, the case of the Knight, who being compelled by duty to keep the lists against Bradamante, was fain, before the combat commenced, to exchange Balisarda for a lighter and less fatal weapon, with which, however, he fought well and successfully.

For ourselves, we are free to say that we quite coincide with Mr. Macaulay, in the exact terms of his proposition. But we beg to make a distinction between lady writers and female writers. We could not find it in our hearts to visit the dulness or ignorance of a well-meaning lady with the rigorous discipline which it is necessary to inflict upon male dunces and blockheads. But where a writer of the softer sex manifests, in her productions, a shameless disregard of truth and of those amenities which so peculiarly belong to her sphere of life, we hold that she has forfeited the claim to be considered a lady, and with that claim all exemption from the utmost stringency of critical punishment. It will not indeed suffice, to work this forfeiture, that she merely step beyond the limits of female delicacy. A Joan of Arc, unsexed though she be, in complete armour, mounted *en chevalier*, and battling for the defence of her native land, might, perhaps come within the rule of knightly courtesy. But the Thalestris of Billingsgate, coarse of speech and strong of arm, hurling unwomanly oaths and unwomanly blows at whom she chooses to assail, would probably be met by a male opponent, (if he could not run away from her,) in a very different manner.

Mrs. Stowe—to whose work of "Uncle Tom's Cabin" we now propose to devote ourselves—is neither one nor the other of the characters we have described. She is not a Joan of Arc. She is not a fishwoman. She is something less noble than the Gallic heroine: she is certainly a much more refined person than the virago of the Thames. Yet with all her cultivation she has placed herself without the pale of kindly treatment at the hands of Southern criticism. Possessed of a happy faculty of description, an easy and natural style, an uncommon command of pathos and considerable dramatic skill, she might, in the legitimate exercise of such talents, have done much to enrich the literature of America, and to gladden and elevate her fellow beings. But she has chosen to employ her pen for purposes of a less worthy nature. She has volunteered officiously to intermeddle with things which concern her not—to libel and vilify a people from among whom have gone forth some of the noblest men that have adorned the race—to foment heart-burnings and unappeasable hatred between brethren of a common country, the joint heirs of that country's glory—to sow, in this blooming garden of freedom, the seeds of strife and violence and all direful contentions. Perhaps,

indeed, she might declare that such was not her design—that she wished, by the work now under consideration, to *persuade* us of the horrible guilt of Slavery, and with the kindest feelings for us as brethren, to teach us that our constitution and laws are repugnant to every sentiment of humanity. We know that among other novel doctrines in vogue in the land of Mrs. Stowe's nativity—the pleasant land of New England—which we are old-fashioned enough to condemn, is one which would place woman on a footing of political equality with man, and causing her to look beyond the office for which she was created—the high and holy office of maternity—would engage her in the administration of public affairs; thus handing over the State to the perilous protection of diaper diplomatists and wet-nurse politicians. Mrs. Stowe, we believe, belongs to this school of Woman's Rights, and on this ground she may assert her prerogative to teach us how wicked are we ourselves and the Constitution under which we live. But such a claim is in direct conflict with the letter of scripture, as we find it recorded in the second chapter of the First Epistle to Timothy—

"Let the woman learn in silence with all subjection.

"*But I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence.*"

But whatever her designs may have been, it is very certain that she has shockingly traduced the slaveholding society of the United States, and we desire to be understood as acting entirely on the defensive, when we proceed to expose the miserable misrepresentations of her story. We shall be strongly tempted, in the prosecution of this task, to make use, now and then, of that terse, expressive, little Saxon monosyllable which conventionalism has properly judged inadmissible in debate, yet we trust we shall be able to overcome the temptation, and in the very torrent and tempest of our wrath, (while declining to "carry the war into *Africa*,") to "acquire and beget a temperance which may give it smoothness."

While we deem it quite unnecessary, in this place, to lay before our readers in detail the plot of *Uncle Tom's Cabin*, still we shall best accomplish our purpose by running over the leading incidents of the novel. But even this will not be the easiest thing in the world. We have given Mrs. Stowe credit for dramatic skill. Yet it will be seen that as a dramatist she is, by no means, without some glaring faults. It is a rule of art, (judged by which Fielding's *Tom Jones* has been pronounced by the best critics to be almost perfect,) that a work of fiction should be so joined together, that every passage and incident should contribute to bring about an inevitable though unexpected catastrophe. Mrs. Stowe's events have many of them no connection with each other whatever. She has two principal characters, for whom the reader's sympathy is enlisted, whose paths never lie within a thousand miles of each other. Whenever she brings Uncle Tom forward, George Harris is moved backward: whenever she entertains us with George Harris, Uncle Tom's rights as a hero are in abeyance, wherein Mrs. Stowe reminds us of the ventriloquial vaudevilles of the facetious Mr. Love, who, individually representing the entire *dramatis personæ*, is compelled to withdraw as Captain Cutandthrust, before he can fascinate his audience with Miss Matilda Die-away. Perhaps, indeed, Mrs. Stowe has proceeded upon the principle laid down by Puff in the Critic—

"O Lord, yes; ever while you live have two plots to your tragedy. The grand point in managing them is only to let your under-plot have as little connection with your main plot as possible."

The tale opens with a dialogue between a Kentucky planter, Mr. Shelby, and a negro-trader called Haley, at the dinner-table of the former at his plantation residence.

Haley holds Mr. Shelby's I. O. U. for a considerable amount which he is unable to settle, and takes advantage of this indebtedness to compel Mr. Shelby to part with two of his slaves—Uncle Tom, his general manager, and a little mulatto boy, the child of Eliza Harris, Mrs. Shelby's maid. Eliza is the wife of George Harris, the Admirable Crichton of the book. Being determined not to see her child sold away from her, she runs off with it in the night, and after many adventures, (one of which is the passage of the Ohio River on the ice, with a leap across its unfrozen channel,) finally reaches the non-slaveholding territory. Before following her, we must pause to notice two points in the narrative. The first is the conduct which the authoress ascribes to Mrs. Shelby in conniving at Eliza's escape—conduct which is held up to us as, in the highest degree, commendable. Now, the reader must know that Mr. Shelby has acquainted his wife with the fact that Haley has become the purchaser of the slaves. The good faith of Mr. Shelby, therefore, was pledged, and his wife knew it, to the fulfilment of this portion of the contract by putting Haley in possession of them. And however painful to the feelings of that kind and excellent lady might have been the separation, the obedience due to her husband, and the regard she was bound to cherish for his word, should have restrained her from throwing any obstacle in the way of the performance of his engagements, much more from assisting in the escape of a valuable servant. But at this place the authoress brings the "Higher Law" to bear upon Mrs. Shelby's line of duty, and as obedience to one's husband is not recognised by the new school of Woman's Rights, perhaps there is no departure herein from ethical consistency. The second point to which we wish to refer, is the utter indifference to fact and probability displayed in a conversation which the authoress details between the men who become engaged in the pursuit of Eliza. Haley, having given chase, after some delay at the Shelby mansion, comes up with Eliza just in time to see her, with the child in her arms, brave the dangers of the ice-bound Ohio and gain the opposite bank in safety. Chagrined at this frustration of his plans, he resorts to brandy-and-water at the nearest tavern, where he finds two old acquaintances quite as beastly and devilish as himself, who are also negro-traders. Haley proposes to them to assist him in retaking Eliza. The matter is debated at length and a bargain is struck. The parties agree that in case of a recapture, the child is to be surrendered to Haley, who shall thereupon interpose no objection to the kidnapping of Eliza by his comrades—the said Haley paying down the just and full sum of Fifty Dollars in advance, as an indemnity against loss in the event of a failure. The discussion reeks with bad brandy and the fumes of tobacco, and is therefore not well suited to quotation, but one passage of it must be given:

"Marks had got from his pocket a greasy pocket-book, and taking a long paper from thence, he sat down, and fixing his keen black eyes on it, began mumbling over its contents: 'Barnes—Shelby County—boy Jim, three hundred dollars for him, dead or alive.

"'Edwards—Dick and Lucy—man and wife, six hundred dollars; wench Polly and two children—six hundred for her or her head.'

"'I'm just a runnin over our business, to see if we can take up this yer handily. Loker,' he said, after a pause, 'we must set Adams and Springer on the track of these yer; they've been booked some time.'

"'They'll charge too much,' said Tom.

"'I'll manage that ar; they's young in the business, and must spect to work cheap,' said Marks, as he continued to read. 'Ther's three on 'em easy cases, 'cause

all you've got to do is to shoot 'em, or swear they is shot; they could'nt, of course, charge much for that.' "

The reader will observe that two charges against the South are involved in this precious discourse—one, that it is the habit of Southern masters to offer a reward with the alternative of "dead or alive," for their fugitive slaves, and the other, that it is usual for pursuers to shoot them. Indeed, we are led to infer that as the shooting is the easier mode of obtaining the reward, it is the more frequently employed in such cases. Now, when a Southern master offers a reward for his runaway slave, it is because he has lost a certain amount of property, represented by the negro, which he wishes to recover. To allege then that the owner, so deprived of his property, would be willing to pay an extravagant sum of money to the man who should place that property forever beyond the possibility of recovery, is so manifestly absurd and preposterous, that Mrs. Stowe will not find many readers weak enough to believe it, even in New England. What man of Vermont, having an ox or an ass that had gone astray, would forthwith offer half the full value of the animal, not for the carcass which might be turned to some useful purpose, but for the unavailing satisfaction of its head? Yet are the two cases exactly parallel. With regard to the assumption that men are permitted to go about, at the South, with double-barrelled guns, shooting down runaway negroes in preference to apprehending them, we can only say that it is as wicked and wilful as it is ridiculous. Such Thugs there may have been as Marks and Loker, who have killed negroes in this unprovoked manner, but if they have escaped the gallows, they are probably to be found within the walls of our State Penitentiaries where they are comfortably provided for at public expense. The laws of the Southern States, which are designed, as in all good governments, for the protection of persons and property, have not been so loosely framed as to fail of their object where person and property are one.*

Recur we now to the fugitives—Eliza and her child. The next thing we hear of them, they are seeking shelter and assistance at the house of Mr. Byrd, (or perhaps we should say Mrs. Byrd, as this lady seems to rule the household as completely as any Woman's Rights Orator could desire,) where they are hospitably welcomed and tenderly cared for. Just before their arrival, the conjugal Byrds had been twittering in an argumentative duet concerning the matter of lending "aid and comfort" to runaway negroes, during which the feathers of the female had been somewhat ruffled, for her loving mate had but lately flown into the nest from that noisy aviary, the Legislature of Ohio, where as a Byrd of some consequence, he had lent his voice in the Senate to the passage of a Bill "forbidding people to give meat and drink

* It is scarcely worth our while to say more on this subject, yet the law with regard to the killing of runaways is laid down with so much clearness and precision by a South Carolina judge that we cannot forbear quoting his dictum as directly in point. In the case of *Wills v. Earnest and Parker*, Colcock, J. delivered the opinion of the Court—

"By the statute of 1740, any white man may apprehend, and moderately correct, any slave who may be found out of the plantation at which he is employed; and if the slave assaults the white person, he may be killed; but a slave who is merely flying away cannot be killed. Nor can the defendants be justified by the common law, if we consider the negro as a person; for they were not clothed with the authority of the law to apprehend him as a felon, and without such authority he could not be killed." January term, 1818. 1 Nott & McCord's S. C. Reports. 182.

to those poor colored folks that come along." Mrs. Stowe takes great delight in showing us here how the Senator's stern convictions of duty were melted away, like the wax that sustained the pinions of Icarus, by the feelings of compassion that kindled in his gentle bosom at the story of Eliza's wrongs, and how the worthy and Honorable Byrd, maker of laws, proceeded to help the fugitives to a place of greater safety, by driving them at night over a rough road to a Quaker settlement some miles distant. The reader who will reflect upon the matter a single moment, must see that the Senator is applauded for what in old times was considered one of the worst of offences—the violation of his oath. For in assuming his legislative duties he had solemnly sworn to support the Constitution of the United States, and his conduct is in direct conflict with that sacred obligation. But to writers like Mrs. Stowe is reserved the casuistical talent, and we may add, the portentous impudence, of making perjury graceful and good, and of founding upon it the claim to an integrity approaching the perfect holiness of the saints.

To keep up with the story, it is necessary that we should now turn to the fortunes of George Harris. This remarkable mulatto, who unites the genius of an Arkwright to the person of an Antinous, shortly before Eliza's begira, had incurred the displeasure of his master for having invented "a machine for the cleaning of hemp" which displayed as much talent, we are told, as Whitney's cotton-gin. George was hired by the proprietor of a large bagging factory, where he was "considered the first hand in the place" and was greatly caressed. His owner, however, cannot brook the crime of invention, and accordingly he takes George from the factory and seeks to humble his proud spirit in the performance of the most degrading offices. As well might he hope to humble a Plantagenet or a Pottowattomy. George runs off, bids adieu to Eliza and the boy who are yet on the Shelby estate, disguises himself, with the help of a little walnut bark and hair-dye, as a Spanish grandee of the *sangre azula*, and with two pistols and a bowie knife under his waistcoat, travels leisurely, in his own conveyance, to the border line of the free states, actually stopping to read, in a tavern by the wayside, the handbill in which the reward of Four Hundred Dollars has been offered for his recovery or, as usual, "for satisfactory proof that he had been killed." If any one portion of Mrs. Stowe's book is more silly than another, it is this account of George's escape. The most embruted wretch that ever "wolloped" his negro, like his donkey, even without the provocation that he "wouldn't go," could not have acted like George's master. George, at the factory, where his genius might be brought into exercise, was worth to his owner five times as much as he could have been on the plantation, and it is a little the most improbable thing in the world that the owner would have sacrificed his pecuniary interest with no other motive than a humiliating sense of his negro's mental superiority. But Mrs. Stowe convicts herself of an utter ignorance of the Law of Contracts, as it affects Slavery in the South, in making George's master take him from the factory against the proprietor's consent. George, by virtue of the contract of hiring had become the property of the proprietor for the time being, and his master could no more have taken him away forcibly than the owner of a house in Massachusetts can dispossess his lessee, at any moment, from mere whim or caprice. There is no court in Kentucky where the hirer's rights, in this regard, would not be enforced. As for the details of the escape—the Spanish disguise, the pistols and bowie-knife, the easy *nonchalance* of the principal performer, *et cetera*, they would not go down as part and parcel of the burnt-cork melodrama of the Bowery.

While George was playing this magnificent part, Eliza had, as we have already described, succeeded in reaching a temporary place of refuge among the Quakers. These worthy people live, it seems, in Indiana. To their village, by a lucky accident, comes George, and a happy reunion of parents and child takes place. But the fugitives are not yet beyond the reach of danger. For Loker and his myrmidons are upon their track, prepared to identify them as slaves. It is necessary, therefore, to push on to Canada. On the way they are overtaken. A struggle ensues between the two parties, in which Loker is shot by George Harris. The rest of the pursuers fly, and the heroic mulatto proceeds without further difficulty, until he sets foot, with Eliza and the child, upon the Canadian shore of Lake Erie. The triumph of innocence is complete.

Having disposed of the Harrises, we have now to direct our attention to Uncle Tom. It is a sad day at Mr. Shelby's when Haley returns from his ineffectual pursuit of Eliza, to take away the negro manager from the old plantation. Mr. Shelby has gone off to avoid the disagreeable scene of the departure; Old Chloe, Uncle Tom's wife, and the picaninies mingle their tears with those of Mrs. Shelby; the whole establishment wears an air of the deepest gloom—two persons only of all seem unaffected, the purchaser and the purchased. Haley, steeled against the promptings of pity, and Uncle Tom himself, lifted by a noble resignation to the will of Providence far above the weakness of despondency, are equal to the occasion. The manacles are put on, and Tom is whirled away. A mile from the house, they meet young George Shelby, the son of Uncle Tom's former master, who has been absent for a few days. Tom gives some parting advice with his blessing to George, and George, with generous fervor, promises to redeem Tom at some future day, and the interview terminates. Without other incident that we need mention, Haley reaches *La Belle Rivière* and embarks with Uncle Tom upon its waters, in a steamer bearing the beautiful French name of the stream itself.

We think it well here to advert to a prominent fault of Mrs. Stowe's production, because it is exhibited as conspicuously, perhaps, in the earlier chapters as any where else. It lies in the cruel disparity, both intellectual and physical, which our authoress makes between the white and black races, to the prejudice of the former. The negro under her brush invariably becomes handsome in person or character, or in both, and not one figures in Uncle Tom's Cabin, no matter how benighted or besotted his condition, who does not ultimately get to heaven. But while Mrs. Stowe can thus "see Helen's beauty in a brow of Egypt," she is unable to look upon a white face without tracing in it something sinister and repulsive. The fairest of her Southern ladies retain some ugly marks of their descent from the erring mother of our race—

Some flowers of Eden they still inherit,
But the trail of the serpent is over them all.

The white villains she describes are villains indeed. Dante fell into some rather bad company when he descended with Virgil to the realms of the lost, but the demons of the Inferno are amiable and well-behaved gentlemen in comparison with Marks and Loker. On the other hand, Beatrice, soaring to the loftiest circles of the glorified, is but a common-place damsel by the side of Eliza. See with what Titianesque touches she is represented to us. The "rich, full, dark eye with its long lashes;" the "ripples of silky black hair;" the "delicately formed hand" and "trim foot and ankle;" "the dress of the neatest possible fit," setting off to advantage "her finely moulded shape"—all these make up a picture the effect of which is heightened by the assurance that the original possesses "that peculiar air of refinement, that softness

of voice and manner, which seems in many cases to be a particular gift to the quadroon and mulatto woman." As for Uncle Tom, he is an epitome of the cardinal virtues, a sort of ebony St. Paul undergoing the perils, the stripes, the watchings and ultimately the martyrdom of the Apostle, with all of the Apostle's meekness and fortitude, carrying a stainless soul in an unoffending body, and walking through much tribulation, without a single turn from the straight course, to the portals of the Heavenly Kingdom. In person he is finely and powerfully made, and as manager of Mr. Shelby's estate his judgment and discretion are unparalleled in Southern agriculture. Trusted with untold gold, he never yields to the temptation of appropriating a piece of it to his own use. Resentment for injury was what Uncle Tom had never experienced. Whisky, the "peculiar wanity" of his race, has never passed his lips. Finally, whatsoever things are true, whatsoever things are honest, whatsoever things are just whatsoever things are pure, whatsoever things are lovely whatsoever things are of good report; if there be any virtue, and if there be any praise, all these things were blended in Uncle Tom.

In attributing this perfection to the negro character, Mrs. Stowe not only "o'ersteps the modesty of nature," but she places in a strong light the absurdity of the whole story of Mr. Shelby's sacrifice. An Irish soldier in our army was once rebuked by his commanding officer for getting drunk. "Arrah! yer honor," said Pat, "yer wouldn't be after expectin' all the Christian virtues in a man, for eight dollars a month!" In like manner we would ask if a sensible man like Mr. Shelby could be expected to sell so much of prudence, honesty, foresight, sobriety and affection as were found in Uncle Tom, for any sum that Haley would be willing to allow for him? We are not told what this sum was, but judging from Haley's grinding disposition, and the fact that he afterwards sold Uncle Tom for thirteen hundred dollars, it is fair to fix his original price at One Thousand Dollars. Now, admitting Mr. Shelby's embarrassments and conceiving it possible that he could set aside all his long-standing attachment for Uncle Tom at the bidding of an insolent trader, is it likely that so valuable, or rather so invaluable, a piece of property would have been relinquished for so small a "consideration?" But a high-toned and chivalrous Kentuckian can not so easily divest himself of his humanity, and it is a slander upon that gallant State to represent the scene within her borders. The dialogue with which Mrs. Stowe's novel opens, if carried to its legitimate conclusion, would have been a short one. Mr. Shelby would have "participated matters," as Mrs. Malaprop says, by knocking Haley down stairs.

But our authoress would have Uncle Tom sold, and we now return to him, with his new master—

Floating down de riber of de O-hi-o!

In due time they reach the Mississippi, upon whose turbid flood they are borne to New Orleans. Before arriving at this metropolis, an incident occurs to Uncle Tom which operates a material change in his condition. Among the passengers in the steamer, there is a certain Mr. St. Clare, a young, rich, clever and handsome Louisiana planter, on his way home from a Northern excursion, accompanied by his daughter, a fair-haired little seraph of five or six years of age, and a New England cousin, one Miss Ophelia St. Clare, who has never before been in the Southern States. One day this little daughter falls overboard from the forward deck, just as the boat is leaving a landing. Tom, who has been reading his bible near at hand, plunges after her in a moment, and rescues her from drowning. A friendship springs up between the child and Uncle Tom which leads to his pur-

chase by Mr. St. Clare, to whose luxurious establishment in New Orleans our sable hero is now speedily transferred. The rôle assigned him was that of coachman, but his duties amounted to no more than a general supervision of the stables. The business of his life was to play the companion to Evangeline, or Little Eva, as she was generally called, to minister to her simple wants, to pluck for her the sunniest fruits and to twine roses in her golden hair. Eva on her part was not less zealous in gentle offices. She read to him, as Tom had never heard them read before, those passages of Holy Writ which were most calculated to impress both their imaginative intellects. Thus for two years did "the foot of Time" with Tom, "tread noiselessly on flowers." But the cheek of little Eva soon mantled with that hectic glow which announces the dread presence of consumption. The art of the physician was invoked in vain to arrest the fatal malady. Day by day the form upon which parents and friends gazed so fondly, wasted from their sight. The fine intellect of the child flashed out with preternatural brilliancy as its earthly tenement was about to be dissolved. The vigils of Uncle Tom at the bedside of the sufferer are described with a pathos that goes to the heart of the reader. At last the destroyer came. In the sad circle of the bereaved there was none whose grief was more bitter and abiding than Uncle Tom's.

This touching little episode is so far the best part of the novel that it seems to be not of it. It is a gem shining amid surrounding rubbish. We think, however, that we have read something very like it before. The enchanting conception of grace and innocence in the person of little Eva is not original. Years ago, the tears of thousands of readers were drawn forth by the story of a child, in all respects the prototype and *ἰδωλον* of Eva, whose angelic figure, floating above an atmosphere of guilt and shame, seemed to sanctify its habitation on earth, as the presence of Eva hallowed the frivolity and extravagance of the St. Clare household. She too was fondly attached to an old man, less saintly than Uncle Tom, but feeling as deep a sentiment of love for his youthful companion as ever Uncle Tom felt. She too sickened of consumption and went down to a premature grave. The story was written by Charles Dickens, and our readers have doubtless already noted the resemblance of Eva and Tom to Little Nell and her grandfather.

One evening during Eva's lifetime, Miss Ophelia, the bustling little spinster to whom we have already alluded, came into the room where St. Clare lay reading his paper, with a raw-head-and-bloody-bones account of a negro woman having been whipped to death by her master.

"An abominable business,—perfectly horrible!" she exclaimed, as she entered the room.

"Pray, what iniquity has turned up now?" said he.

"What now? why, those folks have whipped Prue to death!" said Miss Ophelia, going on, with great strength of detail, into the story, and enlarging on its most shocking particulars.

"I thought it would come to that, some time," said St. Clare, going on with his paper.

"Thought so!—an't you going to do any thing about it?" said Miss Ophelia. "Haven't you got any *selectmen*, or anybody, to interfere and look after such matters?"

"It's commonly supposed that the *property* interest is a sufficient guard in these cases. If people choose to ruin their own possessions, I don't know what's to be done. It seems the poor creature was a thief and a drunkard; and so there won't be much hope to get up sympathy for her."

"It is perfectly outrageous,—it is horrid, Augustine! It will certainly bring down vengeance upon you."

"My dear cousin, I didn't do it, and I can't help it;

I would, if I could. If low-minded, brutal people will act like themselves, what am I to do? *They have absolute control; they are irresponsible despots.* There would be no use in interfering; *there is no law that amounts to any thing practically, for such a case.* The best we can do is to shut our eyes and ears, and let it alone. It's the only resource left us."

In a subsequent part of the same conversation, St. Clare says—

"For pity's sake, for shame's sake, because we are men born of women, and not savage beasts, many of us do not, and dare not,—we would *scorn* to use the full power which our savage laws put into our hands. And *he who goes furthest, and does the worst, only uses within limits the power that the law gives him.*"

We have italicised a sentence or two of this conversation to direct attention to the reckless manner in which our authoress puts loose statements into the mouths of her characters. We are told in the appendix that this incident of the killing of Prue occurred "under the personal observation" of a brother of the authoress who was a clerk to a large mercantile house in New Orleans at the time. If we understand the force of language, it is here meant that this gentleman was an actual eye-witness of the murder. If so, then was he, before God and man, an accessory to the crime. For he had only, in the event that his own interposition would not have sufficed to prevent it, to call in the police to have saved Prue's life. And failing to do this—standing by, in cold blood, while a fellow-being was brutally scourged to death without an effort to rescue her—not even volunteering his evidence subsequently to ensure the punishment of the murderers, in what light can we regard his conduct other than as making him *particeps criminis* of Prue's death? But Mrs. Stowe tells us, through St. Clare, that "there is no law that amounts to anything" in such cases, and that he who goes furthest in severity towards his slave, i. e. to the deprivation of an eye or a limb or even the destruction of life, "only uses within limits the power that the law gives him." This is an awful and tremendous charge, which lightly and unwarrantably made, must subject the maker to a fearful accountability. Let us see how the matter stands upon the statute-book of Louisiana. By referring to the Civil Code of that State, Chapter 3rd, Article 173, the reader will find this general declaration—

"The slave is entirely subject to the will of his master, who may correct and chastise him, *though not with unusual rigor, nor so as to maim or mutilate him, or to expose him to the danger of loss of life, or to cause his death.*"

On a subsequent page of the same Volume and Chapter, Article 192, we find provision made for the slave's protection against his master's cruelty, in the statement that one of two cases, in which a master can be compelled to sell his slave, is

"When the master shall be convicted of cruel treatment of his slave, and the judge shall deem proper to pronounce, *besides the penalty established for such cases,* that the slave shall be sold at public auction, *in order to place him out of the reach of the power which the master has abused.*"

A code, thus watchful of the negro's safety in life and limb, confines not its guardianship to inhibitory clauses, but proscribes extreme penalties in case of their intransigence. In the Code Noir (Black Code) of Louisiana, under the head of Crimes and Offences, No. 55, § xvi, it is laid down that

"If any person whatsoever shall wilfully kill his slave or the slave of another person, the said person being convicted thereof shall be tried and condemned agreeably to the laws."

And because negro testimony is inadmissible in the courts of the State, and therefore the evidence of such crimes might be with difficulty supplied, it is further provided that

"If any slave be mutilated, beaten or ill treated contrary to the true intent and meaning of this act, when no one shall be present, in such case, the owner or other person having the management of said slave thus mutilated, shall be deemed responsible and guilty of the said offence, and shall be prosecuted without further evidence, unless the said owner or other person so as aforesaid can prove the contrary by means of good and sufficient evidence, or can clear himself by his own oath, which said oath every court under the cognizance of which such offence shall have been examined and tried, is by this act authorized to administer." *Code Noir. Crimes and Offences*, 56. xvii.

Enough has been quoted to establish the utter falsity of the statement, made by our authors through St. Clare, that brutal masters are "irresponsible despots"—at least in Louisiana. It would extend our review to a most unreasonable length, should we undertake to give the law, with regard to the murder of slaves, as it stands in each of the Southern States. The crime is a rare one, and therefore the Reporters have had few cases to record. We may refer, however, to two. In *Fields v. the State of Tennessee*, the plaintiff in error was indicted in the circuit court of Maury county, for the murder of a negro slave. He pleaded not guilty: and at the trial was found guilty of wilful and felonious slaying of the slave. From this sentence, he prosecuted his writ of error, which was disallowed, the court affirming the original judgment. The opinion of the court as given by Peck, J. overflows with the spirit of enlightened humanity. He concludes thus—

"It is well said by one of the judges of North Carolina, that the master has a right to exact the labor of his slave; that far, the rights of the slave are suspended; but this gives the master no right over the life of his slave. I add to this saying of the judge, that law which says thou shalt not kill, protects the slave; and he is within its very letter. Law, reason, christianity and common humanity, all point out one way." 1st Yerger's Tenn. Reports. 156.

In the General Court of Virginia, June Term, 1851, in *Souther v. The Commonwealth* it was held that "the killing of a slave by his master and owner, by wilful and excessive whipping, is murder in the first degree; though it may not have been the purpose of the master and owner to kill the slave." 7th Grattan's Reports. 673.

Having placed this matter of the irresponsibility of masters and the insecurity of slaves in its proper light, we revert to the history of Uncle Tom. Soon after the death of Eva, St. Clare determined to emancipate that good and faithful servant, and actually took the initiatory steps for the purpose. Uncle Tom looked forward with delight to his return to Chloe and his children upon "the old plantation." But the fates had ordered otherwise. St. Clare is brought home one night from a café, mortally wounded by a stab from a bowie-knife which he had received in endeavouring to separate two combatants. He lives but a few moments and has no time to declare his wishes as to the disposition of his property. Tom finds himself, after the pompous pageant of his master's funeral is over, at the mercy of a proud, selfish, languid, fashionable, hard-hearted woman, his master's widow—Marie St. Clare. Of this woman we have not before spoken, because she exists in the story hitherto only as a parenthesis, without contributing to its action or at all affecting its characters. We may here say in brief that as an individ-

ual we do not object to her, for we have seen many such in the whirl of fashion in New York and Boston, and such there may be in New Orleans, but that as the type of a class, as a portraiture of Southern female character, she is a gross and stupendous libel. And this libel is all the more unpardonable because Marie St. Clare is represented as a member of a Christian Church, uniting with becoming propriety in all the observances of religion—whereby Mrs. Stowe seeks to bring into contempt the entire communion of the Southern States. We have no words to express our scorn of such an effort, and therefore we proceed to say that this pious widow sets at naught her husband's already-begun proceedings with regard to Uncle Tom and sells him—conduct of which not one Southern lady of a thousand would be guilty, but in perfect consistency with Marie's natural disposition and altogether necessary to the dreadful *denouement* Mrs. Stowe has in store for us.

Behold Uncle Tom now the property of Simon Legree, a Red River planter. And here we may stop a moment to perform an act of justice to Mrs. Stowe in saying that she has transcended all delineations of the scoundrel that have yet fallen under our notice, in this head-devil of her story. Legree is a darker, a more perfect, a more consistent, a more symmetrical piece of diabolism than the literature of any language within the limited sphere of our knowledge can furnish. Ogle in the reeking couplets of Dryden—*Jean qui rit*, the laughing executioner of Louis XI., who found it such capital sport to chop heads off before breakfast—the worst fiends of the Italian poets—Rhadamanthus, in the gloomy shades, punishing first and trying afterwards—Tiberius in the debasement of Caprea—all these bad characters, historical and imaginary, by throwing their blackest traits into a joint stock and presenting them in one master-piece of associated deformity, could not have made up such a *mauvais sujet* as our friend Simon. And if "Uncle Tom's Cabin" is remarkable in no other respect, it is certainly entitled to the praise of giving the world assurance of a villain.

Legree carries Uncle Tom in fetters to the plantation, and from their arrival at that pleasant retreat, the Iliad of Uncle Tom's woes becomes a darker and more painful story until the final scene of all. He is beaten almost every day, for the sole reason that he does not deserve it. He does more than his share of work, and is flogged for that. He will not cry aloud under his sufferings, nor upbraid his persecutor, and this is considered sufficient cause for additional stripes. He refuses to lash his fellow-servants, and the fury of Legree becomes ungovernable. Let it be remembered that Uncle Tom's excellences as a "hand" had been early noticed by his master, who hoped to make him one of the most profitable slaves upon his estate. As a matter of self interest, therefore, it would seem that Legree ought to treat Uncle Tom well. But his cupidity is no match for his cruelty. One day in a frenzy of rage he scourges Uncle Tom beyond the point of human endurance, and the poor, submissive, heroic negro sinks upon his wretched pullet, never to rise from it again. By many persons who regard this novel as a tissue of falsehoods, this shocking act of barbarity will be considered improbable. We confess, however, that to us, Mrs. Stowe seems for once to have kept within the strict limits of *vraisemblance*. For the reader must bear in mind that Simon Legree had not been brought up in a slaveholding community, and had therefore no acquaintance with the negro character, no sympathy with their peculiar traits, no aptitude for their government. Mrs. Stowe tells us that

"In early childhood, a fair-haired woman had led him, at the sound of Sabbath bell, to worship and to pray."

Far in New England that mother had trained her only son, with long unwearied love, and patient prayers."

Now, it is well known in the Southern States that of all tyrants in the world, a New England slave-driver is the most cruel and remorseless. We mean not, in saying this, to reflect upon our brethren of the Northern States, nor will we imitate our authoress by holding up Legree generically as a fair representative of the New England master. But no one who has studied the institution of slavery, can have failed to observe that in a majority of cases, New England slaveholders err, in the management of negroes, in one or the other of two ways—either by indulging them to an extent which puts all subordination out of the question, or by holding over them a rod of iron. The kind-hearted Northern man will never be able to overcome a certain and very natural repugnance to the use of the lash, and so his slaves will do just as they please. The New Englander of less sensibility soon learns how to lay it on, and enforces a discipline the rigor of which exceeds any thing known upon the plantations of Southerners. Much of the odium with which slavery is regarded abroad, is due to the cruelty of New England masters like Legree, and but for the salutary operation of such laws, as we have adduced for the negro's protection, scenes, similar to the "martyrdom" of Uncle Tom, might be more frequent than we are glad to know they now are. The greater humanity of Southern men in the administration of corporal punishment is attested by a Northern writer who brought forth, two years ago, a volume, the object of which was the abolition of flogging in the Navy. He says,

"It is a thing that American man-of-war's men have often observed, that the Lieutenants from the Southern States, the descendants of the old Virginians, are much less severe, and much more gentle and gentlemanly in command, than the Northern officers, as a class."

While Uncle Tom is in the very article of death, but still in the full possession of his faculties, young George Shelby, mindful of his promise to redeem the old manager of the estate at home, arrives at Legree's. An affecting scene occurs between them, marked by the noblest submission on the part of Uncle Tom, and an honest indignation on the part of the generous Kentuckian. It was indeed enough to rouse the blood of the young man—this atrocious murder of his dearly-loved and long-tried negro servant and friend, the grown-up companion of his boyish sports. He seeks Legree, and we are prepared to expect that he will visit summarily upon the head of that miscreant the just retribution of his crime. Mrs. Stowe works us up for something dreadful. Legree speaks to George in an insulting tone. "The word was as a spark to a powder-magazine," and when a spark is communicated to a powder-magazine we naturally look out for a "general burst up." But what does the reader suppose to be the conduct of this "Kentucky boy" to whom "prudence was never a cardinal virtue?" "With one indignant blow," he knocks Legree, (not "into a cocked hat" but) "flat on his face!" Shade of Nemesis, what an expiation was there! Why Simeon Halliday himself, that drab-coated member of the Society of Friends, to whom we were introduced in the first volume as the whilome protector of Eliza, would have done something more to the purpose. The scene is a shocking anti-climax. If our authoress did not intend gratifying us with "justifiable homicide" why should she take such especial pains to make us anticipate it? As it is, we feel like the crowd at Tyburn when there came a reprieve of the highway-

man—we have been swindled out of an indefeasible, though not, perhaps, wholesome, excitement.

We must go back a little here, in order to get at the end of the story understandingly, for the purpose of introducing a character whom Uncle Tom found at Legree's plantation on his first arrival there, and with whose antecedents is connected the only thing like plot in the whole novel. This is a quadroon woman called Cassy. Her life has been a life of shame and suffering. The child of a slave woman and a wealthy proprietor, she had been nursed in the lap of luxury, and sent, at a proper age, to a convent, where she acquired music, French, embroidery and other accomplishments. When she was fourteen years of age, her father died suddenly of Asiatic Cholera, and Cassy was set down in the inventory of his property. The lawyer who came to settle up the estate was a handsome young man, and Cassy fell in love with him. In turn he seemed fascinated with her, and Cassy was not sorry to learn that she was to become his property. He soon placed her in a "beautiful house with servants, horses and carriages, and furniture, and dresses." Some years passed away, and Cassy was the mother of two lovely and interesting children. Up to this time, her master had lavished upon her every proof of affection but one—the marriage vow. But things changed, and Cassy was sold with her children, to clear off the gambling debts of her owner. The purchaser did not long retain his newly acquired property. Cassy passed into the possession of Simon Legree; her children, a boy and a girl, both of tender years, went off with new masters, she knew not whither.

Just before Uncle Tom was whipped to death, Cassy had projected a plan of escape with Emmeline, another quadroon inmate of Legree's household, and it was in connection with their disappearance that Uncle Tom suffered. The plan is successful. Cassy disguised as a Spanish Donna with Emmeline as her maid servant, having helped themselves freely to Legree's money before going off, reach in safety a Mississippi steamboat, the same in which George Shelby embarks on his return to Kentucky. George is struck with Cassy's appearance and pays her some attentions. Cassy, becoming uneasy at the close observation with which he regards her, confides to him the whole story of the escape, and receives from him the assurance of his protection. On the boat, occupying the next state-room to Cassy, is a very beautiful woman, one Madame de Thoux. Hearing that George Shelby is from Kentucky, she makes inquiries of him concerning George Harris, and being told of his flight to Canada, exclaims with fervor "Thank God!" She then explains that George Harris is her brother, that she had been purchased many years before by a West Indian planter who had emancipated and married her, that her husband had lately died and that she was now on her way to Kentucky for the purpose of setting George at liberty. We shall not stop to comment on this string of unnatural incidents, for something stranger is about to transpire. George Shelby in speaking of George Harris mentions his marriage with Eliza. We quote the rest of the conversation—

"Was she born in your house?" said Madame de Thoux.

"No. Father bought her once, in one of his trips to New Orleans, and brought her up as a present to mother. She was about eight or nine years old, then. Father would never tell mother what he gave for her; but, the other day, in looking over his old papers, we came across the bill of sale. He paid an extravagant sum for her, to be sure. I suppose, on account of her extraordinary beauty."

* Herman's Melville's *White Jacket or the World in a Man-of-War*. P. 169.

"George sat with his back to Cassy, and did not see the absorbed expression of her countenance, as he was giving these details.

"At this point in the story, she touched his arm, and, with a face perfectly white with interest, said, 'Do you know the names of the people he bought her of?'

"A man of the name of Simmons, I think, was the principal in the transaction. At least, I think that was the name on the bill of sale."

"O, my God!" said Cassy, and fell insensible on the floor of the cabin."

Of course Eliza turns out to be Cassy's child and we are soon entertained with the family meeting in Montreal, where George Harris is living, five or six years after the opening of the story, in great comfort.

Now, the reader will perhaps be surprised to know that such an incident as the sale of Cassy apart from Eliza, upon which the whole interest of the foregoing narrative hinges, never could have taken place in Louisiana, and that the bill of sale for Eliza would not have been worth the paper it was written on. Observe. George Shelby states that Eliza was *eight or nine years old* at the time his father purchased her in New Orleans. Let us again look at the statute book of Louisiana.

In the *Code Noir* we find it set down that

"Every person is expressly prohibited from selling separately from their mothers, *the children who shall not have attained the full age of ten years.*"

And this humane provision is strengthened by a statute, one clause of which runs as follows—

"Be it further enacted, That if any person or persons shall sell the mother of any slave child or children *under the age of ten years separate from said child or children, or shall, the mother living, sell any slave child or children of ten years of age or under, separate from said mother,* such person or persons shall incur the penalty of the sixth section of this act."

This penalty is a fine of not less than One Thousand nor more than Two Thousand Dollars, and imprisonment in the public jail for a period of not less than six months nor more than one year. *Vide Acts of Louisiana, 1 Session, 9th Legislature, 1828-9, No. 24, Section 16.*

What will be said now of the story of Cassy and her children? Really Mrs. Stowe should be more cautious in the construction of her works of fiction. And yet we know not but the fancy-sketch of the separation and the reunion was the best *finale* "Uncle Tom's Cabin" could have had. There is a fitness, a sort of epic unity in making a book of the most absurd *improbabilities* wind up in an *impossibility* that we can not think open to criticism.

We have devoted a much larger space to the plot of "Uncle Tom's Cabin" than we designed, when we commenced this review; it only remains for us to consider briefly those points upon which the authoress rests her abuse of the Southern States, in the book as a whole. These may be reduced to three—the cruel treatment of the slaves, their lack of religious instruction, and a wanton disregard of the sacred ties of consanguinity in selling members of the same family apart from each other.

We have already shown, by a reference to the laws regulating slavery in the Southern States, that many of the allegations of cruelty towards the slaves, brought forward by Mrs. Stowe, are absolutely and unqualifiedly false. As for the comfort of their daily lives and the almost parental care taken of them on well-regulated plantations, we may say that the picture of the Shelby estate, drawn by Mrs. Stowe herself, is no bad representation. The world may safely be challenged to produce a laboring

class, whose regular toil is rewarded with more of the substantial comforts of life than the negroes of the South. The "property interest" at which the authoress sneers so frequently in "Uncle Tom's Cabin," is quite sufficient to ensure for the negro a kindness and attention, which the day-laborer in New England might in vain endeavor to win from his employer. But we surely need not elaborate a point which has been settled so well by Southern writers before us.

The lack of religious instruction for slaves is a charge against the South, in great favor with Northern fanatics, many of whom are deplorably in want of "religious instruction" themselves, and vastly beneath the pious slave in that love for their neighbour which is the keystone of the Christian arch. Yet never was there a charge more extravagant. We can tell these worthies that throughout the Southern States a portion of every house of worship is set apart for the accommodation of slaves; that upon very many plantations, may be seen rude but comfortable buildings, dedicated to God, where stated preaching of His Holy Word is ordained; that Sabbath schools for negroes are established in several of the Southern cities; and that in every Southern family, almost without an exception, where morning and evening prayers are held, the domestics of the household are called together to unite in them. Instances of fervent and unaffected piety among the negroes, where they have not been tampered with by Abolitionists, are by no means rare. The entire absence of anxiety of mind, with the negro, arising from the perplexities of business and the lack of employment, and the practice, habitual to him from his birth, of resigning all care for the morrow to his master, are favorable to the reception of religious truth, and we believe that statistics would show a larger proportion of professing Christians among the negroes than among the whites. Writers like Mrs. Stowe, in treating of this subject, assume that there can be no acquaintance with gospel truth among a class who are not permitted to learn to read. But how many of the early Christians were ignorant and illiterate persons? The fishermen of Galilee were men without instruction when they first followed the fortunes of the lowly Nazarene. As for Mrs. Stowe, she is answered upon this point in her own pages. Uncle Tom was no scholar, and after many years of diligent application could at last read his bible with difficulty. Yet where shall we find a nobler and purer exemplification of the "beauty of holiness" than in him? It is, indeed, a triumphant vindication of the institution of slavery against Mrs. Stowe's assaults, that in a slaveholding community, a character so perfect as "Uncle Tom" could be produced. We have, it is true, intimated that "Uncle Tom" is somewhat overdrawn, not one dash of human frailty entering into his composition. Yet making due allowance for this, and relying solely upon his biblical lore, we may take "Uncle Tom" and deny, in the face of New England that there can be any serious lack of religious instruction in a society of which he was a member. Mrs. Stowe is, we believe, peculiarly favored in the way of spiritual advantages. Daughter of one clergyman, wife of another and sister to a third, she is redolent of the "odor of sanctity." Yet for ourselves we would not exchange Uncle Tom's unlettered, but trustful and unpretending piety for the erudite godliness of the Rev. Henry Ward Beecher, who can read his *ἐν ἀρχῇ ἦν ὁ λόγος* in the original Greek, or the intellectual devotion of his worthy sister, who can "make a story-book," as the children say, "all out of her own head."

The sundering of family ties among the negroes is undoubtedly a dreadful thing as represented by Abolition pamphleteers. Nor have we any desire to close our eyes to the fact that occasionally there do occur instances of

compulsory separation involving peculiar hardship. But we have shown that in the very State which Mrs. Stowe has chosen for her most painful incident of this character, there are statutory regulations mitigating very much the severity of this condition of affairs, and we may add that every where the salutary influence of an enlightened public opinion enforces the sale of near relatives in such manner as that they may be kept as much as possible together. We are of opinion too that heart-rending separations are much less frequent under the institution of slavery than in countries where poverty rules the working classes with despotic sway. But admit the hardship to its full extent, and what does it prove? Evils are inseparable from all forms of society and this giant evil (if you will call it so) is more than counterbalanced by the advantages the negro enjoys. Ever since the day that St. Paul bade adieu to the little flock at Miletum, who followed him down to the ship, "sorrowing most of all for the words which he spake, that they should see his face no more"—there have been mournful partings and sobbing farewells. The English soldier ordered to the distant coast of India, with a high probability that he will die there of a fever, weeps above his wife and children before he marches off to the tap of the drum; and yet is no argument for the disbanding of the English army that family ties are rent by its stern and indiscriminating discipline.

There are some who will think we have taken upon ourselves an unnecessary trouble in exposing the inconsistencies and false assertions of "Uncle Tom's Cabin." It is urged by such persons that in devoting so much attention to Abolition attacks we give them an importance to which they are not entitled. This may be true in general. But let it be borne in mind that this slanderous work has found its way to every section of our country, and has crossed the water to Great Britain, filling the minds of all who know nothing of slavery with hatred for that institution and those who uphold it. Justice to ourselves would seem to demand that it should not be suffered to circulate longer without the brand of falsehood upon it. Let it be recollected, too, that the importance Mrs. Stowe will derive from Southern criticism will be one of infamy. Indeed she is only entitled to criticism at all, as the mouthpiece of a large and dangerous faction which if we do not put down with the pen, we may be compelled one day (God grant that day may never come!) to repel with the bayonet. There are questions that underlie the story of "Uncle Tom's Cabin" of far deeper significance than any mere false coloring of Southern society, and our readers will probably see the work discussed, in other points of view, in the next number of the *Messenger*, by a far abler and more scholar-like hand than our own. Our editorial task is now ended and in dismissing the disagreeable subject, we beg to make a single suggestion to Mrs. Stowe—that, as she is fond of referring to the bible, she will turn over, before writing her next work of fiction, to the twentieth chapter of Exodus and there read these words—"THOU SHALT NOT BEAR FALSE WITNESS AGAINST THY NEIGHBOUR."

We are indebted to Messrs. Bangs, Bros. & Co., of New York, the American agents of the London publisher, Mr. Bohn, for a package of valuable works sent through A. Morris of this city. These works belong to the *Standard*, *Classical* and *Illustrated Libraries*, so well known to the American public. Among them is a most acceptable collection of the *Dramatic Works of SHERIDAN*, with a life of that brilliant man, who shone with so dazzling a lustre in every walk of literature. Of the more

remarkable of these plays—"The School for Scandal," "The Rivals," and "The Critic," we need say nothing, for the reason that their dazzling fence of wit and repartee, their exquisitely comic situations and their stinging satire are familiar to all readers of English literature. The comic opera of "The Duenna," "The Trip to Scarborough" and "Pizarro"—that commonplace book of theatrical invective into which he threw much of the frenzy of the unreported speech in the case of the Begums—are less read and represented; yet the reader will find in them much of that pointed epigram which was Sheridan's characteristic above all men of the age. Indeed we are not certain but we prefer the Duenna as matter for pleasant reading to anything Sheridan ever wrote. As a literary performance it is more perfect than the Rivals, and though the wit is not so refined as that of the School for Scandal, it affects us more instantaneously. The allusion to Isaac, who has abjured the Jewish faith and "has not had time to get a new one," as standing "like a dead wall between church and synagogue, or like the blank leaves between the Old and New Testaments," is as good as the very best stroke of pleasantry in which Sheridan ever indulged.

Mr. Bohn has done well in issuing a new and popular edition of "*White's Selborne*." It has been many years since we first encountered this most charming volume, but we well recollect with what eager interest we perused it. The narrative of a humble lover of nature and outdoor naturalist, it serves the useful purpose of showing what resources of rational enjoyment we have in the observation of the world around us, in whatever region our lot may be cast. The sketch of the venerable and benevolent White, prefixed to this volume, is from the pen of *Edward Jesse, Esq.*, himself no undistinguished follower in the paths of Natural History. As the volume belongs to the Illustrated Library, it is profusely embellished with the best wood-engravings.

"*Rome in the Nineteenth Century*" is the title of another work of the Illustrated Library, in two handsome volumes. The engravings are of steel, and are really very beautiful. It is a sort of better-class guide book to the works of art, the ruins, the churches and hallowed spots of the Eternal City, the first edition of which was published thirty years ago. As little change has occurred, in the mean time, in the general appearance of Rome, the more especially as the paintings and statues remain where they were in 1820, the book has been thought worthy of republication. We think it likely to meet with popular favor.

We have also volumes II and III of the excellent translation of *Cicero's Orations*, the first volume of which appeared some time since. The same fidelity to the original which has characterized the entire series of Bohn's Classical Library will be found in this edition of Cicero. One more volume will complete the work. The translator is C. D. Yonge, B. A.

One of the latest of Bohn's publications is *Neander's Memorials of Christian Life*—a book which will be hailed with great satisfaction by the religious world. These sketches relate to the missionary history of the Middle Ages, and form an appropriate companion to the Life of Christ by the same author.

The Messrs. Bangs are also agents for other publishing houses of London, and hold out to book collectors in this country very flattering inducements to stock their shelves with useful and entertaining works in choice and elegant editions. Our city readers will find a large assortment of them at the bookstore of A. Morris, 97 Main Street.

ANGLO-AMERICAN LITERATURE AND MANNERS. *From the French of PHILARÈTE CHASLES*, Professor in the College of France. New York: Charles Scribner, 145 Nassau Street. 1852. [From J. W. Randolph, 121, Main Street.

M. Philarète Chasles has been for years one of the most prominent contributors to the *Revue des deux Mondes* and other of the more important literary journals of France, and has exhibited a larger and juster acquaintance with the genius and institutions of our country than any of his *confrères*. We recollect that the earliest recognition of the literary merits of Poe, across the water, came from his pen. In the present work, M. Chasles' abilities as a critic are conspicuously displayed in a survey (neither very extended or minute, it is true) of what the American intellect has produced. As presenting us with the opinions of a thoughtful and educated Frenchman, the book is an interesting one. The translation is easy and elegant, and bears marks of fidelity. In typography and externals the volume is one of the handsomest ever issued from the press of Mr. Scribner.

SPIERS AND SURENNE'S FRENCH AND ENGLISH PRONOUNCING DICTIONARY. By A. Spiers, Professor of English at the National College of Bonaparte (Paris) and the National School of Civil Engineers, etc. Carefully revised, Corrected and Enlarged, &c. &c. By G. P. Quackenbos, A. M. New York: D. Appleton & Company, 200 Broadway. 1852. [From Nash & Woodhouse, 139 Main Street.

The lexicographer, of all makers of books, has before him the dreariest and most difficult task-work, and must be content with the smallest returns in the way of appreciation of his labors. If his volume is a good one, we accept it as useful to us, without reflecting upon the debt of gratitude we owe to the compiler, or the vast amount of patient effort and of learned discrimination too, involved in the compilation. If it turns out a bad one, if we are led astray by it as to a single word, we cuff the responsible party without mercy. Now we think for the Dictionary before us too much praise can hardly be awarded, first to Mr. Spiers for having executed the original work, secondly to the American Editor for the valuable service he has rendered in combining with it the accurate system of pronunciation of Surenne, and thirdly, to the Appletons for their enterprise in bringing out the whole in so excellent a form. Indeed the volume is just what is wanted by scholars and literary men throughout the country, and will supersede at once upon their shelves the antiquated lexicons of Boyer and Chambaud.

PLANTATION AND FARM Instruction, Regulation, Record, Inventory and Account Book. *For the use of Managers on Estates.* By a SOUTHERN PLANTER. Richmond, Virginia; J. W. Randolph, 121 Main Street. 1852.

A friend, in whose judgment we have great confidence, and who is one of the best farmers in Virginia, assures us that this publication is one of real value to Southern agriculturists. As there is a wide field before it, the publisher ought therefore to expect for it a large circulation. To such of our readers as may not have an opportunity of examining the book, we may say that it contains formulas for a daily record of plantation work; for an in-

ventory of negroes with the quantity of clothing, tools and medicines given them, and a register of their births, deaths and marriages; for a list of stock; for a statement of produce made by the proprietor, &c., &c.,—to all of which are prefixed some useful hints to overseers as to plantation management. The book is well gotten up and is offered at a very moderate price.

THE LIFE AND WORKS OF ROBERT BURNS. *Edited by Robert Chambers.* In Four Volumes. Vol III. New York: Harper & Brothers. 1852. [From A. Morris, 97 Main Street.

We have already adverted, on the appearance of the previous volumes, to the peculiar feature of this edition of Burns—the interspersing of the poems throughout the biography in the order of their composition. The present volume is a charming one, containing, as it does, many of the sweetest of the Scottish bard's effusions and some of the most interesting incidents of his life.

ANNA HAMMER; A Tale of Contemporary German Life. *Translated from the German of Temme.* By Alfred H. Guernsey. New York: Harper & Brothers, Franklin Square. 1852. [From A. Morris, 97 Main Street.

Temme, the author of this work, bore a conspicuous part in the attempt made in 1848 at a German Union. He is evidently without much experience as a writer of fiction, and the "Tale" before us, considered as a dramatic performance, is entitled to no high praise. But as a series of descriptive sketches forcibly illustrating the unhappy condition of the German States, and setting forth, in a strong light, the tyranny of the petty monarchs who rule the German people, it will be read with great interest. We cannot wonder, after reading "Anna Hammer," that so many thousands of Germans are annually flocking to the shores of America.

EVENINGS AT DONALDSON MANOR, or, The Christmas Guest. By Maria J. McIntosh, author of the "Two Lives," etc. New York: D. Appleton & Company, 200 Broadway, and 16 Little Britain, London. 1853. [From Nash & Woodhouse, 139 Main Street.

Apropos of the approach of the holiday season, the Appletons have put forth a new revised edition of this pleasant little Christmas volume. It is one of those healthful and cheerful works of the imagination, which delight us with their pleasantry and improve us by their moral tone, and of which we can never have too many.

PIONEER WOMEN OF THE WEST. By Mrs. Ellet. Author of "The Women of the American Revolution," etc. New York: Charles Scribner, 145 Nassau Street. 1852. [From J. W. Randolph, 121 Main Street.

Mrs. Ellet's former volumes of female biography were received with great favor in all parts of the country. The present work will be found, in no degree, inferior to them, and possesses, perhaps, a more direct interest from the fact that it refers to a period within the memory of many now living. The trials and experiences of those heroic women who first braved the dangers of our frontier coun-

try, their social habitudes and primitive enjoyments are narrated by Mrs. Ellet with rare fidelity and spirit. A woman alone could have produced such a volume, for we recognize in a thousand little delicate touches of the writer, a sympathy with the peculiar embarrassments of the subjects of the narrative quite foreign to the male character. Mr. Scribner has given us the "Pioneer Women of the West" in his best style of publication.

From Messrs. Nash & Woodhouse, the Richmond agents, we have received the *Edinburgh* and *North British Reviews* for the summer quarter, and *Blackwood's Magazine* for September. The *Edinburgh* contains some strong articles, mostly on topics of local interest, but is not we think as pleasant reading as usual. The paper on Piedmont though short, is an acceptable sketch of the present condition of that unhappy country. The *North British* opens with a fine article on Jeffrey, which is well followed up by some literary recreations in Ornithology. The critique on American Poetry is beyond all question the most stupid thing we have ever seen in this journal, and seems to us to be wrong in every conclusion at which it arrives, save in the estimate it places on Poe's Raven. The 'learned Thebau' who writes the article concludes with laying down certain rules for the benefit of American poets, for which no doubt this large class will send him a vote of thanks. *Blackwood* is delightful. It too contains a review of Lord Cockburn's Life of Jeffrey, with a continuation of "Katie Stewart," and another instalment of 'My Novel.' We wish Bulwer could rewrite this twelfth book of Plaisistratus Caxton's exquisite story, and strike out all that melodramatic nonsense of the Count Peschiera's midnight villainy, which seems very much out of its latitude on the Thames. It reminds us too much of his earlier works to appear consistent with the foregoing chapters of 'My Novel,' which we had confidently expected would prove altogether the finest production of his genius. We subjoin for the benefit of such of our readers as may desire to get either of these works, a list of the rates of subscription—

TERMS.—Payment to be made in Advance.

For any one of the four Reviews,	-	\$3 00	per ann.
For any two do	-	5 00	"
For any three do	-	7 00	"
For all four of the Reviews,	-	8 00	"
For Blackwood's Magazine,	-	3 00	"
For Blackwood and three Reviews,	-	9 00	"
For Blackwood and the four Reviews,	-	10 00	"

The office of publication is at 79 Fulton St. New York, (Leonard, Scott & Co.,) but any or all of the works can be supplied by Nash & Woodhouse of this city.

Mr. B. F. Griffin of Macon, Georgia, is engaged in an enterprise which deserves the support of the whole South—the publication of Southern School Books. A package of these is now before us consisting of "The Apalachian Primer," "The Apalachian Reader," Nos. 1, 2, and 3. "The Southern Orator" and Griffin's "History of the United States." We have looked over with some care and can safely recommend them to the use of Southern teachers. It has too long been a habit with us to rely upon New England writers and publishers for such books, and in this manner rudimentary volumes filled with mischievous and covert assaults upon slavery have been placed in the hands of Southern children at an age when

their minds are most easily impressed. Mr. Griffin's publications of course are free from such objections and are exactly what is wanted. Mr. O. P. Fitzgerald, the General Agent for their sale is now in Virginia, and we hope he will meet with general encouragement at the hands of our teachers.

We feel great pride in referring to the brilliant success which has attended the work of a Southern artist, Mr. T. B. Welch of South Carolina, in giving the public by far the handsomest steel engraving ever issued of George Washington. It is a copy of the head and bust from Stuart's only original portrait in the Athenæum at Boston, and was engraved, under the immediate superintendence of Thomas Sully, the eminent painter of Philadelphia. Mr. Robert King of New Orleans, the sole agent for Virginia and the District of Columbia, has placed in our hands a number of the highest testimonials to the beauty and excellence of the work, among which are letters from Mr. Sergeant Talfourd and Alison, the historian, but we confess the most interesting of the collection, to us at least, is one from the venerable George W. P. Custis of Arlington. After attesting the accuracy of the likeness, (and Mr. Custis's testimony is worth more upon this point than that of any other living man,) he gives the following account of Stuart's picture—"The splendid original from which your engraving has been taken, should of right, rather have adorned the walls of Arlington House among the other *Washington Treasures*, than the walls of the Athenæum in Boston. The history of the painting is simply this: it was painted for Mrs. Washington. After the sittings for the picture for the Marquis of Lansdowne, the Chief declared he would sit no more for any one. Mrs. Washington, desirous of having an original by Stuart, to place among the family pictures at Mt. Vernon, entreated the Chief to sit once more for her, Stuart being desirous of painting another original with a view to some improvements. The bargain was concluded, Stuart was to make certain copies and then the last original was to have been handed over to Mrs. Washington. On the death of the Chief, Mrs. W. applied for the picture, both by letter and through the good offices of gentlemen then near the residence of the artist. On the death of the venerable Lady, she bequeathed all the Family Pictures to me; I wrote to Stuart and offered a price to be paid for the original, although it was to have been the property of Mrs. Washington "without money and without price." All efforts of all parties failed. Stuart died, and the original, that should have been mine, was sold by his heirs to the Boston Athenæum."

Mr. King, the Virginia agent, is now in Richmond and is prepared to fill all orders that may be given for the engraving, either with or without the frame, as may be preferred.

Our pleasant and excellent contemporary, the *Knickerbocker* of New York, continues to pay us agreeable visits. The Editorial "gossip" is quite as racy as ever.

The Literary World also comes to us with the most satisfactory regularity, filled with elegant and pointed criticism, and fully "posted up" as to all the latest items of literary intelligence.

Notices of many new works and collegiate addresses are unavoidably deferred till the next number of the *Messenger* from want of room.

RICHMOND, NOVEMBER, 1852.

NO. 11.

Notes and Commentaries, on a Voyage to China.

CHAPTER XIV.

Campo da Acclamação; Fountain; Vaccine Institute; A Bachelor's Country Lodge; Costume; Reception of American Minister Afloat; Assimilated rank conferred on Citizens; Privilege of the starboard side illustrated by an old Anecdote; General notions about the position of Assistant Surgeons in the Navy; The good of the Service; Nautical nomenclature; Officers proper; Line and Staff; Sea-officers; Idlers; Non-combatants; Civil Officers.

Tuesday May 9th.—Set out about noon with two friends to visit a valetudinary who is sojourning about five miles out of town. We drove through the city across the Campo da Acclamação to a road which leads to the palace of San Cristavão, or Boa Vista, the residence of the Emperor, which is about four miles from the Campo; it is represented to be in all respects a delightful spot. It was presented by a private citizen to King John VI., the grandfather of Dom Pedro II., the present occupant.

This Field of Acclamation was originally called Campo de Santa Anna, and probably acquired a new title from being the site of popular demonstrations on various great national occasions, including the acclamation of Dom Pedro I., on the 12th of October, 1822, when, it is said, a hundred thousand people were assembled in it.

This Campo da Acclamação, or as it is also called, Campo da Honra, is an irregular, oblong quadrangle, of considerable extent, and is by far the largest public square in the city. It lies between the old and newer parts of the town. On one side the Senate House stands conspicuously, though it has no architectural pretensions to consideration, being a plain edifice of two stories. The square boasts a fountain surrounded by eight columns, which support lamps for its illumination at night; the water flows constantly into two large stone basins or reservoirs which are used in common, as lavatories by scores of black laundry damsels, whose voices are generally heard at a distance, above the splash and crack of the linen garments wherewith they

thresh the stony margin of the cisterns, under the pretext of making them clean. The cheerful voice and merry laugh constitute a tolerably sure sign that working people are inwardly content, for your habitually hungry folks are habitually strangers to mirthfulness.

The "Camara Municipal," that is, the chambers or offices of the city authorities; the National Museum, and the Vaccine Institute, devised (and ably sustained) to extend gratuitously the vaccine protection against small-pox, are also on this square. Twenty years ago it was not uncommon to encounter slaves and others lounging about the streets, covered in the eruption of small-pox. Unprotected persons were thus constantly exposed to the contagion of this loathsome malady.

After pursuing the Boa Vista road for a mile, we turned to the left, and then to the right towards Tejuco, a peak three thousand feet high. A ride of five or six miles brought us into an amphitheatre of green clad hills. We alighted at a house, built on a gentle elevation almost at the bottom of the earthy basin; and in all directions from this point the eye met lovely and picturesque views. The bright tropical foliage, and the numerous white villas contrasting with it, conspire, under the influence of a clear blue sky and delicious air, to delight the senses. The house is a one story cottage-like structure with high steps, surrounded by a broad piazza, furnished with swinging hammocks and comfortable arm chairs. The rooms are large and the ceilings lofty; and their number is sufficient to lodge quite a numerous family. It is occupied by an American gentleman who is seeking to improve his worldly estate by labor in some branch of Brazilian commerce. From eight o'clock in the morning until four in the afternoon, he is at the counting house or "on change;" but the rest of the twenty-four hours, except only the time on the road back and forth, are passed at this retreat, amidst most enchanting scenery and beautiful flowers. These are bachelor quarters, where one is free to enjoy that robe-de-chambre-and-embroidered-slipper sort of life, which natives of temperate regions are disposed to find agreeable in the torrid zone. Very hot weather forbids an easy and contented observance of the rules of costume which prevail in high latitudes; and nothing but the presence of ladies can render broad cloth coats and leather boots bearable in

the vicinity of the equator, where most persons sigh for

"Very thin clothing and but little of it."

A round jacket of linen instead of a coat; a ribbon around the neck instead of a cravat or stock, and light pumps or slippers in place of boots, are in accordance with comfort; and they would be in accordance with taste also, were it not for the arbitrary rules of the jade Fashion, who has doubtlessly been influenced by her sex to favor the ladies in her legislative acts. Why such articles of attire should be, under her rule, immodest or unfit envelopes of gentlemen when ladies are present on hot days, I do not know; nor do I understand that conventional contradiction, which makes the fulness of female costume proportionate to the extent of surface—trunk and extremities—left unscreened from the gaze and admiration of the public. I desire not to be misunderstood; I admire that fashion of full-dress, although I do not perceive why Fashion should permit womankind to enjoy its provisions for coolness in hot climates, while she insists upon covering mankind to the chin in artificial fabrics of wool, and at the same time encourages a natural growth to hide the mouth and cheeks.

At this bachelor retreat, we found full preparation for a bachelor welcome and hospitality. The whole menage seemed to be carefully conducted with a view to a tranquil enjoyment of life; and, although ladies may doubt the statement, I do not hesitate to say perfect cleanliness and order everywhere prevailed. Our valetudinary friend received us, and in the absence of the proprietor, "did the honors" of the establishment.

We dined and returned to the ship before the evening gun was fired.

May 10th.—The American Minister dined to-day with the Commodore on board of the flagship. A salute of seventeen guns and the usual military ceremonies marked the reception of the distinguished civil officer. According to technical meaning the person whose presence is recognised by such formalities, possesses a military rank, either lineal, relative or assimilated. In the case of Consuls, Ministers and diplomatic agents of various grades, these ceremonies are graduated according to an assumed or an established assimilated rank, which carries with it, however, no authority to command. Though a minister plenipotentiary should be received on board one of our public ships with all the formalities which mark the reception of an admiral, and thus he should be acknowledged to possess assimilated rank with admirals, he does not possess any authority or right to command as an admiral in the military or naval community. It is simply the military mode of extending courtesy,

of showing respect to persons who merit distinguished consideration, either through their official position as civilians or through their public virtues. The reception of men distinguished as philosophers, as poets, as literary men, and as statesmen, though at the time they held no office, either civil or military, has been accompanied by the observance of military formalities in a degree proportionate to their standing as estimated by the officer in command. There is no military law or usage which confines these formalities exclusively to officers of the line in military organizations. It is, however, believed by very many, both in the army and navy, that line officers are reluctant to admit that staff-officers should be entitled to an assimilated rank, and consequently to the military honors which inure to it. Within ten years, assistant surgeons, who have always held commissions sanctioned by the Senate of the United States, which may be taken as an indication of the estimation of the office by the government, entered and left American ships of war almost without any military observance, except that they were in many instances required to go and come by the "larboard" or "port" side, which was common to the "forward" officers, privates and servants; and any attempt to compel any commissioned officer of the line to pass in or out of a man-of-war at anchor by that side, would be resented as an invasion of his official dignity, and possibly characterized as an act of cruelty or oppression. Those who aspired to the character of exact disciplinarians, were punctilious on this, and regarded it as including a point of honor. When certain young officers of the medical corps found they were officially forbid the use of the starboard gangway, and were sometimes reminded that the starboard side of the quarter deck pertained, as a promenade, to officers of the cabin and ward-room messes exclusively, and while any of those were present upon it, that they could be there only by the sufferance or courtesy of men whose commissions or patents of authority were, verbally and literally the same as their own, they felt their self-respect and pride were outraged, and they were socially degraded far below the point to which their office, profession, and intelligence entitled them. They felt positively sure that neither the public interests nor the discipline, nor the subordination, nor the common happiness of the ship's company, could be advanced, either separately or conjointly, as sufficient reasons for insisting that assistant surgeons should not be as free to use the starboard gangway and the starboard side of the quarter-deck, as any other officers holding commissions in the navy, whether in the line or in any of the staff departments. They could not estimate themselves to be either soci-

ally, or educationally, or professionally the inferiors of any gentleman; but they did not for an instant imagine they were not to be officially subordinate, and at all times cheerfully respectful to the legitimate authority, and obedient to the lawful orders of the commander of the ship, or to the lawful orders of surgeons with whom they were associated.

The assistant surgeons of the time in question, could not be prevailed upon to admit that the arbitrary rule of military etiquette, which excluded them from the use of the starboard gangway, and of the starboard side of the quarter-deck, when any member of the cabin or ward-room messes was upon it, was founded in reason. Whenever they demanded why they were compelled to pass in and out of the ship by the "port" gangway with servants, privates "forward" and "warrant" officers, the answer was always, "Because you do not mess in the ward-room," which was equivalent to saying, Because you do not inhabit a fashionable or aristocratic quarter in the community. This argument was not satisfactory, because they observed almost daily, that commissioned officers of the line conferred a sort of ephemeral, assimilated rank, on gentlemen who belonged to no military community whatever, by receiving their citizen friends, merchants and others from the shore, at the starboard gangway, with the military ceremonies, which are commonly assigned to lieutenants of the line. They observed too, that assistant surgeons were always welcome guests in the ward-room and in the cabin, and in very many instances, they were the constant and intimate companions or friends of those very gentlemen of the line who were the most stubborn observers of the rule of etiquette, which had become offensive. Therefore, they could not reasonably suppose the application of the rule was made through personal or social prejudices.

Sometime in the year 1843, a ship of the line of the United States, bearing the broad pennant of a commodore, was at anchor in the harbor of Rio de Janeiro. One of the assistant surgeons of the ship had become an intimate companion and friend of the first or senior lieutenant. A party had been formed to visit either the Corcovado summit or the Botanic Garden, and the assistant surgeon, who, through his urbanity, intelligence and gentlemanly bearing, was very popular with all grades, had been invited by officers of the ward-room to join in the excursion. He had received "leave" from his friend, the first-lieutenant, to go on shore, as is customary. The party was assembled on deck. At the time, a boat was at the starboard gangway to take the gentlemen of the ward-room on shore, and at the same moment another boat was at

the "port" gangway to convey the ward-room steward and several "warrant" or forward officers to the landing. As a boatswain's mate began to "pipe the side," and the two side boys assumed their stations, the assistant surgeon advanced towards the starboard gangway to enter the boat first, in accordance with the rule which requires the junior to precede the senior officers when leaving a ship. At the instant he reached the gangway, he was arrested by the authoritative voice of his friend, the first-lieutenant, calling, "Doctor, you can't leave the ship in ward-room boat; you will take passage in the boat from the port side."

The mortification and astonishment of the assistant surgeon on hearing this order, can be better imagined than described. He hesitated an instant, and then inquired whether the first-lieutenant seriously determined that he should not accompany his friends of the ward-room in their boat. The reply was substantially, "The order is, that assistant surgeons can pass in and out of the ship only by the 'port' gangway. It is among the internal regulations."

"Then, sir," replied the assistant surgeon, "I shall obey the order by remaining on board."

"You can use your pleasure, sir," retorted the lieutenant, and then addressing himself to the party assembled from the ward-room, "the boat is at your service."

After the flush of excitement had subsided, the assistant surgeon argued the point with his friend, who entrenched himself behind certain assertions and tenets universally admitted in all military governments. The lieutenant was sure that the military efficiency of the navy must be in proportion to its discipline; and there could be no discipline without system and regulations. He was very positive in his belief that the service would soon go to — that perpetual abode of sinning souls with a monosyllabic name—if any officer or man were permitted to think about the propriety of an order from the first-lieutenant before obeying it. It was enough for him to know the usage of the service, and what were the internal regulations of the ship, without bothering himself to study out whether any one of them was useless or not. "That is the Captain's business; if he chooses to alter his internal regulations to suit your notions," kindly remarked the lieutenant, "I cannot prevent it; but, much as I like you, Doctor, I will say, if I were in his place, I would not. It is all nonsense for you to suppose you cannot enjoy yourself as much, going over the 'port' as over the starboard gangway; and if you choose, for such a silly thing, to quarantine yourself on board all the cruise, you have no right to blame me. When you have been in service as long as I have, you will discover it

don't do to be too particular about the kind of orders that are served out. You would have got ashore just as dry and almost as soon in the boat with the steward, as if you had gone over the starboard side with the ward-room officers. Come, Doctor, you had better make up your mind to take it easy; you will be a ward-room officer yourself one of these days, and then you will understand that young officers should have too much respect for superiors, ever to question their orders."

The assistant surgeon appealed to the Commodore, but was met by a similar course of argument. The Commodore felt bound to sustain the first-lieutenant, and he could not hazard the subordination and discipline of the ship by altering the "internal regulations," or by consenting to any evasion of them to gratify assistant surgeons in their new-fangled notions. According to his experience, the surgeons' mates of old times were just as good as the assistant surgeons of the day—the same thing under another name—and he was very sure he had never heard that the "port" side was not good enough for them. He deprecated innovations generally, and implied rather than distinctly expressed a notion that the changing the title of surgeons' mate to assistant surgeon, (which was effected in a law of 1828,) was the origin of a good deal of discontent among the young doctors. The name, assistant-surgeon, sounded better, and in the estimation of those who bore it, entitled them to more consideration and greater privileges than the old fashioned surgeons' mates. But, in his opinion, there never was a greater mistake, and he had determined, as far as he had power, "to put down" all absurd pretensions to the starboard side, pretensions which would some day destroy the pride of our gallant navy, and then Congress would regret, that it had not listened to the old men, the veterans of the service, who know that the captains of the navy cannot have too large a discretion for the glory of our flag. A man can never accomplish any thing great, if he is forced to move on tip-toe, picking his way among the fancied rights and privileges, for fear of jostling some new fledged "idler." He knew he was as liberal in his views as any man, but he had "the good of the service" at heart, and, though he was sure he could never be reconciled to see assistant surgeons clothed with a right to the starboard side, he was firm in the opinion that "the good of the service" required that the captain should have complete, entire and unlimited control over every officer and man on board ship. They should know they are dependent, while afloat, upon the supreme will of the captain for every thing, and learn to be satisfied, that, when he refuses to grant a request of any kind, the re-

fusal is for "the good of the service," exclusively. A true hearted, gallant officer of the navy in command of a frigate or ship-of-the-line, feels all the solicitude of a father of a family, and kind of parental responsibility for the respectability of the family name. He is far above those sentiments which are apt to grow up where there is rivalry or competition; he can have no prejudices, no petty or mean jealousies against subordinates whom he regards as children; but the moment his generosity or liberality is doubted, by giving his inferiors rights and privileges by law, which are calculated to create a preposterous notion that they may be, in some respects at least, independent of, if not equal to their commander, he must then begin to feel that his judgment, generosity, benevolence and universal knowledge, are no longer implicitly relied upon by the government. He will reason with himself in vain to heal the wound which must be made, when he learns for the first time, the navy department imagines, it is possible, a captain may do wrong. The conclusion is inevitable; he will see "the good of the service" is no longer entrusted to his sole keeping, and he will sit crest-fallen and alone in his cabin, brooding over the impending ruin of the naval service which he had loved from boyhood up, and what will be the result? The "good of the service" will be destroyed through crimping and confining the captains in the exercise of authority; their pride and spirit will be gone, and in event of a war, the influence will be seen by the nation when it is too late. Then, he desired to know what possible advantage would inure to the government of the United States, by permitting assistant surgeons in the navy to use the starboard side, just as if they were ward-room officers: he admitted there might be, but he was free to confess that for his part, he could not see it for the life of him.

When the assistant surgeon ventured to ask if the navy, or any public or private interest could be injured in the most trifling degree, by permitting him to use the starboard gangway, the commodore bestowed upon him a look of commiseration, and endeavored to impress upon his young mind that such a view of the subject could not be for one moment entertained. "The good of the service" only, was to be looked to in all cases. The question was, will it benefit the navy, and if it could be demonstrated affirmatively to his satisfaction, he would yield his private convictions, and place assistant surgeons on a footing with ward-room officers. Yet, even supposing, for argument's sake, that it could be shown that such a change in the long established usage of the service could not injure any person or interest, he would be slow to conclude that such a reason was sufficient, because he

would be the last man, he hoped, to favor any man, or class of men, in an attempt to make use of the public service, merely for their private benefit, without a corresponding advantage to the government which he had the honor to serve. Men might do many things for their own gratification without any injury whatever to others, but that fact in itself was not a sufficient reason why they should be permitted. He argued that a young gentleman might find great pleasure in kissing a lady, but he could not be justified in taking such a liberty, on a plea that the kissing, so far from doing an injury, would be, probably, agreeable to her.

The assistant surgeon next urged that there were then already several ships, on board of which, the assistant surgeons messed in the ward-room by invitation, and it seemed to be a prevalent opinion among lieutenants, that assistant surgeons should be ward-room officers. Some lieutenants, however, were opposed to inviting assistant surgeons into the mess; but, declared, at the same time, they would be glad to see a regulation or law, to make them members of the ward-room mess. It was not apparent that any injury whatever had accrued to discipline, from the fact that assistant surgeons in the cases referred to enjoyed, through courtesy, the privilege and starboard-side honors of ward-room officers.

The Commodore was aware of those cases of departure from the usage of the service, but he was not satisfied that, although no injury to discipline was yet manifest, still it might not come. He supposed the assistant surgeons who had won so much consideration by their deportment, were gentlemen of rare good sense and education, and would not presume to arrogate any thing beyond the courtesies voluntarily extended to them by the "deck" officers. He feared, however, that if assistant surgeons were placed at once in the ward-room, without any opportunity to learn subordination, the surgeons might find great difficulty in controlling them; the young are too apt to over-estimate their abilities and importance, and to seek every opportunity to set up as equals of their seniors, and those assistants, (and he did not doubt there might be many of the sort,) who entertained extravagant opinions of themselves, would soon get to be above their business, and become insufferably insubordinate and disrespectful to the old surgeons. He was quite sure that, if he were a surgeon, he should strenuously oppose any regulation which would elevate assistant surgeons to the dignity of the ward-room mess. The ward-room was crowded too full already, and he could not refrain from believing the mess would be more comfortable, if some of the "idlers" and "non-combatants" were other-

wheres accommodated. In his opinion, no gentleman should be admitted a member of the ward-room until after he had served a sufficient apprenticeship in the steerage, to be thoroughly "broken in" to discipline and subordination. If pursers, chaplains and secretaries were obliged to live two or three years in the steerage, instead of coming from shore directly into the ward-room "it would be better for the good of the service." They would learn there, what they can learn no where else. He admitted that the "deck" officers, as he denominated those of the line, were subordinate, the junior to the senior, and the first-lieutenant did not find those of less rank in his grade were reluctant to obey in consequence of familiar association in the mess; and he was aware, too, that in the army, all the officers of a regiment, holding commissions of every grade and rank, were often associated in one mess, and the youngest sometimes presided at table, without injury to discipline, which, to him, was a very unaccountable circumstance. He felt quite sure the command of the ship would be very insecure if lieutenants were permitted to mess in the cabin with their commander; and it was a wonder to him how masters of merchant ships, in which it was the universal custom for the captain and all his mates to live together in the cabin, managed to retain such discipline and subordination; but he fancied it was because they had been "broken in," before the mast. The fact was, in his opinion, that the captain of a ship should be regarded as an absolute monarch, from whose decision, on all subjects, there could be no appeal by inferiors; and to retain a proper supremacy, it was necessary he should be hedged round by all kinds of formalities and ceremonies calculated to inspire all with a kind of dreadful respect for his presence and name. He believed that the lieutenants of modern times did not regard a captain with as much awe as was necessary for "the good of the service." He remembered the time when he was a midshipman and a lieutenant; then he would as soon have thought of cutting off his right hand as to have lodged at the same hotel with his captain; and as a midshipman, he had too much deference for his commander to walk on the same side of the street; but since all sorts of new-fangled notions had sprung up, and innovations had crept into the service, lieutenants not only lodged at the same hotels with captains, but some of them were so forgetful of what was due to their superiors, that they would even remain on the starboard side of the quarter deck, perfectly self-possessed, in the presence of their commander; and, as if that were not enough, assistant surgeons aspired to the ward-room; and he would not be surprised to hear that non-combatants regarded themselves

to be on a footing with "officers proper" of the navy.

Such were the views and opinions which existed ten years ago. Certain slang terms from long use had become technical to the navy, the officers of which had little leisure, even if they had an inclination, to attend strictly to philology, or verbal definitions. Officers of the line were termed "officers proper of the navy," probably because the word "line" was and is appropriately used in the army; and in the ancient days of the Ben Bows and Von Tromps an affectation of contempt for every thing belonging to a soldier was popular among sea-faring people, particularly of England and of the United States. Common sailors, generally an ignorant and illiterate class, it is well known, entertained a contemptuous opinion of marines and of all other soldiers; an opinion which was no doubt considered contemptible by the latter. "Sea-officers" is another designation of line officers in the navy; and those of the several grades below that of commander are spoken of as "watch-officers," and sometimes as "deck officers." Any officer of the line while in command of the watch, which is composed of all in the ship who are not at their respective posts of duty, is "the officer of the deck," who, for the time, may be regarded as the representative of the commander.

Officers who do not keep watch regularly on deck, whether of the line or not, are termed "idlers," a name which might lead to a belief that in the opinion of several naval communities, keeping a watch on deck is the only vocation in a ship involving labor and deserving the name of work. In angry paroxysms, individuals have applied the term "idler" contemptuously and of course offensively; although it is well known that in its technical application it includes the commander and first or senior lieutenant. Officers of the staff departments, that is, the medical, the pay and provision, the engineer and several clerical departments, are termed, sometimes "non-combatants" and sometimes "civil officers."

This nautical nomenclature is fairly open to criticism. It does not seem to be based upon any system, nor is it arranged with any regard to the meaning of words in common use among all classes of people. Some of the names are probably not perfectly understood throughout the naval service; most of them are indefinite, and it may be added all are, for this reason, inappropriate.

Let us begin with the name, "officers proper." The word officer, signifies in its limited acceptation, one who acts; and therefore, "officer of the navy" is one who acts, or performs some

function in the navy by authority of the government, which function is described in a commission, that is, a patent, or the engrossed testimony that he may do certain things according to law, which all citizens may not do.

The word "proper" means peculiar; not common. It is not accurate, therefore, to denominate officers of the line "officers proper," because they are common and not peculiar. The term may have been invented, possibly, to convey a notion that officers of the line are essentially or peculiarly *the* officers of the navy *par excellence*, or that they are in fact the only officers in the navy, and that no other persons can be appropriately termed officers. If this surmise has any foundation, still the term is clearly incorrect, because naval organization necessarily includes other officers than those of the line.

All the various operations necessary to accomplish the true object of a military establishment, (army or navy,) namely, to fight triumphantly, are comprised in two divisions. One division includes only those who use, wield, manage, or manœuvre war-tools or weapons, the various implements contrived to destroy; they are the fighters, and, in military phraseology, constitute the line of an army or navy. This technical application of the word may have arisen from the arrangement of soldiers in lines or rows when about to engage in battle; or from the arrangement of the officers in a line of successive grades, each grade having assigned to it certain functions, and a degree of authority different from that of the one above or below it in the series. Without fighters an army could not be; they constitute the main and essential feature of an army, and, no matter how it came about, these fighters, military mechanics, (if the term mechanic is applicable to men who necessarily use physical instruments to perform their work,) constitute the Line. But your fighters, bold, brave and glorious as they certainly are, when closely examined are found to possess most of the attributes, strong and weak, common to all men. Heroes consume largely of the various kinds of nutritious materials which are essential to the maintenance of animal life and spirits in a condition of vigorous activity. Hence it is that this line, strong and bold as it may be, cannot stand alone; it requires a support, a something friendly to lean upon, and for this reason the government has provided it with a staff—a staff of many legs and branches so that it will afford support when leaned upon from almost any direction. The second division then, of an army, or navy, includes those who minister to the wants and supply all the means necessary to enable the line to fight. The duties of the staff divisions are to furnish pay, provis-

ions and clothing, lodging, ammunition, arms and accoutrements to those of the line while in health, and, when sick or wounded, medical and surgical aid.

The line and staff are mutually dependent; one is not necessary without the existence of the other. Both are placed under the same laws, and for transgressing them, are alike punishable through the medium of the same tribunals. The labors of the line and staff have a common purpose which is purely and essentially military. Those who are comprised in a military organization, subject equally to military laws and military tribunals, whether they pertain to the line or to the staff divisions, are alike military men.

If these premises are true, and it is believed they are incontrovertible, it is surely incorrect to distinguish officers of the line by the term "officers proper," because these are no more "proper" or peculiar than officers of the staff.

The terms "Deck officers" and "Watch officers" may be readily admitted to be appropriate synonymes for officers of the line in the navy. But the name "sea officers" is vague. It may be applied to all officers whose vocation is exercised at sea without violating the proprieties of language. The masters and mates of merchant vessels, the officers of marines, and the officers of the several staff departments in the navy may be characterized as sea officers as well as the officers of the line. All officers in the navy are sea-officers; if they are not, they should be.

The term "idler," applied to those who do not keep watch at sea, even as a strictly technical word, is objectionable, because it conveys to the minds of people generally a notion of lazy worthlessness. Americans entertain no respect for idlers; among them idleness is looked upon as a fault. Noah Webster says an idler is "one who does nothing; one who spends his time in inaction, or without being occupied in business. A lazy person; a sluggard."

The word "non-combatant" is not found in Webster's great Dictionary of the English language. It has been long in use in the navy to designate those of the staff departments who do not necessarily use war-tools in the discharge of their duties; and is applied to all who do not directly or immediately engage in conflict with a common enemy. The purser, although employed during battle in superintending the supply of ammunition to the battery, and the engineer upon whose steadiness and skill the issue of a fight in a steamer may depend, are styled non-combatants. The negative inference from this term is that no others than those of the line, during an action, contribute by their labors to the result of

a combat between ships at sea. All military men are directly or indirectly combatants.

But of all these technicalities no one is more strikingly misapplied than the word "civil" to designate any class embraced in a military organization. Its definition is clear: *CIVIL*. Relating to the community, or to the policy and government of the citizens and subjects of a State; as in the phrases, *civil rights*, *civil government*, *civil war*, *civil justice*. It is opposed to *criminal*; as, a *civil suit*, a suit between citizens alone; whereas a criminal process is between the State and a citizen. It is distinguished from *ecclesiastical*, which respects the church; and from *military*, which respects the army and navy. The term is constantly used in contrast with *military*; as, *civil hospital*, *civil service*, *civil list*, "*civil architecture*; the architecture which is employed in constructing buildings for the purposes of civil life, in distinction from military and naval architecture, as private houses, palaces, churches. &c."

In contrast we have "Military. Pertaining to soldiers or to arms: engaged in the service of soldiers or arms; warlike, becoming a soldier: derived from the services or exploits of a soldier: conformable to the customs or rules of armies or militia."* It will not be denied that the naval service is military; and the duties differ from those of the army only because they are performed on board ship.

It is easy to perceive that a mental proclivity to copy and imitate the practices of the British naval service may have induced the statesmen who have presided over the Navy Department at Washington to fall into the erroneous use of the word "civil" to designate the staff in the navy. But it is not so easy to understand why the English should have perpetrated a blunder in their own official language, by describing the staff departments of the British navy, under the head of "Civil Branch of the Navy." We have corrected many of England's blunders in government; and we may also correct her blunders in language, unless we are bound to a servile imitation and copy of her Admiralty Lords' regulations for our own navy. Had our own national legislature originated a law for the government of the navy, it is not probable the term civil would have been used in it to describe any officers who are required to act conformably to the customs of military bodies. It never would have been necessary to explain, as it is now, that there are Civil officers who are civil officers according to the meaning of the Constitution of the government of the United States, such as are provided for in "The civil and diplomatic appropriation bills;" and military civil officers, or

* See Webster's Dictionary of the English Language.

civil military officers. such as are provided for in the "Navy appropriation bills." There are, in a word, civil "civil officers," and military "civil officers," who are not "civil officers" according to the meaning of the word "civil" given in dictionaries.

To return from this digression: The assistant surgeon finding all his arguments and appeals in vain, preferred to remain on board rather than leave the ship by the port side, until the end of the cruise, a period extending over a year. Some months after he resigned his commission in disgust. The medical corps lost in that gentleman, who died several years since, one of its most efficient and accomplished members.

The anecdote which I heard from the Doctor himself, as well as from others, serves to show the pertinacity with which a rule of questionable propriety was enforced, and how a circumstance small and even absurd in itself may be made to destroy the mental peace of a gentleman included in the close, yet indefinite organization of the naval service. The application of the rule in this instance was more offensive because at that period it was enforced on board of a very few ships.

Still, the assistant surgeons felt aggrieved; and they believed that until they should obtain a definite position in the navy, they would be liable to petty annoyances of the kind, or subject to receive through a patronizing courtesy what they conceived they ought to have as a right.

About the period referred to an assistant surgeon found on joining a ship that the room which by custom belonged to him, was occupied by a passed-midshipman, who anticipated, however, that he would be called on to give it up, but determined to retain it if possible. The assistant surgeon represented the case to the captain, stating that he had no place for his clothing or books, nor even a berth for sleeping, and that the room or cabin which custom assigned him, was tenanted by a passed-midshipman. The vessel, a ship-of-the-line, put to sea on the very day the assistant surgeon joined her. The captain replied that if the assistant surgeon could point to any law or regulation from which it might be even inferred, he was entitled to a room on the orlop deck or in any other part of the vessel, he would order the passed-midshipman to vacate in his favor. The result was, the assistant surgeon found nothing written to sustain his claim; and was indebted to the courtesy of his messmates for accommodation for his clothes, &c., which were distributed among them, and also for a place to sleep, until the ship had crossed the Atlantic.

It was such incidents, which were not of daily occurrence it is true, that revived the efforts of

medical officers, begun in 1816, to obtain either by law or executive regulation, an assimilated rank which, according to the meaning of the term, would define their position in the military community.

In the year 1846, the Secretary of the Navy, George Bancroft, being satisfied that the petition was well founded, issued a general order on the subject; and the following year, John Y. Mason issued a similar order, assigning an assimilated rank to pursers; and under his administration of the Navy Department, assistant surgeons became established members of the ward-room mess. But the observance of these General Orders was avoided, or neglected, or resisted on various pretexts, pleas and reasons. Some contended that the orders were not clear; others that it was impossible to carry them out without confusion, and a considerable number took ground that the orders were unconstitutional, and, therefore, the Secretary of the Navy had no authority in the premises. There has been, in a manner, a verification here of the ancient French proverb:

Contre fort et contre faux
Ne valent ne lettres ne sceaux.

Virtually, the question remains to be decided by Congress, the members of which are placed in possession of the reasons for and against by those who advocate opposite views. Among the most absurd and unfounded arguments urged on the part of the line against the staff, is that the medical officers are seeking assimilated rank with a view to command in the line—to command ships and naval stations. Even the technical term assimilated rank has been regarded as dangerous; and one highly meritorious and distinguished gentleman has suggested that the word classification should be employed instead. He doubtlessly overlooks the fact that the words grade, rank, lineal rank, relative rank, assimilated rank in their military acceptation, are simply descriptive of positions occupied by individuals in the military profession; and are used to designate positions or classes in military classification or organization. That gentleman and those who concur with him believe that the position of every staff officer relatively to the line should be defined; but desiring to preserve to the line some kind of superiority which is vague and indefinite even in their own view, they assert that "it is not rank that staff officers need; what they want is classification"—"they could not use it if they had it," &c. Their remarks conduct us to an inference that the word rank implies something more than relative position in military authority, and imparts to those who occupy a position or rank in the line some kind of vague, caste distinction, which would be impaired by extending

the word rank, no matter with what adjective qualification, to designate the position of staff officers.

Soon after the General Orders conferring an assimilated rank were issued, epaulettes were made a part of the official costume of medical officers and pursers, a badge or label of rank almost universally recognized in military communities. Opposition to assimilated rank and the wearing of its sign by staff officers was manifested by a number of line officers, who immediately petitioned the Secretary of the Navy to excuse them from wearing epaulettes. When called upon individually to assign reasons why their request should be granted, they could offer none which were deemed of any weight. Some gentlemen of the line expressed an opinion in conversation that since epaulettes were given to surgeons and pursers, it could no longer be regarded an honor to wear them. Indeed time has not yet entirely obliterated this prejudice which may be characterized as almost childish. Some few officers of the line have been so injudicious as to express in the street recently, while discussing the merits of the "uniform dress" lately adopted, that since every d—d purser and doctor could strut about under a pair of epaulettes, they wished the Secretary would take them away from the "sea-officers." Such expressions are indicative of the tone of feeling and opinion which has leavened the arguments brought against the establishment of assimilated rank. But it is hoped that a change is gradually taking place in the views heretofore entertained, and that these petty differences of opinion will be reconciled.

In this connection I will record a suggestion, to which I may recur again, that instead of employing gold in the manufacture of the various insignia and ornaments for the official costume of the navy, they might be made advantageously of platina, a metal which is not liable to change color by exposure to the various compound vapors of ships. The difficulty of preserving gold lace, gold embroidery, &c., from becoming tarnished and almost black on ship board is well known.

I say in deference and in all humility of opinion that the vague, uncertain, indefinite, irregular definitions attached to words in common use in the naval service is at the bottom of most of the contention which has grown up from the claim of staff-officers to an assimilated rank. Premises have been assumed which cannot be maintained by logic or argument; consequently, they are untrue, and the deductions from them are without force or value. This in itself is unimportant; but it is to be regretted, because men are prone to become irritated and angry when beaten in argument; and they sometimes attempt to

supply the deficiencies of their facts and logic, by attacking the persons or characters of their opponents, or what is less ingenuous, by heedlessly mis-stating the points at issue for the purpose of exerting an influence on the minds of legislators. The effect is to mar the harmony which should exist between the line and staff, because, in fact, a common object and common interests bind them together. Dissentions and disagreements which are long entertained weaken the influence of any community or corporation in which they are permitted to exist; and in time may end in destroying not only its efficiency and power, but its existence also.

This question should have been settled long since; but it is clear to my mind that whatever evil may have come to the navy from its agitation, it is not chargeable on the staff. Staff officers have presented their claims again and again, and although admitted to be reasonable, they have never been satisfied in any appreciable degree. It is believed, it has always been in the power of the line to adjust all the points connected with the subject, because the staff, while seeking an assimilated rank which would be protective in its effects, has not desired to acquire power or right to control or direct beyond the limits of staff-duties, or in any manner encroach upon any duty or right pertinent exclusively to line officers. But the line has been pleased to act on other views, until staff-officers in self defence have been provoked to bring the question before the public, and enlist the active sympathies of influential citizens. The whole medical profession of the Union has, in its annual conventions, expressed its opinion; and in some degree at least has made the cause of the medical officers of the navy in the premises its cause, which will be pressed upon the attention of Congress until a fair decision is obtained, whether agreeable to the line or not.

SONNET.

ON SEEING A FAVORITE ACTOR.

Oh, glorious attribute! to sway at will
 All feelings of our nature; thou hast power
 O'er springs of sympathy, whose every rill
 Swells gushing torrents in thy triumph hour.
 The tragic muse must ever to thy name
 Be wedded with a more than marriage link,
 Till on the heights of her immortal fame
 Thou shar'st for aye with her that slippery brink.
 So live that when upon the silent air
 Shall come the echoes of thy passing knell,
 The plaudits of thy heart shall too declare
 The approbation of thyself as well;
 Praise may not steel a soul that hath by meed of birth,
 More high and noble qualities than often meet on earth.

M.

DEATH PUNISHMENT.*

I am fully aware that my subject has been often and ably discussed, but error is hydra-headed, and must be met, though the only weapons at hand be old. Truth, though the dust of centuries be upon it, is to me more attractive than the false glitter of mere novelties. The pamphlet which suggested this reply, consists of a Report made by Hon. T. Purrington, to the Legislature of Maine in 1836, a Petition addressed by the same individual to President Fillmore, asking for the commutation of the punishment of Wm. H. Wells, who was recently sentenced to be hung for murder, and some statistics and remarks, entitled "the Progress of the Cause." It is not my intention to argue systematically or elaborately, the relation of crime and punishment, but to expose, as best I may, some of the fallacies into which Mr. P. has fallen. His Report advocates the abolition of death punishment in Maine for treason, murder, arson, and accessories thereto before the fact. His premises are in substance as follows: "1. That the right to life is natural and inalienable. 2. A natural right cannot be transferred or given up, for which, in the nature of things, no equivalent can be rendered. 3. No adequate consideration can be given in exchange for the inestimable privilege, the enjoyment of life. 4. No man has the right to dispose of it, either according to the whims of himself or others." Upon these, this latest champion of an oft-defeated cause, plants himself; and it is presumable that in the initial point of his argument, are displayed his best abilities. While not denying that man has a natural right to life, I confidently assert, that he can surrender this as he surrenders many other natural rights, that it is wise in him to give up some portion of his liberty for the more effectual protection of the remainder.

It is a mere *petitio principii*, to say that no equivalent can be given for the transfer of the natural right to life, for the advocates of capital punishment hold that the surrenderers of this right have, in the protection which society gives, a full and fair consideration. Mr. P. refers to our Declaration of Independence to prove that the right to life is inalienable, forgetting, or not caring to state, that the words immediately following life are "liberty and the pursuit of happiness;" yet, he inconsistently proposes *imprisonment for life* as a substitute for *hanging*. That the framer never intended such a literal interpretation of that instrument, is evidenced by his sub-

sequent career. It is true, that no man has a right to take his own life; but it is a *non sequitur* to say that therefore man has no right to delegate to society the same right to protect his life which he has himself. Whether he be in a natural or a social state, self-defence is his only justification for life-taking. To deny to society this power, is to deny to it a necessary means for its self-preservation. Rutherford, one of the most approved writers on natural law, says: "We cannot suppose the law of nature to forbid our taking such measures with a man, as his conduct has made necessary for us to take, in order to obtain the end, which the law has in view. The law of nature intends to secure us against injuries. When, therefore, a man has shown us by his conduct, that he is disposed to injure us, this law leaves us at liberty to prevent him." On page 7 of the work under review, it is stated that governments as well as individuals, have the right to take life in cases of *absolute* necessity. This admission the author is compelled to make, else he would have to condemn revolutions in all cases, wars of all kinds, and the execution, under any circumstances, of dangerous traitors and spies. If capital punishment is not absolutely necessary, neither is imprisonment for life; but that a death penalty is, in some cases, necessary and proper, I propose to show. Some say we have no right to take life, because we have not given it. That this proposition is mere nonsense, is evident from drawing one of its legitimate inferences, e. g., society has no right by imprisonment, to deprive of the power of free locomotion, because it has not bestowed that faculty. The greatest offence which an individual can commit against society, is to take, maliciously, the life of one of its members. The greatest crime is fitly punished by what mankind generally esteem the greatest penalty—death! Is not man everywhere informed by his moral sense, that the murderer is deserving of death? Assuredly the rude barbarian, upon whom Christianity has not dawned, delivers up to the friends of the murdered, for retaliation, the doer of the deed. Such an offender, in the language of Coleridge, "forfeits his personal rights, and becomes a Thing, i. e., one who may be *employed* or *used*, as a means to an end, against his will, and without regard to his interest." I freely admit that no penalty, unjust in its character, should be adopted on mere grounds of expediency. The law prescribing such penalty, will sooner or later become, as it ought to be, a dead letter. But the punishment of death for murder, does not belong to this category.

"Neque enim lex æquior ulla,
Quam necis artifices arte perire sua."

That loss of life is esteemed a greater evil than

* REASONS FOR THE ABOLITION OF CAPITAL PUNISHMENT. By Hon. T. Purrington. Published by Gideon & Co. 1852.

loss of liberty, is proved thuswise : If, while a man were being conducted to a penitentiary for confinement, his life should be endangered, who can doubt that he would, with alacrity, endeavor to protect it ? Hanging is more dreaded, has greater deterring power, than any imprisonment, be it for a long or a short period. We shrink with indefinable apprehension from entering

"That undiscovered country, from whose bourn
No traveller returns."

Hill, who was executed a few years ago in New Hampshire, said, that 'if he had supposed that capital punishment would be inflicted on him, he would never have committed the act for which he was condemned;' having evidently calculated that, in case of detection, some secondary punishment would be inflicted on him. Hanging is either more severe than imprisonment for life or less so. If more severe, it deters more; if less so, what right have we to imprison ! Have we a right to do a thing more cruel than hanging ? The opponents of a death penalty are at variance with themselves; dwelling at one moment on its unnecessary severity, at another, asserting that loss of life is esteemed so small an evil, that it possesses but little deterring power.

"Oh, consistency, thou art a jewel !"

The primary object of punishment is not to reform criminals, but to prevent a repetition of their offences. Upon this point, nearly all approved juriconsults are agreed. If the good of the prisoner, and not that of society, should be the chief object of punishment, then he should be liberated as soon as evidence had been given of repentance. Let not Mr. P., a New Englander, be so unmindful of his origin, as to disregard the teachings of the Pilgrim Fathers who said, upon their settlement in Massachusetts, that "they would be governed by the laws of the Bible until they could make better." Their example is still worthy of imitation, for the precepts and mandates of the Bible can never be in conflict with true national progress. The voice of Nature and the voice of God are, as expressed in Holy Writ upon this question, in perfect harmony. The 5th and 6th verses of chapter 9th of Genesis, say : "And surely your blood of your lives will I require: at the hand of every beast will I require it, and at the hand of man; at the hand of every man's brother will I require the life of man. Whoso sheddeth man's blood, by man shall his blood be shed, for in the image of God, made he man." It has been contended, upon the authority of Michealis, that, in the passage quoted, *his* should be substituted by *it*; but that learned critic says, that the original pronoun *damno* may be

either masculine or feminine, and therefore should he rendered *it*, so as to *include* both. As he was in favor of capital punishment, it would have surprised him to learn that his criticism had been so perverted. O'Sullivan, in his Report in 1841, to the Legislature of New York, says, that "whoso sheddeth man's blood," should be rendered "the shedders of man's blood;" but what strength the change gives to the abolition side, I am at a loss to conjecture. By the use of such an argument, (if it may be called one,) he illustrates the proverb that "drowning men catch at straws." Either version, not only permits, but enjoins the infliction of the death penalty upon the murderer. The command is given with emphasis, and its importance is shown, by the reason for it being assigned. The law is not local in its character, and the manner of its promulgation stamps it as permanent. The context shows that the passage is not prophetic. The command was given with the bow, and was meant to be as perpetual, not to a Jew or a Gentile, not to the representative of any class or caste, but to our second great progenitor, when he looked forth upon a new world emerging from the waters. Admitting that many of the Jewish penalties prescribed in the Old Testament, springing, as many of them did, from the Jews being a sacred, a peculiar people, would at present be unwise, it by no means follows, that the law in question should be inoperative now. The passions of men still, as in the days of Noah, need restraint; the reason of the command is in no degree impaired, for the defacing of the image of God is as heinous now as then. "Lex stat, dum ratio manet." Centuries after the law was given to Noah, God repromulgates and confirms it in the most emphatic manner. "Ye shall take no satisfaction for the life of a murderer which is guilty of death; but he shall surely be put to death." The command not only says the murderer shall be put to death, but shall *surely* be put to death. On page 10 of the pamphlet, it is stated that "men with this organization, (i. e., those whose animal appetites or propensities are so powerful as to overbalance the restraining force of their moral and intellectual faculties,) are peculiarly unfortunate, without any fault of their own. To inflict upon such, punishment which the safety and good of society does not require, is to punish them for their misfortunes more than their faults." Does not this argument preclude God himself from punishing ? If their crimes are more their misfortunes than their faults, they should not be punished at all. If there be, as stated, a large class of men thus organized, would it not be humane as well as expedient, to set before them some penalty which is calculated by its *severity* to deter from the infraction of the law. In God's command to Noah, there is no excep-

tion made of any such class. It is true that some have a greater proclivity than others to evil, but "all are created sufficient to stand, yet free to fall." As to the "punishment which the safety and good of society does not require," this is but another example of Mr. P.'s very illogical method of taking for granted essential points in the dispute. With commendable prudence, he touches very lightly upon the scriptural argument, confining himself usually to generalities, e. g., "the pure principles of Christianity forbid it."

Capital punishment for murder, perfectly harmonizes with the precepts of the New Testament, when rationally interpreted. Christ said, "I come not to destroy, but to fulfil the law." It is the New and not the Old Testament, which tells us that, "he (the civil ruler) beareth not the sword in vain: he is the minister of God, a revenger to execute wrath upon him that doeth evil." God is a God of justice as well as of mercy, and the pseudo-philanthropic notions of Mr. P. and his coadjutors, find no basis in the law of love. The sacrifice of the lives of perhaps many *innocent men*, to preserve the life of a *guilty man*, who has justly forfeited it, is anything but wise, anything but Christian or humane.

"Mercy but murders, pardoning those who kill."

St. Paul, on one occasion, says; "If I be an offender, or have committed anything worthy of death, I refuse not to die," from which it is fairly inferable that he thought there were crimes for which death was the proper penalty. Some say, as Cain was not put to death, neither should murderers be now. Does it follow because Ananias and Sapphira were struck dead for sacrilegious lying, that society should put to death all such liars? We do not know with certainty, God's reason for sparing the life of Cain; perhaps because there were none to execute him but his parents, perhaps he was necessary in replenishing the earth, perhaps God wished to show that a mild punishment was ineffectual before resorting to a severer. Certain it is, that the moral sense of Cain told him he deserved to die; "Every one," says he, "that findeth me shall slay me." The command to Noah, was *subsequent* to the sparing of Cain; and, therefore, the former acted in the nature of a repeal, if this special interposition can be considered a law.

"How shall the ancient warnings work for good,
In the full might they hitherto have shown,
If for deliberate shedder of man's blood
Survive not judgment that requires his own."

On page 20 Mr. P. says: "For the punishment of the crime of deliberate and wilful murder, perpetual confinement to hard labor in the State-prison ought justly be inflicted." My ob-

jection to this substitute is that it would not possess sufficient deterring power to meet the just ends of society. The inmate of a prison always hopes to escape from it, either by ingenuity, a happy accident, or executive clemency. The first duty of society is to protect itself, fully and adequately. It is said that imprisonment allows repentance and the system of capital punishment does not. This I deny. Few conversions occur in penitentiaries; but the fixing of some certain day of death often brings about a real change of heart. Mr. Edward Gibbon Wakefield in his "Facts relating to the punishment of Death," says that "the Reverend Mr. Cotton, the ordinary of Newgate, who has been chaplain of the jail for more than a dozen years, has often acknowledged to him, that he does not remember an instance of what he considered sincere conversion to religious sentiments, *except in prisoners, who were executed.*" It is said that murders occur, and occur frequently, under the present system. Experience and self-consciousness tell us that their occurrence would be more frequent under any other. To deny that there is any restraint because there is not prevention, is as illogical as to say that the dam of a river is no check upon it, because some water flows over it. Let the punishment for life-taking be reduced to the grade of minor offences, and men will add murder to them. Approximate the punishment of robbery to that of murder, and how often, for the purpose of concealing the former, will the plundered be also the murdered traveller! The advocates of capital punishment are not bound to approve the bloody code of Henry VIII., nor even the milder one existing in the time of Judge Blackstone. The criminal code of most of the States of our Union is the golden medium between unnecessary severity on the one hand and false clemency on the other. Some of the positions assumed by those advocating the abolition of the death penalty are not only untenable, but ridiculous, e. g., they say that society, in hanging a man, does itself the same thing for which it punishes him, i. e. it *murders*. Where is there any malice in society in this case, and *malice* is an essential ingredient in murder? When society through its lawful instruments imprisons a man for having falsely imprisoned another, it cannot, in any just sense, be said to do what it punishes. It has been repeatedly asserted, that crime has diminished in proportion as capital punishments have diminished. The statistical arguments adduced by my opponent are hollow-ness itself, founded as they are on no sufficient induction, and opposed as they are by individual consciousness. This question is more satisfactorily discussed upon principle, upon the immutable laws of right, but my cause being just, I

shrink from no adversary, however armed, or whatever vantage-ground he may possess. The abolition of capital punishment for stealing, counterfeiting, &c., may have diminished those offences from the fact that the individuals wronged often refused to prosecute or testify, and juries to convict, on account of the unnecessary severity of the penalty, but it is not admitted that the public sentiment is so opposed to capital punishment for murder as to make the law a dead letter. There is some unsoundness on the subject in some portions of the United States of America, but it is not general, and in this enlightened age, is not likely to become more so. From statistical tables kept at the Home Office of Great Britain, and reported thence to Parliament, it appears that in the three years subsequent to the change in the criminal code of that country, made in 1837, there was no less than 33 per cent increase in the offences from which the punishment of death was removed; but I will not fall into the error common to my opponents and herald this statistical argument as conclusive, though it is a better one than they usually furnish. In a majority of the States of this Union treason and murder are the only crimes punishable with death. As the former is of very rare occurrence, I have exclusively discussed the latter; but for each, death is demanded by an inexorable necessity. I fully concur in the sentiment of Sir William Meredith, one of the earliest advocates for penal reform in England, that "it is not more cruel than chimerical to confound the smallest offences with the greatest." Mr. P. so garbles quotations from Blackstone, that some might infer that that eminent jurist was opposed to capital punishment in all cases. The truth is far otherwise. Though an advocate for penal amelioration, he had no sympathy with that radicalism of which the work under review is full. He says, "Capital punishments are in some instances, inflicted by the immediate command of God;" also, that "the pains of death ought never to be inflicted but where the offender appears incorrigible, which may be collected from the perpetration of some one crime of deep malignity which of itself demonstrates a disposition without hope or probability of amendment: and in such cases it would be cruelty to the public to defer the punishment of such a criminal, till he had an opportunity of repeating the worst of villainies." Mr. P. furthermore says, that "the Porcian law, prohibiting the infliction of the punishment of death upon a Roman citizen, was passed 453 A. U. C. and continued in force 200 years." This statement is a tissue of errors. Dr. Anthon, one of the most recent and approved writers upon classical history, says, in substance, that "the Porcian law was made 557 A. U. C.,

and was a renewal of the Valerian law which had been twice previously renewed." It was limited to *Roman* citizens, and exile was the *alternative* of death. Dr. A. says—"It referred probably to those who had been condemned by a magistrate in the first instance, not to such as had been cast in an appeal from his sentence." The Porcian like the Valerian law fell into neglect. Mr. P. quotes authority to show that it did not do any harm; can he cite any to prove that it did any *good*? No statistics are presented proving its beneficent influence; it is presumable that none exist. He also seems to rely on the examples of Russia and Tuscany as proving the correctness of his positions. He states that in the former, the empresses Elizabeth and Catharine II. each abolished punishment by death; but where is there any evidence that the change was beneficial? There is none—absolutely none. It is stated that many executions occurred in the reign of Elizabeth in violation of her pledge to the contrary. Catharine II. while professing clemency to the murderers of her subjects reserved to herself the right to capitally punish for State crimes; as she was depraved in her disposition and despotic in her character, it is not presumable that the right slumbered. The code of Catharine has long ago ceased to be operative. While it had force criminals often died under the terrible punishment prescribed, e. g., the scourging by the knout. Dr. Baird, an eminent traveller, states that every one escaping from exile and returning to Russia is capitally punished. He says that "the death penalty was repealed in that country not from a belief that it was an ineffectual punishment, but because it had been grossly abused by irresponsible nobles and by courts unchecked by juries." With regard to the abolition of capital punishment in Tuscany it is sufficient to say, that its government after trying the experiment of abolition, restored the old system. The Minister of Justice of Belgium states that from 1831 to 1834, the period of the abolition of death punishment, that crime increased; he says, "it is manifest that the administration of criminal justice does not possess the efficiency necessary for the restraint of crime." The Conversations-Lexicon in Germany, referring to the European experiments, says, that "even in those States where, from a one-sided benevolence, the governments wished to abolish capital punishment, they were compelled again to avail themselves of it, and that on the ground that in the opinion of men death is the greatest of evils, in preference to which they would willingly undergo the most laborious life with some hope of escape, because the death punishment is the most terrible of penalties." The Prison Discipline Society of this country,

which fully investigated the subject now under consideration, came to this conclusion, "that the punishment of death for murder could not be abolished with safety." In order that penal jurisprudence should receive any valuable accessions by experiments their trial should be extended through many years and over a large country, so that accidental and temporary causes may be eliminated. It is not fair to try the question at issue between Mr. P. and myself anywhere than in a country where the penal code is not severe, e. g., the United States of America. The causes which may obscure the real effect of changes in the penal law are many and various, such as increased diffusion of useful knowledge, greater energy in Gospel ministers in the discharge of their duties, and a more efficient police; how important then, especially where life is concerned, that the induction should be as broad as practicable. If the law does not give individuals adequate protection, they will as in the case of the invasion of martial rights, be a law unto themselves. But recently the Judiciary in some parts of California was deemed inefficient in protecting their rights, and what was the consequence?—self-constituted and self-styled Committees of Vigilance, executing with some order and much firmness, Lynch law, in defiance of judicial decisions, and justifying themselves upon the plea of necessity. If we wish that "the wild justice of revenge should not prevail, let us hold on to the gallows, not because sanctioned by antiquity, not as an instrument of cruelty, but as a sad necessity, and as one of the essential conservative institutions of society. Mr. P. proposes a restriction on the pardoning power, but does not state *what*. I believe the power to be necessary, yet fully concur with him when he says "it should be seldom exercised, and never but for the strongest reasons." Public executions are denounced as demoralizing in their effect; but I am not bound to defend their *publicity*, that being an usual incident, not an essential of a system of capital punishment. Perhaps it would be better to have executions within jail-walls and in the presence only of those connected with the administration of the law. To invest an execution with the mystery of privacy would increase its deterring power to many. In that part of the pamphlet entitled "the Progress of the Cause," some statistics are presented with regard to the abolition of capital punishment in Michigan, which was effected by the law of March, 1847. The statistical table, on page 46, of murder, &c., in Michigan, is anything but satisfactory; it certainly proves as much for my side as for the opposite. C. H. Taylor, Secretary of State for Michigan, an advocate for the law of 1847, after presenting statistics with regard to his

State, candidly and truthfully says, "I am not unaware that no great reliance can be placed upon, or any conclusive arguments drawn from, statistics of this character, running through so brief a period of time." I have recently been informed by an intelligent citizen of Michigan that the general feeling in his State is towards a return to death punishment. Detroit through its corporate authorities has repeatedly petitioned the Michigan Legislature to that effect. The arguments and schemes of the different opponents of capital punishment are anything but harmonious, are as various and devious as error. Some of them advocate one substitute, some another, some propose none at all. Until they bring forward some system in lieu of the present, supported by better reasons than any yet given, they ought not to expect men to abandon a penalty upon which almost the collected wisdom of the world has set its approval. Let them recollect that all movement is not progress, and that "to innovate is not to reform."

STANZAS.

Pulchris oculis quorum nigredo est intensior.

Agrippa de Occulta Philosophia.

So that according to the opinion of these men, those persons that have faire lovely eyes, although the other parts of the Body be not answerably beautiful, will easily take those who look earnestly on them, unlesse their Reason overrule their Affections. And so on the contrary, be the person never so comely and beautifull, if the eyes be not good, they doe not cause this kind of Passionate Love, but only a simple Friendship, or good likeing in the beholders; as if such lovely persons, which the Greeks for good reason were wont to call *ελεοβλεφαρες*, did by the beauty of their eyes invite those that beheld them at a distance to come nearer, and so by this means entrap them.—*Ferrand's Crotomania.* 1640.

Those eyes, those eyes I see them still,
Where e'er I am, by night—by day,
Nor do I know their wish or will,
Nor whence they came, nor why they stay;
I only know howe'er time flies,
Or sad, or gay, I see those eyes!

Those eyes, those eyes are cold and chill,
And yet their presence still I own,
Like sea, and plain, and vale and hill,
The sun, within the frozen zone,
That warmth, and life, and hope denies,
E'en like those dark and cheerless eyes!

Those eyes, those eyes glad, warm and bright,
They come before my vision now,
And as the Persian to the light,
The homage of my soul I bow,

Because I know that darkness dies
Before the brightness of those eyes!

Those eyes, those eyes with tears are wet,
And now mine too are running o'er—
Sweet eyes, dear eyes, forgive—forget,
If in my flight too high I soar,
For low, mean earth to Heaven might rise
Beneath the guidance of those eyes!

Those eyes, those eyes again they change—
Soft, sweet and calm are these I see,
And yet they seem not new or strange,
Or less than those dear eyes to me,
For well can we, through each disguise,
Still see the angel in the eyes!

Those eyes, those eyes, how can I turn
Upon their beauty and not know,
That weep, or smile, or freeze, or burn,
They bear me with them where they go,
And worlds are nothing when the prize,
For which we strive is in those eyes!

Qualis populea mærens Philomela sub umbrâ, &c.

Translated.

Thus 'neath the poplar shade, sad Philomel
 Mourns her lost young, by some rude, prying hind,
 Torn, plumeless, from the nest. Perch'd on a spray,
 Through all the livelong night she warbles o'er
 Her piteous wail, and fills the echoing grove
 With deep, far-sounding notes of woe.
Virgil, Georgic 4.

But let not chief the nightingale lament
 Her ruin'd care,
 Oft when, returning with her loaded bill,
 Th' astonish'd mother finds a vacant nest,
 By the hard hand of unrelenting clowns
 Robb'd ; to the ground the vain provision falls ;
 Her pinions ruffle, and, low-drooping, scarce
 Can bear the mourner to the poplar shade ;
 Where, all abandoned to despair she sings
 Her sorrows through the night ; and on the bough
 Sole sitting, still at every dying fall
 Takes up again her lamentable strain
 Of winding wo ; till, wide around, the woods
 Sigh to her song, and with the wail resound.
Thomson's Spring.

11.

Lincoln Sumner Fairfield, of New York, wrote and
 published a poem called *The Last Night of Pompeii*.
 He sent a copy to Bulwer, who did not acknowledge or
 notice its reception. But a year or two afterwards came
 out his novel, "*The Last Days of Pompeii*," containing
 most palpable thefts from Fairfield's poem. *Thefts* they
 were ; for it is a truth spoken to a plagiarist in a Latin
 couplet, not now accurately remembered, that

"If you confess where you get the passage, you only
 borrowed it ; if you do not confess, you stole it."

The theft is exposed by the plundered poet, in the XIth
 volume of the *Messenger*, p. 100.

THE VIRGINIA CONSTITUTION OF 1776.

Prof. H. A. Washington's Discourse before the Virginia Historical Society.

We have been repeatedly solicited to lay before our readers this most excellent discourse, delivered at the last annual meeting of the Virginia Historical Society, and the request is the more readily complied with, on our part, by reason of the thoughtful and highly philosophical manner in which the gifted author has treated a most interesting topic, and the fact that its circulation heretofore has been a very limited one. We now publish it and deem it quite unnecessary to ask the reader's attention to an effort of one of Virginia's finest scholars and most earnest thinkers.—[*Ed. Sou. Lit. Mess.*

Mr. President and Gentlemen of the Virginia Historical Society.

In rising to address you, I feel oppressed by the conviction that I have nothing to offer worthy of the Society, worthy of the occasion, or worthy of this large and most enlightened audience: and I have, therefore, to throw myself upon your indulgence for what, I fear, will be considered the crudeness of this address.

Mr. President, I have been much gratified, since my arrival in the city, to learn from our respected Secretary, that the Virginia Historical Society is no longer an experiment, that all those many difficulties which embarrass the infancy of such enterprises every where, but especially in the Southern States, have been successfully surmounted, and that the Society may now be considered as established on a permanent basis. This, as it seems to me, sir, is a fact upon which I may not only congratulate you and the Society, but the State at large—the fact that, at last, after such unpardonable delay, an institution has been established in this Commonwealth, whose office and duty it will be to collect together, and systematically arrange, so as to be of easy reference, that large and invaluable mass of material for future history, which now lies scattered, here and there, in almost innumerable fragments, over the length and breadth of the State—destined, in all probability, to perish forever, unless speedily rescued by this Society. The organization of such an institution is, I repeat, matter of public congratulation, and the thanks of our people are due to those gentlemen whose zeal, perseverance and patriotism have originated and sustained the enterprise—an enterprise which cannot fail to enlist the warm sympathies and cordial co-operation of every son of Virginia, who properly appreciates the treasures and the glories of her history. That history, gentlemen, permit me to say, in passing, remains yet to be written; and I say this with a full and high appreciation of the labors of those gentlemen who have recently pub-

lished volumes upon this subject. They deserve our thanks—they have my gratitude—they have done much to illustrate our colonial annals; but, gentlemen, much yet remains to be done. They have given us histories of the government of Virginia; what we now want is a history of her people—her institutions, her social and political system—her civilization—a history of Virginia in the sense in which Guizot has written the history of France, and Macaulay the history of England. And when, in the future, some scholar shall arise in our midst, (as sooner or later he certainly will arise,) commissioned to this work, will it not be a great point gained—will it not be a great assistance to him, to have collected here, at one point, in the metropolis of the State, every thing which can illustrate his subjects? The public thanks, I repeat, are due to those gentlemen whose zeal, perseverance and patriotism, have founded the Virginia Historical Society.

Gentlemen, I purpose to make the Virginia Bill of Rights and Constitution of 1776, the subject of the remarks which I shall address to you this evening. I select the Constitution of '76, because it was the first written social compact ever reduced to practice, and made the foundation of an actual government, and for the further reason, that its adoption constitutes, in my poor judgment, one of the most important stages in the progress of human liberty. On the 29th of June, 1776, *five days in advance of the general Declaration of Independence*, and amid revolutionary perils, did our wise and gallant forefathers, assembled in the ancient capitol of the colony, and clothed (the first instance, perhaps, in human history,) with the sovereignty of a whole people, adopt this great Charter of rational and manly liberty as the fundamental law of the Commonwealth. And that day, as I conceive, is not only the proudest in the annals of Virginia, but one of the most memorable in the annals of the human race. I shall prove to you, before I have done, that in giving utterance to this sentiment, I speak the language not of extravagance, but of soberness and truth.

It is no part of my purpose, gentlemen, to compare the Constitution of '76 with those which have succeeded it. They are all, without exception, framed upon it as a model, modified, it is true, from time to time and in greater or less degrees, to meet the progress of society and the principles of equality. I wish to speak of that instrument only historically, in its relations to the *past*—as a step in political progress, and, viewed in this light, I do not hesitate to declare that it is, in my judgment, one of the most gigantic ever taken towards substantial and well-regulated freedom. By one and the same act of sublime valor and wisdom, did the men of '76

declare the ancient connection which had bound the Colony of Virginia to the mother country dissolved forever, and frame for themselves and their posterity, an instrument of government, which has become the universal model of all those free institutions which have since arisen, both in the old world and the new—thus binding up our State Sovereignty and our civil and religious liberties in the same great Charter.

Gentlemen, we commonly speak of George Mason as the author of that Charter. In a certain sense, he was its author. The Bill of Rights and Constitution of '76, with the exception of the preamble, were prepared by him, and laid before the Convention. In this sense, that truly great man was their author. But if it be imagined that that instrument was the conception of George Mason, or any other man—that it was the mere coinage of his or any other brain—that it was framed with reference to any mere abstract theory of government existing in his, or any other mind, no greater error could possibly be committed. My own conviction is, that no Constitution or frame of government, the product of mere theory and speculation, ever has existed, or ever can exist the quarter of a century. Locke framed such a Constitution for South Carolina. Seyes gave birth to a "litter" of such Constitutions for Republican France. We know their fate. They perished, each and all of them, in the very effort to reduce them into practice. And such will and must be the fate of every Constitution, which, taking no account of the peculiar habits, customs, manners, opinions and prejudices of a people, proceeds upon the hypothesis that society, like parchment, may be cut into whatever fantastic shape the whim, or caprice, or fancy of philosopher, or legislator, or theorist may choose to dictate.

No, gentlemen, the Constitution of '76 is not the spawn of theory or political metaphysics. It is the ancient and immemorial rights, franchises and privileges of the colonists of Virginia, gathered together and bound up in one great system of law, order, liberty and justice. Our fathers brought those rights, franchises and privileges, with them from England. They are of foreign and not domestic origin. The truth of history requires me to say so. They have, indeed, expanded, ripened and matured in the new world, but the germs were brought from the old. They constitute a part of that "great inheritance of the English race, settled on them at Runnymede," and which, though complicated, in the mother country, with all the consequences of the conquest—with tyranny of that Norman dynasty, the iron heel of which still presses on the neck of the English people—with the Three Estates of the Realm and all those innumerable abuses and

injustices which have grown up with the ancient Constitution of England, have yet secured to her people a larger portion of rational freedom, substantial liberty, than is enjoyed by any other people on the earth, except our own. Their portion in this inheritance—their rights and liberties as free-born Englishmen, our fathers brought with them to this continent. They were guaranteed to them in the original Charter of James I., confirmed and ratified in many subsequent royal charters, expressly stipulated and reserved when the colony capitulated to the forces of Cromwell and the Commonwealth, and ultimately sealed with the blood of our fathers in that revolution which resulted in our independence. And here, in the new world, disembarrassed of all those incumbrances which attach to them in the old, applied to societies which knew no ranks or classes or partial advantages, and modified from time to time to meet the progress of those societies, they have become the foundation of governments under which has been realized as much happiness, security and prosperity as has ever been realized under any governments established among men.

Now, gentlemen, the history of those rights, franchises and liberties, which our fathers brought with them from England,—which they enjoyed throughout the whole colonial period, under the protection of royal charters, and the courts of law, and which, when all connection between the colony and the mother country had been dissolved forever, George Mason and his associates gathered together and bound up in the Bill of Rights and Constitution of '76—the history of these rights, franchises and liberties, is what I wish to speak about this evening. I wish to trace their rise, progress and development. I wish to show you that they have not sprung from modern speculation, or originated in any abstract theory of human rights and human equality; but that they have an ancient origin—a high and noble pedigree, and are, in truth, an inheritance, transmitted to this democratic age and country, from the bosom of an exclusive aristocracy. This is what I wish to show to you this evening.

When we come to look at the Constitution of '76, analytically and philosophically, we find that, passing over the mere machinery of government, it is, in principle, an instrument drawing a line between the powers of the government and the rights of the governed. The single object and function of the Bill of Rights is to assert certain general principles and maxims of liberty, and to enroll, in solemn form, certain rights, declared to be inalienable, which are reserved to every individual man as against the general society of which he is a member, and which that society is bound, under all circumstances, to respect and

hold sacred. So also with that clause in the Constitution which declares that the Legislature shall, in no case, suspend the writ of habeas corpus, pass any bill of attainder, any ex-post facto law, any law impairing the obligation of contracts, the freedom of the press, or of speech, declaring that private property shall never be taken for public uses without just compensation, and securing to every citizen the perfect enjoyment of religious freedom—the effect and object of all which is to draw around every individual citizen and enchanted circle, as it were, which the government dare not enter, and within which he may live in peace and happiness, secure from all manner of authoritative intrusion. About these rights, thus secured to the individual against the general society, I shall have something to say presently. But what I wish now to speak about is the great principle upon which the Constitution of '76 was founded, which is coeval with our ancient liberties—which is their only guarantee, and constitutes, at once, the glory of modern civilization and the genius of modern freedom—the principle, I mean, that a limit should be set upon the powers of all human government—that absolute power, wherever lodged, whether in the hands of one, the few or the many—a monarchy, an aristocracy or a democracy—is despotism in disguise: that there are certain sacred rights, of which the individual is the only natural and proper guardian, which cannot, consistently with man's dignity and freedom, be entrusted to any government, however organized, and that, in the Constitution and frame work of society, those rights should be so trenched round and fortified, as to be made forever impregnable against all manner of governmental intervention. This is the principle upon which the Constitution of '76 was founded, and what more sublime scene does human history record, than was presented by the people of this commonwealth in 1776, when, having just thrown off their allegiance to the mother country, and declared themselves free, sovereign and independent, so far from being elated and intoxicated by this acquisition of sovereign power, but, on the contrary, deeply and profoundly impressed with the high and solemn trust thus devolved upon them, we find them, under the conviction that omnipotence is the attribute of God, and that he alone can use without abasing it, in the very instant of the acquisition, and in the very same act and instrument by which it was made, placing limitations and restrictions upon their own sovereignty, and thus, in the hour of calmness and reflection, erecting safeguards and barriers against their own passions and their own weaknesses, in the hour of excitement and temptation? History, I say, presents no more sublime spectacle than this—more

sublime in its wisdom, its courage, its modesty and its self-distrust.

This idea, gentlemen, that the powers of the State are not absolute; that the citizen has, or can have, any rights as against the State; that his life, liberty, property, himself and everything that is his, are not within the sovereign control and disposition of the State; this idea, as I have already intimated, is peculiar to modern civilization, and the distinguishing glory of modern liberty. It has no place in the ancient world. It was introduced, as we shall presently see, into modern Europe by those northern barbarians, (as we are used to call them), who overthrew the Roman Empire, and who, bringing it with them from the woods of Germany, infused it as a new and vital element into the second civilization of the European races. In the ancient world, upon the contrary, the *Omnipotence* of the State was a fundamental idea, and that ancient liberty, of which we hear so much—the boasted liberty of Greece and Rome—was civil, and not *personal* liberty, man's liberty as a citizen and not as an individual; his franchises and privileges as a member of society, and not his rights as against society. The idea that there was, or could be any thing useful or desirable to the general society, which that society had not a perfect right to exact of every individual member of it, was never conceived by any philosopher or statesman of Greece or Rome. And in an age and country where the jurisdiction of government is more or less limited, and where personal independence and individual free agency, in greater or less degrees, are fundamental maxims, it is almost impossible to form any just conception of the extent to which the ancient Republics pushed the despotism of society over the citizen. The powers exercised by those Republics were not merely civil and political. They were censorial, inquisitorial, paternal. The government placed itself *in loco parentis* to every citizen, directing his whole education for him, prescribing what he should eat and what he should drink, when he should marry and whom he should marry, which children he should rear and which he should sacrifice—in a word, it took charge of his entire existence, public and private, from the cradle to the grave; thinking for him, acting for him, doing everything for him, leaving him nothing to do for himself, and calling upon him at every turn, to lay down the deepest instincts of human nature, and the dearest affections of the human heart as sacrifice on the altar of an inexorable State policy. This despotism of the society over the individual, which reached its greatest intensity at Sparta, was a fundamental political maxim in all the free Republics of antiquity. It was one of the badges of its oriental

origin, which the first civilization of Europe retained to the last, and which was the cause both of its rapid development, and its yet more rapid decline.

This principle, then, lying at the basis of our government, and so important in the annals of Constitutional liberty—the principle, I mean, which draws a line between the government and the individual—has no place in the ancient world. It is, as I have stated, of comparatively recent, and, as I shall now show, of *feudal and aristocratic origin*.

We hear a great deal, gentlemen, in our times, in commendation of the free spirit of the Saxon laws, and there is much justice in these eulogies. It is, however, an indisputable fact—truth requires me to speak it—it is an indisputable fact that all those limitations and restrictions, which the American people have everywhere imposed upon the omnipotence of their governments, are of *Norman descent*, and that those great principles which now lie at the foundation of the liberties of the Democratic Anglo Saxon Republics of North America, have been transmitted from the bosom of a proud and haughty aristocracy; that Norman aristocracy, which, in the mother country, ruled our fathers for centuries with a tyranny as relentless and remorseless as any the world has ever seen. This, the Norman branch of the great European peerage, is the original source from which our American Democratic Anglo Saxon Republics have derived their high-born liberties. Strange as it may seem, the fact is so. It is history, irrefutable history. I shall make this perfectly plain, and it should teach us that the ways of God are not the ways of man. It should also teach us humility, and to repose with resolute hope and confidence, on that Providence which

“Out of evil, still seeks to bring forth good.”

Gentlemen, the English, from whom we are descended, trace back all their liberties to Magna Charta. Now, what is Magna Charta? Is it not a Feudal Charta? And what is the feudal charta, when analytically and philosophically considered? Is it not an instrument drawing a line between the powers of the crown and the rights of the feudal barons? And is not Magna Charta (the greatest of feudal Chartas), an instrument drawing a line between the powers of the English kings and the rights of the English barons; guaranteeing certain rights and privileges to those barons, which the King shall, under all circumstances, respect and hold sacred? And what are the rights and privileges thus guaranteed in Magna Charta, to the barons of England? Here they are: that “no tax shall be levied upon them except by their free consent;” that “no fine shall

be imposed, unless by the judgment of their peers;” that “no freeman shall be injured or impaired in person or estate, banished or deepoiled of his inheritance,” unless by the same judgment, and many others, the most important of which, have all of them the security of person and property for their end and object.

And now, as to the origin of these rights and liberties guaranteed to the barons of England in Magna Charta; what was it? Were they usurpations; encroachments made by the barons, arms in hand, upon the legitimate prerogatives of the crown? Not so, gentlemen! Lord Coke, and all writers upon Magna Charta, tell us that that instrument was *declaratory*. Declaratory of what? I answer, of the immemorial common law of feuds; of those ancient rights and franchises, which were the birthright and inheritance of the feudal peerage everywhere, but which the English barons had lost by the usurpations of the crown during the first century after the conquest. Now, gentlemen, Magna Charta was but a reclamation of those lost rights and franchises, after the pressure of those circumstances, out of which the loss had sprung, had passed away. For more than a century after the Conquest, Duke William and his Norman followers were but a band of soldiers encamped in the midst of a people, subjugated, it is true, yet brave, warlike, infinitely more numerous than their masters, exceedingly restless under their foreign yoke, and ever on the verge of insurrection. While this state of things lasted, self-preservation required that the Norman barons should rally around their King, and the consequence was an enlargement of the royal prerogatives at the expense of the rights of the barons. But when every thing had become quiet; when the invaders had become firmly established in their conquest, and all fear of insurrection had passed away, then the barons began to look to the recovery of their lost rights and franchises, and that struggle between them and the crown began, which resulted in Magna Charta. Such is the history of that great bulwark of English freedom. And it is true, literally true, that those rights, franchises and privileges, which the barons of England extorted from John at Runnymede, were their ancient prescriptive rights, franchises and privileges, as a branch of the great feudal peerage of Europe. There is nothing valuable, nothing characteristic in Magna Charta, “which a vassal might not, according to the ancient and immemorial common law of feuds, demand as a right from his suzerain.”

And what was the *guarantee* provided in Magna Charta, that those ancient rights, thus recovered by the barons, should be respected for the future? I answer, *force*; the right of resistance, deliberately and solemnly stipulated in the Charta

itself. By force did the barons of England recover their liberties, and by force were they resolved to hold them. Twenty-five of their number were charged at Runnymede with the execution of the Charta, and authorized to levy war upon the king for its breach; he himself expressly stipulating that, in such case, "Our barons shall distrain and annoy us by every means in their power, that is, by seizing our lands, castles, and possessions, and every other mode, till the wrong be repaired to their satisfaction, *saving our person, our queen and our children*. And when it is so repaired, they shall obey us as before." Thus did Magna Charta draw a broad and deep line between the powers of the crown and the rights of the English barons, and deliberately ordain FORCE as the guarantee of its observance; thus canonizing, as it were, the right of resistance, and making it as old as our liberties.

"O! Freedom, thou art not, as poets dream,
A fair young girl, with light and delicate limbs
And wavy tresses."

"A bearded man,
Armed to the teeth, art thou: one mailed hand
Grasps the broad shield, and one the sword—thy brow,
Glorious in beauty though it be, is scarred
With tokens of old wars. Thy massive limbs
Are strong and struggling."

Now, gentlemen, who does not see in Magna Charta, the great prototype of the first Constitution of Virginia, and of all those other Constitutions which have since been modeled upon it? Magna Charta is an instrument drawing a line between the powers of the crown and the rights of the English barons. The Constitution of Virginia is an instrument drawing a line between the powers of the government and the rights of the people. The principle of Magna Charta is, that the barons of England had certain rights which the Crown dare not invade. The principle of the Constitution of Virginia is, that the people of the Commonwealth have certain rights, which the government is bound, under all circumstances, to respect. And if we look into the nature of the rights secured in Magna Charta to the barons of England, we will find there the germs of nearly all those rights secured in the Constitution of Virginia to the people of the State, and there declared to be *natural and inalienable rights*.

Thus, gentlemen, are we able to trace back both our liberties and that principle which is their guarantee, directly to the feudal aristocracy of Europe, than whom there never existed on the earth, a body of men animated by a sterner and prouder spirit of independence. An iron aristocracy as to the rest of the community, they were, within the pale of their own order, a fierce

and turbulent democracy. Their chief was but *primus inter pares*, and the point of honor, the duel, the wager of battle, the right of private war, judicial combat, are all but so many witnesses testifying how feeble was the power of the Crown, and how stern, how jealous, how haughty the spirit of personal liberty and independence, which animated their own body. What more striking than the oath by which the nobles of Aragon swore allegiance to their sovereign? "We, who are each as good, and who are altogether more powerful than you, promise obedience to your government if you maintain our rights and liberties, but not otherwise." And this was the spirit of the feudal peerage everywhere. Am I not right then, in saying that a fiercer, prouder spirit of liberty, never animated any body of men? And the feudal Charta, it will be remembered, was the muniment of their high exclusive rights and liberties; the instrument in which those rights and liberties were gathered together, enrolled, and, as it were, canonized.

Now, gentlemen, the point which I wish particularly to bring to your notice, is this—that the feudal Charta was everywhere strictly and purely an *aristocratic Charta*—a compact and treaty between the King and his barons, most generally in arms against each other. The PEOPLE had no part or lot in it. It is, I know, the popular impression, that Magna Charta was an exception to this general rule, and that the people of England were parties to that instrument. This, in my judgment, is a mistake—history does not sustain it. At the time of Magna Charta, the people of England, *as a political body*, had no existence. There were, indeed, serf and villains; villains regardant, and villains in gross; vassals and vassalage through all the stages of fudation and subinfudation; but no people as a power in the State. The "*liberi homines*" of the Charter were, beyond all doubt, the feudal barons. As late even as the fourteenth century, all the popular movements of Europe—the Jacquerie in France, and the rebellion of Wat Tyler in England—were, in their nature, essentially *servile insurrections*.

It is a great mistake, then, to suppose that the people of England were parties to Magna Charta. That Charta was, in the strictest sense, an aristocratic Charta; the King and his barons being the only parties to it. As yet, the great and illustrious English Commons had no existence, and, at the time of Magna Charta, England presents us with two distinct races, living side by side in the same land—the one a conquering and the other a conquered race—the one a race of kings, nobles, warriors, and priests, the other a race of tradesmen, serfs, villains and slaves—the one rich, living in palaces, castles and monaste-

ries; the other poor, and living either in cities in humble tenements, or scattered over the country in cottages and cabins with thatched roofs. Each has its own language, and speaks a tongue foreign to the other. Norman French is the language of the court, the castle and the monastery; the old Anglo Saxon is the language of the field, the workshop, and the hovel. Never was conquest more deeply impressed on any country; never was the distinction between conquerors and conquered more strongly drawn among any people. All rank, power, wealth, privilege,—even liberty itself, were the prerogatives of the conquerors; toil, sweat, poverty and slavery, the doom of the conquered. And this continued to be the condition of England for more than a century after the conquest.

I have said that at the date of Magna Charta, the English Commons had no existence. It may, perhaps, be proper to state, in this connection, that that Commons was formed at a later period, by a union between the conquering and the conquered races. In the course of time, the badges of the conquest began to disappear, the barriers between the two nations were broken down, connections and matrimonial alliances were contracted between them, and the conquerors ceased to exist as an exclusive cast. By the law of the Norman peerage, the title passed to the eldest son—he alone was enobled, and the younger sons sunk into the ranks of the commonalty. It so happened, also, that many of the most illustrious Norman families had declined all titles. The Bohuns, the Mowbrays, the De Veres and others, descendants of those “knights who had broken the Saxon ranks at Hastings, and scaled the walls of Jerusalem,” waving all rank, took their place in the body of the commons. And when, in addition to this, it is remembered that the whole Saxon race, including its ancient nobility—its Godwins, its Harolds, its Siwards, its Leofricks,—men as noble as the proudest baron who followed the standard of Duke William to the shores of England, had been all overwhelmed in one indiscriminate conquest, and merged in the English Commons, we see at a glance, what it was which gave to that Commons the high consecutive character which has distinguished it from all the other Commons of Europe.

But, gentlemen, as I have already said, this body was the formation of after years. At the time of Magna Charta it had no existence, and, at that date, England presents us with conquerors and conquered, masters and slaves; but no **PEOPLE**, *as an independent political power in the State*. And this, the division of the English nation into two races of conquerors and conquered, is the starting point in English history. Standing upon this eminence, and looking down the

vista of centuries, we may trace the Constitution of England through all the subsequent stages of its development, as it has opened from time to time to receive different portions of the subjugated races within its exclusive and aristocratic pale. As society has advanced, class after class has been admitted to all those high chartered rights and liberties which, for centuries, were the exclusive possession and inheritance of the Norman peerage. So that the Constitution of England, is, in truth, little less than Magna Charta enlarged, liberalized and generalized, to meet the progress of its society, and the development of its different classes. This work of generalization has been going on throughout the whole period of English history, which has been one continued reaction against the conquest; nor has it stopped yet. The barons obtained their Charter from John; the middle classes obtained theirs from William; and who doubts that sooner or later, peaceably or by revolution, the **PEOPLE** will have their Charta also. And now, what I wish particularly to call your attention to is this, that as the Constitution of England is Magna Charta enlarged and liberalized to meet the progress of English Society, *so are all our American Constitutions that same great Charta, still more enlarged, still more liberalized to meet the yet greater progress of American society, and the more rapid growth among us of the principles of equality.*

Now, gentlemen, I claim that I have made good the proposition with which I started—that those liberties which we enjoy and prize so highly, have sprung from no abstract theory of human rights and human equality; but are an entailed inheritance, transmitted to this democratic age and country, from the bosom of a haughty and exclusive aristocracy, and that this is true, not only of those liberties themselves, but also of the forms, the very machinery as it were, by which they have been preserved and perpetuated. The principle of *equality*, is indeed new; but *liberty* is old and aristocratic, and the great work assigned to modern society, is to reconcile ancient liberty with modern equality. And, in thus tracing back our liberties to a high and ancient origin, permit me to say to you, in the language of the wisest man of his age, “we are guided not by the superstition of antiquarians but by the spirit of philosophic analogy. In this choice of inheritance, we give to our frame of polity the image of a relation in blood; binding up the constitution of our country with our dearest domestic ties; adopting our fundamental laws into the bosom of our family affections; keeping inseparable and cherishing with all the warmth of their combined and mutually reflected charities, our State, our hearths, our sepulchres, and our altars.”

Gentlemen, I now advance a step further. I

not only maintain that our own liberties are of ancient origin—a birthright and entailed inheritance, but I maintain that this is equally true of liberty, wherever and whenever it has existed among men, whether in ancient or in modern times; or to express the proposition somewhat differently, that *society always begins in inequality and tends towards equality, and that, in its early stages, all rights, privileges and franchises—even liberty itself—are the possession of an exclusive cast, from which they descend in successive stages, with the progress of society, to the great body of the nation.*

In proof of this assertion let me now call your attention for a moment—it shall be only for a moment—to the Constitutional history of those two illustrious races which have filled all countries with the products of their genius, and all time with the fame of their achievements.

And, first, the Greeks. Every student of Grecian history knows that her institutions, like those of England, were founded in conquest. The first distinct fact which meets us in Grecian history, is the presence on the same soil of two races, the one dominant, and the other subject. Behind this, all is myth and fable. And at the first dawn of authentic history, we find the great Hellenic race in possession of the country which they have conquered and distributed among themselves, reducing the native races everywhere to slavery. These Hellenic conquerors were, like Duke William and his Norman chivalry, a band of warriors, who, having conquered the country by the sword, the sword was the tenure by which they held it. We accordingly find them establishing themselves everywhere as a *warrior cast*, devoted exclusively to arms, and imposing upon the subjugated races all the menial and industrial operations of society. At first, and for ages, all rights, all privileges, all franchises were their exclusive birthright, and inheritance; and the rest of the community being in subjection and vassalage, liberty itself became rank and nobility. But while thus establishing their domination over the subjugated races, the Hellenic peerage was, like the feudal and every other peerage, a strict democracy within the pale of their own order; jealous, in the last degree, of their rights and privileges. They acknowledged no superior; had no chief to whom they paid allegiance; and in this respect, pushed the principle of individual liberty even further than the feudal barons. And when ultimately, cause for united action arose in Greece; when the rights of hospitality were violated in the person of an illustrious Hellenic princess, and the most beautiful woman of her age,—

“No wonder such celestial charms,
For nine long years should hold the world in arms;”

when, I say, ultimately, cause for united action arose in Greece, we find the nobles, *electing* a chief. And yet, so feeble was the authority of that chief, so little was it respected, that Achilles (the most perfect and illustrious representative of the Hellenic chivalry,) for a mere *personal* insult, quits the ranks in the presence of the enemy, retires in sullen majesty to his tent, nor can any solicitation or any disaster to the cause of Greece, induce him to relent until *his friend* falls in battle, when immediately, maddened by passion and remorse, and “breathing war and blood,” he rushes to the fight, “all bright in heavenly arms,” not to uphold the sinking cause of his country, but to avenge the shade of that slaughtered friend. So strong, so haughty, so uncompromising was the spirit of personal liberty and independence maintained within the pale of this old Hellenic peerage.

Thus, gentlemen, do we see that the earliest form of Grecian society was that of a haughty warrior cast, everywhere dominant, and holding a vast subject population in bondage by the sword; that, for ages, rank, nobility, power, privilege—liberty itself—was the exclusive birthright and inheritance of this cast; but that, though lording it over the rest of the community, they were, within their own body, in the strictest sense of the term, a military democracy, animated by the fiercest spirit of liberty, independence and equality. Starting from this point, the student of Grecian history may trace her institutions through all the stages of their subsequent development; he may see the bigotry of race gradually yielding before the pride of wealth; the pride of wealth before the spirit of equality. He may see class after class in the progress of society, fighting its way within the bosom of that proud democracy, widening and deepening the basis of the government at each successive step, until ultimately, every citizen of Greece becomes a member of the old Hellenic peerage, and heir to its high-born rights and privileges. Such is the history of liberty in Greece, which was strictly an inheritance, and not the offspring of theory or speculation.

And if, leaving the classic shores of Greece, we pass to that other illustrious race—the mighty masters of mankind in law and government as the Greeks were in literature and art—we find the same truth, if possible, yet more strikingly illustrated. And here, gentlemen, permit me to say, in passing and by way of episode, that history is but in its infancy. This may seem a bold assertion, but I believe it to be literally true. The first half of the nineteenth century is the beginning of a new historic era. Never before has history been studied in such high relations—never before has it been so penetrated by the spirit of

philosophy—never before has such immense erudition, enlightened skepticism and patient, laborious and comprehensive learning been brought to bear on this or any other subject. The result has been almost startling. Stale common-places have been refuted, consecrated errors exposed—established dogmas shaken—ancient rubbish removed—a full broad light thrown upon things which have been hitherto enveloped in impenetrable myth and fable, and, in a word, with material almost entirely new, the hand of genius and philosophy has restored the “buried majesty” of the ancient commonwealths in forms which will endure till time shall be no more. In the department of Roman history, with which we have now to deal, it was the immortal Niebuhr who, to borrow his own happy illustration, like the naturalist, gathering and putting together the fossil bones of some lost species of animal, “has rebuilt, with fragments picked up here and there, where they lie scattered about as by a tempest, over the whole surface of ancient literature, the sacerdotal and patrician City of the Kings, in all its old Cyclopean strength and massiveness and the awful forms of Tuscan mystery and superstition.” He has shown us the vast influence which religion exerted over the mighty Roman race—that they lived, moved and had their being in the midst of religion—that this religion was no simple belief or worship, but a science and a mystery, administered by vestals, flamens, augurs and Pontiffs, amidst gorgeous pomps and ceremonies—that this science and mystery was hereditary in certain families, and that the old patrician fathers of Rome were at once a warrior-cast and a priest-cast. He has also shown us how this religion penetrated and pervaded every portion of the state and of society, consecrating every thing it touched, property in the worship of Terminus, contracts in the apotheosis of Faith, making the city a temple, and its citadel a sanctuary.

But it is to the reconstruction of the ancient Constitution of Rome that Niebuhr has brought to bear the vast resources of his genius and his erudition with such wonderful success. He has shown us that the whole fabric and constitution of Roman society, rested on the element of *race*—that the original people of Rome was composed exclusively of thrice privileged Tribes—that these Tribes were divided into Curiz, and the Curiz into Gentes or Houses—thus making the Gens or House, the original element of the Roman State. He has further shown us that this Gens or House was itself an artificial association, formed by the union of many families, bound together by the joint performance of the same religious rites, and having the altar for its centre—that, in the earliest times, the entire free popu-

lation of Rome were members of some one of these families—and, if of a family, then of a Gens or House, and, if of a Gens or House, then of a Curiz, and, if of a Curiz, then of a Tribe, and, if of a tribe, then of the State—thus making the original *Populus Romanus* a strictly privileged order, in the exclusive possession of the government. Lastly, he has shown us that, by the side of this privileged and exclusive order, there came to be formed, in the course of time, partly by emigration, but principally by conquest, an alien and foreign population, not contemplated by the original Constitution of Rome, for whom no provision was made in that Constitution—having no connection with either one of the three original Tribes—related to none of the Houses forming those Tribes either by the tie of membership or clientage, and therefore excluded from all connection with the State—in a word, an anomalous population, uniting personal liberty with political subjection—*dependants* on no House and therefore freemen—*members* of no House and therefore disfranchised and not citizens of Rome. Such were the *Plebs*—the great Roman commons—the most illustrious commons the world has ever seen, unless the English be excepted. In the infancy of Rome, we see them poor, weak, disfranchised; connected with the State, but so part of it; compelled to fight its battles, but not permitted to share its privileges. They are not even allowed to live within the city—this is consecrated ground. The Aventine Hill, without its walls, is assigned them for their residence. Still less are they permitted to intermarry with any of the Roman Houses. This would be not only to admit aliens and foreigners within the pale of the Constitution, but to taint the old patrician blood of Rome. For many generations the blood ran pure in the veins of those old patrician fathers of the city. No foreign alloy mingled with it, and the Plebeians resided outside of the walls, a distinct community, regulating their own municipal affairs, and living according to their own laws, usages and customs. They were, as we have seen, for the most part, like the English commons, a conquered people; but they were also like that same commons an enterprising, energetic and intelligent people. Consequently they grew rapidly in wealth, and as they grew in wealth they grew in numbers, intelligence and power until ultimately they came to be the most wealthy, most numerous and most powerful portion of the community. Added to this, there were in their ranks men as high-born, in whose veins the blood coursed as pure as in the veins of the haughtiest patrician of the City. The Scilii, the Decii, the Domitii and others, families as ancient and noble as the patrician Claudii or Quinctii, sprang from the bosom of the commons and,

in the latter days of the Republic, the majority of the illustrious historic names of Rome were of Plebeian origin. That such a body of men should rest contented under their political disfranchisement and social inferiority was not to be expected. Accordingly, in the very earliest times, we hear the mutterings of their discontent, and the early constitutional history of Rome is little else than the history of this illustrious body as it develops itself through incessant, though not bloody conflicts, with the original Roman Tribes—the growth of their demands always keeping pace with their growth in wealth, intelligence and power—the pride of privilege gradually yielding before the principle of equality, until ultimately the whole Roman Plebs, like the English commons, fight their way within the pale of the Constitution. The mantle of the high-born patrician descends upon the shoulder of the humble plebeian, and the entire Roman people, patrician and plebeian, are fused together in one homogeneous mass in the enjoyment of equal rights, franchises and liberties.

Thus, gentlemen, do we see that ancient liberty, like our own, was an inheritance transmitted from an aristocratic to a democratic age—from the bosom of a haughty aristocracy to the humblest citizen. The idea that it was founded in nature—that it was an inalienable right due in common justice to all mankind, has no place in the ancient world. It never seems to have once occurred to any legislator or philosopher of Greece or Rome. On the contrary, “the two ideas most deeply rooted in the ancient world were the bigotry of race and the pride of privilege. Never was the bigotry of race more exclusive—more intense—any where, not even among the Jews, than it was at Sparta.” The Doric race there was, like the Norman conquerors of England, literally a standing army encamped in the midst of a subjugated people, ever on the verge of insurrection and only kept down by the sword. Nor was there any thing peculiar in this domination of race over race at Sparta except its rigor and intensity. Citizenship was universally an affair of race—and liberty, so far from being a natural right, was, as we have seen, every where rank, privilege, nobility and the exclusive inheritance of certain superior races, while slavery was equally the doom of certain other inferior races. And in the social and political systems of those times, the relation of master and slave was quite as well established, quite as universal, as the relation of parent and child, husband and wife, or any other domestic relation. The statesmen and philosophers of antiquity so far from holding any general theory of human equality, held precisely the reverse—that the races of men are unequal—that some

are superior; others inferior—that it is the right of the superior races to command, and the duty of the inferior to obey—that all this is agreeable to nature’s law, which law is subordination and not equality among the races of men, and that in establishing and perpetuating, in the constitution of society, the supremacy of certain races—in setting them apart, and, as it were dedicating and consecrating them to government, literature, philosophy and art, while all the menial and industrial operations of society were assigned to certain other inferior races, they were but proceeding according to that law, and laying the foundation of the most refined civilization—this, whether true or false, was the theory of human rights universally prevalent in the ancient world—the theory of all the philosophers of all the schools—the Grove, the Portico, and the Academy. The justice of this view will be at once admitted by every true student of ancient history, and I venture to affirm that he who does not admit it—whose mind is not thoroughly penetrated by it—who has not conducted his historical researches with reference to it, has not, as yet, laid his hand upon the Key of the Past, or even so much as entered the portals of the ancient world.

And now, gentlemen, if, leaving the ancient world, we come to the modern, we shall find but accumulated proof of my proposition that liberty has no where sprung from theory or metaphysics; but has every where descended, in the form of an inheritance, from the bosom of an aristocratic peerage to democratic ages and countries.

Rome, having consolidated her strength in Italy, proceeded, with unprecedented speed, from victory to victory, until she “veiled the earth in her haughty shadow.” But the seeds of her dissolution were sown side by side with the seeds of her greatness, and, having once grasped the sceptre of universal empire, we find her forgetting her early virtues, defiling her ancient liberties, and, after first prostituting herself from time to time in the arms of the city rabble, sinking ultimately exhausted under the despotism of the Cæsars. Then for the fourth, and it is to be hoped for the last time, do we see the collective force of the human race gathered together in one of those mighty aggregates, known as UNIVERSAL EMPIRES—producing always the same effects—monotony, torpor, stagnation—casting the human race in one common mould by bringing them under the despotism of a single will, and destroying that diversity and variety, out of which spring those rivalries and conflicts which are so necessary to individual, social and political development. Such was the condition to which the Roman world was every where rapidly tending toward the close of the fourth century. European civilization was fast assuming the Asiatic

type, and there was the most imminent danger that those oriental elements which presided at its birth would triumph in its decline. At this critical moment, the northern barbarians came to its relief. Bursting the barriers of the Rhine and the Danube, they rushed down like an avalanche, upon civilized Europe and Rome.

"With heaviest sound a giant statue fell,
Pushed by a rude and artless race
From off its wide ambitious base,
When time his Northern sons of spoil awoke,
And all the blended work of strength and grace,
With many a rude, repeated stroke,
And many a barbarous yell, to thousand fragments broke."

Here the curtain falls on the *first* civilization of the European races. The DARK AGES follow. All is chaos and primordial night. No governments, no nations, no country, no laws, no literature, no arts, nothing settled, every thing in motion. Strife, jumble, universal uproar—"confusion worse confounded" is the new order of things. This continues from the fifth to the ninth century. During the whole of this period, what was once civilized Europe, pressed by barbarians on every side, has not a moment of repose, and, amidst the movement we find race displacing race and nation piled on nation.

Never has an angry heaven inflicted upon this earth a more dreadful scourge, and yet never, in any event in human history, has wisdom and mercy, in the midst of wrath and vengeance, been more manifest. For it is an indisputable fact that that same tempest which desolated Southern Europe and swallowed up her languishing and exhausted civilization in universal barbarism, scattered at the same instant the seeds of another and a higher and more glorious civilization. Not only did it break the great Roman empire into a hundred fragments—whip its lazy elements into motion and stir the stagnant mass to its inmost depths; but it introduced into modern Europe a new and invaluable element—that of *individual liberty—personal independence*—an element which, as I have already explained, had no place in the ancient world, but which came now, for the first time, from the woods of Germany. This sentiment of personality—of individuality—freedom from all control, and the liberty of doing whatever one wishes to do, this sentiment, I say, so strong in the bosom of every savage man, was a passion among those barbarian races which overthrew the Roman empire, and became the characteristic element of that civilization which they established. Thus do we see that, at the darkest hour of European history, in the midst of confusion, strife and chaos, were those germs scattered which have since ripened into those great principles and institutions

which now shelter and protect our lives, liberty and property:

"And this should teach us
There's a divinity that shapes our ends,
Rough-hew them how we will."

As the Dark Ages passed away, and society began to reorganize itself, we every where find feudalism issuing out of the bosom of barbarism. "Wherever barbarianism ceased, feudalism began." Now, gentlemen, there is and always has been, in the popular mind, a deep-rooted prejudice against the feudal system. Nor can it be denied that in many respects, this prejudice is well founded. As a *Social System* I have nothing to urge in its behalf. It did little or nothing for society—it was every where opposed to its progress and to the establishment of order. As a system of *general liberty* I have still less to urge in its behalf; for it was unquestionably a system of injustice, tyranny and violence—a despotism founded in no sentiment moral or religious, but in brute force and the domination of man over man. But, gentlemen, all this being admitted, and freely admitted, let it never be forgotten that it was this same system, thus universally opposed to general order and liberty, which first *organized* that principle of *personal independence*, which, introduced into Europe, as we have seen for the first time, from the forests of Germany, and perpetuated in the Feudal System, has become the keystone of the arch which supports modern liberty and civilization. And let me say in passing, that it was principally by means of that ascendancy and preponderance which the Feudal System gave to country over city life that it was enabled to affect this end. All the ancient States were city states—their governments, municipal governments. Rome herself was a city—the empire but an aggregate of cities, and when that empire dissolved, it returned to its original elements—cities. During the Dark Ages, also, population was every where collected together in cities, or large manors, for the purposes of protection and security. *But the Feudal System changed all this.* It dispersed the population of the cities over the country, and gave a vast preponderance to country over city life. "The solitary castle, fortified against the law as well as against violence," is the type of that system. Here, the lordly Baron, gathering around him his feudal family, spends his life. Within its walls are his wife, children and retainers. Beyond them, and at a distance, collected together in huts, are the serfs who till his lands. These constitute no part of the feudal family—they have no association with the inmates of the castle. They are infinitely beneath them—generally of a different race—a conquered

race—and an impassable gulf lies between them. Over this little society the Baron rules supreme: his will the only law. Can any situation be conceived better calculated to foster and develop the sentiment of personality and individual liberty than this? And does not fact here come in aid of theory? Does not the feudal baron stand the historical representative and impersonation of all that is jealous, proud and haughty in liberty and the spirit of personal freedom?

Gentlemen, I have said that the solitary castle, with its towers and frowning battlements, fortified against the law as well as against violence, is the type of the feudal system. I now say that the peasant's lowly cottage, with its thatched roof, and unchinked walls, fortified not against the law, but against lawless violence, is the type of our present system—of modern civilization. "The poorest man may in his cottage," said Lord Chatham in his great speech upon the quo warranto, "bid defiance to all the forces of the Crown. It may be frail—its roof may shake—the wind may blow through it—the storm may enter—the rain may enter—but the king of England cannot enter! All his forces dare not pass the threshold of the ruined tenement!" And thus has a principle which was asserted eight hundred years ago by armed barons in their lordly castles, descended in the progress of society and of liberty, to the humblest peasant, protecting him in his lowly cottage, and making that cottage his castle.

Nor is this principle, which thus throws its protection around private property, confined to those countries which, in common estimation, enjoy free constitutional governments. It extends to every country, however absolute its government, which the feudal system has pervaded. In all those countries, the inviolability of private property is a fundamental maxim. You have all heard, gentlemen, of the wind-mill of Sans Souci. There it stands to this day in full view of the palace at Potsdam, an eye-sore, and yet a monument prouder than any triumphal arch, of the inviolability of private property, testifying that no European monarch, be he ever so powerful, dare invade its rights, save in those cases where, by usage or the organic law, it may be condemned for public uses. And it is precisely in this fact, that the distinction between the European autocrat and the Asiatic despot is to be found; in the fact that whereas the European autocrat, however absolute, is but prince and chief magistrate, the Asiatic despot is, in addition to this, proprietor and landlord over all his vast dominions, which are, indeed, but his estates, and his subjects mere tenants holding at his sovereign will and pleasure. And that this is not now the relation between European monarchs and their

subjects, and between modern democratic governments and their citizens, is due to those feudal barons who, in the middle ages, asserted and maintained against the Crown, principles which then rendered their own persons and property inviolable, and now throw their protection round the life, liberty, and property of the humblest citizen.

Such is the history—such the pedigree of our liberties. Modern speculation and theory have, indeed, had much to do with their development; but their roots extend far out into the past. And the first instance, I believe, either in ancient or modern times, where any people, renouncing antiquity altogether, have undertaken to tear down the ancient fabric of society in order to reconstruct it on principles purely theoretical and speculative, is that of the French revolution. The self-confident architects of that day, setting down as nothing the time-honored and time-consecrated usages of the family, the society, and the altar: having brick for stone, and slime for mortar, said, in their hearts, "Go to, let us build us a city and a tower whose top shall reach unto heaven." We know the result—

"Forthwith a hideous gabble rises loud
Among the builders, each to other calls
Not understood, till hoarse and all in rage,
As mock'd they storm; great laughter was in heaven,
And looking down to see the hubbub strange
And hear the din; thus was the building left
Ridiculous, and the work confusion named."

Such was the result of the first effort ever made among men to construct society upon elementary and speculative principles. The lesson is one which can never be forgotten. Liberty was the object which revolutionary France was seeking in '89, and it must be admitted that she succeeded in that object. For ten long years was she drenched with liberty; drenched to the very dregs. But what sort of liberty was it? Rational, substantial liberty—that liberty which is justice, founded on law and protected by law—the only sort of liberty worth having? No, gentlemen, it was *French liberty*; "a liberty which first attacked property, then the lives of its foes, then those of its friends; which prostrated all religion and morals; set up nature and reason as goddesses to be worshipped; afterwards condescended to decree that there is a God; and, at last embraced iron despotism as its heaven-destined spouse."

All the existing political systems of Europe, have, I believe, with the single exception of the French Republic, been constituted without any reference to general theory. They have everywhere sprung out of conquest, the conquerors establishing themselves as a privileged caste in the exclusive possession of the government, and of all rights, liberties and franchises; and this con-

tinued to be the case for ages. Gradually, however, and in ever widening circles, the conquered races have been admitted to the rights and privileges of the conquerors. This is the history of liberty in modern Europe,—I have already shown you that it is its history in ancient Europe,—the history of gradual and progressive extension of rights, which in the early stages of society, were the birth-right of an exclusive aristocracy, founded in conquest, to the different classes of the conquered races. Society, as I have said, always begins in inequality and tends towards equality, and he only deserves the name of a statesman who sees that its institutions keep pace with its progress, and that the Constitution opens, from time to time, to admit class after class, successively, as they are prepared to enter it. Nations, like individuals, have their growth and their development, and to suppose that the early institutions of a nation are adapted to it throughout all the stages of its progress, is as absurd as to suppose that the swaddling clothes of the infant are adapted to the proportions of the full-grown man. TIME, in this as in every thing else, is the greatest innovator, nor can its march be stayed. All human institutions and systems must follow in its footsteps, or be crushed beneath its progress. And if, upon the one hand, there is a *fanaticism* which would upheave the ancient foundations of society in order to reconstruct it with reference to some fantastic theory, there is, on the other, a *bigotry* which, by opposing all reform, prepares the way to inevitable revolution.

Gentlemen, I have said that coeval with our ancient liberties, and their only guarantee, is the great principle upon which the Virginia Constitution of '76 was founded—that principle, I mean, which sets a limit upon the powers of all government, and throws its shield around the rights of the individual. I wish, in this connection, to read to you the words of a wise man, which must sink deeply and indelibly into the minds of all who hear and can appreciate them. "Whatever theory," says Mr. Mills, "we adopt respecting the foundation of the social union, and under whatever political institutions we live, there is a circle around every individual human being, which no government, be it that of one, of a few, or of the many, ought to be permitted to overstep; there is a part of the life of every person, who has come to years of discretion, within which the individuality of that person ought to reign uncontrolled either by any other individual, or by the public collectively. That there is, or ought to be, some space in human existence thus entrenched round, and sacred from authoritative intrusion, no one who professes the smallest regard to human freedom or dignity, will call into question." Here, gentlemen, in

my poor judgment, is the principle which distinguishes despotism from liberty; for the truth is that liberty, properly viewed, is not so much a question of this or that form of government, as of the rights of the individual as against all government, whatever form it may assume.

If any one doubts the value of this principle—if he supposes that its application is confined to monarchical or aristocratic forms of government—that it is not equally, indeed more important in a popular government than in any other, I have only to refer him to the latter history of the Greek Democracies—particularly of that great Athenian democracy which, after having filled the world and all time with the renown of its achievements in arts and arms, sunk, at last, utterly debauched and prostitute, into the arms of Cleon and the demagogues. Never, perhaps, has there existed at any time upon this earth, a more relentless, exterminating and inexorable tyranny than that of this self-same illustrious Athenian Demos. Plato speaks of it as a "savage wild beast"—Aristotle as a "cruel despot," who, though he has no crown upon his head, has yet a remorseless sceptre in his hand, and holds his court at the corners of the streets and the market place, with sycophants, parasites and demagogues for courtiers. We, who enjoy the benefits of *habeas corpus* and trial by jury, and live in an age and country in which the security of life, liberty and property is a fundamental maxim, can scarcely form any just conception of a state of things where private was treated uniformly as public property—where, indeed, it was established as a principle, that the citizen was but a *trustee* of his property for public uses—where forfeiture and confiscation were organized into a system—where justice was administered in assemblies composed of thousands of the city rabble—where the honest, the wise, and the learned were driven from public affairs and compelled to bury themselves in academic shades—where the voice of truth, justice and wisdom were drowned in the clamors and shouts of the multitude—where, in a word, society was one universal scene of violence, plunder and brigandage, and all the provinces and functions of government, were consolidated and confounded in one tremendous despotism, wielded by a mob as lawless and as brutish as Comus and his swinish crew. It was this state of things in his beloved country which embittered the latter days of the great Demosthenes—which engraved upon his face those deep lines of sorrow and melancholy which have been perpetuated in all his busts, and which paved the way, at once, for the overthrow of Grecian liberty and the iron rule of Macedon. He who has attentively studied and considered the history of these evil times—who

has studied, in the same relation and in the same spirit, the history of the French democracy at the era of the Revolution, and who has thus seen "the most cultivated and enlightened nations led or driven into the worst crimes by wretches like Cleon and Robespierre—who has seen polished capitals, like Athens and Paris, the glory of the earth, seats of the highest civilization and filled with the trophies of genius, become the theatres of horrors worthy only of the most savage hordes, drenched in gore by a banditti of Septembriseurs, doing murder in broad daylight, or delivered up to the bellish orgies of mobs, made cruel by suspicion and drunk with blood—who has witnessed judicial massacre solemnly perpetrated in the name of the law, and decrees of flagrant iniquity, and revolting for their barbarity, sanctioned by the votes of majorities made up of mild and merciful, but timid and feeble men—who has heard shouts of liberty uttered by multitudes, subjugated by terror and cringing before the idols of their own creation, and seen (what is the infallible consequences of such excesses) the reptile demagogue a moment before, "squat like a toad" at the ear of his victim, "start up in his own shape the fiend and stand confessed the tyrant"—he, I say, who has seen and heard all this, is prepared to appreciate that great inestimable principle upon which our fathers founded the fundamental law of this commonwealth, and on the preservation of which our liberties depend. In these schools he will have learned the invaluable truth that despotism is despotism whether wielded by one man, a number of men, or by the numerical majority—that it is, perhaps, never so harsh, so cruel and so relentless, as when it creeps in under popular forms, and allies itself with popular sovereignty—and that, in the worst of Asiatic despotisms, there is something mild, something patriarchal, something paternal, compared with the despotism of an Athenian or a Parisian mob, drunk with liberty, hungry after confiscation, and gorged with blood. He will also have learned that the great and fatal defect in the political constitutions of the ancient world was, that instead of distributing the powers of government among different departments, and thus establishing in their mutual checks safeguards against abuse, the statesmen of antiquity knew no other means of curbing one despotism than by building up another; the consequence of which was, that we find ancient society every where falling under the sway of some exclusive principle,—of the democratic at Athens, the aristocratic at Sparta, and the despotic at Rome. Finally, he will be forced to the conclusion that, as the despotism of the State over the individual, was the rock upon which ancient civilization

and liberty were wrecked, *so the line which separates the rights of the individual from the powers of the government, is the line along which modern civilization and modern liberty must be defended.*

Gentlemen, we hear a great deal in our times about the principles of government. We are told that there are certain *universal principles* of government, and the common and popular opinion is, that the right of the majority to govern is one of those universal principles. Now, gentlemen, in my poor judgment, there is but one *universal principle* of government, which is, that every people are entitled to those institutions which will make them most happy, most prosperous, and most contented. Nor do I believe that there is any *universal formula* for making men happy, prosperous and contented. On the contrary, I believe that what is best for one people, may be worst for another—what is best in Africa, may be worst in Asia—what is best in Asia, may be worst in Europe—what is best in Europe may be worst in America, and vice versa. In a word, I believe that government is a practical affair—an affair of time, place and circumstance—of means to an end, which end is the prosperity of the governed, and that every people have a right, (a natural right, if you please,) to that form of government which will best secure that end. If, under the circumstances in which they are placed, a popular government will best secure their prosperity, then, *with that people*, popular government becomes a natural right: but in this sense it is plain that despotism itself may become a natural right. In the third century, despotism was certainly the best, and, perhaps, the only practicable government for Rome. If so, despotism then at Rome was as legitimate as democracy now at Washington. Sincerely attached to the institutions of my own country—preferring them infinitely above all others—believing that they are admirably, nay, wonderfully adapted to our country and people, and that government here, resting on any other than the broad and generous basis of the popular sovereignty, would be unwise and impracticable, I am not bigot enough to suppose that our institutions are adapted to all times and nations, and that all governments proceeding upon other principles, must necessarily be illegitimate and in derogation of natural rights. The principle of popular sovereignty, applied to the brave, enlightened and educated freemen of America, is, beyond all reach of controversy, the best basis of government; but is there any fanatic in the land who would apply that principle to the rajahs of Turkey, the fellahs of Egypt, the pariahs of India, the Arabs of the desert, or the nomads of central Asia? No, gentlemen, we cannot judge

governments in the abstract, and Macaulay was right when he said that a "good government, like a good coat, is that which fits the body for which it is designed. A person who, upon abstract principles, pronounces a Constitution to be good, without an exact knowledge of the people who are to be governed by it, judges as absurdly as a tailor who should measure the Belvidere Apollo for the clothes of all his customers." I repeat, gentlemen, there is but one principle—one right, connected with government, and that is that every people are entitled to those institutions which, under the circumstances in which they are placed, will make them most happy and most prosperous.

Gentlemen, this idea that government is a science, and is to be constructed with reference to abstract principles, is of comparatively recent origin. All the governments of Europe, as I have already stated, with the exception of the present revolutionary government of France, have been the growth of time and circumstances, springing out of the Feudal System, and modified from time to time, to meet the progress of society. Those political theories and speculations, which have exerted such a wonderful influence over modern society, had no existence when the foundations of those governments were laid. They belong exclusively to the eighteenth and nineteenth centuries, though their rise may be traced back remotely to the Reformation. The distinguishing characteristic of that great movement was, that it was "an insurrection of the human mind against absolute power," and resulted in the emancipation of the human reason, and the establishment of the right of free enquiry. It is a somewhat remarkable fact, however, that the Reformation, thus founded on intellectual liberty, and so eminently favorable to religious freedom, was not, at first, favorable to the progress of political freedom; but was, on the contrary, followed every where throughout Europe, by an increase of monarchical power; for it is an indisputable fact that, at the same moment that the principle of liberty triumphed in the Church, the principle of despotism triumphed in the State—in Germany in the person of Charles V.—in France in the person of Louis XIV.—and in England in the person of Henry VIII. The explanation of this remarkable circumstance is no doubt to be found in the fact that the Reformation was, in its origin, essentially a religious movement, and that the attention of men was at first directed to their religious, to the neglect of their political interests. But it was impossible that this state of things should last, and a struggle between that principle of liberty and free enquiry, which had triumphed in the spiritual order, and that principle of despotism which

had triumphed in the temporal, was sooner or later, inevitable. I need scarcely remind you that that struggle began in England. This is not the place to enter into any examination of the causes which enabled the Tudors to push the royal prerogatives to a point which they had never reached under the most powerful and absolute of the Plantagenets. It is enough that the fact is so, and that the explanation is to be found, partly, in the personal character of the illustrious princes of that haughty house; but, principally, in the destruction of the old nobility in the wars of York and Lancaster, whose jealousy and watchfulness had always held the Crown in check, and maintained the Ancient Constitution of the Realm. Under the usurpations of the Tudors, the English people manifested, from time to time, much uneasiness and discontent; but these monarchs, by their firmness and energy—by timely concession, where concession was inevitable, and by resolute resistance wherever resistance was practicable, managed to maintain their power, and to crush every revolutionary movement in the bud. It was just at this critical moment when the people of England were awakening to their political interests, that, the line of the Tudors failing, James I., a foreigner, a pedant, a coward and a fool, ascended the English throne, and began his reign by the assertion of dogmas in relation to the nature and origin of the regal powers which the haughtiest Tudor had never dreamed of. It was gravely asserted by him that the kingly power came from heaven—that it descended directly from God—that, being derived from God, it was responsible only to him, and, therefore, above all human control and intervention—absolute, inviolable—irrevocable—that no injustice, no misconduct could forfeit it—that to rebel against it was to rebel against heaven, and that what were termed the rights of the subject, were so termed by courtesy only, being, in truth, but so many grants, or concessions from the reigning prince to his subjects, revocable at his sovereign will and pleasure. And thus, at the very instant when the people of England were beginning to take an interest in their political affairs, was an effort made to withdraw them entirely from their jurisdiction, by giving to government a divine origin, and establishing the principle of inviolability. By the assertion of these dogmas on all occasions, in season and out of season, in the palace, the city, and the country, James invited, and, as it were, challenged, an investigation of their truth. I need scarcely say to you that the challenge was accepted—that the controversy soon passed from the court to the nation, and thus began that memorable struggle between the principles of despotism and the principles of liberty which deluded England.

blood, brought one of her ancient kings to the scaffold, and laid the foundations of POLITICAL SCIENCE.

On the side of the Court first appeared Filmer, maintaining, with his royal patron, that the kingly power is of divine origin—absolute, inviolable, irrevocable, and he actually attempted to trace it back *historically* to God. Absurd as was his whole system and the arguments alleged in its support, it is a remarkable fact that Filmer's book made a deep and profound impression at the time of its publication.

The public mind of England was now thoroughly aroused upon the subject of its political affairs, and it was impossible that the controversy should stop at this point. We accordingly find that, shortly afterwards, and on the same side, appeared another writer, not like Filmer, a mere pedant, but a man of genius and erudition—a great, bold, original thinker—the first philosopher of his age and country—I mean *Thomas Hobbes*. Hobbes saw at once the absurdity of Filmer's theory, and that, if the Royal pretensions were to be maintained at all, it must be upon some other hypothesis of government than that of the "*Divine Right*." He adopted that of a "*State of Nature*," and has thus the credit of originating an idea which has been at the bottom of all speculations upon government, from that time to the present. Instead of deducing government from God, he deduced it from "a state of nature," which he supposed to be a state of constant warfare, which, in time, became so intolerable that men were forced to seek refuge from it in *civil society*. The act, by which he supposes them to pass from a state of nature into society, was a "*compact*," and thus this great original thinker was also the first to conceive the idea that *government is founded on a compact*. By this compact, according to Hobbes, all agree to "submit their will to the will of one—it matters not whether this be one individual or an assemblage of persons—whose will should become the will of all." "Whoever procures his will to be thus respected, possesses the sovereign power and majesty—he is the prince—the others are his subjects." In the person of this prince, according to the theory, all powers, executive, legislative and judicial, unite, and, having once passed to him by the original compact, cannot be revoked. And thus Hobbes, deducing government from a "state of nature," and Filmer deriving it from God, arrived, in the end, at the same conclusion—that *the kingly power is absolute, indivisible, inviolable and irrevocable*.

But I have said that the English people had now become deeply concerned about their government, and that that spirit of free enquiry, which had overthrown despotisms in the Church,

was now directed to the State. It was not to be expected, therefore, that Filmer and Hobbes would go unanswered. Nor was it so; and, passing over Algernon Sidney and other writers of less note, I come directly to Locke, the great champion of liberty, and of the ancient Constitution of England, against the despotic dogmas of the Stuarts. Like Hobbes, Locke derived society from "a state of nature;" but his idea of this thing, called "a state of nature," was altogether different from that of Hobbes. According to Locke, a state of nature was no state of universal warfare; but a state in which all men were *free, equal, and in the enjoyment of certain rights*—which rights each was bound to respect, and, in case of their violation or infringement, was justified, upon the principles of self-defence, in resorting to force for their maintenance and protection. And here, permit me to say in passing, we have, for the first time in human history, the suggestion of the idea of *natural rights*, and the *universal freedom and equality of mankind* in connection with government. In Locke's state of nature, all men were supposed to be free, equal, and in the possession of certain rights, and from this state of universal freedom and equality, in which every individual is the guardian and conservator of his own natural rights, he makes mankind pass into civil society by an *act of surrender*, upon the part of each individual, to the constituted authorities, of his personal privilege of punishing and redressing all violations of those natural rights. And, as the State, in the estimation of Locke, is but a voluntary association among a number of men, each individually free and equal, and the universal freedom and equality of mankind thus the original element of his system, it was but a fair and logical deduction from these premises, that this association, when organized, should be directed by the will of the majority, and that each member should submit his will to the will of that majority. Thus was Locke led to the conclusion that the supreme power resides in the majority of the community. But he also held, what was the most important part of his theory, that this supreme power was *transferable and divisible*, and that, in England, it had actually been transferred and distributed among the different departments of the Government and the different orders of the State, in various proportions.

Such was the reasoning by which Locke refuted the despotic theories of Filmer and Hobbes, and demonstrated, to the satisfaction at least of the great body of the English people, that the ancient constitution of the realm was in strict conformity with the abstract principles of government—and so great was the impression made by his Essay—so high was the authority of his

name, and so entirely were his conclusions in harmony with the feelings and patriotism of the people of England, that his theory was looked upon as completing and perfecting the science of government. And certain it is that politics, as a science, has made no progress in that country from that day to this.

Abandoned in England, however, political science was revived upon the continent, and pushed to a point greatly in advance of that at which Locke had left it. This is not the occasion to enter into any explanation of those circumstances which made Geneva, in the early portion of the eighteenth century, the centre of political speculation for all Europe. I simply state the fact, and that the "*Contrat Social*" could only have been written by a "citizen of Geneva." This little Republic—one of the smallest States of Europe—situated in the centre of the continent, and surrounded on all sides by great and powerful monarchies, not only managed to maintain its independence; but became, about this time, the hot-bed of those political theories which have since overturned a throne, expelled an ancient dynasty, and agitated the general fabric of European society to its lowest depths. Rousseau was the apostle of this Geneva School. Like Hobbes and Locke, he deduced government from "a state of nature," out of which he supposes mankind to emerge into civil society by a voluntary contract—the "*Contrat Social*." This contract is the result of unanimous agreement, every member of society being a party to it, and is concluded, not between the people and their rulers, but between the people themselves. The object of it is the establishment of institutions "under which the power of *all* may be exercised for the protection of the persons and property of *each*"—each individual surrendering himself to the will and direction of the community, which is thus made sovereign and supreme. And the sovereign and supreme power, thus vested in the community, is, when so vested, according to Rousseau, *indivisible and intransferable*, always abiding, undiminished, in the community—from which it follows that magistrates are but agents, and government a mere agency, responsible always to the people, who remain *all the time* supreme and sovereign.

Such is the "*Contrat Social*"—the "text-book of revolution"—which, though it would be a shallow and superficial view to say that it caused the French Revolution, yet certainly impressed upon that great movement its distinctive character, and gave it the direction which it took.

It is manifest from this rapid review of the theories of Hobbes, Locke, and Rousseau, that Hobbes and Rousseau stand at opposite extremes, while Locke occupies a position inter-

mediate between the two. Hobbes, by maintaining that the supreme power is transferable, but indivisible and irrevocable, and that, in all organized governments, it has been actually transferred, thus undivided, to the constituted authorities by the original compact, was led directly to *absolute monarchy*. Rousseau, on the other hand, by maintaining that the supreme power was indivisible and intransferable, and must abide always, and under all circumstances, with the sovereign people, was led directly to *pure democracy*—while Locke, by maintaining that the supreme power was both transferable and divisible, was led to *mixed government*.

Such is a very brief sketch of the rise and progress of those political theories which, though of recent origin, have exerted, and are still exerting a marvellous influence over the destinies of modern society. Their great importance demanded that I should not pass them by in silence. Many good and wise men, looking to the discontent and dissatisfaction which they have diffused so generally throughout the world, and the excesses and crimes to which they have led in at least one memorable instance, have been induced to regret their existence, and to look upon speculative politics as the great pest and nuisance of our times. Such is not my opinion. Those ideas of human equality and natural rights, generated by political theory and metaphysics, have, indeed, like all new ideas of a popular character, been pushed, in the first instance, to extremes; but the evil is one which, in the nature of things, must soon correct itself, and it is manifest that reaction has already commenced. The difference between the first and second Revolutions in France, marks the progress of that reaction, and I have an abiding faith that modern civilization will not fail in the accomplishment of its great work of reconciling the *principles of equality* with the *principles of liberty*. I have never been able to see why those general ideas—that spirit of philosophy, which has pervaded every other department of human affairs, and allied itself, in science, morals, and religion, with experience and fact, should be excluded from the field of legislation. Why is it that, in the scientific, moral and religious world, theory and fact may move side by side, checking, controlling and modifying each other, while the political world must be abandoned to prescription and to ancient abuses and injustices? There is, there can be no good reason for it, and while upon the one hand I would not surrender society to the despotism of theory, so neither would I, upon the other, abandon it to the despotism of prescription; but keeping a steady eye upon its growth and development, I would gradually, cautiously, and upon the principles of reform rather than of revolution, mould and mod-

ify the institutions of the past so as to accommodate them to the present. And, if that great conservative principle, which lies at the basis of our government, can only be preserved in its full integrity, I have no apprehensions connected with the progress of the principles of equality—no fear whatever but that those ancient and high-born rights, privileges and franchises, of which I have so often spoken, may be extended with safety and infinite benefit to the humblest citizen who toils and sweats in the field, the work-shop, the factory, or on the highway.

In conclusion, gentlemen, for I feel that it is time, full time, that I should bring this address to a conclusion, I have but one wish to express, which is that the purport and tenor of these remarks may not be misunderstood. In all that I have said—in every syllable which I have uttered, I have had but one object in view, and that is to say something which might strengthen and tighten the cords which bind every son of Virginia to the soil which gave him birth. If I have endeavored to prove to you that our liberties have not sprung from modern theory and metaphysics, but have a high and ancient pedigree, it was only that I might thereby the more endear them to you upon the principle upon which we love and respect whatever is old, and which has been transmitted to us as an inheritance from our fathers. If I have endeavored to prove to you that the principle upon which the Virginia Constitution of '76 is based, is the principle which draws the line between despotism and liberty, and is at once the glory and the guarantee of modern civilization, it was only that, by teaching its priceless value, I might present to you a stronger motive to defend and maintain it under all circumstances and at every hazard. Lastly, if I have spoken in terms of reverential homage of those illustrious founders of the Republic, who, at the instant of the separation of the colony from the mother country, collected together and bound up the ancient liberties of the people of Virginia in that great Constitutional Charta, and thus transmitted them as an inheritance to those who should succeed them, it was only that we might learn to love and respect their memories the more, and to imitate their high example. And, now, gentlemen, finally, what I say to you, and through you, to the young men of our State, is, let us study the characters of these Conscript Fathers of the Republic—let us fill our heads with their rational and manly views of liberty, and our hearts with their noble, patriotic impulses and purposes—let us, in a word, take them as our models, and to this end, here, in the capital of that Commonwealth which, under the shelter and protection of those institutions which they founded, has enjoyed, for the last seventy-five years,

as large a portion of happiness, prosperity and substantial freedom, as has been ever realized by any community of men on earth,—here, I say, in the capital of this ancient Commonwealth, and within a few yards of the spot from which I now address you,

"WILL WE BUILD THEM

A MONUMENT and plant it round with shade
Of laurel, ever green, and branching palm,
With all their trophies hung and acts inroll'd
In copious legend, or sweet lyric song.
Hither shall all the valiant youth resort,
And from their memory inflame their breasts
To matchless valor and adventures high:
The virgins also shall, on feastful days,
Visit their tomb with flowers."

TO MY SISTER.

BY THE LATE F. S. KEY.

I think of thee, I feel the glow,
Of that warm thought, yet well I know
No verse a brother's love can show;
My Sister!

But ill should I deserve the name,
Or warmth divine that Poets claim,
If I for thee no lay could frame,
My Sister!

I think of thee, of those bright hours,
Rich in life's first and fairest flowers,
When childhood's gay delights were ours,
My Sister!

Those sunny paths were all our own,
And thou and I were there alone,
Each to the other only known,
My Sister!

In every joy, and every care,
We two, and we alone, were there,
The brightness and the gloom to share,
My Sister!

As changing seasons o'er us flew,
No changes in our love we knew,
And there our hearts together grew,
My Sister!

And then there came that dreaded day,
When I with thee no more must stay,
But to the far school haste away,
My Sister!

Sad was the parting, sad the days,
And dull the school, and dull the plays,
Ere I again on thee may gaze,
My Sister!

But longest days will yet be past,
And cares of school away be cast,
And home and thee be seen at last,
My Sister!

The mountain-top—the road—the plain,
The winding creek, the shaded lane,
Shall shine in both our eyes again,
My Sister!

Who then shall first my greeting seek,
Whose warm tears fall upon my cheek,
And tell the joy she cannot speak,
My Sister!

My Sister, those bright joys are gone,
And we through life have journeyed on,
With hearts which still as then are one,
My Sister!

A parting hour again must come,
To meet again beyond the tomb,
Oh! let us then make Heav'n our home,
My Sister!

Sketches of the Flush Times of Alabama and Mississippi.

THE BENCH AND THE BAR.

INTRODUCTION.

In the month of March, A. D., 1836, the writer of these faithful chronicles of law-doings in the South West, duly equipped for forensic warfare, having perused nearly the whole of Sir William Blackstone's Commentaries on the Laws of England, left behind him the red hills of his native village, in the valley of the Shenandoah, to seek his fortune. He turned his horse's head to the setting sun. His loyalty to the Old Dominion extorts the explanation that his was no voluntary expatriation. He went under the compulsion which produced the author's book—"Urged by hunger and request of friends." The gentle momentum of a female slipper, too, it might as well be confessed, added its moral suasion to the more pressing urgencies of breakfast, dinner and supper. To the South West he started because magnificent accounts came from that sunny land of most cheering and exhilarating prospects of fussing, quarrelling, murdering, violation of contracts, and the whole catalogue of *crimen falsi*—in fine, of a flush tide of litigation in all of its departments, civil and criminal. It was extolled as a legal Utopia, peopled by a race of eager litigants, only waiting for the lawyers to come on and divide out to them the shells of a bountiful system of squabbling: a California of Law, whose surface strife only indicated the vast *placers* of legal dispute waiting in untold profusion, the presence of a few craftsmen to bring out the crude suits to some forum, or into chancery for trial or assay.

He resigned prospects of great brilliancy at home. His family connections were numerous, though those of influence were lawyers themselves, which made this fact only contingently beneficial—to wit, the contingency of their dying before him—which was a sort of *remotissima potentia*, seeing they were in the enjoyment of excellent health, the profession being remarkably salubrious in that village; and seeing further, that, after their death, their influence might be gone. Not counting, therefore, too much on this advantage it was a well-ascertained fact that no man of real talent and energy—and, of course, every lawyerling has both at the start—had ever come to that bar, who did not, in the course of five or six years, with any thing like moderate luck, make expenses, and, surviving that short probation on board wages, lay up money, ranging from \$250 to \$500, according to merit and good fortune, *per annum*. In evidence of the correctness of this calculation, it may be added that seven young gentlemen, all of fine promise, were enjoying high life—in upper stories—cultivating the cardinal virtues of Faith and Hope in themselves, and the greater virtue of Charity in their friends—the only briefs as yet known to them being brief of money and brief of credit; their barrenness of fruition in the day time relieved by oriental dreams of fairy clients, with fifteen shilling fees in each hand, and glorious ten dollar contingents in the perspective, beckoning them on to Fame and Fortune. But Poverty, the rugged mother of the *wind-sellers* of all times and countries, as poor Peter Peebles so irreverently calls our honorable craft,—the Necessity which knows no Law, yet teaches so much of it, tore him from scenes and prospects of such allurements: with the heroism of old Regulus, he turned his back upon his country and put all to hazard—*videlicet*, a pony valued at \$35, a pair of saddle-bags and contents, a new razor not much needed at that early day, and seventy-five dollars in Virginia bank bills.

Passing leisurely along through East Tennessee, he was struck with the sturdy independence of the natives, of the enervating refinements of artificial society and its concomitants; nor less than with the patriotic encouragement they extended to their own productions and manufactures: the writer frequently saw pretty farmers' daughters working bare-footed in the field, and his attention was often drawn to the number of the distilleries and to evident symptoms of a liberal patronage of their products. He stopped at a seat of Justice for half a day, while Court was in session, to witness the manner in which the natives did up judicature; but with the exception of a few cases under a statute of universal authority and delicacy, he saw nothing of special

interest; and these did not seem to excite much attention beyond the domestic circle.

The transition from East Tennessee to South Western Alabama and East Mississippi was something marked. It was somewhat like a sudden change from "Sleepy Hollow" to the Strand. A man, retailing onions by the dozen in Weathersfield, and the same man suddenly turned into a Real Estate broker in San Francisco, would realize the contrast between the picaresque standard of the one region, and the wild spectrification, the impetuous rush and the magnificent scale of operations in the other.

The writer pitched his tabernacle on the thither side of the state line of Alabama, in the charming village of P., one of the loveliest hamlets of the plain, or rather it would be, did it not stand on a hill. Gamblers, then a numerous class, included, the village boasted a population of some five hundred souls; about a third of whom were single gentlemen who had come out on the vague errand of seeking their fortune, or the more definite one of seeking somebody else's: philosophers who mingled the spirit of Anacreon with the enterprize of Astor, and who enjoyed the present as well as laid projects for the future, to be worked out for their own profit upon the safe plan of some other person's risk.

Why he selected this particular spot for his *locus in quo*, is easily told. The capital he had invested in emigration was nearly expended and had not as yet declared any dividend; and, with native pride, he was ambitious to carry money enough with him to excite the hopes of his landlord. Besides, he was willing to try his hand on the practice where competition was not formidable.

The "accommodations" at the "American Hotel" were not such as were calculated to beguile a spiritual mind to things of sense. The writer has been at the Astor, the Revere and the St. Charles since, and did not note the resemblance. A huge cross-piece, like a gibbet, stood before the door—the usual *inn-sign* of the country; and though a very apt device as typifying death, it was not happy in denoting the specific kind of destruction that menaced the guest. The vigor of his constitution, however, proved sufficient for the trial; though, for a long time, the contest was dubious.

In the fall of the year so scarce were provisions—bull-beef excepted, which seemed to be every where—that we were forced to eat green corn, baked or fried with lard, for bread; and he remembers, when biscuits came again, a mad wag, Jim Cole, shouted out from the table that he should certainly die *now*, for want of a new bolting cloth to his throat.

A shed for an office procured, the next thing

was a license; and this a Circuit Judge was authorized to grant, which service was rendered by the Hon. J. F. T. in a manner which shall ever inspire gratitude—he asking not a single legal question; an eloquent silence which can never be appreciated except by those who are unable to stand an examination.

This egotism over, and its purpose of merely introducing the witness accomplished, the narrative will proceed without further mention of him or his fortunes; and if any reader thinks he loses anything by this abbreviation, perhaps it will be full consolation to him to know that if it proceeded further, the author might lose a great deal more.

Dropping the third for the more convenient first person, he will proceed to give some account of what was done by or to Themis in that part of her noisy domain.

Those were jolly times. Imagine thirty or forty young men collected together in a new country, armed with fresh licenses which they had got gratuitously, and a plentiful stock of brass which they had got in the natural way; and standing ready to supply any distressed citizen who wanted law, with their wares counterfeiting the article. I must confess it looked to me something like a swindle. It was doing business on the wooden-nutmeg, or rather the patent brass-clock principle. There was one consolation: the clients were generally as sham as the counsellors. For the most part, they were either broke or in a rapid decline. They usually paid us the compliment of retaining us, but they usually retained the fee too, a double retainer we did not much fancy. However, we got as much as we were entitled to and something over, *videlicet*, as much over as we got at all. The most that we made was experience. We learned before long, how every possible sort of case could be successfully lost: there was no way of getting out of court that we had not tested. The last way we learned was *via* a verdict: it was a considerable triumph to get to the jury, though it seemed a sufficiently easy matter to get away from one again. But the perils of the road from the writ to an issue or issues—for there were generally several of them—were great indeed. The way was infested and ambushed, with all imaginable points of practice, quirks and quibbles, that had strayed off from the litigation of every sort of foreign judicature,—that had been successfully tried in, or been driven out of, regularly organized forums, besides a smart sprinkling of indigenous growth. Nothing was settled. Chaos had come again, or rather, had never gone away.

Order, Heaven's first law, seemed unwilling to remain where there was no other law to keep it company. I spoke of the thirty or forty barristers on their first legs—but I omitted to speak of the older members who had had the advantage of several years' practice and precedence. These were the leaders on the Circuit. They had the law—that is the practice and rulings of the courts—and kept it as a close monopoly. The earliest information we got of it was when some precious dogma was drawn out on us with fatal effect. They had conned the statutes for the last fifteen years, which were inaccessible to us, and we occasionally, much to our astonishment, got the benefit of instruction in a clause or two of "the act in such cases made and provided" at a considerable tuition fee to be paid by our clients. Occasionally, too, a repealed statute was revived for our especial benefit. The courts being forbidden to charge except as specially asked, took away from us in a great measure, the protection of the natural guardians of our ignorant innocence: there could be no prayer for general relief, and we did not—many of us—know how to pray specially, and always ran great risks of prejudicing our cases before the jury, by having instructions refused. It was better to trust to the "uncovenanted mercies" of the jury, and risk a decision on the honesty of the thing, than blunder along after charges. As to reserving points except as a bluff or scarecrow, that was a thing unheard of: the Supreme Court was a perfect *terra incognita*: we had all heard there was such a place, as we had heard of Heaven's Chancery, to which the Accusing Spirit took up Uncle Toby's oath, but we as little knew the way there, and as little expected to go there. Out of 1,000 cases, butchered in cold blood without and with the forms of law, not one in that first year's practice, ever got to the High Court of Errors and Appeals; (or, as Prentiss called it, the Court of High Errors and Appeals.) No wonder we never started. How could we ever get them there? If we had to run a gauntlet of technicalities and quibbles to get a judgment on "a plain note of hand," in the Circuit Court, Tam O'Shanter's race through the warlock, would be nothing to the journey to and through the Supreme Court! It would have been a writ of error indeed—or rather a writ of many errors. This is but speculation, however—we never tried it—the experiment was too much even for our brass. The leaders were a good deal but not generally retained. The reason was, they wanted the money, or like Falstaff's mercer, good security; a most uncomfortable requisition with the mass of our litigants. We, of the local bar trusted—so did our clients: it is hard to say which did the wildest credit business.

The leaders were sharp fellows—keen as briars—*au fait* in all trap points—quick to discern small errors—perfect in forms and ceremonies—very pharisees in "anise, mint and cummin—but neglecting judgment and the weightier matters of the law." They seemed to think that judicature was a tanyard—clients skins to be curried—the court the mill, and the thing "to work on their leather" with—*bark*: the idea that justice had anything to do with trying causes, or *aeoneo* had any thing to do with legal principles, never seemed to occur to them once, as a possible conception.

Those were quashing times, and they were the *out quashingest* set of fellows ever known. They moved to quash every thing, from a *venire* to a *subpoena*: indeed, I knew one of them to quash the whole court, on the ground that the Board of Police was bound by law to furnish the building for holding the Court, and there was no proof that the building in which the court was sitting was so furnished. They usually, however, commenced at the *capias*—and kept quashing on until they got to the forthcoming bond, which, being set aside, released the security for the debt, and then, generally, it was no use to quash any thing more. In one court, forthcoming bonds, to the amount of some hundred thousands of dollars, were quashed, because the execution was written "State of Mississippi"—instead of "*the* State of Mississippi," the constitution requiring the style of process to be the State of Mississippi: a quashing process which vindicated the constitution at the expense of the foreign creditors in the matter of these bonds, almost as effectively as a subsequent vindication in respect of other bonds, about which more clamor was raised.

Attachments were much resorted to, there being about that time as the pressure was coming on, a lively stampede to Texas. It became the interest of the debtors and their securities and of rival creditors, to quash these, and quashed they were, almost without exception. J. H. was sheriff of W., and used to keep a book in which he noted the disposition of the cases called on the docket. Opposite nearly every attachment case, was the brief annotation—"squashed for the lack of form." This fatality surprised me at first, as the statute declared the attachment law should be liberally construed, and gave a form, and the act required only the substantial requisites of the form to be observed: but it seems the form given for the bond in the statute, varied materially from the requirements of the statute in other portions of the act: and so the circuit courts held the forms to be a sort of legislative gull trap, by following which, the creditor lost his debt.

This ingenious turn for quibbling derived great

assistance and many occasions of exercise from the manner in which business had been done, and the character of the officials who did it, or rather who didn't do it. The justices of the peace, probate judges, and clerks, and sheriffs, were not unfrequently in a state of as unsophisticated ignorance of conventionalities as could be desired by J. J. Rousseau or any other eulogist of the savage state. They were all elected by the people, who neither knew nor cared whether they were qualified or not. If they were "good fellows" and wanted the office, that is, were too poor and lazy to support themselves in any other way, that was enough. If poor John Rogers, with nine small children and one at the breast, had been in Mississippi instead of Smithfield, he could have got any office he wanted, that is, if he had quit preaching and taken to treating. The result of these official blunders was, that about every other thing done at all, was done wrong: indeed, the only question was as between void and voidable. Even in capital cases, the convictions were worth nothing—the record not showing enough to satisfy the High Court that the prisoner was tried in the county, or at the place required by law, or that the grand jury were freeholders, &c., of the county where the offence was committed, or that they had found a bill. They had put an old negro, Cupid, in C—— county, in question for his life, and convicted him three times, but the conviction never would stick. The last time the jury brought him in guilty, he was very composedly eating an apple. The sheriff asked him how he liked the idea of being hung. "Hung," said he—"hung. You don't think they are going to hang me, do you? I don't mind these little circuit judges: wait 'till old *Shurkey* says the word in the High Court, and then it will be time enough to be getting ready."

But if quashing was the general order of the day, it was the special order when the state docket was taken up. Such quashing of indictments! It seemed as by a curious display of skill in missing, the pleader never could get an indictment to hold water. I recollect S. who was prosecuting *pro tem.* for the state, convicted a poor Indian of murder, the Indian having only counsel volunteering on his arraignment, S. turned around and said with emphatic complacency: "I tell you, gentlemen, there is a fatality attending my indictments." "Yes," rejoined B., "they are generally quashed."

It was in criminal trials that the juniors flourished. We went into them with the same feeling of irresponsibility that Allen Fairfield went into the trial of poor Peter Peebles's suit vs. Plaintunes, namely—that there was but little danger of hurting the case. Any ordinary jury

would have acquitted nine cases out of ten without counsel's instigating them thereto—to say nothing of the hundred avenues of escape through informalities and technical points. In fact, criminals were so unskillfully defended in many instances, that the jury had to acquit in spite of the counsel. Almost any thing made out a case of self-defence—a threat—a quarrel—an insult—going armed as almost all the wild fellows did—shooting from behind a corner or out of a store door, in front or from behind—it was all self-defence! The only skill in the matter, was in getting the right sort of a jury, which fact could be easily ascertained, either from the general character of the men, or from certain discoveries the defendant had been enabled to make in his mingling among "his friends and the public generally,"—for they were all, or nearly all, let out on bail or without it. Usually, the sheriff, too, was a friendly man and not inclined to omit a kind service that was likely to be remembered with gratitude at the next election.

The major part of criminal cases, except misdemeanors, were for killing, or assaults with intent to kill. They were usually defended upon points of chivalry. The iron rules of British law were too tyrannical for free Americans, and too cold and unfeeling for the hot blood of the sunny south. They were denounced accordingly, and practically scouted from Mississippi judicature, on the broad ground that they were unsuited to the genius of American institutions and the American character. There was nothing technical in this, certainly.

But if the case was a hopeless or very dangerous one, there was another way to get rid of it. "The world was all before" the culprit "where to choose." The jails were in such a condition—generally small log pens—that they held the prisoner very little better than did the indictment: for the most part, they held no one but Indians who had no friend outside who could help them, and no skill inside to prize out. It was a matter of free election for the culprit in a desperate case, whether he would remain in jail or not; and it is astonishing how few exercised their privilege in favor of staying. The pains of exile seemed to present no stronger bars to expatriation, than the jail doors or windows.

The inefficiency of the assisting officers, too, was generally such that the malefactor could wind up his affairs and leave before the constable was on his track. If he gave bail, there were the chances of breaking the bond or recognisance, and the assurance against injury, derived from the fact that the recognisance were already broke.

The aforesaid leaders carried it with a high hand over us lawyer-lings. If they took nothing by their false clamor, they certainly lost nothing by sleeping on their rights, or by failing to claim all they were entitled to. What they couldn't get by asking the court, they got by sneering and brow-beating. It was pleasant to watch the countenances of some of them when one of us made a motion or took a point, or asked a question of a witness that they disapproved of. They could sneer like Snake and scold like Madame Caudle, and hector like Bully Ajax.

We had a goodly youth, a little our senior but more their junior, a goodly youth from the Republic of South Carolina, Jim T. by name. The elders had tried his mettle: he wouldn't fag for them, but stood up to them like a man. When he came to the bar, Sam J. made a motion at him on the motion docket, requiring him to produce his original book of entries on the trial or be non *suit*. (He had brought an action of assumpsit on a blacksmith's account.) When the case was called, Sam demanded whether the book was in court. Jim told him "No, and it wouldn't be," and denied his right to call for it; whereupon, Sam let the motion go, and suffered Jim T. to go on and prove the account and get the verdict; a feat worthy of no little praise. Jim was equal to any of them in law, knowledge and talent, and superior in application and self-confidence, if that last *could* be justly said of mere humanity. He rode over us rough-shod, but we forgave him for it in consideration of his worrying and standing up to the rack. He was the best lawyer of his age I had ever seen. He had accomplished himself in the elegant science of special pleading,—had learned all the arts of confusing a case by all manner of pleas and motions, and took as much interest in enveloping a plain suit in all the cobwebs of technical defence, as Vidocq ever took in laying snares for a rogue. He could "entangle justice in such a web of law," that the blind hussey could have never found her way out again if Theseus had been there to give her the clew. His thought by day and his meditation by night, was special pleas. He loved a demurrer as Domine Dobiensis loved a pun—with a solemn affection. He could draw a volume of pleas a night, each one so nearly presenting a regular defence, that there was scarcely any telling whether it hit it or not. If we replied, ten to one he demurred to the replication; and would assign fifteen special cases of demurrer in as many minutes. If we took issue, we ran an imminent risk of either being caught up on the facts, or of having the judgment set aside as rendered on an immaterial issue. It was always dangerous to demur, for the demurrer being overruled, the defendant was entitled to judgment final.

Cases were triable at the first term if the writ had been served 20 days before court. It may be seen, therefore, at a glance, that, with an overwhelming docket, and without books, or time to consult them if at hand, and without previous knowledge, we were not reposing either on a bed of roses or of safety. Jim T. was great on variances, too. If the note was not described properly in the declaration, we were sure to catch it before the jury: and, if any point could be made on the proofs, he was sure to make it. How we trembled when we began to read the note to the jury! And how ominous seemed the words "I object"—of a most cruel and untimely end about being put to our case. How many cases where, on a full presentiment of the legal merits of them, there was no pretence of a defence, he gained, it is impossible to tell. But if the ghosts of the murdered victims could now arise, Macbeth would have had an easy time of it compared to Jim T. How we admired, envied, feared and hated him! With what a bold, self-relying air he took his points! With what sarcastic emphasis he replied to our defences and half defences! We thought that he knew all the law there was: and when, in a short time, he caught the old leaders up, we thought if we couldn't be George Washington, how we should like to be Jim T.

He has risen since that time to merited distinction as a ripe and finished lawyer; yet, "in his noon of fame," he never so tasted the luxury of power,—never so knew the bliss of envied and unapproached preëminence, as when, in the old log court houses, he was throwing the boys right and left as fast as they came to him, by pleas dilatory, sham and meritorious, demurrer, motions and variances. So infallible was his skill in these infernal arts, that it was almost a tempting of Providence not to employ him.

I never thought Jim acted altogether fairly by squire A. The squire had come to the bar rather late in life, and though an excellent justice and a sensible man, was not profoundly versed in the metaphysics of special pleading. He was particularly pleased when he got to a jury on 'a plain note,' and particularly annoyed when the road was blocked up by pleas in abatement and demurrers or special pleas in bar. He had the most unlimited admiration of Jim. Indeed, he had an awful reverence for him. He looked up to him as Boswell looked up to Sam Johnson, or Timothy to Paul. The squire had a note he was anxious to get judgment on. He had declared with great care and after anxious deliberation. Not only was the declaration copied from the most approved precedent, but the common counts were all put in with all due punctilios, to meet every imaginable phase the case could assume.

Jim found a variance in the count on the note: but how to get rid of the common counts was the difficulty. He put a bold face on the matter, however, went up to A. in the court house, and threw himself into a passion. "Well," said he, with freezing dignity—"I see, sir, you have gone and put the common counts in this declaration—do I understand you to mean them to stand? I desire to be informed, sir?" "Why, y-e-s, that is. I put 'em there—but look here, H——, what are you mad at? What's wrong?" "What's wrong?—a pretty question! Do you pretend, sir, that my client ever borrowed any money of yours—that yours ever paid out money for mine? Did your client ever give you instructions to sue mine for borrowed money? No, sir, you know he didn't. Is that endorsed on the writ? No, sir. Don't you know the statute requires the cause of action to be endorsed on the *capias ad respondendum*? I mean to see whether an action for a malicious suit wouldn't lie for this? and shall move to strike out all these counts as multifarious and incongruous and heterogeneous." "Well, Jim, don't get mad about it, old fellow—I took it from the books." "Yes, from the English books—but didn't you know we don't govern ourselves by the British statute,—if you don't, I'll instruct you." "Now," said A., "Jim, hold on—all I want is a fair trial—if you will let me go to the jury, I'll strike out these common counts." "Well," says Jim, "I will this time, as it is you; but let this be a warning to you, A., how you get to suing my clients on promiscuous, and fictitious, and pretended causes of action."

Accordingly they joined issue on the count in chief—A. offered to read his note—H. objected—it was voted out, and A. was non suited. "Now," said Jim, "that is doing the thing in the regular way. See how pleasant it is to get on with business when the rules are observed!"

The case of most interest at the Fall term of N—e court, 1837, was the State of Mississippi vs. Major Foreman, charged with assault with intent to kill one Tommy Peabody, a Yankee schoolmaster in the neighborhood of M—ville. The District Attorney being absent, the Court appointed J. T. to prosecute. All the preliminary motions and points of order having been gone through and having failed of success, the defendant had to go to trial before the jury. The defendant being a warm democrat, selected T. M., the then leader of that party, and Washington B. T., then a rising light of the same political sect, to defend him. The evidence was not very clear or positive. It seemed that an altercation

had arisen at the grocery, (fashionably called doggery,) between a son of the defendant and the schoolmaster, which led to the shooting of the pistol by the younger F. at the aforesaid Thomas, as the said Thomas was making his way with equal regard to speed of transit and safety of conveyance from that locality. As it was Thomas's business to teach the young idea to shoot, he had no idea of putting to hazard "the delightful task" by being shot himself: and by thinking him of "what troubles do environ the man that meddles with cold iron" on the drawing thereof, resolved himself into a committee of safety and proceeded energetically to the despatch of the appropriate business of the board. But fast as Thomas travelled, a bevy of mischievous buck-shot, as full of devilment as Thomas' scholars just escaped from school, rushed after, and one of them, striking him about two feet above the calf of his right leg, made his seat on the scholastic tripod for a while rather unpleasant to him. In fact Thomas suffered a good deal in that particular region in which he had been the cause of much suffering in others. Thomas also added to the fun naturally attaching, in the eyes of the mercurial and reckless population of the time, to a Yankee schoolmaster's being shot while running, in so tender a point, by clapping his hands behind at the fire and bellowing out that the murderer had blown out his brains! A mistake very pardonable in one who had come fresh from a country where pistols were not known, and who could not be expected, under these distressing circumstances, to estimate, with much precision, the effect of a gun-shot wound.

Young Foreman, immediately after the pistol went off, followed its example. And not being of a curious turn, did not come back to see what the sheriff had done with a document he had for him, though assured that it related to important business. The proof against him—as it usually was against any one who could not be hurt by it—was clear enough: but it was not so much so against his father. The Major was there, had participated in the quarrel, and about the time of the firing a voice the witness took—but wasn't certain—to be the Major's, was heard to cry out, "Shoot! Shoot!" and, shortly after the firing, the Major was heard to halloo to Peabody, "Run—Run—you d—d rascal—run!" This was about the strength of the testimony. The Major was a gentleman of about fifty-five—of ruddy complexion, which he had got out of a jug he kept under his bed of cold nights without acknowledging his obligations for the loan—about five feet eight inches high and nearly that much broad. Nature or accident had shortened one leg so that he limped when he walked. His eyes stood out and were streaked like a boy's white alley—and

he wore a ruffled shirt; the same, perhaps, which he had worn on training days in Georgia, but which did not match very well with a yellow linsey vest and a pair of copperas colored jeans pantaloons he had squeezed in the form of a crescent over his protuberant paunch: on the whole he was a pretty good live parody on an enormous goggle-eyed sun perch.

He had come from Georgia, where he had been a major in the militia, if that is not tautology; for I believe that every man that ever comes from Georgia is a major,—repaying the honor of the commission or title by undeviating fidelity to the democratic ticket. He would almost as soon be convicted as to have been successfully defended by a whig lawyer.

Old F. held up his head for some time—indeed seemed to enjoy the mirth that was going on during the testimony, very much. But when J. T. began to pour broadside after broadside into him, and bring up fact after fact and appeal after appeal, and the courthouse grew still and solemn, the old fellow could stand it no longer. Like the Kentucky militia at New Orleans, he ingloriously fled, sneaking out when no one was looking at him. The sheriff, however, soon missed him, and seeing him crossing the bridge and moving towards the swamp, raised a posse and followed after. The trial in the mean time proceeded—as did the Major.

I said he was defended in part by W. B. T.

You didn't know Wash? Well, you missed a good deal. He would have impressed you. He was about thirty years old at the time I am writing of. He came to N. from East Tennessee, among whose romantic mountains he had "beat the drum ecclesiastic" as a Methodist preacher. He had, however, doffed the cassock, or, rather, the shad-belly, for the gown. He had fallen from grace—not a high fall—and having warred against the devil for a time—a quarter or more—Daggetty-like, he got him a law license, and took arms on the other side. His mind was not cramped, nor his originality fettered by technical rules or other learning. His voice, had not affectation injured the effect of it, was remarkably fine, full, musical and sonorous, and of any degree of compass and strength. He was as fluent of words as a Frenchman. He was never known to falter for a word, and if he ever paused for an idea, he paused in vain. He practised on his voice as on an organ, and had as many ups and downs, high keys and low, as many gyrations and windings, as an opera singer or a stage horn. H. G.—y used to say of him that he just shined his eyes, threw up his arms, twirled his tongue, opened his mouth, and left the consequences to Heaven. He practised on the injunction to the apostles, and took no thought

what he should say, but spoke without labor—mental or physical. To add to the charms of his delivery, he wore a poppaw smile, a sort of sickly-sweet expression on his countenance, that worked like Dover's powders on the spectator.

After J. T. had concluded his opening speech, Washington rose to open for the defence. The speech was a remarkable specimen of forensic eloquence. It had all the charms of Counsellor Phillips' most ornate efforts, lacking only the ideas. Great was the sensation when Wash turned upon the prosecutor. "Gentlemen of the jury," said the orator, "this prosecutor is one of the vilest ingrates that ever lived since the time of Judas Iscariot; for, gentlemen, did you not hear from the witnesses, that when this prosecutor was in the very extremity of his peril, my client, moved by the tenderest emotions of pity and compassion, shouted out, 'Run! run! you d—d rascal—run! It is true, (lowering his voice and smiling,) gentlemen, he said 'you d—d rascal!'" but the honorable court will instruct you that that was merely *descriptio personæ*." The effect was prodigious.

After Washington had made an end, old Talabola rose slowly, as if oppressed by the weight of his subject. Now T. never made a jury speech without telling an anecdote. Whatever else was omitted the anecdote had to come. It is true the point and application were both sometimes hard to see; and it is also true that as T's stock was by no means extensive, he had to make up in repetition what he lacked in variety. He had, however, one stand-by, which never failed him. He might be said to have chartered it. He had told it until it had got to be a necessity of speech. The anecdote was a relation of a Georgia major's prowess in war. It ran thus: The major was very brave when the enemy was at a distance, and exhorted his men to fight to the death;—the enemy came nearer—the major told his soldiers to fight bravely, but to be prudent;—the foe came in sight, their arms gleaming in the sunshine—and the major told them that, if they could not do better, they ought to retreat; and added he, "being a little lame, I believe I will leave now." And so, said T., it was with the prosecutor. At length, after a long speech, T. concluded. J. T. rose to reply. He said, before proceeding to the argument, he would pay his respects to his old acquaintance, the anecdote of the Georgia major. He had known it a long while, indeed almost as long as he had known his friend T. It had afforded him amusement for many courts—how many he couldn't now stop to count. Knowing the major to have been drafted into Mr. T's speeches for many a campaign, he had hoped the war-worn veteran

had been discharged from duty and pensioned off in consideration of long and hard usage, or at least, that he was resting on furlough; but it seems he was still in active service. His friend had not been very happy in his anecdote on other occasions, but, he must say, on this occasion he was most *felicitously unhappy*; for the DEFENDANT was a major—he was a Georgia major too; unfortunately he was a little lame also; and, to complete the parallel, “in the heat of this action, on looking around,” said J. T., “I find he has left!” T. jumped up—“No evidence of that, Mr. H. Confine yourself to the record, if you please.” “Well,” said J. T., “gentlemen, my friend is a little restive. You may look around and judge for yourselves.” Tallabola never told that anecdote any more:—he had to get another.

The jury having been sufficiently confused as to the law by which about twenty abstract propositions bearing various, and some of them no, relation to the facts, (the legislature, in its excessive veneration for the sanctity of jury trial having prohibited the judges from charging in an intelligible way,) retired from the bar to consider of their verdict. In a few moments they returned into court. But where was the prisoner? Like Lara he wouldn't come. The court refused to receive the verdict in the absence of the defendant. Finally, after waiting a long while, the Major was brought, an officer holding on to each arm and a crowd following at his heels. (The Major had been caught in the swamp.) When he came in, he thought he was a gone sucker. The court directed the clerk to call over the jury: they were called and severally answered to their names. The perspiration rolled from the Major's face—his eyes stuck out as if he had been choked. At the end of the call, the judge asked “are you agreed on your verdict?” The foreman answered “Yes,” and handed to the clerk the indictment on which the verdict was endorsed. The clerk read it slowly. “We—the jury—find the—de—fen—dant, (the Major held his breath,) *not* guilty.” One moment more and he had fainted. He breathed easy, then uttering a sort of relieving groan shortly after, he came to Tallabola—“Tal,” said he, blubbing and wiping his nose on his cuff, “I'm going to quit the dimmycratic party and jine the whigs.” “Why, Major” said Tal, “what do you mean? you're one of our chief spokes at your box. Don't you believe in our doctrines?” “Yes,” said the Major, “I do; but after my disgraceful run I'm not fit to be a dimmycrat any longer—I'd disgrace the party—and am no better than a dratted, blue-bellied, federal whig!”

THE VALE OF ENNA.

From “*The Search for Persephone*,” an Unpublished Poem.

BY R. H. STODDARD.

The Vale of Enna slept in solitude,
No foot had ever fallen there before,
Save when a fawn, or startled antelope
Flew o'er its slopes like wind, or bleating lambs
Strayed down its pastures never to return.
Ridge after ridge, and shelvy ledge on ledge,
And slope on slope, with soft declivities
The meadows sank, as some great wall of surf,
Caught in a rift of crags that front the sea
Rolls down its broken volumes, wave on wave,
Billow on billow sinking, till the last
Kisses the drift of foam along the shore:
The matted grass was full of snowy buds,
As though the winds had shorn the ragged spray,
And shook its fleeces o'er the hollow gulfs.
Below the meadows spread a stretch of lawn,
Which now the virgins gained with dewy feet:
Thickets of roses grew around, breast high,
And pastoral hedges full of flower and thorn:
And all around in nests of tufted grass,
Thick-sown in clusters, grew a myriad flowers,
Sole in their hues, or misted o'er with all.
With flecked inlay and constellated dust,
So starry and innumerable that the Vale
More than of Earth, resembled those of Heaven,
Thick-sown with constellations, bloomy stars:
Near by an orchard grew, a bloomy wood,
Covered with fruit and blossoms all the year:
With plums and pears and figs, the grass was heaped,
And laced with vines, and melons, globes of gold;
Bananas drooped like ingots; pelting down
The dead-ripe olives showered; pomegranates split,
And shed their crimson seeds; myrrhs oozed their gums:
And when the white-throat thrust his silver bill
In stem or bough, the manna bled its balm.

CHILDREN AND THEIR LITERATURE.

BY MONCURE D. CONWAY.

Children! Hasten into life! In the pure garments of beauty, may Love meet you with heavenly looks and with the wreath of Immortality!—GÖTTE, (*Exequies of Milton*.)

Were we called on to state the most mysterious, unexplored region of Science, we would not say electricity, but—Childhood. “The bane of Science,” cries some naturalist, for whom little Tommy has been kind enough to upset a basin of fresh salamanders, the captives of a hard battle with the sinks of the nearest bog. ‘Babies! did you say?’ cries the literary man, as he puts up his book, to get the little Pledge to sleep:—‘Why the very name comes from Babel.’ We are firm on our assertion; and will cease our defence of children only when they cease coming!

‘I have gotten a man from the Lord,’ was the mother's exclamation at the birth of the first child.

We question if any of Eve's daughters ever saw so deeply into the mystic nature of Infancy after her. How few look upon the little one as a MAN, as much so as the bud is a flower, as much so as a drop has the same elements with the ocean! How few remember that the child is 'from the Lord;' a trust from Heaven of an Immortal Soul, for which the mother is elected!

O mystic realm of Childhood, how so guarded! The generations as they pass bring us Philosophers, Orators, Prophets; but how few come with the key of the child-soul. Who hath the amulet: who will be the 'Tongue of the Secret?' Where is the Seer,

—"the man of eld,
Whose eyes within his eyes beheld
Heaven's numerous hierarchy span,
The mystic gulf from God to man?"

Novalis pauses amid his woes to say, 'Where Children are, there is the golden age;' and the 'Sage of Concord' rises higher when he sees in infancy the 'perpetual Messiah,' sent to woo us back to virtue and simplicity. Is it too much? No: Christ thought not; for amid the disputes of his disciples he took a child and set it in their midst! O what a reproof and Evangel! The trust, the simplicity, the love of a Child,—these are the living Gospel. Amid all the darkness and superstition of the Middle Ages, when we see in every church the Madonna with the gentle Babe, we do not wonder that such souls as St. Francis and Thomas à Kempis were nurtured even by the Apostate Mother. The mediæval Church bore in that Child the germ of its death, for it cultivated in Pascal, in Luther, the child-like spirit that consisted not with hypocrisy. Thou art right, 'good Novalis,' childhood is the golden age. We sit within a hard shell of ceremony amid our companies; fearing to show any sign of inward life,—intent on weather, the crops, the President. But here comes Baby,—every body understands Baby! It cannot speak a word, but stupid indeed is that age or sex that doesn't read a volume in its eyes and hear eloquence in its voice. Thou art unfit for the golden age, friend, if thou art tired of Baby; for Baby must be the test of the Phalanx. 'Christina,' cried the people at the death of Gustavus, 'Christina shall be our Queen!' and the little girl was brought out laughing and frolicsome. Happy nation whose rough soldiers kissed the hand and smiled at the bright eyes of a little Sis of seven years! Alas! Christina, hadst thou been ever a child!

Does any one wonder at the fascination which is exercised over a child by stories apart from real life. Aladin in the Underworld, Fairy

Queen in the Sea, Crusoe in the far-off isle.—these and similar stories are the

—"stars which tremble,
O'er the deep mind of dauntless infancy."*

Because these are glimpses of the true Eden; intuitions of a life away from the Actual. Idealism is here clothed and manifest; the child is the true and only transcendentalist. Heaven is indeed 'around our infancy:' in every birth we see radiant

—"the morning of the world,
When the Earth was nigher Heaven than now."

How much touching and suggestive truth is in these verses of Hood's:

"I remember, I remember
The fir-trees dark and high,—
I used to think their slender tops
Were close against the sky:
It was a childish ignorance,
But now 'tis little joy,
To think I'm farther off from heaven
'Than when I was a boy!"

How much more touching this history—"Then were there brought unto him little children, that he should put his hands on them, and pray: and the disciples rebuked them. But Jesus said, Suffer little children, and forbid them not, to come unto me; for of such is the kingdom of heaven." Matt. xix—13, 14.

TRICK, 'who has embodied so many Runic secrets,† has made childhood state its own position on earth, in the sweet though fantastic story of 'The Elves.' The following conversation between the elf and the mortal is a sweet fancy. The mother is looking on the two unperceived.

"Elfrida was sitting there on a little bench, and beside her the well-known Zerina; and the children were playing and amusing one another, in the kindest unity. The elf embraced her beautiful companion, and said mournfully, 'Ah! dear little creature as I sport with thee, so have I sported with thy mother, when she was a child; but you mortals so soon grow tall and thoughtful. It is very hard: wert thou but to be a child as long as I!'

"'Willingly would I do it,' said Elfrida; 'but they all say, I shall come to sense, and give over playing altogether; for I have great gifts as they think for growing wise. Ah! and then I shall see thee no more, thou dear Zerina! Yet it is with us as with the fruit-tree flowers: How glorious the blossoming apple-tree, with its red bursting buds! It looks so stately and broad; and

* Tennyson.

† Countess Ossoli.

every one that passes under it, thinks surely something great will come of it; then the sun grows hot, and the buds come joyfully forth; but the wicked kernel is already there, which pushes off and casts away the fair flowers' dress; and now in pain and waxing it can do nothing more, but must grow to fruit in harvest. An apple, to be sure, is pretty and refreshing; yet nothing to the blossom of spring. So is it also with us mortals: I am not glad in the least at growing to be a tall girl. Ah! could I but once visit you."*

The perpetual tragedy of the earth is the perversion of infancy. We cannot be wrong in saying that it is next to impossible for an infant to preserve the harmony with the Universe, wherein it is born. We have taken our children from their weeping angels and consigned them to the fiends, Puritanism and Jesuitism,—which riot in our laws, social and other, though unorganized.

Michael Wigglesworth, reader, was early in the last century a school-teacher at Walden, N. E., in high repute. He was eulogised by Dr. Cotton Mather in 1710, who stood, you remember, on a very high eminence in the Puritan Church. Now, this Michael wrote a poem called "The Day of Doom," which was used seventy years ago as a SCHOOL-BOOK. Some extracts therefrom we will transfer. Wigglesworth meditates calmly on the damnation of infants,—read!

"Then to the bar all they drew near who died in Infancy,
And never had or good or bad effected personally,"—

We have seen how on earth He took them in his arms and blessed them; but Michael with his penetration sees a change. These infants commence pleading, and, one would think, rationally for such young folk,—whose very name (*infor*,—not to speak) means that they can't speak at all. The little ones say—

"Not we but he ate of the tree whose fruit was interdicted,
Yet on us all of his sad fall, the punishment's inflicted."

They are thus indoctrinated by Theologian Wigglesworth:

"But what you call old Adam's fall, and only his trespass
You call amiss to call it his; both his and yours it was.
He was designed of all mankind to be a public head,
A common root whence all should shoot and stood in all
their stead!

The infants had the good breeding to yield the point, for

"Their consciences must needs confess his reasons are
the stronger."

They are then by Michael, who seems to think

that he is forerunner of the archangel of that name, sent to trumpet the 'Day of Doom,' cast into the place of 'weeping and gnashing of-gums,' as Burns used to have it.

Now this will be ridiculed. But is there not a modification of this same Ironside teaching in our social state now? What else is the doctrine that the Child is a Demon, and must live on in sin until he shall be converted? What else is that which refuses infants the nourishing breast of the church? O friends, let us lift up our voice against the hard selfishness taught our children! How many children are taught these things in the Westminster catechism:

"Q. What is the chief end of man?

"A. Man's chief end is to glorify God and enjoy him forever."

Here the child is taught that he must live to gratify God's vanity and his own selfishness. The very fountain of the inward life is poisoned! For human life is but the outgrowth of the first ideas of God and duty. The next step in education of the child is logically subsequent to this. We teach the child that all virtue is but a name to cover what feels best. The mother gives the child a lump of sugar for a good act,—thenceforth in the child's vocabulary the definition stands thus: "A good act;—something which brings a lump of sugar!" Who wonders at the world of iniquity and crime-statistics when our dear little ones, who will be copied to the third and fourth generation, are taught this foul Benthamism?

With the Reverend Channing we must put the office of teacher above that of the minister; and there is no problem of more moment to society than the elevation of the instructor. To teach requires the rarest combination of faculties. The child is simple hearted, and so may be filled with good or evil. It needs much faith to treat it rightly. Read this striking paragraph from 'The Diary of Lady Willoughby,'—a book worth money and time. "A child's mind stops not at difficulties as ours does: when told that God heareth prayer from his throne in heaven, the belief is entire and she questioneth not. I verily believe the doctrine, that we should walk by faith and not by sight, is easier to a young child than to us, whose affections have been engrafted on earthly objects and the first simplicity of faith observed. And surely we should consider it a sacred trust given to us, to direct this inborn trust and ready belief of the little child to *Him* who implanted it."

The Talmudists relate that the Queen of Sheba placed two roses before Solomon—one artificial, the other real,—asking him to distinguish them. The king studied long. Seeing a bee outside the window he opened it: the bee flew in and lit on one of the flowers. 'That,' said the king,

* Carlyle's German Romance.

'is the rose!' Now children are guided to the real, like the bee. No matter how lovely the flower,—the child will know if it be a sham. And with them you stand for what you are. The father trembles before the emperor, but the child does not. Little Oliver Cromwell would not, despite the efforts of his father and the king, do obeisance to little prince Charles, and when he misbehaved in play he did not fail to conquer him, as afterward when he misbehaved in governing England! "In my dealing with my child, my Latin and Greek, my accomplishments and my money, stead me nothing; but as much soul as I have avails. If I am wilful, he sets his will against mine, one for one, and leaves me, if I please, the degradation of beating him by my superiority of strength. But if I renounce my will and act for the soul, setting that up as umpire between us two, out of his young eyes looks the same soul; he reveres and loves with me."—EMERSON'S ESSAYS. *The Oversoul*.

Acute also are the senses, spiritual and physical, of children. Nothing is trivial; even your play is to them symbolic and real. The author of 'Thinks-I-to-myself,' has portrayed truly the effect on the child of the discrepancy between the outward and inward of the household;—the slander turned into compliment at the appearance of the visitor; the angry brow grown smooth in an instant. "The igner man," says Jean Paul Richter, "like the negro, is born white, but is colored black by life. In advanced age the grandest moral examples pass by us, and our life-course is no more altered by them than the flitting comet; but in childhood the first object that excites the sentiment of love or of injustice, flings broad and deep its light or shadow over the coming years; and as, according to ancient theologians, it was only the first sin of Adam, not his subsequent ones, which descended to us by inheritance, so that since the One Fall we make the rest for ourselves, in like manner the first fall and the first ascent influence the whole life." Astyages asked Cyrus for an account of his last lesson. "A great boy," said he, "in the school having a short cassock, by force took a longer from another that was not so tall as he, and gave him his own in exchange: whereupon I, being appointed judge of the controversy, gave judgment that I thought it best each should keep the coat he had, for that they were both better fitted now than they were before. Upon which my master told me that I had done ill, in that I had only considered the fitness of the garments, whereas I ought to have considered the justice of the thing, which required that no one should have any thing forcibly taken from him that is his own."—*Xenophon. Cyrop.* i, 3.

Cyrus was punished for this injustice, the fruit

of early misdirection; and the influence of the lesson must have been incalculable. Even modern days have not learned the lesson,—Do no evil that good may come.

Such a teacher as that of Cyrus is indeed rare: and our Books for Children, far the most important part of our literature, are for the most part worthless. Even our Sunday School publications are, we must say, too machine-like for the young. They remind us irresistibly of the man who on a pretty morning took his children out from the city to the green country, and seizing them by the collars, said, "Now, boys, I've brought you out here to enjoy yourselves,—and if you don't enjoy yourselves pretty soon, you'll catch it, that's all!"

Rare gifts indeed must he have who would write for a child,—and great will be his reward; for the child will remember him when grown ripe for the tomb. As in the time of Aaron, many cast in their rods to have their claim to enter the Holy of Holies attested,—but only one budded and bloomed and bore fruit. The priests are very rare, and the children need one very much.* Where is the *rara avis* with a pinion that can soar over the inferior heights of mathematica, philosophy, critical theology, &c., to the heavenward realm of infancy and childhood? O! for a divining-rod to find him.

—Be not startled, reader, when we cry—EUREKA! We have indeed found a true priest, and wish to introduce him into every home where there are bright eyes and budding souls. It is no other than friend Nathaniel Hawthorne, writer of 'True Stories from History and Biography,' and 'Wonder Book for Boys and Girls.' These books cost seventy-five cents a piece, but their worth cannot be estimated in gold. We once heard Grace Greenwood say, that she pitied the one that got too old for Hawthorne's Child-book: we had read only his books for the old, inasmuch as we were advancing in life. But we could read these books with joy and delight a score of times. We wish to lay the wreath of laurel on his genial forehead and call on the youth to hail him king!

The season for Christmas presents is coming on. The season also of cheerless days without, of bleak winds, of dull skies—

"When turn we from the world without
To seek the world within."

Parents! much will be added to your children's minds this winter,—either for a "savor of life unto life, or of death unto death." Beware what books you give them; be careful that you give them books! One book gotten without re-

* Have you ever read Miss Barrett's 'Cry of the Infants'?

fection or supervision may ruin them. O, reflect on this !

To be specific we will allude to some writers and books which we would commend to those who buy books for children. A child's book should be suggestive rather than affirmative. A parent often procures a book upholding some form of faith which pleases him, for his child. Now if the proposition is true the child will have it from the book, but not from experience or invention, which is its only value ; if it be untrue, and the child finds that it is the parent's belief, he will hold to it ; but it is his first lesson in hypocrisy. For this reason Miss Edgworth is justly high in esteem with young and old ; we wish she were more so. She doesn't think for the child, but helps the child to its own thoughts. Mrs. Sherwood will do best for children of fourteen who have some defined theories : we especially recommend 'Flowers of the Forest.' Mrs. Ellis should also be read at this age. As a general thing our best Child-books are from female writers. We must also here enter a caveat against morbid poetry, too much humor, and a fantastic style of thought—such as Poe's for example. 'The World and the Soul,' published, we think, by the S. S. Union, is a vivid and good book, some parts a little too harrowing for the young. A better book is published by the Methodist Society—'Sketches and Incidents : ' this book was written for adults, but our highest praise for any book is to say it is good enough for a child. Above all let the child read the Gospels with its own comment.

But above all books of human origin which we have seen, we can commend the books of Hawthorne above-mentioned. We trust that the writer of them will without fail give us such a Christmas gift annually. He has not forgotten that he was a child once ! If it is true, as is written, that no 'man knoweth the things of a man save the spirit of man that is in him,' even so can none know the spirit of a child save the spirit of a child. It requires the spirit of a child to enter the kingdom of heaven.—and childhood is its outer court. Who that can bear this child-like spirit into the experience and information of age, he is the true priest of the child : the rod blooms in his hand ! Hawthorne has found the Water of Youth on the mountain top,—despite all the allurements of other walks of literature ; he has a fount of those waters springing up in his soul : may it long sparkle and flow, and may the old be made young again thereat ; and may the children come with thirst for the Best, and drink of these sweet waters. Heaven bless the children and ever give Angels charge over them !

HYMN TO THE SAVIOUR.

The following lines were written by a boy of thirteen years of age, a native of Philadelphia, but now living with his parents in Cincinnati, Ohio. As the production of so young a poet, we think them quite remarkable.

[Ed. Mess.

Saviour ! from thy shining throne,
From thy throne on high,
Listen to my humble moan.
Bursting tear and sigh,
Oh, protect us
Through the darkness,
Ave Jesu !

Holy Jesus ! ever blessed,
Pure and undefiled,
Hear the fervent supplication
Of an erring child—
Give us quiet,
Rest and stillness,
Ave Jesu !

Balmy rest and quiet slumbers
Send me from above,
Peace of God and dreams from heaven
Setting forth thy Love,
Let us sleep
In thy protection,
Ave Jesu !

In my last and awful struggle
Be thou near to aid,
Let thy prayer, Oh Christ ! my Saviour,
My defence be made,
Take me home,
A wayward wanderer,
Ave Jesu !

POETRY AND RELIGION.

NO. XI.

The Responsibility of Poetical Genius.

That man is a moral agent, subject to law, responsible to a supreme power, and that a character of right or wrong, of innocence or guilt, is attached to his actions, while a corresponding reward or penalty ensues as their final result—this fundamental truth will be denied by none but an avowed atheist. Nay, even he, whatever may be the professed theory of his unbelief, will exhibit a practical refutation of such a conclusion, in the intuitive convictions and spontaneous feelings that arise within him, as he witnesses the actions of others, whether good or evil. These imply that man possesses a character of responsibility. Otherwise the sense of approval or of indignation which he may feel would be absurd and inconsistent. Moreover, when his own actions pass under review, there

arises in the breast of every man, irrespective of all reasoning, as to the grounds of obligation, a feeling of complacency, or a sense of guilt, which testifies to a supreme moral law binding upon the heart and conscience.

The conditions of responsibility are two-fold—the capacity of a moral agent, and the existence of moral relations. Wherever a creature possesses such a capacity, and is surrounded by such relations, there you find a moral agent—a being responsible to God for his conduct. Man is such a being, he possesses such a capacity, and is placed in the midst of such relations. He is endowed with reason and conscience, with a will and affections. He has intelligence to know, freedom to choose, and motives to pursue the path of rectitude. He is related primarily to God, and subordinately to his fellow-men. Each of these relations involves its peculiar class of duties, so that man owes duties to God and to his fellow men in the various relations of society. But all these are at the same time duties to God, inasmuch as they are enjoined by His authority, and are comprehended in that first and highest duty of supreme love to His character, and entire obedience to His will. The will of God, therefore, as revealed directly in His law, or as expressed directly in the social relations which surround man under His providence, is the great source of moral obligation. This common ground of obligation is possessed equally by every man as a moral agent.

But there is another principle, which determines the *degree* of obligation, in different cases. If the intellectual and moral capacities of man constitute him a moral agent, then the degree of his responsibility will be in proportion to the amount of his capacity. In other words, he who is endowed with nobler gifts and faculties than the mass of his fellowmen, is placed under higher obligations. "From him to whom much is given, much will be required." He who has ten talents committed to his trust will be expected to render a larger return by accumulation than he who has received only five or one. The justice of this principle is obvious and undeniable. Yet by some mysterious process, the principles of justice and the laws of obligation are all reversed in the case of certain men of genius. Instead of regarding their superior gifts and endowments as so many additional obligations, they plead them on pretexts for unbounded license. In their inflated self-conceit, the ignorant and obscure multitude, the vulgar herd of mankind, alone are bound by the obligations of virtue and piety, while they, by their transcendent capacities, are released from such ordinary restraints. Strange perversion of all reason and all motive! From the very premises, that should

lead to an inference of the highest pitch of responsibility, they draw the conclusion of its entire absence. The very attributes by which they are equipped and furnished for a higher scale of duty, and a nobler field of destiny, they suppose entitle them to the rare privilege of pursuing a career both aimless and useless. The very considerations that should prove incentives to humble, grateful and ardent piety, become the stimulants of arrogant, impious and selfish pride. The very qualifications that should constitute the gifted spirit a bright and central luminary amid a cluster of smaller stars in the moral firmament, dispensing its light over the surrounding system, attracting each in the order of its own sphere, and binding all in harmony around a common centre, are perverted so as to form

"A wandering mass of shapeless flame,
A pathless comet and a curse,
The menace of the universe;
Still rolling on with innate force,
Without a sphere, without a course,
A bright deformity on high,
The monster of the upper sky."

This fatal perversity is seen, not only in the character of lawlessness sometimes assumed by men of genius, in their licentious and reckless habits of life, but it is extended, also, to the exercise of their gifts and talents, and displayed in the productions of their genius. We have already considered to some extent in a former essay, the privilege of moral insubordination, as claimed by certain gifted but misguided men, in their personal conduct and social habits. But many who seem to acknowledge a kind of restraint over this department of their agency, do yet exclude all idea of responsibility from the exercise of their talents, as writers and authors. They seem to be aware of something like duty or obligation binding them to a degree of outward prosperity in their ordinary transactions in life. But they are insensible to all considerations of responsibility, when they put their peculiar gifts into exercise, and wield the brightest influence they possess for the benefit or injury of society. Their genius at least they think is free. Their talents are their own. They may use them as they please, provided, only, they reach eminence in their art, excite the admiration of mankind, and reap the reward of genius in honours and fame. The department of polite literature is thus regarded as a sort of neutral ground, an unappropriated territory, where conscience has no jurisdiction. God no authority, and moral law no existence—a vacant, unreclaimed region, inhabited only by aerial beings of the imagination. Under the vague and visionary character thus assigned to

the province of literature, in which the gifts of genius are exercised, a general claim of exemption from moral considerations is asserted, and the authority of taste is regarded as supreme and altogether exclusive of that of conscience. But in this view of the subject there is involved an obvious self-contradiction. The character thus attached to the sphere of genius is one of intellectual imbecility, yet the feeling of moral exemption founded upon it is not that of humble inferiority, and comparative insignificance; but the lofty independence of pride and the arrogant airs of towering superiority. Such writers feel exempted from ordinary moral ties, not because in their position they are sunk beneath the sphere of responsibility, but because in their lofty elevation they are placed above it. How shall the considerations be reconciled, which from the same source, at once release the mind from the claims of duty, and inflate it with arrogant pride, and unbounded self-conceit.

But this claim to moral inefficiency in polite literature, we pronounce to be wholly unfounded. There is nothing either in the faculties with which genius is endowed, or in the sphere in which it labours, to justify such a claim. But from both these sources, from the high nature of its powers, and the important character of its department of influence, we draw considerations to enhance our ideas of its responsibility. The sphere of taste, genius, and poetry is not thus circumscribed apart from all connection with moral relations. Much absurd and unmeaning language is employed by those who speak with a tone of authority, in defining the landmarks and proclaiming the laws that pertain to this department of literature. We are led to imagine it as located in some unsubstantial region of air and shadow, as inhabited by aerial beings, as bearing no relation to things in heaven, or things on the earth, as having no connection with the claims of God, or the concerns of men. We are informed that poetry deals with illusion and not with reality; that its office is to entertain and please, not to instruct and edify; that it consults taste, not truth; that it has reference to beauty and sublimity, not to morality and religion, and that consequently it would be absurd to hold an author in this department of literature responsible for the moral effect of his productions, since in the nature of the case no such effect could follow. But who will, for a moment, admit this to be a just description of poetical literature? If such were its character, if it were confined to a region thus visionary and void, if it conversed only with aerial beings, and constructed nothing but castles in the air, if it held no contact and no communion with human affairs, and never addressed

itself to the interests, the sympathies, and the passions of mankind—then it would be imbecile as well as innocent; it would be senseless, and therefore harmless; it would fail to interest, and consequently to injure; it would escape notice, and thus avoid censure; its immunity would consist in its insignificance.

But it is no such blank and barren wild of non-existence over which the genius of poetry presides. It is rather a bright sphere of this warm, living, habitable world, a genial zone vivified by a glowing sun, watered by perennial streams, and abounding in luxuriant vegetation, and luscious fruits. Whatever ideal or visionary character may pertain to it, refers not to a separate scene, remote from reality which it inhabits; but to qualities of excellence and perfection in that class of objects in the present actual scene, with which it prefers to converse. If it employs the imagination, deals in illusion, and addresses the taste, it is more in the peculiar method of conveyance, and in the richer style of expression and illustration, than in the substance of the materials, in which it deals. The domain of poetry is not mapped off by any geographical boundary lines that divide the regions of the visionary and the real, the ideal and the actual. Its materials abound everywhere in endless variety, mingled with meaner forms, on the broad surface of the surrounding universe. It is by selecting from these the objects of her choice, and arraying them in the appropriate colours and drapery, derived from her own richly furnished wardrobe, that poetry forms a peculiar classification in literature. It is by thus selecting, combining, and adorning materials already existing, and not by plunging into empty space, and there erecting capricious images of air, made after the likeness of nothing in the heavens above or in the earth beneath, and having no relation to human experience or sympathy, that the inventive and creative genius of the poet is appropriately exercised. In the outward form and process of the communication there may be variations from the literal truth. The structure of the materials may be more complex, ornate and attractive than the outlines of experience. But the edifice itself rests on a foundation of reality; and its proportions rise in the symmetry of truth. To be great and effective, in a word, to be truly poetical, every such production of genius must conform to the facts of human experience, and accord with the laws of human sympathy. This is true of the noblest monuments of genius that now stand in the department of poetry. This was true of Milton, although the lofty range of his genius led him to converse with "principalities and powers in heavenly places," and with demous and depths in the nether darkness. This was true of

Shakespeare, amid all his vagaries on fairy ground, and all his variations from the literal record of history, in his rich combinations of incident and character. In the exercise of their genius they come home to "the business and bosoms of men." They dealt with the tenderest ties, the highest relations, and the most vital interests of the race. They appealed to the purest sympathies, the noblest aspirations, and the strongest passions of the human heart. And hence the commanding, thrilling and transporting power of their productions, which has endowed them with an immortality of influence over successive generations of the race. Away then, with the unmeaning cant about "the province of art," the standard of taste, aesthetic rules, ideal perfection, opposition to truth, reason and reality, and exemption from the claims of morality and religion! If there be any conflict with such interests, in the moral results produced in any instance, it is owing, not to any laws of necessity either in the powers of genius, or the province of poetry, but to a voluntary choice of such materials, and a culpable design in their combination and effect, induced by the perverted tendencies of the author's own mind, and the depraved tastes of the multitude whom he seeks to gratify, regardless of all higher considerations of usefulness and duty. A condition of neutrality in morals and religion is possible only on a supposition of intellectual obscurity and weakness, which would bring poetry into universal contempt, nay, would annihilate its very existence. For although the form of verse might remain, the animating life, the melodious spirit, the thrilling and triumphant power of poetry would be wanting. Indeed the peculiar attributes which distinguish this classification of literature are so many elements of power. The select materials which it moulds into forms of beauty and grandeur are those which lie deepest in the fountains of faith and feeling, and spread widest in their influences on the destinies of mankind. It matters not that the professional air and office of a moral teacher is omitted. It matters not that the precise formality of systematic instruction is neglected. Whatever may be the manner of its approach, or the method of its communications; though it may not advance by the open avenue of induction, or enter at the front door of the logical reason, and then move in a connected series from one apartment to another; though it may not address an isolated faculty, or make its appeal to the understanding alone; yet it opens every avenue of the soul at once, addresses every faculty by a simultaneous way, fascinates by its presence, and commands by its authority, takes possession of the entire man, and moves his moral nature by a per-

vading law of resistless sympathy. Vividness of conception and power of expression in the writer are answered by depth of impression in the reader. And if we are to judge of power by the reality of its effects, and not by the formality of its process; then there is no other department of literature, entitled to higher consideration for the extent of its influence and the importance of its results. If it does not teach, it thrills: if it does not instruct and inform, it quickens and moves. If it does not enlighten and edify, it educates and moulds. And its education includes preeminently the elements of our moral nature. Its power lies in the operation of sympathy. It appeals to our tastes, sensibilities and affections. By the frequent indulgence and exercise of these moral qualities, their habits become at length fixed in the soul. And these habits of taste, feeling and sentiment constitute the permanent features of the moral character.

The true moral effect of any production consists in the kind of sympathy it awakens, and the nature of the impression it leaves on the ardent and susceptible mind of the reader. Or according to John Foster—"Whatever is the chief and grand impression made by the whole work on the ardent minds which are most susceptible of the influence of poetry—that is the real moral." Judged by this rule, there is no class of writers more highly responsible in the exercise of their gifts, than those employed in this department of literature. They wield the highest intellectual power in a form most efficient for good or evil. They teach chiefly by example, and their power is exercised in awakening responsive sympathy. The moral effect of their writings is determined partly by their choice of character and incidents to serve as models and examples. A common plea for the introduction of vicious characters and immoral incidents, is that of faithfulness in imitation of nature. But there is no necessity laid upon a writer to select such examples. He does it by a culpable exercise of his own free will. The influence of such a character in a work of fiction or poetry presents a new temptation to the reader—a temptation as real and often as powerful as if he encountered such an one in social intercourse. But temptations are always to be avoided, if possible; and he who deliberately invents and produces in a work of genius, the example of a corrupt character; and thus presents a needless occasion of temptation before his readers, is just as culpable for the moral injury inflicted, as if that example had been actually presented in his own person. There was no law of literature or morals requiring him to select such an example. But on the contrary, the same scale of duty

which would lead us to avoid the company of such a character in real life, should forbid a contact with its example in the department of literature.

But the evil effect consists, not merely in *selecting* such examples; but mainly in the *manner of presenting them*—in the treacherous art by which a vile character is disguised, adorned and dressed up in unreal attractions. The perverted sympathy and admiration of the author's own mind for such a character, (which is generally the secret ground of *preference* that leads to its selection,) will be manifested by placing it in such favourable attitudes, amid such modifying circumstances, and with such a beautifying combination of light and shade in the surrounding scenery, as most powerfully to awaken corresponding sympathy and admiration in the minds of his readers. It is this sympathetic fascination, transferred unconsciously from the mind of a writer to his productions, which forms the fatal spell of perverted genius. The chief danger in such literature lies in its power to call forth, multiply and perpetuate, to an unlimited extent, responsive sympathies among all classes of its readers. As the seeds of evil exist more or less in the nature of all, even the comparatively pure have the capacity to sympathise for a time with certain fascinating forms of corruption. And as our sympathies are often blindly exercised, in advance of the strict supervision of conscience, it is possible for the repeated indulgence of this sympathy to result in a habit of moral feeling, which may ultimately include the approbation of evil. Admitted under this advantage of sympathy, vice, once abhorrent, becomes at length congenial, until

"Seen too oft, familiar with her face,
We first endure, then pity, then embrace."

The pernicious power of a writer then, lies not exclusively in the selection of evil examples, but in the false colouring and the fictitious fascinations with which they are invested by the perverted sympathies of his own heart. When such a depraved character is possessed by a writer, he will of course be regardless of the injurious moral consequences of his productions; even if he does not deliberately design to mislead and corrupt mankind by his influence; but few writers, if any, would openly avow so diabolical a purpose. Even when the pervading tone and general effect of their writings are pernicious, they seek to cover their motives from censure, under inconsistent professions of benevolence and incongruous maxims of virtue. Such is the pitiable policy, often without plausibility in its disguise, of those unprincipled writers,

"Who, kindling a combustion of desire,
With some cold moral think to quench the fire."

But if the sympathies of the reader are excited toward a corrupt character—if the impressions left upon his mind are at variance with moral purity; then there is no apology, that human ingenuity can devise, or the canons of false criticism suggest, that will avail to shield such an author from a condemnation as strong and sweeping, as his influence is wide and destructive.

To quote again from Foster—"If it be said that such works stand on the same ground, except as to the reality or accuracy of the facts, with an eloquent history, which simply *exhibits* the actions and characters, I deny the assertion. The actions and characters are presented in a *manner*, which prevents their just impression, and impowers them to make an opposite one. A transforming magic of genius displays a number of atrocious savages in a hideous slaughter-house of men, as demigods in a temple of glory. No doubt an eloquent history might be so written as to give the same aspect to such men and such operations; but that history would deserve to be committed to the flames. A history that should present a perfect display of human miseries and slaughter, would incite no one that had not attained the last possibility of depravation, to imitate the principal actors. It would give the same feeling as the sight of a field of dead and dying men, after the battle is over—a sight at which the soul would shudder, and earnestly wish that this might be the last time the sun should behold such a spectacle. * * * *

* * * * It is no justification to say that such instances have been known, and therefore such representations but imitate reality; for if the laws of criticism do not require, in works of genius, a careful, an anxious adaptation of examples and sentiments to the purest moral purpose, as a far higher duty than the study of resemblance to the actual world, the laws of piety most certainly do. Let those who have so much literary conscience about this verisimilitude, content themselves with the office of mere historians, and then they may relate, perhaps without guilt, if the relation is absolutely simple, all the facts and speeches of depraved greatness within the memory of the world. But when they choose the higher office of inventing and combining, they are accountable for all the consequences. They create a new person, and in sending him into society they can choose whether his example shall tend to improve or to pervert the minds that will be compelled to admire him. If they deliberately choose the latter, the guilt of *creating*, is, with respect to the influence,

the same as the writer would have incurred by practically *being* such an example."

When we consider then the high prerogative of Genius—how plastic its power, how transforming its touch, how potent its spell for good or evil—when we think of its kindling conceptions, its contagious sympathies, its thrilling and transporting emotions,—and when its breathing thoughts are announced in burning words, how henceforth they become watch-words of the life and "mottoes of the heart"—when we remember the number, the variety and the rapid diffusion of its productions through all the avenues of society—when we reflect that these are eagerly devoured, especially by the youth of each generation, and constitute the chief mental aliment of ardent and impressible spirits, at a period of life most important in the formation of character,—when we consider that the spell of their influence operates in the absence of all disturbing and counteracting causes, in the retirement of solitude and the silence of study, distilling like the noiseless dew, pervading as the vital air; and when we bear in mind that the noblest productions of genius possess a self-perpetuating vitality, that the world does not willingly let such works die, and that immortal in their influence for good, or evil, they live on, enlarging, deepening, and widening their mighty currents, extending their magic sway from heart to heart, and from generation to generation for ages upon ages, after the heart that swelled with their original conception has ceased to beat, and the hand which inscribed the thrilling record, has moulded into dust; when all this is borne in mind, it would be brutal stupidity or impious madness to manifest indifference to the sway of such an agency! How immense, how fearful the responsibility of the gifted spirit that wields such an influence over the destinies of the race! If the sacred obligations of piety are disowned, surely a benevolent regard to social virtue, and the generous glow of patriotism which none will disavow, should restrain the parricidal pen of that reckless writer, who by diffusing corrupt tastes and sentiments through society, would destroy that moral purity, which is indispensable to social order and national prosperity!

But the genius of the poet is bound by higher obligations than those which enforce the promotion of social virtue and the public good. Man is surrounded by higher moral relations than those that connect him with his fellow-men on the present theatre of existence. He is related to God as a dependent creature, and an intelligent subject of His moral government. He is related to an invisible future state of existence, in which he shall realize the destinies of immortality. These higher relations include and mod-

ify all subordinate earthly ties. In a word, genius is bound by the sacred obligations of religion. The lowest possible form of these obligations forbid him in any way to injure the cause of truth and righteousness. But this is not all. There is a more direct and positive obligation. The high responsibility of genius is not answered by simply abstaining from what is wrong and injurious. God did not endow man with superior faculties, merely that he might "stand all the day idle in his vineyard." Men of genius are not distinguished as the useless pets of creation, preserved with special care for ostentatious display. The law of preëminence among intelligent moral beings, is a law of beneficent activity, and preëminent service. "The Son of Man came not to be ministered unto, but to minister, and to give his life a ransom for many." Angels are "ministering spirits, sent forth to minister to the heirs of salvation." And among men the same precedence prevails. "He that is chief among you shall be your minister; and he that is greatest shall be the servant of all."

But a state of neutrality with respect to religion is in the nature of things absolutely impossible. Christ affirmed a necessary law, when he said, "He that is not with me, is against me; and he that gathereth not with me scattereth abroad." Christianity claims a universal empire. There is no sphere of human life, there is no department of human thought, over which its authority does not extend, or to which its principles do not apply. Genius has not the power to form to itself any "peculiar province" from which the claims of Christianity may be excluded. Religion, unless it be a phantom, is a mighty law that pervades and binds the entire system around us. Christianity, unless it be a fable, is a great, vital, central truth, to which all other forms of truth are related in consistent subordination; around which they revolve in harmonious order—a presiding orb, throned in the midst of that moral system under which man exists, (a system divinely adapted to his lapsed and fallen condition,) dispensing its light to every part and issuing its laws in every direction. All the departments of nature, and all the dispensations of providence;—all the relations of society, and all the events of human life, are adjusted in accordance with this supreme and pervading principle. Christianity embraces under its jurisdiction the whole sphere of man's existence—comprehends all his relations, duties and interests. It supplies its peculiar motives, and diffuses its peculiar spirit in all the departments of human agency. Such is the comprehensive claim of the gospel, based on the supposition of its truth, as a divine revelation. If the light of heaven has indeed shone

upon our world, it illuminates every object and every scene within the compass of our vision. If the voice of God has truly spoken in distinct and audible tones to man, the responsive echoes of that voice still continue to reverberate in all the corners of earth, and give back to human ears the significance of his silent works. If the gospel is, as it claims to be, the infallible testimony of divine truth on questions pertaining to the present character and future destiny of man—if it has affirmed clearly concerning his relations to God, his attitude in His sight, and his prospects beyond the grave—if it has declared man to be a sinner, and assured him of the only way of salvation—if it has declared the necessity of a moral renovation of his nature, and pointed to an almighty agent by whom it must be effected—and pronounced the awful alternative, that if this moral disease be not healed by these, its only remedies, it must result in eternal death—if these fundamental and essential features of Christianity be admitted, as they are by the general consent of society: then, they should be held not only as so many separate items of belief, but held in all the branches of their connection, all the scope of their application,—and in all the extent of their legitimate inferences,—they should be recognized and regarded in all their evident bearings on subordinate departments of truth; in all their appropriate emanations of light and shade on the scenes of human life, and in all their modifying effects on the motives, interests and prospects of mankind. Nothing should be advanced in any department of human thought, which would clash or conflict with any of the numberless ramifications of these great central truths of the Christian system. There should be no exhibition of human character and no picture of human life, presented in an aspect different from that which it assumes under the full light which shines from heaven.

Now it is evident there may be a thousand modes of conflict and collision with the truths of Christianity, without any direct allusion or reference being made to those truths. This indeed is the most common and most dangerous form of opposition to the gospel. The mind would be startled at the presumption of its own daring position, in assuming an attitude of avowed hostility to such a system. The more successful method of attack consists in simply making no allusion or reference whatever to the subject, and proceeding, in utter forgetfulness of its inspired lessons to advance opposite principles and sentiments. Let the mind of a writer but succeed so far in a process of self delusion, as to acquire a habit of oblivion with respect to the gospel as an infallible standard of truth, and the grand

source of success in error is already attained. He proceeds to inculcate, and his readers to imbibes, false and pernicious views on moral subjects, without being conscious of opposing or renouncing that system of truth, which by the general consent of society is admitted to be of divine authority. By means of this treacherous policy, a gifted writer may succeed by the moral influence of his productions in erecting, in the prejudices and passions of the human heart, a barrier of practical unbelief to resist the entrance of the gospel, more extensive, obstinate and enduring than all the battlements and towers that open Infidelity has ever reared around its citadel. He may present false views of human life, its duties, interests and ends, its realities, relations and prospects—views at war with all the lessons of experience and observation, as well as the dictates of the word of God—yet so coloured as to be alluring to the vision of the youthful mind, and lead it astray in absurd plans and visionary expectations. He may paint the whole scene as a paradise of pleasure, abounding in sources of self-gratification. He may conceal the stern realities of affliction, disappointment and death. He may omit all reference to the character of God, and the immortality of the soul. And life, thus divested of all its higher moral significance, becomes perverted to low temporal ends, and is squandered away in a vain career of self-indulgence, as a scene of preparation for eternity. He may present false motives to action, and inculcate spurious virtues, and set up a low moral standard for the estimation of character, regardless of the high motives and virtues enjoined in the gospel, and the pure and perfect moral standard found in the law of God. He may give false representations of the nature and condition of man, overlooking the many infirmities, trials and temptations that pertain to our earthly lot, and the radical moral disease which preys on our fallen nature; and hence the remedies devised by infinite mercy, are spurned and rejected. In these and many other similar ways, a writer of genius may oppose and resist the entire system of Christianity, without making a single hostile allusion to its truths—by merely disregarding them: and he may do this without adopting the strict and sober form of didactic or systematic instruction. He may do it with less parade, but often with more effect, by what is esteemed the lighter process of fiction and poetry. He may do it by painting false but fascinating pictures of life—by disguising corrupt motives and false virtues, under an aspect of magnanimity or heroism—by presenting an unworthy model of character in such a combination of scenes and incidents, that the unguarded sympathies of his readers are excited and

their admiration awakened in behalf of qualities that are spurious and base. He may accomplish in this way an incalculable amount of moral injury by his influence, and yet presume to evade censure for his opposition to the gospel, by urging the pretext that the doctrines of Christianity do not lie within his peculiar province, as a writer of taste and genius—that they belong especially to the church and the ministry. But, as we have shown, the truths of the gospel are universal in their application to mankind. Christianity has a prior claim to entire jurisdiction, and consequently no subsequent plea can be urged to a separate, exclusive province, since it already includes and comprehends in its sway, every department of human thought. It allows no independent claim—it permits no control that is not subordinate to its supreme authority. It sanctions no rules that do not harmonise with its unchangeable laws—it admits nothing as true, which does not conform to its sacred doctrines, at least in their inferences and results.

Nor is this an arbitrary claim of mere authority: christianity demands this harmony and agreement in all the subordinate branches of truth *because then only they are true in themselves—because then only they conform to nature and reality*: And, when any instances of conflict or collision occur, they are, as to the established order of things, as well as to the doctrines of revelation, but the mere falsities and vagaries of a disordered brain. We perceive thus how utterly absurd and groundless is the common plea, as to the peculiar province of taste and genius, when urged to vindicate a departure from the divine instructions of the gospel. Equally without foundation is the inference sometimes suggested, that to maintain such a moral harmony with the principles of christianity, in all the departments of elegant literature, would entirely annul the appropriate office of poetical genius, and convert it into an anointed priest of the sanctuary. But this is by no means implied. There need be no change in the materials employed, or the methods adopted in the communications of genius. There need be no formal advocacy or systematic enforcement of the peculiar doctrines of the gospel. There need be no departure from its proper sphere, its legitimate topics, or its appropriate forms of illustration and ornament. Consistency does not demand that literature should be confined to commentaries on the Bible, or systems of theology. Duty does not require that genius should become invariably a mere preacher of the word—a messenger from the invisible world—a prophet burdened with the revelations and mysteries of religion. This office is already filled. There is a separate yet a coördinate mission. Let it go

abroad over this actual living scene; reveal the mysteries of the visible world around us; unveil the shrouded and lovely face of nature, interpret the thousand thrilling voices of human life—voices eloquent with truth, in harmony with the voice of God in his word, which if they do not proclaim the heavenly message, at least do not deny it; but rather like the voice of Him in the wilderness, lift a note of accordant testimony, and gently opening the portals of the human soul, “prepare the way” for the entrance of Him, who alone is “the way, the truth, and the life.”

By pursuing this consistent course, neither departing from the sphere of polite literature, nor encroaching on the province of Christian theology, a conscientious writer may wield the magic power of genius, and employ the captivating arts of poetry with extensive moral advantage to mankind. While he gratifies the taste, he purifies the heart; while he delights the imagination, he guides the life; and by the honest exercise of his gifts and talents in their legitimate province, he attains the highest forms of literary excellence, and promotes, indirectly, but efficiently and widely, the spiritual improvement of his race.

But, if on the contrary, a writer should adopt an opposite policy; if actuated by the evil tendencies of his unbelieving heart, and aiming to gratify the corrupt passions of the ignorant and erring multitude, by the effusions of his genius, he should utterly disregard the entire compass of Christian truth, and advance views and sentiments at variance with its practical results and at the same time equally at war (as they must be in such a case) with the actual truth of nature and the sober realities of human life; if he appeals to unworthy motives, adorns vice in the garb of virtue, and confers on guilty pride the title and the fame of heroic magnanimity: if he excites the admiration and sympathies of his readers in behalf of defective or pernicious models of character: or, even if pausing short of such an openly immoral tendency in his productions and while inculcating an inferior degree of seeming virtue, he should yet, by the representations and delineations of his gifted pen, induce his readers to adopt low conceptions of the standard of moral duty—the holy law of God—to cherish delusive opinions of human character and entertain false views of human life: if, by any process whatever, he should induce, in minds subject to the sway of his genius, a habit of delusion in regard to the great facts on which the provisions of Christianity are based—the unsatisfying nature of earthly interests, as a portion for the soul—the insufficiency of mere social virtue to meet the requirements of the moral law, and the necessity of a divine influence to quicken and restore—to purify and prepare the nature of man during his

earthly probation for an immortal destiny, he would thus encourage and confirm a prevailing practical blindness as to the existence and the evil of sin; the duty of repentance and faith; the need of a Saviour, and the obligation to lead a pure progressive life of humble piety, as the appointed pathway to heavenly blessedness; and hence, the entire system of saving truth would be obstinately spurned away as an inappropriate, ungenial and altogether unnecessary intrusion upon the notice of a rational mind. If such be the legitimate tendency and practical result of the productions of any perverted genius, then, whatever palliating considerations may be urged; whatever redeeming qualities may exist; whatever minor charms and excellencies may prevail; in the sight of truth and reason he must be condemned as the instrument of moral murder on a fearful scale—and the higher the gifts possessed, the brighter the colours employed, the more entrancing the magic spell wielded by such a genius, the heavier is his responsibility, and the deeper his guilt. To estimate the responsibility and measure the guilt in such a case, we must rise above the paltry considerations of time and sense—we must adopt a higher standard of computation, than that which determines the interests of earth—we must contrast the dignity and duration of the soul with that of the body—we must compare eternity with time—we must measure the distance from earth to heaven, and thence again to the fathomless abyss beneath; and so high is the responsibility—so vast and so deep is the guilt of that unhappy writer, who, by the influence of his genius, has destroyed the present purity and peace, and desolated the immortal prospects of his fellow-men, *by keeping them aloof from the only foundation on which the soul and its interests may rest for eternity!* Alas! how much of the current polite literature of our day, though not censurable for an openly immoral tendency, is chargeable with results of this description.

NOVEL ADVERTISEMENT.

We are introduced to a new advertising "dodge" in the columns of the morning papers—of which these are "undoubted specimens of old masters." This is very sweet upon some fair unknown:

"If the Lady in a Fourth Avenue Stage, on last Friday, who was eating a package of Mrs. Jervis's cold candy, and expressed herself to her friend as being benefitted by its use, will address a note to M. R. K., Broadway Post Office, she will hear of something to her advantage."—*Literary World*.

LETTER FROM GOPHER-TOWN.

GOPHER-TOWN, STATE OF —, }
October 1st, 1852. }

Mr. Editor.—We have received the September number of the *Messenger*, in which you present us with the second sketch of the "Flush Times of Alabama," in the person of "Old Sarcasm," and the dramatic narrative of the great case of "*Higginbotham vs. Swink*." It has excited an unusual degree of interest in the public mind, owing in some degree to our peculiar circumstances, which I will explain.

Our village is one of the oldest settlements in this State; so old indeed, as to have passed through the promise of its spring, and the vigor of summer, into the mature ripeness of autumn. Other towns, farther west, having as yet their fortunes and reputations to make, are struggling with one another in the race for wealth and distinction. We, on the contrary, fraught with the spirit of the Old Dominion, from which some of our first families derive their origin, and content with the greatness achieved by us in the early annals of this State, leave to our younger neighbours the task of carrying on the work of to-day, while we devote ourselves to the duty of preserving the records of the past. We are a very literary people; and we are particularly fond of the study of Local History and Antiquities, which has been pursued with signal success by several distinguished members of the "Gopher-town Historical Society." Our locality and our very name have some relation to our labors, and may have had some influence in giving them a direction.

The Gopher is an animal which, by superficial inquirers and recent travellers, has been sometimes considered fabulous, as the Dodo was held to be, from the time when its species became extinct, until its former existence was demonstrated from the narratives of the old voyagers, and the long forgotten specimens in European museums. The Gopher is a sort of middle term between the muskrat and the mole, a little amphibious beast, inhabiting wet prairies, and dwelling in small round hills, formed by excavating and throwing up the marshy soil. The surface of the ground in our vicinity, where these interesting traces have not been destroyed by ploughing and draining, bears some resemblance to a collection of diminutive Hottentot Kraals, or a deposit of manure, distributed by the spade-ful. The motion of a wheeled vehicle in one of these prairies awakens very touching reminiscences of the corduroy bridges and other unsophisticated roads in Old Virginia.

The march of the white man has been as fatal to the race of Gophers, as it has been to the other native denizens of the wilderness, including the red men who ruled over all in savage sovereignty. Hence the injurious doubt in later times as to their real existence in *rerum natura*—perhaps I should say in *rebus natura*. But that has been triumphantly vindicated in a profound treatise by *Digby Fossil, Esq.*, corresponding secretary of our Society, which has been obligingly forwarded by him for publication to the Smithsonian Institute. Our sense of his services has been expressed by adopting as the seal of our Society the device of a Gopher, *rodens et fodiens*, with the motto "*Dignus vindice nodus*."

An especial interest in the sketch of old Sarcasm, in our minds, is due to the fact, that in some respects he reminds us of one of our valued associates, whose memory is still green in our hearts, though his majestic form has long since mouldered beneath the clods of the valley. At the last meeting of our Society, that paper was read by the President, and it was resolved by an unanimous vote to address you on the subject. The President was pleased to appoint me to that duty, one of the oldest surviving contemporaries of the deceased: and in obedience to his order, but without any hope of approaching the graphic delineations of my predecessor, I proceed to its discharge.

Pompeius Le Grand, Esq., or, as he was sometimes called behind his back, Pompey the Great, was a lawyer from the State of New York. Tradition informs us that he bore a conspicuous part in the wars of the Buck-tails and their opponents and was a powerful orator in Troy and the region round about; but which party he belonged to we were never able to ascertain with certainty. I ought to say, which party *belonged to him*,—for it was not in his nature to acknowledge allegiance to any man or body of men upon earth. He came to Gopher-town about the time when the star of Van Buren was rapidly approaching its zenith. Whether this circumstance had any malign influence upon the horoscope of Pompey Le Grand, and induced him to seek a wider and clearer horizon in our boundless prairies, must remain a mystery. From the time of his advent among us, he bore himself as an old Trojan might have done, in the conflict between Greek and Turk. He preserved a dignified, but an armed, neutrality. He stood upon his own height, and scorned to descend into the tumultuous arena of their battle. He espoused the quarrel of no candidate. He assisted none. He protected none. He betrayed no sign of encouragement or favor. But he was always in harness—his sword in his hand, not *en garde*, but in the act to strike. And, whenever the fitful current of the fight brought

a straggler from either side within the reach of his blow, it was sure to descend, and no less sure to find the weakest joint in his armor. Victor and vanquished were equally welcome to his steel; and not unfrequently his ponderous double stroke—cut one, cut two—discomfited parmer and pursued, and drove them to seek another field, out of the jurisdiction of their relentless umpire. Except in his stern and haughty indifference to "the spoils," he might be compared to the *Skimmers* of the Revolution; for he *flayed* without mercy every man that fell into his hands. No matter what his original colors, he was sure to carry from that hour the *stripe* of Pompey the Great.

In person our hero was tall and robust, his presence stately and commanding. His features were bold and manly, his complexion bronzed by outward exposure, and purpled by internal heat; for, like the southern advocate, he abjured thin potations, and was strong in his drink, as in all other things. His manners were usually courteous, but reserved. In an auspicious hour, he might even be kindly and jocular. But his sunshine, like that of a March morning, while it shone over a certain clear spot, always rested upon the skirts of clouds, but half withdrawn; and no man could tell how soon the sky might lower, and pour out from its depths the stormy blast, which few dared to encounter; for the breath of his anger was keen, cold and unsparing. Its force was mighty, not blistering, by fits and starts, but steady and sweeping, like the wind that hurries along some unhappy bark, and dashes it to pieces upon the breakers of a lee shore. And yet, with all this there was much to make his company acceptable; especially to those who were willing to take the trouble of watching his weather-glass, and keeping to windward of him. He possessed a sound, clear mind; a respectable share of classical learning, a general and familiar acquaintance with English literature. His style, both in writing and speaking, though somewhat Johnsonian in character, was nervous, fluent, and expressive. He was no mean observer, and he had seen much of his fellow men. Was it strange that an unsuccessful man of talent should be somewhat cynical at 48 or 50 years of age? And cynical in truth he was. "Lord of the master spell of irony," he was no less powerful with the weapons of fierce invective and scornful sneer. He wielded them all at will; not with the swift and dexterous sleight of Saladin, but with the deliberate and ponderous strength of King Richard. He was not particularly cunning of fence—indeed, he seemed rather to despise the art. Freely exposing himself to the utmost malice of his opponents, and heedless of their assaults, he went on.

like some giant of romances, now swinging aloft a knotty oak, and now demolishing some luckless champion with the huge hammer of Thor. His very look was dreadful—he bent his brows like a thunder cloud—and his voice smote upon the ear of his victim like the roar of heaven's artillery. It is impossible to describe the crushing effect of his mien and gesture. We sometimes tried imitations—they were pitiful puppet shows. "None but himself could be his parallel."

I shall never forget the first time that I had "a taste of his quality." In conjunction with another half-fledged attorney, I was defending a suit, in which old Pompey appeared for the plaintiff. It was necessary for him to prove a partnership. Witness after witness had been called to the stand, but not one of them knew the fact. Torture by interrogatory had been tried to the uttermost. *Leading* questions and *driving* questions were equally unavailing; and he closed his case, in grim despair, hopeless of a verdict, but resolved nevertheless "to go to the jury," and in that way at least to inflict some damage upon our client. In an evil hour that unfortunate wight persuaded us to call a witness. The fact he was to disprove was of no earthly consequence, and so we represented it. But conscience made a coward of him; and, fleeing from an imaginary danger, he rushed upon certain death. What young lawyer has not suffered in the same way from the foolish importunity of clients? We yielded—examined our witness—and left him for cross-examination. Turning his lion-like visage upon this new subject, old Le Graud surveyed him slowly, and began. His sagacity quickly discerned that this man, if any body, knew the business of the party who had summoned him, and in five minutes he had established beyond a doubt the fact of the partnership, which had so long eluded his pursuit. Oh! what a lurid light of triumph glowed in his pitiless eyes—and what a sickly hue expelled the flush of confidence from our blanching cheeks! The avenger was upon us, and we knew it. He rose deliberately from his seat, bowed with gravity to the court, primed himself with an ounce of snuff, and opened his battery upon our defenceless heads.

"Gentlemen of the jury, it has been wisely said by a heathen poet, and every day's experience illustrates more and more the infallible truth of the maxim, *that whom the Gods wish to destroy they first deprive of reason!* Divine Providence is often pleased to make crafty men the instruments of their own ruin; and never was that Providence more signally exemplified than in the conduct of this cause by the defendant's counsel. You beheld, gentlemen, the difficulties under which I labored—you saw the efforts which I

made, and made in vain, to develope before you the true character of this transaction, and to fix upon the dishonest debtor the just responsibility from which he sought to escape. You witnessed the disappointment, the defeat, which waited upon every attempt to extract from my witnesses the important fact upon which, as a pivot, turned the decision of this cause. All was darkness. The cunning of the defendant had covered all his traces. He was secure from the pursuit of his defrauded creditor, and already chuckled in secret over his successful artifice. But the truth is mighty and will ever prevail. That which was beyond our reach, he has himself brought forward and placed within our grasp. The proof—the damning proof—which was in his single keeping, he has himself produced to his own discomfiture and disgrace—he has furnished the rod for his own correction—the rope for his own execution; and, to crown all, the acuteness of his *learned* and *experienced* counsel has been laid asleep—their right hand hath forgot its cunning—they have been smitten with *judicial blindness*, and rushed headlong into the very snare which they had spread for the feet of the innocent!" * * * * *

How much more there was of the same sort, I cannot tell. Painful sensations had been assailing me for some time, and they became so intense, that I hardly knew where and what I was. The jury swam before my eyes—there was a sound of many waters in my ears—I felt like a sufferer in a horrid night-mare—and was conscious only of a vague idea that some cruel giant was rolling me over and over from the top to the bottom of a long, rough, rocky hill; at last, it seemed a weary lifetime, the noise and the motion ceased. We were called upon to reply, but we had been *punished* too much, as the boxers say—we could not *come to time*. A hurried consultation satisfied us that we had nothing in the world to say. Our client had disappeared.

"And that last thought on him we could not save Sufficed"—

We submitted the case to the jury—rejoiced that it was all over, and that we were delivered from the final agency of the closing speech for the plaintiff. We had a dim consciousness that the limits of professional courtesy had not been strictly regarded by Old Pompey, and some faint purpose of calling him to account; but we consumed so much time in discussing the question of precedence, without being able to settle which was the senior counsel, and entitled to lead the forlorn hope, that the critical minute went by, and the attack was indefinitely postponed.

* * * * *

There was another member of the legal fra-

ternity who deserves commemoration, not merely on account of the anecdote I am about to relate. He was a lawyer by prescription. From time immemorial, (in those new countries that period was something under 60 years,) he had practised the profession in those regions, and was supposed to have been Attorney General to the *Shawnee* Governors. Upon the departure of the Indians and the advent of the whites, he relapsed into the usages of civilization to some extent, and was long distinguished upon the northern circuit, which then took in half the State. His habits of life continued to be somewhat nomadic and roving. He had no fixed habitation. His whereabouts, during the long vacations, was somewhat uncertain; but he was generally believed to hybernate in the river bottoms, whence he always emerged on foot and alone at the commencement of the Spring courts. He was commonly dressed in blue homespun, his weather-beaten neck coming up out of a coarse cotton shirt, unfettered by stock or cravat, and his brogans seldom disguised by the application of blacking. His features was small and contracted—his little grey eyes furtive and timid in expression—his manners inoffensive, and his humor facetious. He was an indefatigable reader, voluminous in *briefs*, and always ready with hosts of references to authority; but, unluckily for him, he was apt to misunderstand their application, and was not unfrequently overthrown by the recoil of his own guns. His love of old law books, his unknown antiquity, and a grizzled queue into which he gathered his thin hair, combined to acquire for him the *sobriquet* of LORD COKE, by which he was much better known than by his lawful patronymic.

Towards this learned brother, Old Pompey cherished, for some unexplained reason, an invincible antipathy. Lord Coke was aware of it, and always avoided any chance of a collision. But since the days of the wolf and the lamb, it is well known that aggressors can always find or make some occasion of hostility. One day, the quiet old man, unoccupied with business, was sitting in court, deeply engaged in the perusal of the celebrated case of *Doe on the demise of John Seekright vs. Timothy Gripe*. Within two or three feet of him stood Pompey the Great, arguing a demurer, which some audacious pleader had put into one of his declarations. "In the whole course of my practice," quoth he, "I have never known an objection to be urged, so utterly destitute of legal foundation. Sir, you may commence with the Year Books, and trace the whole current of legal decisions, through the courts of Westminster and those of the United States—you may even search those extraordinary and unparalleled authorities, the judgments of the

Supreme Court of our own State, and nothing will be found to sustain it. Yes, sir, from the days of *Lord Coke*, down to the present hour, it will be impossible by any research to find a precedent for this pretension. I allude, sir, to the reports of that eminent English jurist, Sir Edward Coke, and not my Lord Pig-tail here!" The terrified ancient startled from his chair, dropped his book, grasped his queue with both hands, and retreated precipitately. He was never seen afterwards to take up a book in court, without carefully reconnoitering the position of his ruthless enemy.

Old Pompey brought with him to Gophertown an antiquated, Dutch built, double barrelled, fowling piece, with accoutrements to match, and declared a war of extermination against all birds and beasts *feræ naturæ*. But, as Mr. Webster said, the vigor of the campaign did not always correspond with the high sounding tone of the manifesto. His first enterprise was undertaken in the month of May, at a farm in the wide prairie where he had passed the night. He was awakened at daybreak by a strange medley of hootings, howlings and shouts, which seemed to come from a great distance. Much had been told him of prairie wolves, and he felt assured that a wolf-hunt was on foot. He rose instantly, donned his hunting gear with all speed, hustled on his long gaiters, and seizing his trusty fowling piece, sallied forth in quest of adventure. Long and patiently he toiled through the rank wet grass, following the wild noises, which came now from one quarter, and now from another. Sometimes they fell upon his ear so distinctly that he cocked his gun and paused, in momentary expectation of seeing the chase break cover within gun-shot. But again the tumult would die away, and spring up anew in some distant, perhaps opposite, direction. The sun was now about two hours high, and growing very hot. The unusual exercise had fatigued old Pompey—his natural thirst was greatly increased—water was out of sight and out of the question—and in his haste he had forgotten to bring any substitute for that fluid. Dry and exhausted, he was on the point of giving up the hunt, when the noise rung out again, louder and clearer than ever, just beyond a little swell of the prairie in his front. Once more he girded up his loins, and pushed on with manful resolution. His vigorous strides soon brought him to the top of the rising ground, and he beheld half a dozen old prairie cocks in a bare place, with their yellow wattles distended, and their wings outspread, strutting and trumpeting as if they had taken lessons from old Pompey himself! The provocation was too great to be endured, even in the breeding season. Furiously

he brought up his piece, banged away with both barrels, and cut off untimely the hope of unborn generations of grouse. His vengeance satisfied by this truculent proceeding, he turned his face homeward, and trudged along his two miles of verdant wilderness, "a sadder and a wiser man."

I might fill many pages with his subsequent experiences and exploits. I might narrate how he casually encountered a brother sportsman one day, duck-hunting on "The Island," and led him away in the most cautious and stealthy fashion for several hundred yards to a bushy point on the bank, whence he pointed out some divers swimming along the opposite shore almost a quarter of a mile off, and inquired if he thought them near enough for a shot? I might depict his anxiety and painful vigilance one dreary night, when he got lost in the river bottom, and was obliged to extemporize an encampment, solitary and alone, without food, fire, or blanket: how he was roused from his first nap by dreadful yells and cries, which seemed to issue from the ravening throats of savage "varmints;" how he betook himself to a tree, which he climbed with great labor, and bestrode the first crotch of it till sunrise: and how he was assured by a wood-cutter on his way home, that the dreaded disturbers of his rest were nothing more nor less than the great owls engaged in their regular concert. But I fear I should trespass too much upon your indulgence: and will conclude the present notice with one more specimen of his dealings with his foes.

There lived among us a talkative, conceited, good-natured fellow, who loved deer-hunting better than hard work, and who assisted his wife (the good lady kept a boarding house) by furnishing the table now and then with game. Having no other ostensible occupation, he called himself Doctor, and we conformed to his example. This gentleman, by way of pastime, projected a hunting party, to be divided into two bands of rival sportsmen, who were to unite in a game supper, the cost of which should be borne by those who were least successful in the hunt. A meeting was called of the subscribers, to make the necessary arrangements, and to fix a tariff of values for the different sorts of birds and beasts, that were to be received as lawful spoil. An animated debate sprang up, in which the various interests were advocated, as vehemently as coal and iron, wool and cotton are discussed in the American Congress. Our riflemen looked down with scorn upon the *scatter-gun* gentry, and went in for high rates upon venison, turkeys, and wild geese, that almost amounted to a prohibition of the smaller game: while this schedule was strongly opposed by the free traders, who designed to invest their capital in quails, prairie

hens, ducks, squirrels, and other such "small deer." Old Pompey headed the latter party, and made an effective speech in their behalf. When he had finished, our friend the Doctor was moved by his evil genius to reply: and as he warmed in the cause, he was further "instigated by the devil" to ridicule the venatorial pretensions of old Pompey, and to sneer at sundry mishaps and miscarriages that had befallen him. Indeed, he was not a little successful in raising a laugh at the veteran's expense, and was loudly applauded by the killbucks when he sat down. But his triumph was of short duration. Brimful of wrath, the old Titan returned to the charge. Grasping the back of the bench which was before him, and riveting his fiery eyes on his antagonist, his deep sonorous tones reverberated through the room, till the very glass in the windows shook with sympathy—"What awful convulsions of nature gave birth to this mighty Nimrod? What portents foretold his coming? Was he cradled in an earthquake, and lulled to sleep with thunderbolts? I suppose he was ushered to the light of day like Glendower—

"At his nativity,
The front of Heaven was full of fiery shapes,
The frame and huge foundation of the earth
Shaked like a coward—
And all the courses of his life do show
He is not in the roll of common men."

The poor Doctor heard no more. At the first word, his head drooped below those who sat around him—he crouched lower and lower as the orator went on—till the last withering, intolerable sneer, fairly lifted him from his seat, and with a shuffling limp, for he had one short leg, he made for the door, stooping as if to avoid the storm of missiles that followed his retreat. By daybreak the next day he crossed the river and plunged into the forest, for a hunt upon his own individual account; nor did he return till the *grande battue* was over, the supper eaten, and the echo of old Pompey's irony had died away in the distance—

* * * *

If these slight memorials are so fortunate as to win your approbation, I will be happy to furnish others hereafter.

I am sir, very respectfully,

Your obedient servant,

HILARY PARCHMENT.

Editor's Table.

An intelligent and gentleman-like correspondent in Amelia county, Virginia, writes to us, objecting to what he thinks an illogical blunder in the argument on the "Evidences of Christianity," published in the August number of this magazine. This blunder he says occurs on the 1st column of the 487th page. We quote a passage from his letter:

"The object of the writer is to prove the divine origin of the bible and thereby also the existence of a God. You say that man cannot by induction,—that is by a collation of facts,—by the observance of men, life and manners,—by great and varied experience, &c.—account for the origin of the bible—because the bible was written at a very early age of the world. Now, what I wish to know is this;—have you not here tacitly assumed as true the biblical account of the age and creation of the world, and thence deduced your argument to show the absurdity of the previous supposition? If so, you have actually begged the question so far as this particular argument for its divine origin is concerned; because the very passages which you have assumed to be authentic, actually constitute a part of that which is the subject in dispute. If you cannot show authentically that at the time the bible was written, the world was too young for man to be able by any possibility to reason by induction sufficiently, it is at once evident your argument goes for nothing."

This is a fair and manly statement, on the part of our correspondent, of his objection. A few words will suffice for our reply to it.

We submit that the 'question' is not 'begged' in the argument under discussion, and that the difference between our polite critic and ourselves is more apparent than real. It is a dispute about terms. Let us therefore settle the meaning of our language, and the objection will be seen to have no force whatever. When it was assumed in the argument, that the bible was written at a very early age of the world, by this term was meant the *sentient world*, a globe peopled with rational and reflecting creatures, as opposed to the chaotic mass, "without form and void," which existed before Adam walked in the garden. This assumption is equally consistent with the geological and Scriptural accounts of the creation. For geology supposes, before the world was illumined by the intelligence of man, a long and dreary succession of periods—the ages of the Megatherium and Pterodactylus—when there could have been no reasoning, by induction or otherwise, simply because there was no mind. It is quite enough, therefore, for the support of the argument to accept the geological account, and declare that the bible displays an acquain-

tance with the religious phenomena of man, which precludes the supposition of its human origin, at so early a point of time in the history of the sentient and peopled world. Our correspondent will admit, we think, there is no *petitio principii* in this position.

It is proper for us here to state, for the benefit of our correspondent and others, who have attributed the argument in question to the editor of the Messenger, that he did not write it and therefore deserves not the credit, which has been extended him, of so able and eloquent a production. It is from the pen of a learned divine of our own State, who is not only an honor to the pulpit, but an ornament to Southern Literature.

OCTOBER XXIV. MDCCCLII.

I.

The boom of sad artillery is heard
Through mightiest commonwealths, from shore to shore,
WEBSTER now sleeps, "life's fatal fever" o'er.
The man of intellect, whose single word
The depths of human sentiment has stirred,—
These reffluent tides shall own his sway no more:—
The Eloquent of speech, who dared to soar
With tireless wing of Apalachian bird,
Right upward to serene, unclouded skies:
Let thunder then from funeral guns resound,
And banners droop in sorrow to the ground,
And tears start freshly from "a nation's eyes"
Yet dim with weeping o'er the heroic dust
Of his two stately peers, the gifted and the just!

II.

If he had foibles, let us kindly fling
Oblivion's mantle here above them all,
And in this hour of grief alone recal
Those nobler virtues than can ever spring
From littleness of soul; and let us bring
Some flowers as fadeless to bedeck his pall
As those on which his fancy's sunbeams fall,—
And let our future poets learn to sing
How in the Senate house he stood erect,
And battled always for his Country's cause,—
Her shrines, her Constitution and her Laws,—
And how, when Treason rose from Faction's sect,
He turned Columbia's ægis on the crime
And froze it into silence for all time!

III.

My country, mother of the mighty! thou
That sit'st in stony anguish at the grave
Where cypress branches, twined with laurel, wave;
Dispel the shadow from thy luminous brow!
The God thou worshipp'st did ne'er allow
The good, the great, the gifted or the brave
To live or die for naught; and brightly now,
Above the spots where fond affection gave
CALHOUN and CLAY, the giant dead, to earth,
A guiding star is blazing in the sky;

So shall a beacon have its radiant birth
 From WEBSTER'S ashes, and so fixed on high,
 Its steady and immortal fires shall burn
 Wide over land and sea, while seasons yet return!

Two years ago, while the spontaneous grief of our whole country at the death of Zachary Taylor was yet unchecked, we received intelligence of the great loss England had sustained in the death of Sir Robert Peel. The Commoner died seven days before the President. It is somewhat remarkable that a similar affliction should again call forth the sorrow of each nation, almost at the same period. Our newspapers were filled with the accounts of the last scenes in the life of the Duke of Wellington up to the very day that the greatest intellect of the nineteenth century was blotted out. Webster and Wellington! When shall England or America see their counterparts?

As a graceful tribute to the memory of the Englishman, we present here a letter of great interest, from the Honorable Richard Rush of Pennsylvania, which will sufficiently explain itself:

SYDENHAM, NEAR PHILADELPHIA,
 October 28, 1852.

MY DEAR SIR:

I have received your recent favor, in which you intimate a wish to receive from me, in the form of an article to be prepared for the 'Southern Literary Messenger,' some of my recollections of the Duke of Wellington. While yet the public interest is fresh concerning his remarkable character and career.

With every sensibility to the obliging spirit of your letter, I yet feel forced to withdraw from the request or intimation it conveys. There could be little hope indeed, that any thing I might be able to send you, would be of much if any interest in the public eye, now that the Duke's death will bring forth accumulations of anecdote and reminiscences from persons of his own country, possessing opportunities of intercourse and intimacy with him, so superior to any that fell to my share. It is true, that whilst I was Minister in England during more than seven years, he then being of the British Cabinet, it was my good fortune to see him often, under various circumstances, in social life; and I was constantly struck with his remarkable naturalness of manner and frankness of speech, as beautifully contrasting with his brilliant fame first blazing up in Asia; conceded to him more or less throughout Europe, as won afterwards by his more extended deeds in arms and in council on that continent; and of exaltation altogether supreme over every name in England, in the estimate of all, from the throne to the cottage, when I was there. He made this same impression on the whole diplomatic corps assembled in London. At that era of his life, he was very hospitable to the corps—often inviting members of it to dinner; not on great and set occasions only, but on more simple and unceremonious ones. And in an humble work, I have given to the public founded on the diplomatic negotiations I was charged with in the English mission at that epoch, and on some of the personal scenes interwoven with them, I have briefly told

here and there what seemed to me illustrative anecdotes of this great British chieftain—pointing to the qualities of the public man in him. This task was never attempted, but under the restraints due from me when imparting to the public any information whatever so obtained; and I feel that I have nothing to add derived from my own intercourse with him, to what has appeared in those humble volumes. One thing very characteristic in his personal habits I have not alluded to, which was well known and may be here stated: It was his great punctuality in answering letters and notes. Scarcely any body ever wrote to him in proper terms, on any subject, without receiving a prompt reply, and very generally in his own hand. I have seen these answers in the possession of respectable mechanics, in his own hand-writing, and when the subjects were of no great importance, certainly of none to him. Notes and letters to him were extremely numerous; and this habit, considering the multiplicity of his social engagements and heavy calls on his public time, marked at once his industry and kindly feelings.

And I may dare venture to mention, if at this moment any curiosity or interest might attach to it, an opinion of the late Lord Ashburton, respecting the Duke of Wellington, as I heard it from him when he was in the United States in 1842, laboring, and laboring successfully, in conjunction with the great statesman we have just lost, Mr. Webster, in concluding the treaty which at last settled our North Eastern boundary with England. It was no limited sagacity or powers of judgment that this nobleman was gifted with. He was long and usefully conspicuous for both; and, with an expanded benevolence and intelligence, was warmly attached to our country while devoted to his own. He long possessed the Duke's good will; possessed it when he was Alexander Baring, founded on his high qualities, not merely as a great and most honorable merchant, but as a commercial statesman of large views, exercising in the House of Commons, the powers of a mind as accomplished and classic as it was elevated and clear in the whole range of its knowledge of the wants and interests of the British commercial empire; and this early good will of the Duke ripened into friendship under farther opportunities of intercourse after the peerage, so well earned by Mr. Baring, was conferred upon him. This enlightened Briton, the more so from being the friend of America, said to me when speaking of the Duke that he had been always greatly struck in contemplating his character with its resemblance, in many points, to that of our Washington. He was right. Bating that Washington's name towers to the skies as the founder of a great nation, where no room can be left for parallel, the two men were still alike in truthfulness and honesty; alike in straight-forward conduct and perpetual honor, that ever rose above all intrigue, all selfishness, and little jealousies, all thought of small ambition, or playing a small game under any circumstances; alike in that wisdom in vast affairs which looks at men as they are, and events as they exist, with no misleading thoughts to mistake either in planning and executing momentous measures; alike in that enduring resolution, those self-relying resources of in-born and well-trained virtue, bravery and patriotism, which never think of yielding, but going on amidst misrepresentation and difficulties, no matter how many, or stubborn, or complicated, that overset the weak and vacillating, but which the intrinsically strong heed not, but turn to final success and glory, in fighting great battles and undergoing other great trials, whether for a country, or to found a country; these were the grand qualities that Wellington and Washington possessed in common. The former served Britain as she was; the latter made America what she has become, and what she is to be. The sphere of the one was more wide-spread and multitudin-

ous in events, and in detached achievements; the sphere of the other was single and matchless at the time, but boundless in the future. One was the great Englishman of the age; the other, the great American of centuries. It was to this effect Lord Ashburton expressed himself. He started and led the way in the comparison as far as it was carried, and I concurred with him.

Hardly can I suppose, my dear sir, that this letter will be of any account with you; but if you should deem otherwise of it in any sense, I offer it as a little substitute for the article you sought at my hands, and you are at liberty to make any use of it you may think it worth.

In conclusion, I pray you to believe me,
with great truth, yours very faithfully,

RICHARD RUSH.

JOHN R. THOMPSON, Esqr.,
Richmond, Virginia.

We confess we have not read any which has so outraged our sense of propriety as the following paragraph, from a letter addressed to the *Leeds Mercury* by the Earl of Carlisle, better known to our readers as Lord Morpeth. His Lordship, in allusion to "Uncle Tom's Cabin," says

"With respect to the work in question, its genius, its pathos, its humor, must sufficiently commend themselves to its nearly unparalleled number of readers: *I feel that I have seen and known enough to convince my own mind equally of its general FAIRNESS, FIDELITY AND TRUTH.*"

We had occasion, some time since, to comment upon a very puerile and discreditable Lecture on America, pronounced by his Lordship before the Leeds Mechanic's Institution, in which, however, there was nothing absolutely unworthy of a gentleman. We certainly did not then suppose that the Earl of Carlisle would ever volunteer to defame us, whatever he might have said and written in a depreciative spirit of our social institutions. But here we find him endorsing the vilest falsehoods that have ever been promulgated against the Southern States of America—testifying to the "fairness, fidelity and truth," of a work which represents the Southern master as equally licentious and tyrannical. The charge has frequently been brought against American tourists, that they have abused English hospitality by printing the gossip of West End drawing-rooms and laying bare the domestic economy of aristocratic country seats. This disregard of the sanctity of private life is without doubt obnoxious to severe censure, but what shall be thought of the man who repays his generous host with false and malignant charges at the bar of the world's opinion? When Lord Morpeth visited the Southern States in 1842, he met everywhere with the most considerate politeness. There were homes in Virginia and South Carolina, where he was welcomed with the cordiality of long-established friendship; the ancient and honorable name

of Howard forbidding the supposition that he could violate hospitality. And yet this flower of England's nobility thinks it no indecorum to bear witness to the truth of a book, wherein these same Southern homes are described as the abodes of impurity, of inhumanity, of crime!

It is worthy of remark that in endorsing "Uncle Tom's Cabin," the Right Honorable the Earl of Carlisle runs counter to his own previous statements in the Lecture to which we have already referred. Mrs. Stowe brands the Southern slaveholder as cruel in his treatment of the slave, and the Earl of Carlisle has "seen and known enough to convince his mind" of the justice of this mark of infamy. In his Lecture, in mentioning his visit to South Carolina, he says:

"I went with a remarkably agreeable party to spend a day at the rice plantation of one of their chief proprietors: he had the credit of being an excellent manager, and his negroes, young and old, seemed well taken care of and looked after."

In "Uncle Tom's Cabin," the compulsory separation of near relatives among slaves is the groundwork of the romance. Of course the Earl of Carlisle, by becoming surety for Mrs. Stowe's fairness and truthfulness, is responsible for her allegations on this point. Yet in his Lecture, he tells us—

"I must not omit to state that I saw one slave auction in the open street, arising from the insolvency of the previous owner (a similar emergency to that which caused the sale of Uncle Tom): a crowd stood round the platform on which sat the auctioneer, and beside him were placed in succession the lots of from one to five negroes. *The families seemed to be all put up together.*" Lecture p. 53.

We do not see how inconsistency could be more glaring than this. In what manner the Earl of Carlisle can reconcile Mrs. Stowe's imaginary scenes with the incidents that fell under his own eye in the Southern States, we leave to nicer casuists than ourselves to conjecture.

We lament this aberration from candour the more in the Earl of Carlisle, because it necessarily sullies the fame of a proud and venerated house, associated with much of England's glory from an immemorial past to the day which closed over the drenched field of Waterloo. It brings the Howard down to the level of the common slanderer. It forces us not only to recal the lines of the poet, who satirized the father—

What heterogeneous honors deck the peer!
Lord, rhymester, petit-maitre, pamphleteer—

but to anticipate a time when a juster, if not a bitterer sarcasm may be applied to the son, reckless of that regard for truth, which, amid all their follies and excesses, has ever distinguished the

English nobility and half redeemed their worst crimes.

There come to us occasionally, in our editorial correspondence, some rare gems of epistolary composition. By compiling them, we feel confident we should be able to give the world a volume, which for really delicious infelicities of spelling and grammar, would exceed anything Mr. Chawls Yellowplush ever wrote. Here are a couple of letters, by way of illustration, which we cannot help printing, though we confess to some guiltiness of conscience in finding amusement in the illiteracy of the writers. The reader will observe that these letters would seem to have been inspired by the tragic and the comic muse, as the one establishes a marriage, the usual finale of comedy, and the other pathetically suggests a death.

"Mr Edetor of the S Messenger

"Sir I receive a letter Sent to Miss ——— requestin her to pay for the Mesenger I have bin Marred to Miss ——— five years and I never have taken the first one out of the office for I Never intended to pay for them before we were Marred her Brother ——— Sent for the Mesenger for her and had it Sent in her name She never Sent for it her Self and after we ware Marred ——— P M Sent to you to Stop it and it Still come and you had Better Stop Sendin it unless you want to loss more for I never intend to pay for them unless compelled by law so No more But remains yours ———"

"To the Editor Sir one of your Paper have Bind Cumming hear to Dr ——— with Soro I will say to you that he Dide Some time a go and the man that he was Living with got me to Rite to you to stopt it.

"Yours
* * * P. M.

We can only say to our kind correspondents, in answer to such satisfactory epistles, that we learn "with Soro" the decease of our medical friend, and that we fondly trust that however effectually the loving couple were "marred," the same unhappy term may never be used with reference to their matrimonial happiness.

In the article on Houdon's Statue of Washington, in the last number of the Messenger, we stated that no cast of this inimitable piece of sculpture could be found in the State of Virginia. We have since learned that a copy of the bust in plaster, taken by a skilful hand, adorns the mansion of the Hon. Andrew Stevenson in the county of Albemarle. We take pleasure in expressing our approval of the good taste which is implied in the possession of such a prize. We recollect to have seen a good plaster bust copied

from Houdon, among the household gods of Prof. H. W. Longfellow at Cambridge, who resides in the identical house formerly occupied by Washington when in command of the Revolutionary army.

A recent number of the HOME JOURNAL contains a pertinent paragraph upon the loose notions of property that prevail among the editorial class. It has been the fortune of that excellent paper to suffer greatly by the larcenies of some of its contemporaries, and its editors therefore feel called upon to recur to the old doctrine of *meum* and *tuum*, in self-defence. Our own experience in this regard has led us to think that very many editors act upon the convenient maxim of Monsieur Proudhon—"La propriété, c'est le vol," for we see the Messenger's articles reprinted in all quarters, without a word of acknowledgment. It certainly surprised us, however, to find, in this very same number of the Home Journal, the poem of "Mildred," published in the last number of this magazine, quietly transferred to the Journal's columns, with no mark of credit as to its origin. The *Virginia Recorder*, a meritorious paper published at Buchanan, Virginia, also did us the honor, a short time since, to publish as original a sweet little poem of Miss Talley's—The Autumn Time—which we had the gratification to lay before our readers as long ago as October, 1848. But the most "wexatious" thing we have experienced for many moons was an appropriation, three weeks ago, on the part of the New York Courier and Enquirer,—in one of its able and solid leaders,—of the whole substance of our legal argument against "Uncle Tom's Cabin." We ought, perhaps, to feel complimented by this employment of our humble labors by a journal of so high a reputation for talent, but we should have enjoyed a much intenser satisfaction if the writer, who made use of us to "get up" his law, had been liberal enough to append to his argument the name of his attorney.

As a pendant to the Literary Parallels, supplied by a valued contributor to the foregoing pages of the present number of the Messenger, we give here a curious coincidence between a passage in Pope's Homer and one in Hudibras. When Achilles draws his sword against Agamemnon, his arm is arrested by Minerva, as described in these lines—

Achilles heard, with grief and rage oppress,
His heart swell'd high, and labour'd in his breast,
Distracting thoughts by turns his bosom rul'd,

Now fir'd by wrath, and now by reason cool'd;
That prompts his hand to draw the deadly sword,
Force through the Greeks and pierce their haughty lord:
This whispers soft, his vengeance to control.
And calm the rising tempest of his soul.
Just as in anguish of suspense he stayed,
While half unsheath'd appeared the glittering blade,
Minerva swift descended from above,
Sent by the sister and the wife of Jove,
(For both the princes claim'd her equal care;)
Behind she stood, and by the golden hair
Achilles seiz'd.—*Pope's Iliad. Book I.*

The passage in *Hudibras* is as follows—

This said, with hasty rage he snatch'd
His gun-shot, that in holsters watch'd;
And bending cock, he level'd full
Against th' outside of Talgol's skull:
Vowing that he should ne'er stir further,
Nor henceforth cow nor bullock murder.
But, Pallas came in shape of rust,
And 'twixt the spring and hammer thrust
Her Gorgon shield, which made the cock
Stand stiff, as 'twere transformed to stock.

Hudibras, Part I, Canto II. 775.

Our readers will enjoy, we are sure, the graceful descriptive verses we give this month, from the pen of our gifted poetical contributor, R. H. Stoddard. It gives us pleasure to announce that this gentleman will shortly make his appearance again before the public in a volume of *Fairy Stories for the Holidays*. The book will issue from the press of Ticknor, Reed and Fields, under the tempting title of "*Adventures in Fairy Land*." It is designed chiefly for the little folks, but will present a collection of simple prose poems which will afford the purest delight to all classes of readers.

We have a friend, a member of the bar, who enjoys a high and deserved reputation for ability as an advocate, and is also famed for his ready and never failing wit. On one occasion we heard him, in cross-examination of a witness as to the exact distance between two places, interpose a curious objection to the testimony. The witness asserted the distance to be nine miles "because the sign-board said so." "Stop, sir," cried our friend, "what the sign-board says, is 'n't evidence; you must tell us what you know, and not what you have had said to you." A few days since, he was engaged in defending a man charged with some crime in which a stick was involved as part of the transaction. The prosecuting attorney, in the midst of his concluding argument, inquired, with great emphasis, "and now, gentlemen of the jury, how came this stick where we have traced it? Some one must have carried it there—it could not have got there of its own accord!" "Why, sir," said our friend, interrupting him

with a very quizzical expression, "it was a walking stick."

A gentleman being required by a lady to find a rhyme for *Taliaferro*, which (for the benefit of distant readers) we remark is pronounced '*Toliver*,' produced the following:

'I think I have the right to ask
A Rowland for my Oliver—
To you, in turn, I give the task
To find a rhyme for '*Taliaferro*.'

To which the lady responded:

"It is most true, that very few
Fit rhymes exist for '*Taliaferro*—
But surely you, down in Peru,
Must needs have heard of Bolivar."

A Prospectus lies on our table, in which our artist friend Hubard signifies his intention of opening Classes in Richmond, for instruction in Drawing and the general principles of the art of painting. Few men in this country have greater skill with the pencil than Hubard, and we have seen portfolios of his sketches, that worthily and faithfully engraved would give him a reputation not very far below that of Retschz himself. We are therefore glad to see that he proposes to devote a portion of his time to teaching the elements of his noble art, because, not permitting ourselves to doubt his success, we confidently expect from his efforts an improvement in the taste and judgment of the community with reference to his particular branch of artistic study.

Notices of New Works.

PHILOSOPHERS AND ACTRESSES. By ARSENE HOUSAYE, Author of *Men and Women of the Eighteenth Century*. Redfield. Clinton Hall. New York. [From J. W. Randolph, 121 Main Street.

In the pleasant volumes of Monsieur Arsène Housaye, we are admitted into a gaily-decorated and brilliantly-lighted *salle de spectacle*, where the curtain rises upon a very charming circle of wits and beauties, in whose action and dialogue we find ourselves readily interested. True it is, that we hear some sentiment that is peculiarly French, and witness some imbroglis that are rather equivocal, but the fascination of the place with its surroundings, causes us to look upon all this with a very lenient eye. Such experience is an unquestionable delight; and it is only when the show is over, when the sparkling company of its clever and pretty sinners have left the stage, when the loves have taken flight and the snery relapses into darkness, that we become sensible of the fact that

we have been sinning ourselves all the while we have been yielding to the enchantment.

To be candid with Monsieur Houssaye then, we must tell him that we think him one of the sprightliest and wickedest writers of the day; and wicked not so much because he teaches bad morals, as because he finds nothing in the loose adventures of his characters to disapprove. The grace and sweetness with which his *griottes* are made to offend against all the proprieties of life—the *bienséance* uniformly displayed by his “philosophers” in their worst departures from the line of good conduct—the delicious way in which they both contrive to throw off the restraints of society—all these are well calculated to make us regard lightly what we might else be forward to condemn. If he does not absolutely smile upon a peccadillo, he has no rebuke for the guilty one, while he chronicles the whole affair in the airiest and most flippant of sentences.

The best thing to our taste in the two volumes now before us is the sketch of Voltaire with which the first opens. It is obnoxious to the objection we have urged against the author in a general way, but is eminently lightsome and suggestive.

REUBEN MEDLICOTT, *Or the Coming Man*. By M. W. SAVAGE, Esq., Author of the “Bachelor of the Albany,” &c. New York: D. Appleton & Co. 200 Broadway. 1852. [From A. Morris, 97 Main Street.

The second title of this book might have been “The Philosophy of Failure,” instead of “The Coming Man,” for its hero is a ‘Man’ who never does ‘come,’ or rather, who perpetually illustrates how easy a thing it is to go through the world and accomplish not one single useful or important purpose. Reuben Medlicott is a young gentleman of rare parts, of whom a circle of admiring friends predict the most brilliant things, and whose life is but a succession of melancholy mishaps. Out of his varied adventures the author draws forth the moral which *Æsop* has taught in one of the best known of his fables, that perseverance and unflinching industry will in the end achieve more than the fitful and misdirected efforts of the most gifted genius.

The literary merits of the volume are considerable. The style is less pointed than the Bachelor of the Albany, and the story has been needlessly expanded; nevertheless there are many clever hits, here and there, that might be profitably transferred to our pages had we room for them. The work is divided into books, each of which is opened, by way of prolegomena, with some of the author’s own reflections, after the manner of Fielding.

SICILY: A PILGRIMAGE. By H. T. TUCKERMAN. New York: G. P. Putnam. 1852. [From Nash & Woodhouse, 159 Main Street.

It is matter of congratulation that, as Mr. Tuckerman’s volume is the only one published of late years on Sicily, the task of describing Sicilian scenery and people should have fallen into such excellent hands. The first edition of this little work appeared as long ago as 1840, under the title of “Isabel, or Sicily,” but it did not attract its proper share of attention at that time, and we are glad to see it again brought before the public. We are also glad that the name of Miss ‘Isabel’ has been dropped from the title, inasmuch as it suggested rather a dark-lantern Sicilian novel than what the book really is, a charming and instructive record of travel. Mr. Tuckerman has employed Miss Isabel and a little story in which she figures, to

beguile the indifferent into a perusal of his pages, but the device was not at all necessary, nor do we consider that the young lady or her companions lend much to the interest of the volume. We commend “Sicily” highly to the reader’s notice.

ORACLES FOR YOUTH. *A Home Pastime*. By CAROLINE GILMAN. Author of “The Sibyl,” etc. New York. G. P. Putnam & Co. 10 Park Place. 1852. [From A. Morris, 97 Main Street.

Arrayed in appropriate and beautiful habiliments, this little volume confirms, upon a closer acquaintance, the pleasing first impression its appearance has created. The object of it is to afford an innocent in-door diversion to the young folks, and this is done through the happy medium of verse, simple yet tuneful. Certain questions are asked by one out of a circle of children, and the child questioned responds by giving a number. To this number will be found appended a Delphic revelation, suited to the interrogatory, conveyed in a stanza more musical than any utterances of the ancient Pythoness. Mrs. Gilman has shown herself a real friend of the rising generation in the invention of this oracular amusement for them.

THE CABIN AND PARLOR: *Or Slaves and Masters*. By J. THORNTON RANDOLPH. Philadelphia: W. B. Peterson, No 98 Chesnut Street. [From G. M. West & Bro., 14th Street, under the Exchange Hotel.

Good in all respects. The style is that of a well educated and practised writer; the incidents are striking and told with spirit: pathos alternates with humor throughout the story, and the argument is manly and unanswerable. We can only regret that by similarity of title and the time of its publication, it should be associated, in any way, with Mrs. Beecher Stowe’s volumes, of the very name of which the public are getting heartily tired, for “The Cabin and Parlor” is excellent enough to have won for itself a wide popularity, in the absence of that surfeit of ‘nigger’ literature, which now sickens the popular taste.

CONTENTMENT BETTER THAN WEALTH. By Alice B. Neal, (Cousin Alice.) Author of “No Such Word as Fail,” etc. D. Appleton & Co. 200 Broadway, N. Y. 1853.

GOOD IN EVERYTHING: *A Story*. By Mrs. Barwell. New York. D. Appleton & Co. 200 Broadway. 1853. [From A. Morris, 97 Main Street.

These little works, from the press of the Messrs. Appleton, strike us as most appropriate and excellent for the purpose had in view, no doubt, by author and publisher. “Contentment Better than Wealth” is a charming gift book for any little boy or girl not very far in his or her teens; and we have no doubt that the literary character of the performance is as attractive as the “outward semblance”—which is red and gold—or the title-page, which is just that fascinating mixture of crimson, and azure, and the rainbow generally, which takes captive the youthful heart. We have been enabled scarcely to glance into “Contentment Better than Wealth,” but are quite willing, having read the name of Alice B. Neal upon the title-page, to recommend it to our readers. She is the popular authoress of “No Such Word as Fail,” and

other moral tales; and as "Cousin Alice" has attained to a very gratifying popularity with the rising generation. We repeat that these are just the books which children love.

GARDEN WALKS WITH THE POETS. By C. M. Kirkland. G. P. Putnam & Co. New York. [From A. Morris. 97 Main Street.

Mrs. Kirkland has performed a sweet and graceful office, with her accustomed delicacy and judgment, in collecting together all the finest passages of English poetry which relate to "the Garden." The book itself is a beautiful bouquet to ornament the centre-table, or diffuse its fragrance through the *boudoir*. With the ladies it is likely to prove a great favorite, both for the taste for flowers and the love of poetry which distinguish the gentler sex.

LIVES OF WELLINGTON AND PEEL. *From the London Times.* New York. D. Appleton & Co. 1852.

The very day after the announcement of the death of Wellington, the London Times published an elaborate and extended biography of that great captain, filling many columns of its issue. A similar though less full sketch of Sir Robert Peel had appeared on the occasion of the great Commoner's decease in 1850. The Appletons have brought out these two efforts in a handsome volume which will no doubt have a run. It is well printed and neatly bound.

THE INDUSTRIAL RESOURCES OF THE SOUTHERN AND WESTERN STATES. In three volumes. Volume first. By J. D. B. DeBow. Published at the office of DeBow's Review, New-Orleans. John-street, New York. East Bay and Broad-streets, Charleston. [From J. W. Randolph, 121 Main Street.

If any one should derive the impression, from reading the title page of this volume, that it is a mere collection of statistics relating to Southern Commerce, he would not only commit a great mistake, but do gross injustice to the indefatigable and worthy author. Professor De Bow has rendered the South a great and essential service, which we trust will meet with a better reward than usually attends the efforts of those who labor in behalf of the Southern people. We commend his book most cordially to the attention of all who would make themselves acquainted with the resources, not only industrial but moral, of the slaveholding States.

PARISIAN SIGHTS AND FRENCH PRINCIPLES, seen through American Spectacles. New York: Harper & Brothers. 1852. [From A. Morris. 97 Main Street.

Whoever it was that looked through these "American spectacles" upon the sights and scenes of the French capital, saw them to some purpose, for we have not read anything fresher and more entertaining than this book, since Sanderson's time. There are some marked indelicacies which had been better omitted, and should the vol-

ume go through another edition, we trust the author will strike them out. Yet the work as a whole, is excellent, possessing all of Sir Francis Head's fidelity and humor without any of his tiresomeness.

THE PERSONAL ADVENTURES OF "Our Own Correspondent in Italy." By MICHAEL BURKE HONAN. New York: Harper & Brothers. 1852. [From A. Morris, 97 Main Street.

"Our own Correspondent," in his Italian campaigns, seems to have directed his energies, in a special manner, to the cookery and small-talk of the pleasant country described; but mixed up with his gossip and gastronomy, there is so much of lively incident and stirring adventure, connected with the recent revolutions in Italy, that the book will well reward perusal.

SLAVERY IN THE SOUTHERN STATES. *By a Carolinian.* Cambridge: John Bartlett. 1852.

We are indebted to a friend in Boston for a copy of this well-timed brochure. It is understood to be from the pen of E. J. Pringle, Esq., of Charleston, S. C., and was addressed by him to a friend in New England, in reply to the question "What do you think of 'Uncle Tom's Cabin' at the South?" Mr. Pringle writes with great affluence and perspicuity, and it is not difficult to see from his close and searching argument, that his mind has been well trained in logical studies. We thank him for the service he has rendered our section of the Union by so thoughtful and dispassionate an effort, because we can not help thinking that any Northern man of judgment and honesty of purpose who will read it, will become convinced of the correctness of the author's positions. With such writers as Mr. Pringle to defend her institutions, the South need fear nothing from the assaults of fanaticism from whatever quarter they may come.

OUR IRON ROADS: Their History, Construction and Social Influences. By FREDERICK S. WILLIAMS. With numerous Illustrations. London: Ingram, Cooke and Co., 227, Strand. 1852. New York: Bangs, Bros. & Co. [From Harrold & Murray, Broad Street.

The whole economy of the Railway System of England is discussed in this beautiful volume at considerable length, and with a perfect knowledge on the part of the author of the subject he has taken in hand. Every thing connected with the 'Iron Road,' the motive power, the carriages, tunnels, viaducts, bridges, excavations, &c., &c., is accurately described, and illustrated by a spirited wood engraving. There is some very pleasant reading in the volume, a sort of branch road, upon which the reader is carried, now and then, by a switch deflecting the train of his thoughts from the main track, and sending him along through flowery valleys and quiet retreats. The work belongs to the series of the "London Illustrated Library" of which we have before spoken with praise.

Notes and Commentaries, on a Voyage to China.

CHAPTER XV.

Santa Casa da Misericordia—Orphan Asylum—Foundling Hospital—Population of Rio de Janeiro—Charity of Roman Catholics—Medical education—Medical practitioners—Courts martial—Character of sailors—Progress of Rio de Janeiro.

May 12th. Visited several of the public charities. The Santa Casa da Misericordia, founded in the year 1582, is a charity hospital of sufficient extent to accommodate about 400 beds. Without distinction of country, color, religion or sex, all who are sick and in want are admitted without question. The patients are supplied with good medical and surgical attendance, diet, medicines and lodging. It is of course resorted to by the miserable and destitute, and they find relief, though the furniture and provision for them are of the plainest kind. The institution seems to be well managed and is cleanly kept.

It is endowed and its annual income is about 188,580,666 reis, equal to about \$95,000; and its ordinary expenses are about \$65,000. Recently the building has been repaired, and considerably extended at a cost of about \$70,000. The number of patients admitted is about 5,000 every year, of which nearly one fourth die. The interments in the Campo Santo or Potter's field connected with the institution for the year 1847, were 1,535 free persons and 1,839 slaves, or an aggregate of 3,374.

Connected with this establishment is an Orphan Asylum, commenced in the year 1739, which is maintained at annual cost of about \$15,000. The number of orphans in it varies from 40 to 50. They are received at all periods of minority, and when they attain a proper age the males are taught trades, and the girls, when they marry, receive a small dower to enable them to begin the world. The marriage portion may have some influence in procuring husbands for these parentless maidens. A considerable proportion of the inmates of the Orphan Asylum are transferred from another branch of this "Holy House of Mercy,"—the Foundling Hospital, which seems to carry on an extensive business.

In the year 1847, the number admitted on the wheel was 594; many of them had been badly treated, some were at the point of death, and 17 were actually dead; and they were of ages from a few days up to even eleven years old. During the year 228 were discharged, 360 died, and 91 remained in the house, besides 467, between the ages of 7 and 8, who were boarding at the charge of the hospital.*

This gives a proportion of nearly three foundlings yearly to every thousand of the population which is 170,000, as follows:

Brazilians, native or adopted,	60,000
Strangers, of all nations,	25,000
Slaves of every color and sex,	85,000
	170,000

These figures tell a story about the morality of the good people of Rio de Janeiro, which should not be compared with the morality of the United States in this respect, because we have no record to show precisely how many illegitimates, if any, exist among us. Setting aside the religious view of the subject, the question may be asked, and considered simply in relation to legislative policy, what influence does the existence of a Foundling hospital exercise on the community? The argument most prominent in favor of such an institution, is that it removes all the motives which are supposed to lead to the perpetration of infanticide, and thus far contributes to the augmentation and preservation of population, which is the measure, all things being equal, of national strength. For this last reason, legislators have always endeavored to enact laws, the tendency of which is to encourage the holy institution of marriage. Among the effects of this common endeavor has been the creation of a public opinion, a public sentiment which discountenances bastardy, and degrades women in social estimation when, through persuasion or force, they become mothers without legal or religious sanction. A female thus unfortunate receives no sympathy from her own sex; not one connives at her error by silence, or utters one word in pity or in extenuation; she is deemed to shame and to feel that the finger of scorn or condemnation is pointed at her and follows her

* See Almanak Administrativo, Mercantil e industrial da Corte e Provincia do Rio de Janeiro. 1848. Anuario Politico do Brazil. 1848.

through life. This castigation has no limit, and to a sensitive mind may be intolerable; and rather than attempt to endure it, the miserable woman in her anxiety to preserve social approbation or character, may seek to hide a monstrous offence by perpetrating the darkest crime. At the moment she determines to murder her own child, maternal fondness, one of the wisest of Nature's boons, succumbs in an agonizing conflict with love of approbation, often cultivated to excess, and the woman no longer comprehends the wickedness of the deed she contemplates; the fear of God is lost in an irrational dread of social censure.

Maternal love is not contingent upon social contrivance. The attraction which binds the mother to her offspring, has no dependence upon statutory or conventional rules; it is as much an attribute derived from natural cause as the fountain of liquid nourishment prepared under physiological laws to appease the hunger of the new born animal. The expression of maternal instinct or affection may be stifled by fear of reprobation, and yet the instinct be not extinguished; even where priestly work and ceremony have not made ready the soil.

The rules of society are somewhat responsible for the cruel dilemma in which women find themselves, when they forget the conventional customs established for the protection of their innocence, and yield to false promises under the most bewitching influence that sways humanity in its youth. Departure from the moral code should not be encouraged; but we are not forbidden to pity the frailties and misfortunes of our fellow-beings? For certain unfortunates, a foundling hospital is an institution of mercy, because it opens a way to save life, and to shield them from endless degradation: but it does not take away the fear of shame, encourage a repetition of the error, or release them from penitential suffering. Who appreciates the distress of an unhappy mother while she stealthily, at a silent hour of the night, approaches the friendly wheel, to deposit upon it her first-born, to be conveyed away from her embrace forever to hired hands? Who sympathizes with her heart's tumult while she beholds the wheel turning from her with what might have been a treasured blessing if man had been but true: or while she pursues the dark road from the hospital, where her heart is, to her home where her peace is no longer, for she must now strive to hide her sorrow in an assumed deportment of content? She will never see her infant smile in its mother's face; yet, she hopes and believes that it thrives under the care of some strange nurse, even though it may have died. Surely even a most wanton fault is somewhat expiated by such mental anxieties.

The frailties and imperfections of humanity, particularly those which spring from physiological condition, may be in some degree provided for. A foundling hospital is a result of Christian mercy and of Christian pity, and is an institution, it is believed, peculiar to Christian communities. While it is a monument of Christian charity, it is a record of human weakness. It is true our notions do not, at least in Philadelphia, countenance such an institution by name, though it exists in fact. The newspapers occasionally announce that infants deposited at the doors of citizens have been conveyed to the *alms-house*. Such an institution seems to be necessary in every populous city; and its existence ought not to exert an influence prejudicial to morality to as great an extent as penitentiaries and jails, which are established to protect society from the acts of the vicious and violent. I confess that at first, the existence of a foundling hospital seemed to me a proof of laxity of morals as well as of female impurity in the city of Rio de Janeiro; but further examination has induced a belief that such an inference is unjust and unphilosophical. The existence of a prison does not increase the number of criminals; the existence of a foundling institution is not likely to render women indifferent to the chances of deception and shame; on the contrary it may stand like a gibbet to warn against indulgence of passion.

The hospital of Pedro II., founded in 1841, embraces a department for the treatment of the insane; the number under treatment averages about forty annually.

The whole of this hospital establishment is under the direction of a holy brotherhood—*irmandade da Misericordia*—and is supported by the extensive revenues of the fraternity, assisted by the profits of two lotteries every year, and bequests from private individuals. There is in this institution an example of the practical charity which constitutes a prominent feature of the Roman Catholic religion. There is no religious sect of Christians who give more liberally, or attend more faithfully to the wants of the poor, the afflicted, the wretched and the destitute. Indeed, the Roman Catholics are a charitable, an *alms-giving* people in all countries, and in this respect there is no sect or denomination of Christians who do so much to alleviate affliction. Who has not heard of the Sisters of Charity? We find no similar sisterhood belonging to any other Christian sect than the Roman Catholic.

In the *Misericordia* I met an English woman in the capacity of nurse: she stated to me that she had resided in the hospital seventeen years at a monthly salary of ten milreis, about five dollars.

The military hospital, which I found in good

order, contained one hundred and ninety-nine patients, belonging to that portion of the Brazilian army stationed in and about Rio.

Considerable attention is paid to medical education. The course of studies embraces all the branches and extends through a period of seven years. The effect of this long probation is to fill the metropolis with practitioners, while there is a dearth of them in the rural districts. Young men from the country, who enter the medical college, become attached to the capital by long residence, and after graduation seldom return to their homes. The system of medical education is exclusively French.

The medical faculty consists of a director and twenty-two professors, who seem to be divided so as to take up the students in classes of the first, second, third, fourth, fifth, sixth, and seventh years.

According to a register before me for 1845, the city contains 178 practitioners of medicine, of which number 11 are homeopaths, besides 12 female practitioners, 9 dentists and 76 apothecaries. Among them is a surgeon of the army who has the rank of lieutenant colonel. Besides all these of name and habitation, there is no doubt a full proportion of quacks and nostrum venders, who always find prey among the ignorant and credulous ever found in large populations.

The social standing of members of the medical profession in Rio de Janeiro, may be inferred from the care bestowed in securing professional knowledge. Thorough education and competent knowledge must attract respect from all who are able to appreciate the worth of skilful physicians and surgeons in a community. The length of time devoted to the study of medicine, seven successive courses of a year each, is strikingly in contrast with the three years' study generally required in the United States. It must not be forgotten that in a hot climate, more time is probably required for the accomplishment of the same work, than in temperate regions where men seem to enjoy much greater nervous endurance, and are capable of greater mental efforts, without unfortunate results to health. The labor of the brain, when pushed, rapidly exhausts the physical powers; and, if long continued, destroys health.

The science of human anatomy, which embraces all that can be known of the form and relations of the multitude of parts which constitute the human body; the science of human physiology which embraces the study of the actions or functions of these parts, separately as well as conjointly; the science of chemistry which studies the actions and reactions of matter, in its simple and compound conditions, and leads us to a knowledge of the composition of animal and ve-

getable and mineral materials, include only the elementary principles on which practical medicine and surgery are based. One who attempts to adjust displaced bones, remove diseased parts, or to obviate the destructive influence of wounds on life, without knowing the form, relations and functions of organs, is dishonest and unworthy of public confidence. The same remark applies to one who prescribes treatment for maladies without being able to distinguish one from the other, or without any adequate conception of the manner in which the nutrition and growth of the body are effected, or how various kinds of inanimate matter taken into the interior of the body, may modify the functions of its organs and its general condition. A worn bucket or a wash-tub, are confided to the cooper for repairs, for few have enough effrontery to assume a knowledge of his craft; few men who have not learned the art, have vanity enough to endeavor to replace a broken or dislocated wheel in a watch; but if a child or adult member of the family fall sick, he is freely confided to the influence of a nostrum, or the untrained judgment of any one of the neighbors or friends who will suggest a remedy. Complicated and difficult as the laws of life in health and disease are admitted to be by all persons of thoughtful intelligence, a very great many persons in every community are ever ready to advise the means of restoring impaired or lost functions of organs to healthful action. Their ignorance renders them fearless; and they deal with poisonous remedies and disease with less diffidence than the best educated and most experienced physicians. They regard disease as an entity, a sort of malevolent spirit, possessed of depth and breadth and length and weight, which may be destroyed or expelled through means of a drug. They are unable to conceive that this notion is false, and all the reasonings based upon it are untrue; they cannot be made to understand that disease is merely an untoward modification of healthy action of an organ or organs—simply a condition. So long as people are ignorant enough to hazard life and health by accepting advice from any one who may volunteer to bestow it, so long will the various sorts of pretenders in the art of healing meet with encouragement and success. The homeopath who pretends that one ten millionth part of a grain of tobacco exerts more influence on the body than a nostril full of snuff, or mouthful of the best "Honey Dew," is not a greater impostor on credulity than those who pretended to ascertain from medial communication with the eternal soul of William Penn, that he was opposed to the political consolidation of the city and incorporated districts of Philadelphia. It is lamentable to see how falsehood and credulity conspire to delude and

cheat the people in medicine, in surgery, in politics, and even in religion, and how little encouragement masses of men give to absolute truth and integrity.

For thirty years and more, the system of medical education pursued in the United States, has tended to lessen the amount of knowledge required by colleges to secure the diploma, a certificate to the public, that their alumni respectively were true men, worthy of confidence and trust in all things pertaining to the art and mystery of removing disease. Indeed, it is nearly thirty years since it was ascertained in the military services of the country, that the diploma of colleges is not a reliable document, and that this certificate, purporting to embody the testimony of trustees and professors, men elevated to their positions in consequence of their integrity and learning, could not be trusted. Hence the government, for once in advance of the knowledge of the day, disregarded the diploma, and employed only such persons in the medical department of the army and navy, as were pronounced competent by boards of experienced medical officers, appointed to examine them. In the early days of these examinations, not one-fourth of the candidates examined were found qualified, and even now not much more than one-half of the examinees are passed; yet, all or nearly all who present themselves are armed with diplomas or certificates to the public that they are fully instructed and capable to practice medicine and surgery as occasion may require.

Still the evil goes on. Medical schools are multiplied in almost every section of the Union; they resort to various means to attract the pupils, and in some instances, they rival each other in facility of granting diplomas. Such institutions believe they find both their renown and profit to be in proportion to the number rather than in the learning of their graduates. And this system is tending to lessen the respectability of the medical profession, and to encourage quackery, imposture and credulity; and the only hope of irradiating this state of things is in the American Medical Association, which will in time, perhaps, enlighten the public as to the true character of certain institutions which, under the pretext of teaching medical science, are obtaining money under false pretences, and indirectly colluding to poison and kill innocent members of the community. If the influence of the respected and respectable members of the profession, prove insufficient to protect the public from such impostors, a general law, inhibiting any person from practising medicine or surgery for profit, except by license obtained on the certificate of boards of examiners appointed by the Executive or Legislative authority of the States respectively, might

be effectual. The profits of such a board should be independent of the result of the examination. Its members should look only to the interests of the community, and without fear or favor of candidates for license to practise.

Yet, it cannot be denied that, notwithstanding the evils and abuses to which our system is obnoxious, our country affords abundant facilities for the acquisition of medical science. A proof of this is seen in the skill of our physicians and the boldness and dexterity of our surgeons; they are not surpassed in any other country.

May 15th.—Dined with an English resident who has a cottage in the midst of a pretty garden, in a district called Larangeira. I went out in an omnibus drawn by four mules. A ticket secures a seat, so that the passengers are never crowded.

A few days since, a personal misunderstanding occurred between two gentlemen of the navy, at an evening entertainment. They exchanged angry words, and at one time the quarrel looked serious, but the difficulty was composed before returning to their respective ships. Unfortunately, perhaps, the circumstance was so represented to the Commodore, that he determined the affair should be investigated before a Court-martial. One of the gentlemen belonged to a staff-corps, and the other to the line. According to custom, the court was composed of officers of the line exclusively: the staff had no representative in it. The investigation resulted in a reprimand to each.

Courts-martial are formed and conducted in a manner very much at variance and often in conflict with the rules which govern civil tribunals. A court may be convened by the accuser, who may also be a witness, as well as any member of the court detailed by him.

Naval courts-martial, under the Statute of April 23, 1800, "for the better government of the navy of the United States," may consist of any number not less than five nor more than thirteen members, who must be "officers;" and they must be of the class styled commissioned, because the act provides that "the senior officer shall preside, the others ranking agreeably to the date of their commissions." The habitual construction is to form a court exclusively of commission officers of the line; commissioned officers of the staff departments are not detailed for this duty, though there is nothing in the letter or spirit of the law to prevent either medical officers, or pursers, or chaplains, from serving. About the year 1828 or 1829, Commodore Jacob Jones detailed a mixed court, which included medical officers and pursers for the trial of a seaman charged with the crime of murder. He was condemned and executed.

Besides the members, a court includes a Judge Advocate, whose duty is to keep a faithful record of the proceedings, and to the best of his knowledge, advise the court as to the law, and to secure the prisoner a fair trial. The judge advocate may be a citizen. It is not uncommon on foreign stations, to select a commodore's secretary, a surgeon, or a purser, for this duty.

The finding of courts-martial is determined by a majority of votes, except in cases involving loss of life, when a concurrence of two-thirds of the members present is required. The judge advocate has no vote.

The members and judge advocate swear to keep secret the opinions and votes of each other, and not divulge the sentence of the court until approved by the proper authority.

It is not pretended that courts-martial are, in fact, courts of justice; they are regarded rather as courts of discipline; and, for this reason, the common interests and subordination of the military body should be kept in view by the members in all cases. In other words, the effect of a sentence on the subordination and discipline of the ship or squadron, or of a post, is ever to be taken into consideration. It is on this principle, perhaps, that mildness or severity of condemnation is measured by the grade and rank of the accused; it is a very common notion in the service, among juniors especially, that a captain will be acquitted on charges which would cashier a midshipman, and that a private would be flogged for alleged faults, which a court would dismiss as frivolous if charged against a commission officer.

It has been tritely, though in some degree, truly said, "there is no law for post-captains." And it may be added, that the vigor of military law increases with inferiority until it descends to privates, who generally experience its full force. And such is likely to be the case, until the system is modified; until the antiquated and barbarous law of 1800 is remodelled so far as to harmonize with the spirit of the age. Is it not possible to devise a law which, while democratic in its general features, may be still sufficiently aristocratic to meet all the requirements of military discipline? Let those interested in the question, think well of it before answering.

On the other hand, it should not be forgotten, that a captain occupies a position which is often beset by difficulties, which require judgment and skill to avoid. He may have associated under his command, naturally discontented or insubordinate spirits, who constantly watch his actions, for the purpose of discovering something to censure; or, some may be negligent, heedless, indolent, and if he should be intolerant of irregularities, he will be pretty sure to meet resistance of authority, and to find rebuke to beget recrimina-

tion. Men rarely possess sufficient virtue to recognize misconduct in themselves when pointed out; and even when convicted of faults, the spirit of subordination is rarely enough to induce them to submit to just censure or punishment. In a word, few men are competent judges of the propriety of their own conduct, if it be in the least degree defective. Many instances of officers who attempt to justify their own disobedience, might be cited; but it is most dangerous to military discipline to permit even the most brilliant success to excuse or palliate any violation of orders.

A naval or military community, large or small, includes two very distinct classes of men: a class of officers who are educated, intelligent, possessed of sensibilities quick to the influence of praise or censure, and governed generally in their conduct by sentiments of honor, truth and integrity. In fact, unless men have these attributes, they should be considered not qualified to hold a commission in military service, because the country cannot safely repose confidence and trust in any who are not scrupulously observant of the highest code of morals in every respect. But unfortunately for theory, humanity is imperfect; men of defective moral constitution will, in spite of every precaution, become official associates of military bodies, and when admitted, it is often almost impossible to eject them. Yet this is not more true of military, than it is of religious organizations. Vicious, dishonest, untruthful men have, again and again, long held distinguished positions in every church, to the scandal of all right minded people. Delinquent bishops and priests are found among Christians of every denomination; but it is not to be inferred therefore the principles of Christianity are defective or in any measure responsible. The difficulty probably rests on the merciful forbearance, degenerating almost into a frivolous sentimentality, which it is the fashion to extend to evil doers of every grade and class. There is probably too little severity exercised towards delinquents and tricksters of every shade, who hold positions of trust, power, and patronage, as well as towards cheats, thieves, burglars and assassins, from the lowest walks of life. While such notions govern men in civil life in their conduct towards those who disregard legislative acts, as well as religious and moral laws, at the cost of peace, of property and of life, it is unreasonable to demand a higher tone among military officers. Still, it is hoped, the time is fast approaching when no exceptionable man can be retained in the officiality of the navy or army of the United States.

The other class above alluded to, includes privates of every grade and name. In the navy, they are drawn from the least intelligent and least

cultivated of our fellow citizens; and from a notion that a rigid and exact administration of summary law and punishment, enabled the officers to control the most violent, vicious and disorderly, some of the very worst of men are found in the naval service, and placed there, too, through the agency or connivance of civil officers in our large cities. Often, muscular power and robust health are their sole qualification and recommendation. Still, there is a very large proportion of true-hearted, brave and respectable men, who only lack cultivation and knowledge to make them equal to the best. Among them are men of rude manners and rough exteriors, whose truth and integrity are beyond contamination; yet these brave fellows are exposed to injustice and imposition through the system which makes them mess-mates and companions of such as are only fit to be inmates of jails and penitentiaries.

The character of sailors is not commonly understood by citizens, who seem to imagine that peculiarities are acquired from living very much at sea. The fact is that it is eccentricity, or some blemish of mental or moral constitution, which leads men to prefer the inconvenience and dangers of a life on the ocean, to the more stable vocations on shore. Thriftless people, who lack entirely the power of self-control and require superintendence of others, find the profession of a seaman congenial to their careless, heedless, improvident dispositions. It is not unusual for men to make a three years' cruise and return home with three or four hundred dollars in cash, which they squander in the most absurd and wanton manner in a week. Their lavish expenditure for the time passes for generosity, a virtue which is not common amongst them; for these very men during a cruise, resort to various expedients, and often manifest a most miserly passion, to accumulate money, to spend in the gratification of the lowest propensities of our nature. They are attracted by all the vices, without the least power of resistance, and possess so little intelligence that they fall an easy prey to any one who chooses to plunder them of their hardly earned wages, by catering to their lusts and vicious inclinations. Yet, under these defects of character, we find many excellent qualities. It is not uncommon to find men who, while they do not hesitate to pilfer and lie, are yet as true as steel in the hour of difficulty and danger; who will fearlessly risk their own lives to succor a fellow being in peril; men who would not betray a mess-mate under any circumstances, and whose conduct is thus far strictly honorable among themselves, but at the same time false to others. To cheat a rogue is, in their estimation, commendable; but to defraud one who is considered a good-fellow, is disgraceful. But such character-

istics are not necessarily the offspring of the sea; they have their origin and acquire their full growth on shore. It may be said in a word, that ignorant men who are naturally thriftless and prodigal; men entirely destitute of business capacity, and living an uncertain, precarious life, and the same time possessed of active, warm temperaments, form the class of common sailors. Hence it is that they very rarely accumulate property, or grow rich.

It will be perceived a man-of-war is indeed a microcosm, which embraces all the virtues and vices, common to men in every situation of life, which require to be restrained and encouraged according to their moral condition and conduct. The objects for which they are employed and paid, require prompt and almost unlimited obedience to legal authority.

The mode of controlling such a heterogeneous company, without brutalizing, is difficult to devise. Is the present court-martial system best, all things considered, to attain the object in view; or is it susceptible of improvement without hazard to discipline? It is certain that a tribunal for the adjudication of questions growing out of the infraction of law, is as necessary on board ships-of-war, as in communities on land. Authority to control and chastise to a limited extent, may properly rest in an individual, the captain; but it is not necessary that he should be legally an autocrat to decide all questions which may arise. Tribunals or courts of some kind are necessary. They should embrace all the intelligence and moral character the community can command. For this reason, it is wise that the members of the highest tribunal should be selected from the grades of commissioned officers exclusively. It is presumable that, with few exceptions, all have acquired, from experience, the general knowledge of military discipline, necessary to enable them to investigate cases which involve infraction of military laws. The functions of members of courts-martial, are analogous to those of jurymen in cases in which they are called upon to assess damages; they are required to determine as to the facts of a cause, and then to form a sentence accordingly, under the provisions of law. If this position is true, and the writer has no doubt that it is, commission officers of the staff-departments, as well as those of the line, may be competent and efficient members of military courts. It cannot be maintained in objection, that staff-officers are not military men, and therefore, ignorant of the importance of discipline and subordination. It is not supposable that a man of intelligence and general information can pass ten or fifteen years of life, in close association with military acts, and participating in them, without acquiring all the

military knowledge requisite to appreciate disobedience, negligence, or disrespect to superiors, which constitute nine times out of ten the gist of the charges submitted to courts for investigation. Surely medical officers, chaplains, pursers and engineers, are as capable to determine what constitutes offences against morals, such as drunkenness, falsehood, theft, &c., as officers of the line? In criminal cases they would be as able to determine on facts and to apply the law, as any other commissioned officers. For these and other considerations, the practice of proscribing staff-officers in the navy from participating in the constitution of courts-martial, is unreasonable, and is not sanctioned either by the letter or spirit of the existing law. It is not consonant to the spirit of our civil institutions, that any class should be proscribed from representation in our courts of justice; though some classes may be excused from serving on juries, no one is considered positively ineligible to those duties. Lawyers and physicians are always excused from common jury duties, on account of their professional connections and relations to the community, but they are not proscribed as ineligible, or as incompetent. We recognise no such caste distinctions on land, and why should we in the navy, recognise any one class of grades as exclusively fitted, to aid in the administration of law? There is nothing in the nature of the vocation or pursuits of officers of the line, to qualify them above all others in the service, to appreciate the value of evidence in any case whatever; and nothing in the vocations of staff-officers to unfit them to perceive the force of testimony, and to arrive at just conclusions from the statements of witnesses. On the contrary, it is the constant habit of most staff-officers, to study the value of testimony. The chaplain is constantly employed, while studying theology, in examining evidence relative to the facts of Christianity; the physician learns in pursuit of science and philosophy, and in distinguishing diseases, to understand the nature and value of testimony, and the engineer and purser, in their respective vocations, are more or less trained in observation and rational comparison of facts.

In the constitution of courts-martial, intelligence and knowledge should be sought, not in one grade or class solely, but from every grade: because the intelligent of all grades should feel a common interest in the administration of law, and in preserving proper discipline in the service. If it were habitual to select judge advocates from any one grade in the navy, it would probably be advantageous, because it would have the effect to direct the attention of officers of that grade to the subject of military law, and to induce them to study carefully the mode of con-

ducting trials before military tribunals. It would make the functions of judge advocate virtually a part of their official duty, and they would feel in honor bound to study and become acquainted with the rules of legal evidence, and all other points relating to management of courts-martial.

There is a feature of courts-martial of very questionable propriety. I mean the sworn secrecy as to the opinion of the members of the court, because it removes, in a great degree, individual responsibility for views and arguments need, and strengthens any one who should attempt to influence the court, to gratify personal unfriendliness to a prisoner at the bar. The oath of secrecy was doubtlessly designed to prevent personal feuds, growing out of differences of opinion between the accused and his judges, at some period subsequent to trial; but it is believed, that jurors and judges in civil life require no such protection to a frank expression of opinion after formal investigation, and they never hesitate through personal fear, to condemn where condemnation is proper. It is enough that questions are decided by ballot, instead of a viva voce vote. Where members of a court are thus sworn to secrecy, there is a chance that the trial will not be open and fair for the accused.

Under the present law, courts-martial in the navy have a discretion, which is too wide and indefinite; and this is a chief reason why decisions in like cases differ so widely from each other. As already suggested, in a previous note and commentary, there should be a classification of faults, offences and crimes, distinguishing those which are military from those which are moral; and a corresponding classification of punishments should be devised, and all embraced in the statute. Military offences might be expiated, but in a military community, there should be no expiation for a clearly dishonorable act. Falsehood, for example, once proved, should forever proscribe an officer from the confidence of the government, and no punishment short of dismissal, should be considered an expiation of the crime. Yet, it is believed there are instances of officers who have been convicted of stating officially what they knew to be not true, who, after punishment by suspension from duty for a time, have been again called into active service by the government, seemingly on a footing of equality with the most exemplary officers in the navy. I do not mean to imply censure to the navy department, because the theory is, that when an offender has submitted to the punishment legally awarded, the law has no further claim against him on account of the offence. To adopt a different view in practice, would place the department in the aspect of assuming judicial functions, and exercising

them in a spirit of cruelty and persecution. The fault lies in the existing statute and in the too lenient administration of it, perhaps, by the court.

Besides the General Court Martial, an inferior tribunal, such as a ship's or capstan court, or drum head court for the examination of petty offences, would be an advantage. A court consisting of three commissioned officers, sitting like judges in banc, in connection with a jury of five or seven drawn from the crew might possibly serve a good purpose. The jury, by a mere majority vote, should decide as to the facts from testimony, and the court determine the application of the law, which should award the punishment. The effect of allowing men in the humblest stations in the ship to thus participate in the administration of law would be to increase their self-respect and give them a new motive to distinguish themselves, by becoming conduct, in order to merit employment as jurors.

The court of inquiry, which also belongs to the system of military jurisprudence, is simply inquisitorial in its functions, like a Grand Jury, and is instituted to ascertain, in doubtful cases, whether there are grounds for trial. In cases of shipwreck, for example, it is always desirable that a formal investigation of the causes of loss should be had in order that the professional attention and skill of the captain and officers may not be improperly represented by common report.

May 16th. I first visited this harbor about twenty-two years ago, and improved my acquaintance with it in several subsequent visits. Few changes have taken place; the town and hills seem to be no older now than when I first beheld them. There is less noise of church bells and salutes; and illuminations and explosions of fireworks are less frequent than in the days of Pedro I. Yet the spirit of improvement is manifest. Many of the rude, yet picturesque ferry-boats, with their tall latine sails, have given place to those iron evidences of civilization—steamboats. The ferry-boats between Rio de Janeiro and Praya Grande, and between Botofogo and the city, are now propelled by steam. This handy work of man seems to be an intrusion amidst naturally beautiful scenery. The rude boat and sail harmonized better with the poetry of the place, than the little black English built steamers which disturb the tranquillity and startle away the flamingoes, by the wheezing and puffing of their engines and the splash of their wheels. There is no romance about steamboats and rail cars, except in elopement cases; the ingenious literary are called upon to invent new figures of speech and comparison to meet this new state of things. The black smoke of a pigmy steamer rising from the tranquil surface of

the waters of Botofogo is not advantageously contrasted with the fleecy clouds rolling up the mountain sides, like the mists of the morning, hanging gently above the heads of the Pão da Açucar and Corcovado, standing in silent strength and grandeur. The steamer, though a convenient and time-saving machine, is a blot in the beauty of the scene.

The Brazilians deserve commendation for observing those rules of architecture which require buildings to be in harmony with nature and the climate. The red tile roof with pointed eaves, blue enamelled entablatures, or variegated in colors; the yellow walls and close green trellis work of the shutters, or the gaily painted walls of the houses and gardens; bright colored iron railings; beautiful gateways; the motley arranged shell-work borders of flower plots and statues mingled with tropical foliage under a tropic sun produce views as gaudy as the most skilful theatrical scene-painter ever imagined.

To the young, with heart and mind new to the world, Rio de Janeiro is a fairy land, provided you have no repugance to the sight of half-naked negroes, and are deaf to the song of the slave or crack of the driver's lash, or are indifferent to the equality of people of all colors, and perceive no caste distinctions in the hue of the skin,—provided there is no question of slavery. I am told a slave dare not wear shoes, because they are a badge of freedom: they may wear silks if they can procure them, but not shoes.

But it must not be inferred that Brazilians are harsh masters from what is observed in the streets here. The slave-drivers are employed by the government to keep at work those slaves who have been sentenced to labor to expiate crimes. Gangs of them are often seen, sometimes wearing irons.

STANZAS.

BY SIR PRETTYFUL PLAGIARY.

Roll on, thou dark and deep blue Ocean—roll!
And waft a sigh from Indus to the pole,
Fresh as the first beam glittering on a sail
To point a moral or adorn a tale.
How sweet to me the hour when daylight dies,
Even from the tomb the voice of nature cries;
All is not lost, th' unconquerable will
Walks o'er the dew of yon high eastern hill,
There, ye wise Saints, behold your light, your star—
The steep where Fame's proud temple shines afar—
Like some tall cliff that lifts its awful form,
Rides on the whirlwind and directs the storm.

A HANDFUL OF AUTUMN LEAVES:

FROM THE LOWLANDS OF VIRGINIA.

—
IN THE WOODS.

—All the rich to come
Reels, as the golden Autumn woodland reels
Athwart the smoke of burning flowers.—*Princess.*

I have seated myself upon a log here in a hollow of the hills, with the dry leaves still rustling where my steps were placed but now; the low winds moving on their way through the lofty trees, and all around me the sunshine and the waving beauty of the rich Autumn leaves. A scroll in my hand, a pencil, excellently pointed, ready, what better can I do than trace for you, or attempt to do so, some of the glories of this beautiful weather.

Much more beautiful in the woods than elsewhere, though I hold that Autumn is also beautiful, everywhere; even in town—the busy town, we are not wholly barred from the splendid clouds, and the soft, rich splendor—uncooled, as yet, by wintry winds.

But the woods! That word has ever exerted a strange fascination upon me. It conjures up in all their power and beauty, the glowing foliage and moss-clad tree-trunks of the Fall forest: I hear the twigs dropping on the already fallen leaves: I feel the dim and misty grandeur of the tall tree monarchs; and I live again in memory the days of my past existence. The woods! and they were not Spring or Summer woods, though at those seasons there was surely much of attraction in their thick-leaved solitude; but the woods of Autumn—the woods of a thousand magical tints which, wandering through in my fallow boyhood, I now dream of, and love forever. Not more strongly do the true localities of youth instinet with a thousand memories carry us back to early days: these waving trees towering aloft against the blue, everywhere remind us of what we long so often to recall, and yearn for, and almost weep because it flies us still—our childhood. The Autumn woods affect me thus at least, in mountain and lowland, just the same; they are the woods of Autumn still. If we could but get at the truth most men yearn at times for that life, gone so long, like the dead, dry leaves of other years; many an old sinner cries, "Speak to me O, Past! I am not what I usually am: my heart is soft; my eyes moist; my throat choked with the dim, faint memory only of my young days; speak to me in the clouds and leaves and winds of the gone faces of my infancy, and childhood, and after days of boyhood when life open-

ed to me so brightly, and I was so pure: speak to me, O, Past, here in the Autumn days!" The man who has not felt these

"Yearnings that can never be exprest
In signs or groans or tears,"

is in a bad way, because it argues that he is contented with, and loves, and clings to the world: avoid him.

And so ends my moral discourse in the woods, surrounded with the leaves and winds!

—
SOME AUTHORS AND BOOKS.

—One
Discussed his tutor rough to common men,
But honeying at the whisper of a lord.

Princess.

THACKERAY:—Infernal machines only originate with individuals of the "lower classes"—and are usually directed against or intended for great men of Louis Napoleon's or Mr. Bennet's stamp; and this is why I fancy Thackeray will live out his natural term of years, and die in his bed at last. He is not a "great man," and his enemies are not of the Infernal-machine-inventing class: but the disposition of those enemies to administer some such pleasant correction as the Marseillais carbonari the other day, would have inflicted on Napoleon the Little, I do not doubt in the least.

Those enemies of Thackeray are the British aristocracy; and "Snobocracy" of all classes, indeed.

You will find no difficulty in understanding, by this time, that I have been reading the "Book of Snobs"—the last issue, I believe, of Appleton's Popular Library. I have scarcely ever read any thing as savage as the "Book" in question: the "Kickleburys" is probably as severe, but not as comprehensive. The present work cuts into the gangrene of every class, from the "Jukes," as Costigan says, to the penny-aliner of the Dailies. Many of the allusions—hence much of the force of—the work must escape us, since we do not live in and keep pace with the follies and meannesses of that monstrous English society. No doubt many of these are portraits—as must be the case with all books which deal in social peculiarities of the day and hour. The author must observe before he writes, and the individual, not the class, attracts the satirist, whatever protest he may make. But although these are portraits, Thackeray makes no protest; on the contrary, I fancy he would not shrink from avowing that he *had* real personages in his eye.

For a satire perfectly savage and ferocious and

annihilating, united to a coolness perfectly well preserved. I know of no writer who approaches the author of "Vanity Fair." It is as if the most violent of Junius' letters was drawled out by the most nuchalant dandy of Pall Mall. The arm is raised without violence, or swelling of the muscles, or aught upon the face but a smile; nothing but a playful touch of the thong can result from this! The whip descends; and the lash, pitilessly steeped in vitriol, cuts like a knife into and buries itself in the offender's flesh. The same smile is on the operator's lips, and the lash again descends upon the writhing victim. This is Mr. Thackeray's power: the power of Juvenal before him.

"What people say" of books, men and things has ever been the best criticism. People are apt to utter exactly what they think of authors, especially; and here is a short dialogue touching "The Book of Snobs," and its author:

"Thackeray is a keen old fellow—he comes down on the Snobs like a lion."

"Cuts like a knife."

"A poor gentleman, I suppose?"

"Yes; a man of good family, but reduced. He was first an artist then a writer."

"I reckon the big English snobs patronise him."

"Patronise Thackeray indeed! Patronise a hungry grizzly bear!"

And it would, I fancy, be quite as safe a thing: the "Book of Snobs" does not look like *patronage*.

The author is coming to America. For Heaven's sake let us have no Dickens mania over again. Should Thackeray rise in his wrath and write the "Book of American Snobs," where shall we hide in shame our "foreheads and our eyes!"

"LOTUS-EATING":—Such is the title which Mr. Howadji, I beg pardon, Mr. Curtis, has given to his last work. I have sat at his literary banquet through all the courses; partaken of Lake George and Lake Como hashed; of the Hudson highlands dished up *à la Mont Blanc*; of that river itself "served right" with Rhine and Danube sauce; and finally, of Niagara decorated (like an herb-covered ham) with "European associations compared with those of the new world" in general; and I am constrained to say in spite of the delicious flavor of some of the side dishes, that I do not like the "Eating." The title, of course, is taken—with the *tone*—from Mr. Tennyson's "Lotus Eaters," which poem, the Howadja admires exceedingly, as I was well convinced on reading that wicked, objectionable, fascinating volume, "Nile Notes." His motto

is in the spirit of the lotus-eating mariners' desire to

"Live again in memory
With those old faces of our infancy."

This motto is, (if I recollect aright,) "There's rosemary that's for remembrance," and the whole spirit of the book is in the lotus-consuming vein; as *vide* Tennyson, (from memory,) in his "Lotus-Eaters."

"—the dark blue sky
Droops above the dark blue sea:
Death is the end of life: Ah why
Should life all labor be.
Let us alone. Time driveth onward fast
And in a little while our lips are dumb.
Let us alone. What is it that will last?
All things are taken from us and become
Portion and parcel of the dreadful Past:

Now Lotus-Eating suggests forgetfulness—that is the very head and front of Homer's and Tennyson's poems. The mariner eats and never returns to his wife or home or little ones. Yet Mr. Curtis presents us in his title page with "rosemary"—for what? why "for remembrance." Rosemary for remembrance in the threshold of "LOTUS-EATING," which is so suggestive—on the best authorities—of oblivion! But I admire Tennyson too much to find fault with Mr. Curtis' *tone*, on this score; and may add, I admire "Howadji" too much to desire that his present work should share the fate of the old lotus-eater's wife and little ones—be forgotten. The fault is worse, and in one word, is an unreasonable, unpatriotic, unjustified, un-American, way Mr. Curtis has of painting finely and beautifully, our fairest and grandest American landscapes, only to put in the corner of his picture—in the P. S. to his letter—in the end of his chapter—a gentle, or rather a very broad hint, to the effect that, the thing is fine and beautiful; but when he was in Europe, he saw things so much finer. I defy the "Howadji" to read his book over, after reading my strictures upon it, and deny that every thing European suffers, in order that every thing European may be exalted. The Hudson highlands are fine and striking—noble and majestic, etc., etc.; but "The Alps! my dear sir! the Alps!" Trenton, Lake George, even Niagara, are hauled over the coals. Beautiful, grand, unparalleled: but the "associations" connected with European *lions* of the same species! Is not this a true bill,—O, Howadji!—which, this beautiful rustling country day with "Nile Note" sunlight in my memory as bright as the real yonder—I have brought against you?

Thou hast admirers—O Howadji of the many colored pencil—many admirers; and inconsiderate people have even praised your "Lotus-

Eaters" for that beautiful "Nahant" dream. But do not snub thy native land—the greatest, grandest, most association-crowded land, which lies now separated from the sea. Reflect on this, Howadjí, before the second edition; and take warning.

"HANS ANDERSEN'S STORY BOOK," is the title of a collection of the Danish novelists juvenile tales, which Francis has just published for children; and for me. Who does not love Andersen: that bright hearted, bright-souled, bright-eyed Dane? Who has not been delighted with the simple and grand pathos of "The Little Match Girl," with "The Snow Queen," and "The Picture Book Without Pictures?" For my part, I have almost a personal affection for the honest heart, which conceived these pure and touching thoughts: as I have an admiration perfectly genuine, for the hand which placed those thoughts in such bright and moving words.

The "Picture Book Without Pictures," proves to me that a poet of the first rank was spoiled, when Andersen became a novelist; though certainly he ranks high as a poet also, in his native land. Here and in England he is known scarcely at all, but as the author of the "Improvisatore." Andersen has a peculiar child-like tenderness, which bears a striking resemblance to the same quality in Jean Paul Richter. The two men are alike in many other points. There is much quaintness about Andersen, and a power of assimilating his own thoughts to a child's, which is very striking: as in the "picture" where the little girl just decked out in her new dress, and jumping with delight, suddenly pauses thoughtfully; and on being asked the reason, replies that she "wonders what the dogs will think of her." Some of the "Pictures" in this little book, are perfect paintings; and it is quite evident that the author has been to Italy, and acquired the artist-eye. He can thus at any time, grasp the suggestive points in a picture or thought, and convey a perfectly distinct idea to the reader. The soul of the poet, the eye of the painter!—all honor to the child poet.

Andersen's descriptions are pictures: his "Picture Book Without Pictures," is indeed, a series of paintings. Take, as specimens, the following.

"I looked down upon a creek in the east coast of Zealand. Beautiful woods were there, lofty mounds and an old mansion house with red walls, swans in the moat, and a little trading town, with its church among the apple orchards; a fleet of boats, each bearing a torch, glided over the unruffled water: it was not to catch fish that the torches were burning: no; everything was festal! Music sounded, a song was sung; and in the

middle of one of the boats stood he whom they honored, a tall, strong man in a large cloak; he had blue eyes and long white hair.

'Hurrah!' resounded from the boats: 'Hurrah for Bertal Thorwaldsen!'"

Here is another "Picture."

"Aloft in the projection of the mountains, a solitary nunnery hangs, like a swallow's nest. Two sisters stood up in the tower and rung the bell. They were both young, and therefore they looked out beyond the mountains into the wood. A travelling carriage drove below along the high road, the postilion's horn resounded, and the poor nuns riveted with kindred thoughts, their eyes upon it. There were tears in the eyes of the younger of the two. The horn sounded fainter and fainter. The bell of the nunnery overpowered its dying tones."

A painter would certainly find no difficulty in painting these scenes, and so with all of Andersen's works. There is, above and beyond all, about this man and his writings, a cheerful, hopeful, loving atmosphere, which will make him and his books favorites with all readers.

Honor, again, to the poet of children: the charming *raconteur* of the mysteries of Fairy Land, Hans Andersen!

EMBERS OF A WOOD FIRE.

Fresh as the first beam glittering on a sail
That brings our friends up from the underworld:
Sad as the last which reddens over one
That sinks with all we love below the verge;
So sad, so fresh, the days that are no more.

Tennyson.

There is much in a wood fire which does not meet the careless eye: I pride myself upon having discovered this hidden significance long before, "Ik. Marvel" adorned the pages of the *Messenger* with his graceful and touching "Reveries:" and though I have delayed too long to take out a patent for the exclusive use of the subject, I am none the less entitled to it: I stand on my "reserved rights."

There is much in a wood fire, oh, friend-and-brother reader, (if I may look beyond you to the audience I address;) much which does not "meet the eye." There is youth, with the crackle of the twigs and bark: manhood, with the full glorious blaze and roar, as like some strong Napoleon, it wraps *totem Orbem* in flames, and warms or burns all who approach: there is old age when the dying white brands fall down, dim and shrouded, to their sepulchre, in that ashes which shall receive, we are told, and wrap up in its fold, the glories of all mortal things: there is all this in a wood fire.

But there is more.

O, friend, (thou whose attention I have invoked already,) who livest now in the great city, thoughtful of thy stocks and dividends, thy invoices and thy sales: who lookest to the going and coming ships with no eye for the sunlight on their snowy sails, or the swanlike movement of their wave-cutting keels,—only for the piled up boxes—O, friend and brother, hast thou never in this hurlyburly of a thousand and ten thousand worldly thoughts, sat quietly some evening beside the fire, and while the twigs were crackling, better when the blaze was warm and cheering, or best when the white hood fell down upon the brands, gone back in thought to thy early days, in the old house, buried in its flowering poplars, locust trees and elms? Hast thou not pensively leaned thy cheek upon thy hand—there is much in the very attitude—and let thy poor heart breathe again, and live once more in the old days when thou

—“rememberest to have been
Joyous and free from blame?”

Tell me, O, weary heart, hast thou not thus, waking, dreamed of the quiet circle before the old homestead; the lawn; the peach trees by the garden fence; the merry days when hall and meadow resounded with the merry shouts of boys and girls—grew up, now, married and surrounded by their children; and the joyous flutter of the kite away up in the clouds, which crying out, alarmed lest it should pull from her grasp, the little maiden held? Dost thou not see again that maiden, O, my brother! the maiden with the long, fair auburn hair falling on her shoulders, and the laughing eyes of blue, and the red lips—see her in those merry games of blind man's buff, which now, with outstretched hands, beckon you away to those bright times? Dost thou not wander once again in woodland paths; and climb for birds' nests; and rob hares' forms of the little sleek-eared hare-lets; ride like an Emperor on the moving mountain of the hay wagon; and clasp thy boyish friend's hand once again; and whisper to the little tender heart which throbbed beside your own, under the cloudshadows in those fairy days of old?

All this hast thou seen and felt again—thanks to the crackling twig or roaring log, or whitening brand: and of all these, say hast thou not dreamed most over the last? Hast thou not sat at midnight on the last day of the year, or haply in Autumn time, when leaves were falling round the window, and the blast of latter Fall moaned around the gables of the friend's house, whither you had gone for a week's shooting; and as you sat there in the flickering light flown back thus, O, my friend, to thy innocent, pure, wondering,

hopeful and most happy childhood; and as the brand drew the cover over its eyes, and said good night in its low, crackling whisper, caught with all the passionate fervor of the untamed boy-heart, at thy radiant youth? And, as that brand fell down and crumbled into ashes—pitiously sighed, and passed trembling fingers over thy worn, furrowed brow, and almost wept there, to relieve thy sinking heart;—and muttered in the dimming chamber—one-half now in a frowning darkness of old presses, high-backed chairs and curtains—a name which once sent every drop of blood straight to the tell-tale cheek, and made the heart throb; and still has power enough through all the cares and interests of a heart-strangling existence, to fill the throat with tears and shake the bosom wrapped in the triple golden hauberk of thy worldly thoughts?

The woodfire did all this. And when thou feelest that thy heart is harder and less worthy, for such thoughts, dream not again beside these embers, but go back to anthracite—behind the prison bars of thy city office grate—red like thy miserable gold.

But do not feel thus, O, my brother: scout the thought: this hour of thought has purified thy soul—O, brave wood fire!

OLD AND NEW SONGS.

But shall we make the welkin dance indeed? Shall we rouse the night owl in a catch that shall draw three souls out of one weaver? Shall we do that?—*Twelfth Night*.

It is interesting to observe the “rise and fall” of a song: I refer to the good songs; the bad do not rise at all. Such, are “of short continuance and full of trouble:” the urchin will not bawl them on his way to school, the organ grinder cuts them dead, and will not grind them as he does the popular ones, into your very soul; the maiden will not chaunt them in the pauses of the piano storm. In a word, the bad songs

“Sink to the grave from whence they sprang
Unwept, unhonored and unsung.”

But the good song: that is different. It creeps in by degrees—is considered “tolerable,” then “good,” then “beautiful,” then indispensable. It rules at parties: it is sung by boys and girls; by negroes returning from their work: by Ethiopian minstrels: by organ grinders it is ground (as before observed) into your brain; by urchins it is whistled surprisingly out of tune; by young ladies it is poured forth in the full respectability of the evening party, where arrayed in many colors, and with letters on the title page half a foot long, it has become established in society, and as Carlyle probably would say, keeps its gig, and

reigns an undoubted *respectability*. Now it is the rage: every body sings it; every body whistles it; every body plays it—on organs, pianos, fiddles, banjos, flutes, accordions and guitars.

But such a popularity cannot last: it is too excessive. Like Lord Byron, the song once so popular, has to encounter on account of that very popularity, a powerful reaction. It declines in public estimation; grows stale, flat and unprofitable; especially unprofitable to the organ grinders, minstrels and young ladies; and when it is sung at the Theatre between the pieces, by a lady in bistrionic costume, it is hissed. It becomes hateful: it is called "that old thing;" people are "tired of that;" and, last scene of all, which ends the history, the poor neglected song takes up its residence on a dingy stool under the piano, or on a book-case, and so, in course of time expires.

The popular songs of America have for some time been decidedly "Ethiopian;" and this bold African inroad has nearly driven every other song from the market and the *boudoir*. Young ladies have ceased to ask for a cot in the valley they love, and rather incline to the "hut among the bushes" of the last popular negro-song: they have long ago abandoned "Young Lochinvar," for that respectable patriarch, "Uncle Ned;" the "Irish Emigrant's Lament," is dead without any body's lamenting it, and the "Very Last Polka" has yielded to the very last novelty of Christy. The whole United States is now singing "The Old Folks at Home," "Wait for the Wagon," "Oh, Boys, carry me 'long," "Camptown Races," and other charming mixtures of negro sentiment and opera airs—of beautiful music, and mournful lamentation. They are nearly all, sad, sorrowful, gloomy, touching and resigned. Wherever the hero of the "Old Folks" roams, he thinks of his good old home: the main figure in "Oh, Boys," is a dying African of tender sensibility and unhappy fate; the lover in "Farewell my Lilly dear," is in that state of misery that Job compared with him was a jolly and merry-hearted personage. They all sigh for, they all lament—something. It is only that rude, wicked, vulgar *roué* ("Ethiopian" of course,) returned from the Camptown races, who throws such namby-pamby lamb-like sentiment to the winds, and like "a man and a brother," chaunts the various fortunes of the day, and "builds the lofty verse" of that charming production, without regard for poetry or pathos. There is no pretence in this honest fellow. He went to the said races with his hat "stove in" and returned with money enough to fill his tow-bag: that is the important thing—that is better than sentiment! And there he has sung it in a jolly, rollicking poem, which sounds for all the world like a rattling banjo, at

the negro quarters. Another merry fellow is the lover of the "Louisiana Belle"—a sort of "great big blundering Irishman," (to illustrate one song by another)—an "Our Correspondent,"—in a word, a perfect (Ethiopian) lady-killer. Without the least circumlocution, he states his intention of marrying the *belle*, gives her directions for her private conduct before that interesting period; and all this in a gay, dancing tripping little air, which gives you the disposition to burst out laughing. Thus do the "Races" and the "Belle" and "Nelly Bly," give tone with their hearty laughter to the mournful, sighing "Lilly's," "Virginia Brides," *et id genus omne*. Well, contrast is the soul of Art.

There really is a great deal of good music in these songs—the "Old Folks at Home" and others are very sad and affecting, and are aided by the dramatic uncouthness of the words: *vide* the last verse of this song. But the "Log Hut," more popular than in 1840, is coming; and "Katey Darling," and "Nelly Bly"—though "Nelly" has been toasted before in that charming "Nelly was a Lady," which ran so quickly, through the then thirty states—and many more are going. "All these shall go;" soon they will sink into that oblivion where starting up at intervals only, lie "Dan Tucker," and "Zip Coon," and "Uncle Ned," and "Rosa Lee," and "Susy Brown," and "Dearest Mae," and a thousand Susannas, Cynthia's, Nancys, Julianas, and Girls with "blue" and other "dresses" on:—just like their

— "elders and their betters"

the Scottish Songs—as "Logan Water," "Blue Bells of Scotland," "Lochivor," "Auld Robin Gray," and that wicked, unintelligible, irresistible, "Comin' thro' the Rye."

"The Old Folks," and the rest will soon be gone, those honest tunes. *Requiescant in pace.*

SUNLIGHT, WINDS, AND MUSIC.

A REVERIE.

On me she bends her blissful eyes
And then on thee; they meet thy look
And brighten like the stars that shook
Betwixt the palms of paradise.

In Memoriam.

O beautiful and golden hours, flown so long away—like wild geese breasting with their snowy bosoms the sunset clouds—into the west and dead days of the past!—O wind that art amid the trees around me, a voice of what can speak no more! O sunlight, such as slept upon the yellow wheat like the gold-haired maiden now

no more a thing of this earth—for me;—only of my blissful, cruel hours, of pondering; O wind, and sunshine, and bright tinted Autumn leaves, wherein is your potent spell?

For—I went on—I have listened often to more thoughtful, merry winds than this;—amid the haughty, tufted heads of the grand pines of my own mountains, yonder in the west; when every fairy seemed to have come from fairyland—the queen and all—and fled before it on their snow-white elfin horses, (you see them scattered on the hills, those flower horses!) with their crimson, blue and golden caparisons, (you see those gay caparisons float downward from the Autumn trees now yonder!) and their merry bridle bells jingling and tinkling thro' the swaying boughs (the sound came thither from the foxglove underneath the trees!);—I have listened often to more thoughtful winds—I resumed; and looked on sunlight quite as fair, when evening went in gorgeous royal splendor to my west: and surely I have seen there in my native Blue-Ridge-dominated land, as great a wealth of slowly falling, delicate-tinted leaves spread by old Autumn for his many-colored carpet, when he thinks of going deep into the woods, to lay him down and die!

Those winds that talked amid the pines of jangling but most musical fairy bells: that sunlight dying in the golden west: those leaves that whirled away and were no more of this world: none of these, though heard and seen and loved before, have altogether moved me as they have this day.

—And why this unwonted plunge into the far bright Past?—I said.

—Because they have to aid them and interpret them, the mellow and long-loved delight of the piano music, sounding gaily, sadly, and most sweetly in the pauses of the wind. That Past is a bright-faced, much-loved maiden, I would fain look on with joyous, quiet, eyes: but around her neck, and over her face fall myriads of pale golden curls, which make her lovelier, but hide her wondrous beauty from my yearning eyes.

—Those beautiful curls are the wind and Autumn leaves and sunlight—I said. But look! She sweeps the rippling curls aside and binds them from her forehead with a glittering band of snowy velvet, and her beauty is revealed! The music is that band: wrapped thus around the forehead of the Past. All honor to the music then—I laughed.

But oh! come back far sunset-flying past days—I resumed. And I mixed a very weary sighing with my laughter.

THE ENTHUSIASTIC SPORTSMAN.

My hounds are bred out of the Spartan kind
So flewed, so sanded: and their heads are hung
With ears that sweep away the morning dew.

Shakespeare.

There are some men who have a sincere and genuine pity for those unfortunate individuals whose lives are passed in cities, or elsewhere, unroused by the explosion of partridge-annihilating guns, or the musical cry of the fox-hounds;—in other words, for those who do not or cannot hunt.

Now, it certainly is an unfortunate circumstance that some men are debarred from the splendid and most exhilarating life of the country in autumn; and among its attractions, the amusement of hunting certainly occupies no unimportant place. But I must beg leave to record here my opinion, that the class which I have dubbed *enthusiastic sportsmen*, is almost or quite as unhappy as the first named. For a man to be firmly convinced that the world holds nothing of delight beyond the inspiring cry of hounds, or the scientific slaughter of partridges, is assuredly an unhappy circumstance. There are other things of interest in this our wicked world—as, poetry, science, (other than the partridge-slaughtering,) politics, philosophy, painting, pensive pondering, philological pleasantries, and Platonic philandering. You perceive that mystyle, exhausted of all flowers and leaves of rhetoric, runs to alliterative seed:—but I could, without much trouble, find a pleasure or a pursuit for every letter in the alphabet, quite equal to the “pleasures of the field.”

I was “raised” (as we say in Virginia) in the country, and my childhood was not undisturbed by the barking of dogs, and the report of shot-guns:—they are thus twice-loved; for the association first, then for their joyous inspiration. I therefore can have no prejudice against “shoot-ing,” I who have, before this, winged my partridge, exhausted the night in coon and ‘possum hunting, and stopped my “molly cotton” in her headlong flight;—though I must add, in all sincerity, (to which I am much given) that no vast amount of destruction has resulted from the hunting of my entire life.

This vast destruction of all running and winged things, is the boast of the enthusiastic sportsman. All things tend to it. For him the weather clears up for the partridges, or is moist and cloudy that the fox and coon tracks may hold their scent. When the dogs take the back trail, fox hunting, they do it to “spite” him, or the fox only wanted to annoy him. When the deer will not come to the stand, or in night-

hunting perseveres in keeping out of sight of the burning pan, and thus is accessory to the murder of some innocent horse or cow, it is with an eye to his disappointment. When the coon is treed at once, the unfortunate animal took shelter thus early because he was coming it well knew:—all things bend to him or oppose him, and he bends all things to his darling pleasure.

Hunt not so much O brother—I would say to each one of these my friends—for life is short, but seventy years at best, and those hours taken up in sport should show some other result than a full bird bag, or a bushy tail, when each of the said hours has “sweat its sixty minutes to the death.” Thou surely hast great things to do here in this world, with thy knowledge, and education, and clear-seeing, baseness-hating heart. Think whether it will be well for thee to say, only, at thy last hour, “I have killed so many partridges, deer, coons, and other things, and now depart in peace.” Is it not better to be able at that hour to say, “I have killed so many vices, fostered so many virtues here around me?”

Thou hast lodged many slugs in the side of the flying fawn, or antlered deer, when turning from thee at thy river stand, he would have fled, but for the load which threw him,—his limp leg quivering—upon the ground, and tuned in his throat, that disagreeable instrument, the death-rattle. But hast thou lodged thy slugs in any proud-antlered sinner, O my brother? Thou hast made the fields and hills most vocal with the merriment of hounds, on a warm trail, and certain of the fox; and thou hast held aloft with a joyous horn-blast, the bushy tail,—but now so dragged by his weariness,—of the hen-roost-thief, and thought thyself a most deserving person. But are there not in this “desperately wicked” and most self-contented world, worse robbers than the fox, who with their cunning arts rob sadder things than hen-roosts? Thou hast brought often down, in the fair sunlight, flying birds, and taken pride thereat, my brother,—but hast thou aimed thy weapon—that strong, true mind of thine, burnished with so much care—at the obscene vultures which blacken the free air of God’s great heaven, with their unholy wings?

Think, O my friends! our life is short; and if for every idle word we must give an account,—which I take to mean each word that does no good—shall we not more give account of every idle hour? There is much vice to expose, and banish from the world; much goodness, and grand unappreciated truth, to bring to light;—so many things to point the “slow-moving finger of scorn” at; so many flowers of chivalric honor, and pure majesty to hold aloft that all may inhale their beathful fragrance!

Waste not thy time then, O excellent friends: abandon not thy hunts and other pastimes; but give not the glorious, never-returning hours of thy short days to these alone. Listen to the words of the present preacher, O my friends, and profit by them.

—
THE END OF AUTUMN.

Now slides the silent meteor on and leaves
A shining furrow as thy thoughts in me.

Tennyson.

The ground is covered with a thick carpet, and every moment the dry leaves whirl from the boughs to make the carpet thicker and more rustling to the tread. The sunshine lights up woods, already in the midst of November, losing their bright October colors: and you love to stand in the clear light—lazily thinking—and trying to fancy, that the life and glory is not waning, waning. The crows flap their wings, or caw from the tops of the trees, or cast their flying shadows on the open book you hold in your hand: the book which vainly woos your attention from the more suggestive landscape. The blue birds twitter—the swamp-sparrow in the accacia “tunes his quill”—the melancholy days of Bryant’s lyric are upon you.

Soon they will yield to winter, and snow and ice:—but also, heaven be thanked, to roaring log-fires, and cheerful evenings, and a thousand merry fireside tales and gossipings. As I write, I hear the crows merrily chattering in the variegated, waving woodlands yonder, of their gay experiences. But crow-discourse, however merry, cannot compare with what the coming Christmas days will bring,—the “voices of the children” and their laughter by the crackling winter fire!

The wind is already cold, and only a few poor flowers linger: I cannot remain to see even them laid upon their biers to the music of the wind. I must return to that labor which awaits me in town, as it awaits others elsewhere. With the expiring Indian summer my poor sketches end.

Therefore farewell, O Autumn; I have tasted your delicious flavors to my heart’s content. Your woodlands once again are painted on my heart:—farewell!

P. I.

Pine-wood, Nov. 15, 1852.

THE REALM OF REST.

Within the realm that Nature boundeth,
Are there balmy Shores of Peace,
Where no Passion-torrent soundeth,
And no Storm-wind seeks release;
Rest they 'mid the waters golden,
Of some strange, untravelled sea,
Where soft Halcyon winds have stolen,
Lingering 'round them slumb'rously:

Shores begirt by purple hazes,
Varying with pale, mellowéd beams,
Whose dim curtains shroud the mazes,
Wandering through the realm of dreams;
Shores, where Silence woos Devotion,
Action faints, and Echo dies;
And each Peace-entranced emotion
Feeds on quiet mysteries?

If there be! oh! guardian Master!
Genius of my life and fate,
Bear me from the world's disaster,
Through that Kingdom's voiceless gate:
Let me lie beneath its willows,
On the fragrant flowering strand,
Lulled to sleep by murmurous billows,
Faint with airs of Elfin-land:

Slumber, dim, with faintest dreamings,
Deep that knows no answering deep,
Unprofaned by phantom-seemings,
Which but leave the soul to weep:
Noiseless, timeless, half-forgetting,
May this sleep Elysian be,
While, yet heavenlier tides are setting
Inward from the roseate Sea.

Soft to mine, a voice is calling,
Sweet as music-winds at night,
Gently sighing, faintly falling
From some wondrous mystic height:
And it gives my heart assurance
Of the land I long to know,
Nerving to a fresh endurance
'Neath the present weight of wo:

"There's a realm thy footsteps nearing,
(Thus the voice to mine replies,)
Where the heavy heart's despairing
Gains its rest, and stops its sighs:
'Tis a realm imperial, stately,
Refuge of dethronéd years;
Calm as midnight towering greatly,
Through a moonlit mist of tears.

Though an Empire, freedom reigneth,
Kingly brow and subject-knee,
Each, with what to each pertaineth,
Slumbering in Equality:
'Tis a sleep, divorced from dreamings,
Deep that knows no answering deep,
Unprofaned by phantom-seemings,
Voiceless, wondrous, timeless sleep.

On its shores are weeping-willows,
Action faints, and Echo dies,
And the song of mystic billows
Lulls with opiate symphonies:
But beside this murmurous Ocean,
All who rest repose in sooth,
And no more the stilled emotion
Stirs to joy, or wakens ruth.

Thou *shalt* gain this blest dominion,
Thou *shalt* know this peaceful ground,
Shaded by Oblivion's pinion,
Startled by no mortal sound;
Noiseless, timeless, ALL-forgetting,
Shall thy sleep Elysian be,
While eternal-tides are setting
Inward from that mystic Sea."

9.

LINES.

*To the Bride of my friend, N. S. W., on the eve of her
Marriage and departure for Italy.*

Bright be thy life through coming time
As that beloved Italian clime
Where flowers e'er bloom in rosiest hues,
And sunlight decks the diamond dews
And, breathing round perpetual spring,
In beauty clothes each living thing!
And as with him thou fondly lovest
Through that fair clime thou dreaming rovest,
Look on the lovely Arve and Rhone,
And know their happy fate thine own:
The separate streams in liquid light,
Mingling their currents in their fight,
United flow—and joyous glide
One gentle, rosy, radiant tide,
Till, lost in Leman's Lake of Love—
Like spirits bright in bliss above—
At golden morn, or starlit even,
A crystal mirror hold to Heaven!

Richmond, Nov. 17, 1852.

UNCLE TOM'S CABIN.*

This is a fiction—professedly a fiction; but, unlike other works of the same type, its purpose is not amusement, but proselytism. The romance was formerly employed to divert the leisure, recreate the fancy, and quicken the sympathies of successive generations, changing its complexion and enlarging the compass of its aims with the expanding tastes of different periods; but never forgetting that its main object was to kindle and purify the imagination, while fanning into a livelier flame the slumbering charities of the human heart. But, in these late and evil days, the novel, notwithstanding these earlier associations, has descended from its graceful and airy home, and assumed to itself a more vulgar mission, incompatible with its essence and alien to its original design. Engaging in the coarse conflicts of life, and mingling in the fumes and gross odours of political or polemical dissension, it has stained and tainted the robe of ideal purity with which it was of old adorned. Instead of remaining the ever welcome companion of an idle hour, which turned to profit by its sweet alchemy the loose moments devoted to intellectual reverie, it has entered upon a sterner career, and one which requires us to question the visitant before admitting it to our confidence or listening to its tale. Now-a-days, it frequently assumes both the stole of the philosopher and the cassock of the priest, and exhibits strange contrasts between its face and figure, and the garb in which they are enveloped. Sometimes, though rarely, we discover the fairy features of our former favorite under the new disguise, and are only amused by the quaint antics and grotesque *diablerie* which spring from the uncongenial union: but more commonly the airy phantom which flitted before our earlier fancy, is transmuted into an aged and haggard crone, who wears the mask, pads her shrivelled limbs, and clothes herself in a deceptive garb, that she may steal more securely into our unsuspecting favor, mumble her incantations before we recognise them as the song of Canidia, and distil into our ears the venom of her tongue, before any apprehension is awakened. In the one case we may imagine that we have before us Omphale in the arms of Hercules; in the other, it is the drunken *Lais*, proud of the conquests of her youth and beauty, and garnishing the silly tattle of her age with the shreds and patches she has preserved from her ancient association with

Aristippus. The one may still be a Venus, though bedecked with the casque and plumes of Minerva: the other is the veriest drab who ever pretended to sense or virtue, to modesty or religion.

The wide dissimilarity between these two classes of romancing missionaries renders it important for us to be on our guard, and should suggest the prudence of questioning at the threshold, these new votaries of fiction, that we may know whence they come, and to what end they visit us. We may tolerate the coquettish airs of the one; we must repel the disgusting and depraved seductions of the other. If they descend upon us like the angel visits of former dreams, bearing balm upon their wings, and bringing consolation in the afflictions or trials of life, by enlarging the range of our sympathies, and revealing to our eyes the pettiness of our own sorrows, murmurs, complaints, and difficulties, in comparison with the vast array of deeper agonies, more arduous struggles, and darker fortunes numbered amongst the possible and probable contingencies of human life,—then, as in the days when they were still untainted with suspicion, let us bid them welcome, and receive or endure the philosophy which but little befits them, for the sake of the inspiration, the hope, or the resignation which they instil. But, if the emblems of fiction are assumed but to delude, if the stole which they wear is the robe of the Cynic, or their hood the cowl of the fanatic; if their mission is to produce discontent, to be the heralds of disorder and dissension, then, though their song be as sweet as the Syren's, and their skin as sleek and slimy and glistening as that of the serpent which tempted Eve, let us bid them *avaunt!* and repel them from our intimacy and from our dwellings, which their presence would contaminate. But, in either case, let us examine their nature before we extend to them our greetings, or reject them with disgust.

We have examined the production of Mrs. Harriet Beecher Stowe, which we purpose to review, and we discover it to belong to the latter class, and to be one of the most reprehensible specimens of the tribe. We own that we approach the criticism of the work with peculiar sensations of both reluctance and repugnance. We take no pleasure in the contact with either folly or vice; and we are unwilling to handle the scandalous libel in the manner in which it deserves to be treated, in consideration of its being the effusion of one of that sex, whose natural position entitles them to all forbearance and courtesy, and which, in all ordinary cases, should be shielded even from just severity, by that protecting mantle which the name and thought of woman cast over even the erring and offending members

* Uncle Tom's Cabin; or Life Among the Lowly. By Harriet Beecher Stowe. Ninety-fifth Hundred. Boston. John P. Jewett & Company. Cleveland, Ohio: Jewett, Proctor and Worthington. 1852. 2 vols. 12mo.

of the sex. But higher interests are involved: the rule that every one bearing the name and appearance of a lady, should receive the delicate gallantry and considerate tenderness which are due to a lady, is not absolutely without exception. If she deliberately steps beyond the hallowed precincts—the enchanted circle—which encompass her as with the halo of divinity, she has wantonly forfeited her privilege of immunity as she has irretrievably lost our regard, and the harshness which she may provoke is invited by her own folly and impropriety. We cannot accord to the termagant virago or the foul-mouthed hag the same deference that is rightfully due to the maiden purity of untainted innocence. Still, though the exception undoubtedly exists, and we might, without indecorum, consider that all claims to forbearance had been lost by Mrs. Stowe, we shall not avail ourselves of the full benefit of her forfeiture. We cannot take the critical lash into our hands with the same callous indifference, or with the same stern determination of venting our just indignation, that we might have done, had the penalty been required for 'the lords of creation.' We will endeavor, then, as far as possible, to forget Mrs. Harriet Beecher Stowe, and the individuality of her authorship, and will strive to concentrate our attention and our reprehension on her book, venturing only an aside at parting—a quotation from a work which it would be infamy to cite in connection with any other lady's name than her own:

Ciel, que je hais ces créatures fières,
Soldats en jupe, hommes chevaliers !
Du sexe mâle affectant la valeur,
Sans posséder les agréments du nôtre,
A tous les deux prétendant faire honneur,
Et qui ne sont ni de l'un ni de l'autre.

With this, we dismiss Mrs. Stowe: and we claim credit for our forbearance in thus resisting the temptation to castigate the improprieties of a woman, who has abandoned the elevated sphere appropriate to her sex, and descended into the arena of civil dissension and political warfare—to say no more—where the gladiators contend naked and *à l'outrance*.

We have said that Uncle Tom's Cabin is a fiction. It is a fiction throughout; a fiction in form; a fiction in its facts; a fiction in its representations and coloring; a fiction in its statements; a fiction in its sentiments, a fiction in its morals, a fiction in its religion; a fiction in its inferences; a fiction equally with regard to the subjects it is designed to expound, and with respect to the manner of their exposition. It is a fiction, not for the sake of more effectually communicating truth; but for the purpose of more effectually disseminating a slander. It is a fictitious or fanciful representation for the sake of producing

fictitious or false impressions. Fiction is its form and falsehood is its end. When Aristotle assigned to poetry the precedence over history for its superior efficacy in instructing, refining, and ennobling mankind: when Bacon re-echoed the praise, and eulogised the works of the imagination, as seeking, by the universality and congeniality of ideal truth, to correct and elevate the warped and imperfect examples of virtue furnished in human action, they certainly never anticipated that the realm of fiction would be degraded into the domain of falsehood, or that fiction would cease to be the means of inculcating truth for the sake of substituting itself as the ultimate aim in the place of truth. By the beneficent Providence of God, the mind of man has been so constituted that, amid all the frailties and illusions, the follies and the errors of fallen humanity, it can still conceive of virtue more endearing and undeviating, of justice more unwavering, of fortitude more constant and patient; and of charities more diffusive and ennobling than the trials, and difficulties, and obstacles of actual existence will permit to be exhibited. Fancy, as if lighted up by the radiance of the sun which gilded the landscapes of Eden, can revert to the imagined possibilities of a higher, a holier, and a nobler existence, and recalling, as it were, the reminiscences of the days of purity and innocence, can strengthen our hearts and elevate our feelings, to resist the seductions of evil; when, without such aid, the imperishable relic of a better condition—we might too easily yield to the vanities, the vices, and the temptations of life. But the magic wand is broken—the priceless treasure lost—when, instead of limiting the play of the imagination to its legitimate employment, we turn it to unholy uses. Nay, it is degraded and stripped of its power of transmitting this baser life of ours into the semblance of a golden age, when we suffer its potency to be turned to opposite ends, and to be applied not to the revival of the latent image of ideal excellence, but to the dirty sorcery of party purposes and fanatical aims. The rod of Aaron, which blossomed in the desert, drew down day by day celestial food from heaven, and educed from the riven rock the living waters, to quench the deadly thirst of the Israelites, was the same wand which brought the plagues of flies and frogs and locusts, famine and pestilence and death, over the populous valleys of the prolific Nile. So it is with fancy: the fiction, which is the hand-maiden of truth, may refresh our fainting spirits in the wilderness of life: the fiction, which ends in fiction and is the slave of falsehood, will spread a fatal blight where all was salubrious, and happy and prosperous before.

In Uncle Tom's Cabin, the vice of this depraved

application of fiction and its desolating consequences, may be readily detected. Every fact is distorted, every incident discolored, in order to awaken rancorous hatred and malignant jealousies between the citizens of the same republic, the fellow countrymen whose interests and happiness are linked with the perpetuity of a common union, and with the prosperity of a common government. With the hope of expediting or achieving the attainment of a fanatical, and in great measure, merely speculative idea, of substituting the real thralldom of free labor for the imaginary hardships of slavery—the hydra of dissension is evoked by the diabolical spells of falsehood, misrepresentation, and conscious sophistry. What censure shall we pass upon a book, calculated, if not designed, to produce such a result? What condemnation upon an effort to revive all the evils of civil discord—to resuscitate all the dangers of disunion—allayed with such difficulty, and but recently lulled into partial quiescence by the efforts of the sages and the patriotic forbearance of the States of the Confederacy? What language shall we employ when such a scheme is presented, as the *beau idéal* of sublimated virtue, under the deceptive form of literary amusement, and is seriously offered as the recreation of our intellectual leisure?

We have neither the time nor the inclination to run methodically through the labyrinths of misrepresentation which constitute the details of this romance. It has obtained an unhappy notoriety, which would render the task as profitless as it would be ungrateful. The copy before us purports to belong to the ninety-fifth thousand already published in America; and we see that upwards of one hundred and fifty thousand have been issued in England. How rapid the circulation of error! how slow the progress of truth! how easy the propagation of falsehood; how arduous the dissemination of its antidote! When in the course of a few short months, a quarter of a million of the readers of the English tongue manifest their readiness to welcome and their anxiety to believe a lie, it is useless for the injured party to disprove the false statement, as his disclaimers will be drowned by the clamors of the aggregated fanatics. The circumstances of the time; the distempered atmosphere of public sentiment, both at the North and beyond the Atlantic; the mawkish sensibilities and the imbecile ignorance of many within our own borders; the recent and still active agitation of the Slave-question in Congress and in the Presidential canvass; the frenzy of fanaticism and the fever of political intrigue, have all conspired to give a popularity and currency to the work at this particular moment, which its ability does not justify,

and its purposes should forbid. Still, from whatever cause its multitudinous dispersion may arise, this of itself assures us both of the virulence of the venom and of the aptitude of the public mind both at the North and in England, to catch the contagion, and welcome the contamination. Hence, the necessity on the part of all those interested in the rights, the prosperity, the happiness and the integrity of the South, to accord to it a notice far beyond what its intrinsic merits or even vices might claim. But, as a bold, sweeping, unmitigated accusation against the Southern States, it cannot be suffered to pass entirely without challenge, nor can it be permitted to circulate without reprobation and repudiation. The consciousness of right, the dignity of our position, the knowledge of the inefficacy of our disclaimers, might prescribe unruffled contempt and unbroken silence, as the true mode of meeting the bald slanders and the forged accusations of mere fiction: but the purpose of the fiction—the intention of the libel—is recognized, welcomed and applauded by myriads; and the numbers which swell the battalions of our adversaries render them dangerous, however contemptible the component units may be.

But, though we condescend to give more attention to Uncle Tom's Cabin than we think such a work or such an attack entitled to on its own score, we will not prolong our disagreeable duty so far as to follow it through all the mazes of its misrepresentation—through all the loathsome labyrinths of imaginary cruelty and crime, in which its prurient fancy loves to roam. So far as a false statement can be rectified by positive denial,—so far as misrepresentation can be corrected by direct, abundant, unquestionable proof of the error, this service has been already adequately rendered by the newspapers and periodical literature of the South. We have intimated our belief, that both the negation and the refutation are useless, for our adversaries are as deaf and as poisonous too, as the blind adder. But this service has already been fully rendered. It would, then, be a work of supererogation to repeat the profitless labor, to trace the separate threads of delusion which enter into the tissue of deception, and to exhibit the false dyes and the tangles of fiction which aid in the composition of the web. It would seem almost a hopeless waste of time to show how the truth which has been so scantily employed, has been prostituted to base uses, and made to minister to the general falsehood; how human sympathies have been operated on to encourage and sanctify most unholy practices: how every commandment of the decalogue and all the precepts of the Gospel have been violated in order to extend the sanctification of the higher-law, to every crime de-

nounced and condemned by laws, human and divine. Unfortunately for the cause of the South, the evidence for or against her, is neither weighed nor regarded: the defence is rejected without consideration, and all slanders are cordially received, not because they are known or proved to be true, but because they are wished to be so; and harmonise with pre-conceived and malicious prejudices. We have not the ear of the court; our witnesses are distrusted and discredited, and in most cases, they are not even granted a hearing; but the case is presumed to be against us, and by a summary process a verdict of guilty is rendered, without any regard to the real merits of the cause, but in compliance with the fanatical complicity of the jurors. Why is this? and what is the court before which we are required to plead?

Assuredly, there is no necessity to convince the slave owners, or the residents in the Southern States, that the condition of society, the *status* of the slave, the incidents and accidents of slavery, the practices or even the rights of masters, are exhibited in a false light, and are falsely stated in Uncle Tom's Cabin; and that, by whatever jugglery or sorcery the result is obtained, the picture, with all its ostensible desire of truthful delineation, is distorted and discolored, and presents at one time a caricature, at another a total misrepresentation of things amongst us. It is not to Southern men that it is necessary to address any argument on a topic like this. They are already aware of the grossness of the slander by their own observation and experience. No, the tribunal to which our defence must be addressed, is the public sentiment of the North and of Europe. In both latitudes, the case is already prejudged and decided against us; in both, popular ignorance and popular fanaticism, and a servile press have predetermined the question. The special circumstances of the condition of society in both have led to the complete extinguishment of slavery, *eo nomine*; and what was dictated by pecuniary interest, and achieved by folly or accident, is believed to furnish the immutable canon for the action of all communities, and to constitute the valid criterion of a higher law, which shall promise all the blessings of redemption to those who vilify and malign their fellows for following the example of Abraham, Isaac and Jacob, and all the curses of damnation to those who are the innocent victims of the abuse. The ignorant and unreflecting outcry of those whose social condition is infinitely below that of our slaves, is eagerly caught up by the myriad serfs of the dominant cottonocracy; is re-echoed from all points of the horizon; and is believed to be the language of truth because it is the clamor of a multitude. A better class stim-

ulates and repeats the defamation, because their interests are supposed to accord with the perpetuation of ignorance and the propagation of delusion on this subject; and because it is a cheap expenditure of philanthropy to melt in sentimental sorrow over remote and imaginary evils, while neglecting the ever present ills and pressing afflictions in their own vicinage. Such a tone of sentiment among both the educated and the illiterate classes in those communities where literature is a trade and the mercenary principles of Grub street constitute the morality of all intellectual avocations, generates a literary atmosphere which is fatal to the dissemination of unpopular truths, and which gives singular vitality and longevity to error, by pandering to the popular desire for its circulation and confirmation. In this manner, we may understand both the cause of the thousands of copies of Uncle Tom's Cabin, which have been sold at the North and in England, and also the extreme difficulty, not to say absolute impossibility, of securing a dispassionate hearing for our defence, or of introducing the antidote where the poison has spread. There is no obduracy so impracticable—no deafness so incurable—as that Pharisaical self-sanctification and half-conscious hypocrisy, which gilds its own deliberate delusions with the false colors of an extravagant morality, and denounces all dissent from its own fanatical prejudices, as callous vice and irremediable sin. The whole phalanx of Abolition literature, in all its phases and degrees, is fully imbued with this self-righteous spirit; and its influence, under all forms—in fiction and in song—in sermon and in essay—in political harangue as in newspaper twaddle—is completely turned against us: and an aggregation of hostile tendencies is brought to bear upon us so as to deny to our complaints, our recriminations, or our apologies, either consideration or respect. The potency of literature, in this age of the world, when it embraces all manifestations of public or individual thought and feeling, and permeates, in streams, more or less diluted, all classes of society, can scarcely be misapprehended. But the illiberal, unjust, and unwise course of Southern communities, has deprived them of the aid of this potent protection, by excluding themselves and their views almost entirely from the domain of literature. The Southern population have checked and chilled all manifestations of literary aptitudes at the South; they have discouraged by blighting indifference, the efforts of such literary genius as they may have nurtured: they have underrated and disregarded all productions of Southern intellect; and now, when all the batteries of the literary republic are turned against them, and the torrent of literary censure threatens to unite with other agencies to overwhelm them, it is in

vain that they cry in their dire necessity, "Help me, Cassius, or I sink." The voice of a home-born literature, which would have been efficient in their defence, is almost unheard, and, if uttered, is scarcely noticed beyond Mason and Dixon's line, because the Southern people have steadily refused to it that encouragement, both in the shape of material support and public favor, which is essential to its healthy development and assured existence, and which is imperatively required to give it respectability and influence abroad. Thus are we to explain the reason why the arguments and expositions of Southern sentiment on the subject of slavery, pass so entirely unheeded—why both its expostulations and denials are wholly disregarded, and its grave discussions contemptuously scorned and rejected without a moment's consideration.

What Southern author has not occasion for bitter complaints of the neglect, injustice, and illiberality of the Southern communities for which he has lived and written? What Southern work has been introduced to public favor by the cordial co-operation of Southern men, or the steady approbation of the Southern people? What Southern periodical, established for the development of Southern intellect, for the defence of Southern institutions, for the creation of a Southern literature, has not languished for want of adequate encouragement, come to a premature end for want of respectable support, or lingered on with a frail and fainting existence, having ever on its tongue and in its heart the humiliating confession that the South, for which it labored and to which it ministered, was indifferent to its fate? The fact that some few Southern works have attained distinction, that a few Southern periodicals have been able to protract a feeble and uncertain life through all trials and difficulties, reveals rather the native energy of the Southern mind, the spontaneous vitality of Southern intellect, than furnishes any disproof or palliation of the folly, the illiberality, the injustice, or the mole-eyed and narrow-minded sagacity of the Southern States.

It is a natural and inevitable consequence of this silly and fatal indifference to the high claims of a native and domestic literature, that the South is now left at the mercy of every witting and scribbler who panders to immediate profit or passing popularity, by harping on a string in unison with the prevailing fanaticism. It is a necessary result of the same long continued imprudence, that no defence can be heard, no refutation of vile slander regarded in the courts of literature, which comes from a land whose literary claims have been disparaged and crushed by its own blind recklessness and meanness. In Uncle Tom's Cabin, there is certainly neither ex-

traordinary genius nor remarkable strength: the attack is unquestionably a weak one: there is only that semblance of genius which springs from intense fanaticism and an earnest purpose; and that plausibility which is due to concentrated energy and a narrow one-sided exposition of human afflictions: yet, though so slight be the merits of the book, the only criticism in reply which could pretend to any general efficiency in arresting the current of the virtual slander—and then by no means an adequate one—must be sought beyond the Atlantic, and gathered from the columns of the London Times. The South has benumbed the hearts and palsied the arms of her natural and willing defenders: she has dismantled her towers, and suppressed her fortresses of all efficient garrison, and she is now exposed, unarmed and unprotected, to all the treacherous stratagems and pitiless malice of her inveterate and interested enemies. She has invited and merited her own fate: she has wooed the slander which she is almost powerless to repel: she has offered a premium to vituperation and imposed a grave penalty on every attempt to redress the indignity to which she has subjected her citizens.

It is not without distinct and deliberate purpose, that we have thus unveiled the secret causes of that contempt for the feelings, the interests, the rights, and the views of the South; which is indicated by the sudden and unprecedented success of Uncle Tom's Cabin, and also of that impossibility of obtaining an equal hearing in reply, which renders it as ungrateful and useless, as the task of exposing its perversions and misrepresentations is humiliating and disgusting. We will not repeat the unwelcome and unprofitable labor. The only true defence of the South against this attack, and the swarms of similar insults and indignities which its success and the prevalent fanaticism will generate, is to create and cherish a true Southern literature, whose spontaneous action will repel and refute such accusations, and command a respectful consideration wherever intellect is honored, or truth even dimly sought. Let the South honestly and cordially sustain her own periodicals, and her own writers, and such productions will cease to alarm or annoy her, or if they should attempt to fret her, they will be brushed aside without effort, and without producing even momentary injury. Let her fail to do this, and no one can complain if she is slandered, without contradiction and maligned without defence.

The mis-statements of Uncle Tom's Cabin, have already, as we have said, been frequently exposed, but the refutation has been entirely disregarded in those quarters where alone the disproof of its mis-representations could be re-

quired. But, if for these and other reasons, we will not so far degrade ourselves as to retrace the beaten track, what remains for a Southern writer to do? Absolute silence is liable to misconception, and the just indignation which so malignant an outrage would merit, might be traduced as blind rage at the detection of guilt. He is, therefore, compelled, by the untoward circumstances of the case, to speak, although convinced that, by so doing, he concedes much of the dignity of his cause to the evasive vituperation of its enemies. He may, however, enter his solemn protest against the reception of an impeachment, supported by testimony, which has been steadily and uniformly denied and disproved. He will do this, not with the hope of arresting the course of the slanderers, but for the sake of bearing testimony to the innocence of the South, and the wanton guilt of her accusers, and of preventing her from becoming a party to her own defamation, by the silence which might be construed as assent. He may then strike out a new line of argument, which, by waiving the points apparently in dispute, may, perhaps, conciliate attention, and discuss the real issue in a manner less calculated to excite or revive the habitual prejudices.

Something of this sort we will endeavor to do. We will concede for the nonce, the general truth of the facts alleged, and will maintain that, notwithstanding this concession, the culpability of the work, its fallacy and its falsehood remain the same. In the one case, the false conclusions are erected upon the basis of false assertions; in the other, we overlook the untruth of the statements, and find that they are deliberately employed for the insinuation of untrue and calumnious impressions. We will suppose, then, that such enormities as are recounted in *Uncle Tom's Cabin*, do occur at the South: that George Harris and Eliza his wife, with that seraphic little mulatto, their child, have, in truth, their prototypes among our slaves, and that the brutal treatment of the former by his owner, might find its parallel in actual life. We will endeavor to imagine the reality of the murder of Prue, and the probability of the virtues, misfortunes and martyrdom of Uncle Tom—and, still heavier tax upon our credulity, we will suppose the angelical mission of that shrewish Yankee maiden, Miss Ophelia, for the conversion of hopeless niggers, and the redemption of Ebo, to have been a fact:—and, yet, notwithstanding all this, and it is tough, indeed, to swallow, we will maintain the doctrines of the book to be most pernicious, the representation given to be most erroneous, the impression designed to be produced to be most criminal and false, and the iniquity of the scandalous production to be entitled to unmitigated censure

and reprobation. We will not even limit our concession so far as might be requisite to bring the delineation within any reasonable approximation of the truth: we will not insist that the incidents conceded must be regarded as exceptional cases; for it is perceived in *Uncle Tom's Cabin*, that to admit them to be exceptions, would be to change, entirely, the character of the argument, and destroy its validity. How acute is the perverse instinct of deliberate wrong: how sagacious the ingenuity of premeditated error? We will concede all the facts stated in the work: all that we will not concede, is the significance attributed to them, and their relevancy for the purpose for which they are employed. And, having granted all this, we still believe that we can offer an ample vindication of the South, and justify the severest censure of this inflammatory and seditious production.

We cannot, however, pass to what may be regarded as the argument of the work, without noting that the hero and heroine of the tale—the tawny Apollo and Venus, with the interesting yellow Cupid, on whom so large a portion of the plot is concentrated—belong exactly to that particular shade of tainted blood, when the laws of many of the Southern States, if not of all, would recognize them as free. George and Eliza Harris, as represented, have a larger proportion of white blood in their veins, than is compatible with the continuance of the servile condition. The jurisprudence of those very communities which are vilified for their imaginary mistreatment of this elegant pair, is not savage enough to retain them in bondage. It would only have been necessary for them to exhibit their radiant countenances, their soft, glossy hair, and curling ringlets, and prove the superabundance of their Caucasian blood in any of our courts of justice, to be assured of obtaining their free papers. If the work was intended for an exposition of the enormities incident to slavery, and for a protestation in favor of the injured and down-trodden African race, is it not a singular dishonesty of procedure to assume as types of this class, those who are rather degraded specimens of the white blood, than in any sense, representatives of the African, and who do not, legitimately, by the laws of the South, belong to the class intended to be redeemed by the exhibition of their sufferings, but more properly to the tribe of the alleged oppressors. Into such inconsistencies is malice betrayed, when it aims at producing false impressions, and is utterly unscrupulous in the employment of any means which seem calculated to heighten the false effect desired.

But leaving this exceedingly vulnerable characteristic of *Uncle Tom's Cabin*, the argument of the work—for there is an argument even in

successive dramatic pictures designed to produce a given effect, as well as in successive syllogisms designed to establish a special conclusion:—the argument of the work is, in plain and precise terms, that any organization of society—any social institution, which can by possibility result in such instances of individual misery, or generate such examples of individual cruelty as are exhibited in this fiction, must be criminal in itself, a violation of all the laws of Nature and of God, and ought to be universally condemned, and consequently immediately abolished. Unhappily, in all the replies to *Uncle Tom's Cabin* which have hitherto been attempted under the form of corresponding fiction, usually, we are sorry to say, by weak and incompetent persons, it has not been recognized with sufficient distinctness that the whole strength of the attack, as the whole gist of the argument, lies in this thesis. The formal rejoinders have consequently been directed to the wrong point: the real question has been mistaken; and the formal issue never joined. This explains the insufficiency of such counter representations as Aunt Phillis's Cabin, and similar apologies; and also that sense of insufficiency which they have not failed to produce. It is no valid refutation of the offensive fiction that slavery may be shown to present at times—no matter how frequently—a very different phase. This point was already guarded:—nay, it was already conceded in *Uncle Tom's Cabin*; and such a mode of replication consequently mistakes the subject of debate, and is entirely without force because directed against a point already surrendered. It may be doubted, indeed, whether an assault on a solemn interest, moral or social, conveyed under the garb of fiction, can ever be satisfactorily answered under a similar form. If it could be, it would be too trivial to be worthy of such an elaborate defence. If it be sufficiently important to demand a thorough reply, it is degrading to the serious character of the subject, it is trifling with the earnest and grave import of the question, to dress it up in the gewgaws and tawdry finery of a mere counter-irritant. Moreover, a reply in this shape too commonly necessitates such an adherence to the dramatic procedure and to the progression of sentiment adopted by the original work, that it places the replicant in a secondary position, and exhibits him in the false light of a mere imitator and plagiarist, by way of opposition, thus obviously yielding the vantage ground to the offender. If, however, the reply must be couched in the same form as the attack, the true picture to be delineated is not a mere representation of a real or imaginary state of beatitude enjoyed by fictitious slaves, but should be the portraiture of graver miseries, worse afflictions, and more horrible crimes fa-

milliar to the denizens of our Northern Cities; and incident to the condition of those societies where the much lauded white labor prevails. But the main cause of failure in the replies which have been attempted, and whose inefficacy has been injurious to the interests of the South, has unquestionably been that the real thesis of *Uncle Tom's Cabin*, whence most of its dangers, its pernicious sophistry, and its wicked delusion proceed, has not been recognized with adequate clearness, and has not been refuted in a suitable manner. It is this thesis which we propose to examine.

The true and sufficient reply to this proposition is a very brief one. It is simply this, that the position is absolutely fatal to all human society—to all social organization, civilized or savage, whatever. It strikes at the very essence and existence of all community among men, it lays bare and roots up all the foundations of law, order and government. It is the very evangel of insubordination, sedition, and anarchy, and is promulgated in support of a cause worthy of the total ruin which it is calculated to produce. Pandemonium itself would be a paradise compared with what all society would become, if this apparently simple and plausible position were tenable, and action were accordingly regulated by it. Ate herself, hot from hell, could not produce more mischievous or incurable disorder than this little thesis, on which the whole insinuated argument of *Uncle Tom's Cabin* is founded, if this dogma were once generally or cordially received. In all periods of history—under all forms of government—under all the shifting phases of the social condition of man, instances of misery and barbarity equal to any depicted in this atrocious fiction, have been of constant recurrence, and, whatever changes may hereafter take place, unless the nature of man be also changed, they must continually recur until the very end of time. In thousands of instances, of almost daily occurrence, the affliction or the crime has sprung as directly from existing laws, manners, and institutions, as in the examples erroneously charged to the score of slavery in *Uncle Tom's Cabin*. But in all of them the real causes have been the innate frailties of humanity, the play of fortuitous circumstances, the native wickedness of particular individuals, and the inability of human wisdom or legislation to repress crime without incidentally ministering to occasional vices. If there be any latent truth in the dogma enforced by the nefarious calumnies of *Uncle Tom's Cabin*, it furnishes a stronger argument against all other departments of social organization than it does against slavery, as the records of our courts of justice and the inmates of our penitentiaries would testify. There is no felon who might not divest himself of his load of

guilt, and extricate his neck from the halter, if such an argument was entitled to one moment's weight or consideration. In the complicated web of trials, difficulties and temptations, with which Providence in its wisdom has thought proper to intertwine the threads of human existence, an unbroken career of happiness or prosperity is not to be found. Every heart has its own sorrows,—every condition as every class its own perils and afflictions, and every individual his own bitter calamities to bewail. The very aptitude of this life for that state of probation which it was designed to be, depends upon the alternation and juxtaposition of weakness and virtue, of joy and misery, of gratifications and trials, of blessings and misfortunes, of adversity and prosperity. These varying shadows of our earthly career are due partly to the accidents by which we are surrounded, partly to the temper and conduct of our own hearts, but more than all to the concurrent or conflicting action of the members of the community among which our lot has been cast. The virtues of our neighbors may aid or encourage us, but their vices or their crimes may crush our hopes, ruin our fortunes, and entail irretrievable woe on our children as well as on ourselves. From this discord of fate it is our stern duty to educe the elements of our own career: beset with temptations, menaced by vicious intrigue, cheered by high examples or consoling counsel, but ever at the mercy of fortune, we must pursue our rough journey through the thorny paths of a world of trial. We cannot invent an Elysium or reclaim a Paradise: we can only turn to the utmost possible good the diverse conditions which encompass us around on all sides. It is only the insane hope of a frivolous and dreamy philanthropy to expect or wish that this order and variety of sublunary changes should be altered; as it is only the malignant hate of a splotic and frenzied fanaticism which would venture to charge upon a particular institution, as its peculiar and characteristic vice, the common incidents of humanity in all times and under all its phases.

It is no distinctive feature of the servile condition that individual members of the class should suffer most poignantly in consequence of the crimes, the sins, the follies, or the thoughtlessness of others;—that children should be torn from their parents, husbands separated from their wives, and fathers rudely snatched away from their families. The same results, with concomitant infamy, are daily produced by the operation of all penal laws, and the same anguish and distress are thereby inflicted upon the helpless and innocent, yet such laws remain and must remain upon our statute books for the security and conservation of any social organization at all. The

ordinary play of human interests, of human duties, of human necessities, and even of human ambition—unnoticed and commonplace as it may be conceived to be, produces scenes more terrible and agony more poignant and heart-rending than any attributed to slavery in Uncle Tom's Cabin. The temptations of worldly advancement, the hopes of temporary success, the lures of pecuniary gain, in every civilized or barbarous community throughout the world—in the deserts of Sahara as amid the snows of Greenland—in the streets of Boston and Lowell as in those of London, Manchester, and Paris, may and do exhibit a longer register of sadder results than even a treacherous imagination, or fiction on the hunt for falsehood has been able to rake up from the fraudulent annals of slavery in the present work. There is scarcely one revolution of a wheel in a Northern or European cotton-mill, which does not, in its immediate or remote effects, entail more misery on the poor and the suffering than all the incidents of servile misery gathered in the present work from the most suspicious and disreputable sources. The annual balance sheet of a Northern millionaire symbolizes infinitely greater agony and distress in the labouring or destitute classes than even the foul martyrdom of Uncle Tom. Are the laws of debtor and creditor—and the processes by which gain is squeezed from the life-blood of the indigent, more gentle;—or the hard, grasping, demoniac avarice of a yankee trader more merciful than the atrocious heart of that fiendish yankee, Simon Legree? Was the famine in Ireland productive of no calamities which might furnish a parallel to the scenes in Uncle Tom's Cabin? We would hazard even the assertion that the Australian emigration from Great Britain, and the Californian migration in our country—both impelled by the mere hope of sudden and extraordinary gains, have been attended with crimes and vices, sorrows, calamities and distresses far surpassing the imaginary ills of the slaves whose fictitious woes are so hypocritically bemoaned. But such are the incidents of life, and we would neither denounce nor revolutionize society, because such consequences were inseparable from its continuance.

It should be observed that the whole tenor of this pathetic tale derives most of its significance and colouring from a distorted representation or a false conception of the sentiments and feelings of the slave. It presupposes an identity of sensibilities between the races of the free and the negroes, whose cause it pretends to advocate. It takes advantage of this presumption, so unsuspectingly credited where slavery is unknown, to arouse sympathies for what might be grievous misery to the white man, but is none to the dif-

ferently tempered black. Every man adapts himself and his feelings more or less to the circumstances of his condition: without this wise provision of nature life would be intolerable to most of us. Every race in like manner becomes habituated to the peculiar accidents of its particular class; even the Paria may be happy. Thus what would be insupportable to one race, or one order of society, constitutes no portion of the wretchedness of another. The joys and the sorrows of the slave are in harmony with his position, and are entirely dissimilar from what would make the happiness, or misery, of another class. It is therefore an entire fallacy, or a criminal perversion of truth, according to the motive of the writer, to attempt to test all situations by the same inflexible rules, and to bring to the judgment of the justice of slavery the prejudices and opinions which have been formed when all the characteristics of slavery are not known but imagined.

The proposition, then, which may be regarded as embodying the peculiar essence of Uncle Tom's Cabin, is a palpable fallacy, and inconsistent with all social organization. Granting, therefore, all that could be asked by our adversaries, it fails to furnish any proof whatever of either the iniquity or the enormity of slavery. If it was capable of proving any thing at all, it would prove a great deal too much. It would demonstrate that all order, law, government, society was a flagrant and unjustifiable violation of the rights, and mockery of the feelings of man and ought to be abated as a public nuisance. The hand of Ishmael would thus be raised against every man, and every man's hand against him. To this result, indeed, both the doctrines and practices of the higher-law agitators at the North, and as set forth in this portentous book of sin, unquestionably tend: and such a conclusion might naturally be anticipated from their sanctimonious professions. The fundamental position, then, of these dangerous and dirty little volumes is a deadly blow to all the interests and duties of humanity, and is utterly impotent to show any inherent vice in the institution of slavery which does not also appertain to all other institutions whatever. But we will not be content to rest here: we will go a good bow-shot beyond this refutation, though under no necessity to do so: and we maintain that the distinguishing characteristic of slavery is its tendency to produce effects exactly opposite to those laid to its charge: to diminish the amount of individual misery in the servile classes: to mitigate and alleviate all the ordinary sorrows of life: to protect the slaves against want as well as against material and mental suffering: to prevent the separation and dispersion of families; and to shield them from the frauds, the crimes, and the casualties of others, whether masters or fellow-slaves,

in a more eminent degree than is attainable under any other organization of society, where slavery does not prevail. This is but a small portion of the peculiar advantages to the slaves themselves resulting from the institution of slavery, but these suffice for the present, and furnish a most overwhelming refutation of the philanthropic twaddle of this and similar publications.

Notwithstanding the furious and ill-omened outcry which has been made in recent years against the continuance of slavery, the communities where it prevails exhibit the only existing instance of a modern civilized society in which the interests of the labourer and the employer of labour are absolutely identical, and in which the reciprocal sympathies of both are assured. The consequence is that both interest and inclination, the desire of profit and the sense or sentiment of duty concur to render the slave-owner considerate and kind toward the slave. So general is the feeling, so habitual the consciousness of this intimate harmony of the interests and duties of both, that it has formed an efficient public sentiment at the South which brands with utter reprobation the slaveholder who is either negligent of his slaves or harsh in his treatment of them. It goes even further than this; it makes every man at the South the protector of the slave against injury by whomsoever offered, thus establishing an efficient and voluntary police, of which every one is a member, for the defence of the slave against either force, fraud, or outrage. Such habitual regard for the rights of a subordinate class generates in its members a kindness of feeling and a deference of bearing to the slave-holder in general, which no severity could produce and no rigor maintain. It is this intercommunion of good offices and good will, of interests and obligations, which renders the realities of slavery at the South so entirely different from what they are imagined to be by those who have no intimate familiarity with its operation. Hence, too, in great measure it is, that, except where inveterate idleness or vice compels a sale, or the changes of fortune, or the casualties of life, break up an establishment, families are rarely dispersed, but are held together without being liable to those never-ending separations which are of daily occurrence with the labouring or other classes elsewhere. Even where the misfortunes of the owner necessitate a sale, if the negroes enjoy a respectable character, there is every probability that they will never be removed from the district in which they have lived, but will either be bought with the place on which they have worked, be transferred *en masse* to some neighboring locality, or scattered about within easy distances of each other in the same vicinity.

It is true that the continued agitation of the

slavery question, and the nefarious practices of the abolitionists, which are so cordially eulogised in *Uncle Tom's Cabin*, have in some degree modified the relations between master and slave in those frontier settlements which border on the Ohio river, and have rendered imperative a harsher intercourse and more rigid management, than prevails where the feelings and principles of the negroes are not tampered with by incendiary missionaries. This is but one of the melancholy fruits of that philanthropical fanaticism, which injures by every movement which it makes those whom it pretends so sympathetically to serve.

It is needless to repeat the evidence that the average condition of the slave at the South is infinitely superior, morally and materially, in all respects, to that of the labouring class under any other circumstances in any other part of the world. This has been done so frequently and efficiently before, that we need only refer to previous expositions of this point.

If then all the facts alleged in *Uncle Tom's Cabin*, and entering into the composition of the pitiful tale, be conceded, they furnish no evidence whatever against the propriety or expediency of slavery. But, if the facts be false, what might have been error and delusion in the former case, becomes deliberate fraud and malignant slander. If they were true, we might pity the ignorance which had suffered itself to be perverted to crime by its ill-disposed credulity. If they are false, we must execrate the infamous virulence which fanatically employs falsehoods to breed dissension. If they were true, but did not legitimately minister to the purpose for which they were introduced, we could not pardon the folly, the presumption, and the unchristian spirit, which used them to fan the flames of discord, and to stir up the embers of civil war. If they are false, the diabolical hate which presided over the composition of the work, and clothed itself in the tempting hues of tender charity and melting philanthropy, for the surer accomplishment of its infernal aims, stands revealed in all its naked deformity, seared with the brand of infamy, and blackened with the deep damnation of its guilt. It is Satan starting up from his disguise, in the monstrous proportions and with the fiendish visage of the prince of hell, at the presence of the angels of heaven, and the touch of the spear of truth. That the facts as stated and as intended to be received are false, we solemnly aver—and for the confirmation of this averment we confidently appeal to every resident in the South, who has dispassionately reflected upon his own experience and observation—whether he be slave-owner or not:—whether he be native, yankee immigrant, or foreigner. That the isolated statements may accidentally be true *sub modo*, we will

not utterly deny: the range of fiction is wide, but the miracles of reality far surpass it: but that they are true under the colouring with which they are depicted we do absolutely gainsay, and inferences insinuated with the impressions designed to be produced are utterly fallacious in themselves, and are generated by a criminal desire to propagate a slander.

We have so far endeavored to estimate this inflammatory publication with all possible sobriety and coolness: we have tempered our indignation as nearly as might be to philosophic impartiality: we have conceded all that is or could be asked in favor of *Uncle Tom's Cabin*; and yet we find, that even if its facts were true, they would not support the inference which the work is designed to convey, much less justify the practices which it is intended to enforce. A libel is a libel still, notwithstanding the truth of its allegations, because it is calculated to disturb the peace of societies, and to destroy the harmony of any community. The ignorance of the libeller of the import or tendencies of his own language will remove neither the penalty nor the guilt, because the injury inflicted is not diminished thereby, and the public danger is not mitigated by the plea of folly. When, then, *Uncle Tom's Cabin* employs representations of Southern slavery, even if supposed to be true, which are calculated not merely to wound and outrage the feelings of Southerners, which would be comparatively a slight offence, but to pander to malignant prejudices, to disseminate throughout the Union dissensions and hostilities, and to circulate scandal abroad throughout the world, neither sincerity nor ignorance would afford any palliation for the rash, foolish, and criminal procedure. It is a caution frequently given to children, not to meddle with edge-tools, and if weak women or other persons of mature years but immature discretion, venture to engage in seditious pursuits, knowing the aim but ignorant of the character of the means, they must pay the penalty.

But, if truth be deliberately wrested to wrong: if facts are accurately stated for the sake of veiling with the semblance of truth doctrines known to be dangerous, and intended to generate social disorder and political ruin, the sin of treacherous hypocrisy is substituted for, or is added to the weakness of ignorant temerity. The vestments of an angel of light are thrown around the body of a fiend; the wolf has assumed the clothing of the sheep, that it may more successfully prey upon the innocent and delude the shepherd. Shall we exonerate *Uncle Tom's Cabin* from such deep-dyed hypocrisy? Almost every page shows that however it may revel in the altitudes of an ideal perfection, the practices inculcated and the cause espoused by it, are at variance with all law.

order, and government, with solemn oaths and established obligations, with the well-being of society, and with the perpetuity of the Union. Is either simplicity or fanaticism any excuse for that mole-eyed blindness, which fancies it sees afar off the duty of an organized crusade to conquer a disputed point of morals or social economy, and yet cannot behold the ever present obligation to perform these common duties of life which lie at the foundation of all social and political communion? Is it not either wilful hypocrisy or deliberate perversity, when a solitary crotchet of sentimental morality is conceived to transcend all the commandments of the decalogue, all the prescriptions of the Bible, and all the laws of man? Yet all this is done,—purposely, systematically, continually, and malignantly done in that immaculate encyclopædia of fictitious crimes—Uncle Tom's Cabin. The commandment inscribed by the finger of God on the tablets of stone which Moses bore to the Israelites as the everlasting will of Jehovah, burns in our eyes in characters of flame while perusing this intricate tissue of deception. **THOU SHALT NOT BEAR FALSE WITNESS AGAINST THY NEIGHBOUR.**

This, however, is by no means the sole violation of the Decalogue which is committed by the book, but it is the most prominent. Of the others we have scarcely the patience, and we have very little inclination to speak. Yet all the commandments relative to the duties of mankind to each other are frequently and systematically contravened, with the significant exception of that against adultery, which was not a very delicate prescription for a lady to handle, although she does assiduously endeavor to assert its habitual disregard in the South by slave-owners towards their female slaves. We will not disavow the existence of vice where it may be proved to exist, nor will we defend it under any circumstances, but if the author of Uncle Tom's Cabin had been as well read in the annals of prostitution in countries where slavery does not exist, or, supposing her to have the information, had she been as much disposed to reveal the facts that might be discovered on this head with regard to the virtuous practices of Boston, Philadelphia, and New York, as she is ingenious in the imagination of fictitious seductions, and inclined to transmute a dirty fancy into an alleged truth, she might have found that there was neither any very great peculiarity nor any very remarkable excess in Southern practices in this respect.

The essence of murder according to the laws of all nations and the public sentiment of all periods lies in the taking, contrary to law, and with malice prepense, the life of a rational fellow-creature. Unless the definition be altered en-

tirely and the moral principles of mankind be changed, murder is distinctly prescribed and applauded both by the precept and example of this book.

There is one sin which is justly regarded as the most despicable and debasing in the catalogue of crimes—the sin of perjury. Yet this is deliberately commended by this new missionary of the higher law.

It has always been esteemed the duty of good men and the pride of patriots to obey the solemn laws and uphold the institutions of their country. The whole tenor of these would-be immaculate volumes is directed to the subversion of both.

The Bible is either blasphemously mocked by the infidel, or reverently received by the Christian: but here with professions of more than Christian sanctity, its doctrines are distorted or disavowed, and its ministers maligned.

It is easy for even sincere fanaticism to run ignorantly and precipitately into the practice or palliation of crime; but in this instance the fanaticism clothes itself with the raiment of a pretended impartiality, and feigns justice the better to effectuate iniquity. There is an obvious discord between the professions and the purposes, the sentimentalism and the precepts of Uncle Tom's Cabin, which can scarcely permit us to withhold from it the charge of deliberate hypocrisy.

We are surprised to see how small a portion of the topics of censure, to which the production is obnoxious, has yet been touched upon: to feel that after all we have already said, the mountain of its offences, its perversions, its fallacies, and its iniquities, still rises as vast as ever before us. We have not had the heart to speak of an erring woman as she deserved, though her misconduct admitted of no excuse, and provoked the keenest and most just reprobation. We have little inclination—and, if we had much, we have not the time, to proceed with our disgusting labor, to anatomize minutely volumes as full of poisonous vermin as of putrescence, and to speak in such language as the occasion would justify, though it might be forbidden by decorum and self-respect.

We dismiss Uncle Tom's Cabin with the conviction and declaration that every holier purpose of our nature is misguided, every charitable sympathy betrayed, every loftier sentiment polluted, every moral purpose wrenched to wrong, and every patriotic feeling outraged, by its criminal prostitution of the high functions of the imagination to the pernicious intrigues of sectional animosity, and to the petty calumnies of wilful slander.

CICERO'S CATO THE ELDER :

OR,

A TREATISE ON OLD AGE.

Translated by L. M. for his Father, aged 77.

Father TIME is not always a hard parent ; and, though he tarries for none of his children, often lays his hand lightly upon those who have used him well : making them old men and women inexorably enough, but leaving their hearts and spirits young, and in full vigor. With such people, the gray head is but the impression of the old fellow's hand, in giving them his blessing ; and every wrinkle, but a notch in the quiet calendar of a well-spent life.

[Barnaby Rudge.

Though I look old, yet I am strong and lusty :
For in my youth I never did apply
Hot and rebellious liquors in my blood ;
Nor did not, with unbashful forehead, woo
The means of weakness and debility.
Therefore my age is as a lusty winter—
Frosty, but kindly.

[As You Like It. II. 3.

CICERO ON OLD AGE.

I.

[In a brief Preface, addressed to his friend T. Pomponius Atticus, Cicero says that he feigns the following discourse '*de senectute*,' to have been uttered by the elder Cato, (Cato the Censor,) in a conversation with two young men of great promise—Lælius and Scipio: the same Lælius, whose 'mild wisdom' is mentioned by Horace;* the same Scipio, who afterwards overthrew Carthage, and acquired the surname of Africanus the Younger. He was also called Æmilianus, after his grandfather, Paulus Æmilius, who fell in the disastrous rout at Cannæ.†

* '*Mitis sapientia Læli.*' Lat. 1., Lib. 2., v. 72.

† History scarcely presents a nobler character, or a more touching fate, than those of Paulus Æmilius the Elder. Forced into battle against his better judgment, by his rash and arrogant colleague, he did all that a leader or a soldier could, to avert defeat, and roll back the carnage. When Hannibal's might could no longer be resisted, and the shattered remains of the Legions, with Varro at their head, were flying in dismay towards Rome, Æmilius, covered with wounds, was seen, sitting upon a stone, in the very track of the pursuing enemy. Friends and servants passed without knowing him; disfigured and blood-stained as he was, and bowed down with anguish and despair. At length a young Patrician recognized him, alighted from his horse and entreated him to mount and save himself for the sake of Rome. But Æmilius steadfastly refused; and, notwithstanding the young man's

Cato is represented by Cicero as refuting the various imputations commonly thrown upon Old Age: *first*, that it withdraws us from the pursuits of active life; *secondly*, that it enfeebleth the body; *thirdly*, that it robs us of the pleasures of youth; and *fourthly*, that it is rendered melancholy by the near approach of Death. Cato's answer consists partly in denying that the alleged evils are peculiar to Old Age; and partly in proving, that even if peculiar to it, they do not necessarily make it unhappy.

Should Cato be thought to speak too learnedly or elegantly for his homespun character—Cicero suggests—it may be ascribed to his tincture of Grecian literature; to which, late in life, he devoted himself.

The supposed time of the conversation is about 148 or 149 years before Christ.]

PERSONS IN THE DIALOGUE.

MARCUS PORTIUS CATO, the Censor, (aged nearly 84.)
CARUS LÆLIUS, } Young
PUBLIUS SCIPIO AFRICANUS, the Younger, } men.

II.

Scipio.—Cato, Lælius and I habitually admire your consummate wisdom in all respects, but especially, your never seeming to be oppressed by Old Age: a burthen so unwelcome to most of the aged, that they declare it heavier than Mount Etna.

Cato.—My young friends, what you marvel at is very simple. Every age is burthensome to those who have no resources within for a good and happy life; but he, whose enjoyments are all of the soul, regards nothing as an evil, which Nature makes unavoidable. Foremost in this class, is Old Age. All wish to attain it; yet all, having

tears, obliged him to mount his horse again. Then rising up, he said—"Go, Lentulus, and tell Fabius Maximus, that Paulus Æmilius followed his injunctions to the last: but was overcome, first by Varro, and afterwards by Hannibal." Lentulus had not gone far, before he saw the aged consul surrounded and cut down by the Carthaginian cavalry—striking at them till he died. Well did he earn the tribute paid him in the undying strain of classic minstrelsy—

Regulam, et Scauros, *animæ que magna*
Prodigum Paullum, superante Pano,
Gratus insigni referam Camena.

[Hor. Od. 12, Lib. I.

The grateful muse with louder tone shall sing
The fate of Regulæ—the Scaurian race—
And Paulus, 'midst the waste of Cannæ's field
How greatly prodigal of life!

[Francis.

attained, disparage it: so fickle and perverse is folly. "It has stolen upon them," they say, "faster than they expected!" Who made them expect falsely? Does age creep faster upon youth than youth upon childhood? Besides, how would their load of years be less, at eight hundred, than at fourscore? A spent life, however long, can minister no soothing, no solace to dotage. If you admire my wisdom, then—and would that it were worthy of your esteem, or of my own surname!†—it consists merely in following and obeying as a deity, that best guide, NATURE. She would hardly have mismanaged the last act of Life's drama, like an awkward poet; after having disposed the other parts skillfully. But a closing scene there must be: a time to wither and fall like wild berries and the earth's fruits, in their ripening season. And this a wise man will bear meekly: for, to act otherwise—to struggle against Nature—what were it, but to war with Heaven, as the Giants did?

Lælius.—Well, Cato,—as Scipio and I hope, or at least wish to become old, you will do us a great favor by teaching us now, beforehand, how we may best bear the increasing weight of years?

Cato.—Willingly, *Lælius*: and particularly if, as you say, it will be agreeable to both of you.

Scipio.—Yes, if it will not incommode you,—since you have accomplished a long journey, which we too, are commencing, we desire a view of the region you have reached.

III.

Cato.—I will do my best. I have been present, when contemporaries of mine—for "birds of a feather flock together"—nay, when persons of consular dignity, C. Salinator and Spurius Albinus, complained of lost pleasures, without which, they deemed life a mere void; and of con-

*Cicero here may have had in his mind's eye the words of Plato, [*in Axiocho*—] λαθὼν ὑπαισθηθε το γηρας—"Old age, unseen, has stolen upon us." And Juvenal, [Sat. 9.] still more probably had this passage of Cicero in view, when he wrote those exquisite lines—

"Festinat enim decurrere velox.

Flosculus angustæ miseræque brevissima vitæ
Portio: dum bibimus, dum sarta, unguenta, puellas
Pocimus, obrepit non intellecta senectus."

But is not Cicero wrong in saying (or making Cato say,) that old age creeps no faster upon youth than youth upon childhood? Certainly, to all human experience, it seems otherwise. Each successive year of life appears briefer than the preceding one. The flight of Time, like the movement of a body falling freely, gathers new velocity with every additional space it traverses.

†CATO, from *catus*, prudent.

temptuous treatment from those who had once used to court them: I thought they misplaced the blame. For, had it been chargeable to Old Age, the same ills would beset me, and other old people,—many of whom I have known wax old without a murmur—who were not sorry to be freed from the chains of appetite, and experienced no slights from their acquaintance. In truth, all such complainers should blame their own characters and not their years. Men of moderation, not peevish or ill-natured, find old age easy and peaceful: but a fretful, or a savage temper, makes every time of life unhappy.

Lælius.—This is all very true. Yet an objector may remark that, upon your age sits lightly, because of your wealth, dignity, and varied resources—a lot which few can enjoy.

Cato.—That undoubtedly is something, but by no means all: for, to Old Age is applicable what Themistocles answered, in some dispute with an inhabitant of Seriphos—who alleged that Themistocles had acquired glory by his country's greatness, not by his own: "Most true! I should never have been great had I been a Seriphian; nor would you, if you had been an Athenian." So, in extreme want, age is no trifle, even to the wise; and even amidst abundance, it is burthensome to the unwise. The old men's best panoply consists in virtuous qualities and virtuous habits. These, cherished through a long life, yield wondrous fruits; not only because they never fail us, even at the grave's brink—though that is no trivial recommendation—but because the consciousness of a well spent life, and of many good actions, is preëminently delightful.

IV.

In my youth, Qu. Fabius Maximus, who recaptured Tarentum, though quite aged, was no less dear to me than if he had been young as I: for he had a gravity softened by courtesy, and age had not changed his manners. Indeed, my devotion to him commenced when he was not very old, though advanced in life. At a great age, he waged war as actively as in youth; and his patience tamed the young exultation of Hannibal—as our friend Ennius finely sings:

"Sole chief, whose wise delays won victory back
Brooking a coward's name, that Rome might stand!
For this, shall higher glories grace thy fame."

By what masterly vigilance and address did he retake Tarentum! Salinator, who had lost the town and fled to the citadel, boastfully said to him in my hearing, "Fabius, I was the means of your recovering Tarentum." "Certainly," retorted Fabius, smiling, "for if you had not lost the place, I never should have recovered it."

Nor was he less great in civil affairs, than as a warrior. In his second consulship—Spurius Carvilius his colleague being a tame nonentity—he withstood, as long as possible, all the efforts of the demagogue tribune, C. Flaminius, to parcel out the Picenian and Gallic lands, against the Senate's will. And when augur, Fabius had the boldness to declare, that good auspices attended every enterprise which was undertaken for the public safety; and that the omens were always adverse to bad movements. In that great man I knew many illustrious traits; but none more admirable than his demeanor at the death of his son Marcus, who had been a consul of no small renown. His eulogy on that son is in all hands; and when we read it, how despicable seems every philosopher in the comparison! Nor was Fabius great only when abroad, and exposed to the public gaze. Within himself, and in domestic privacy, he was greater still. What diction! What sentiments! What knowledge of Antiquity! What skill in the laws of Augury! And, for a Roman, what literary attainments! His memory treasured up every thing: not our own history only, but wars between foreign nations. Greedily did I feast on his conversation; as if haunted by a presentiment, that on his death I should find no other teacher.

V.

And why do I say thus much of Fabius Maximus? Why, to shew you how absurd it is to call an Old Age like his, unhappy. All men, however, cannot be Scipios, or Maximuses, to recall their stormings of cities, their land and sea-battles, their campaigns and their triumphs. Yet, there is a mild and placid close, to a life that has been pure, tranquil and refined: a close, like Plato's—who died writing, in his 81st year: an old age like that of Isocrates, who tells us that he wrote his book entitled *Panathenæicus*, in his 94th year: and he lived five years afterwards. His master, Gorgias of Leontium, completed 107 years, never flagging in his studies or toils: and when asked how he could bear to live so long? he replied, 'I have no fault to find with Old Age.' A noble answer—and worthy of so wise a man! For silly people charge their vices and defects upon Old Age. But not so did Ennius, whom I spoke of just now, and who compares his own advanced life to that of a generous and successful race horse:

"The gallant courser then, victorious oft
In proud Olympic fields, worn down with years
Now covets calm repose."

The last years of Ennius, you may well remem-

ber. For the present consuls, Titus Flaminius and Marcus Acilius, were chosen in the 19th year after his death; which occurred in the consulship of Cæpio and Philip. I, that year, aged 65, advocated the Voconian Law* with sound lungs and a loud voice. Ennius, at three-score and twelve—for he attained that age—bore those two burthens, poverty and old age,—as if they were pleasures.

Attentive consideration discovers to me four pretexts, for supposing age to be unhappy:—1. That it withdraws us from the business of life. 2. That it enfeebles the body. 3. That it takes away nearly all our pleasures. 4. That it verges upon Death. Now let us see what justice there is in each of these allegations.

VI.

"Age draws us away from the business of life!" From what business?—from such as requires youth and strength? Are there, then, no employments for the old, which call only for mind, regardless of corporeal infirmity? Was Fabius Maximus an idler, then? Or was Lucius Paulus;† your father, Scipio, and my noble son's father-in-law? Were those other veterans, Fabricius, Curius, and Coruncanian,‡ idlers and droues, when they were saving the Commonwealth by their wisdom and their influence? Appius Claudius was old and blind also: yet he, when the Senate seemed inclined to peace and a league with the victorious Pyrrhus, boldly uttered, among other stern sentiments, that which Ennius repeats in the well known verse—

"What fatal error warps your staggering minds,
All nerv'd before with fortitude and wisdom!"

That speech of Appius is yet extant.¶ He delivered it 17 years after his second consulship,

* Voconian Law, [*Lex. Voconia*.] enacted that no one should take, by the will of a deceased man, more of the estate than went to his natural heirs. It was passed A. U. C., 584. Cooper's note to Justinian's Institutes, 515.

† Paulus Æmilius, who vanquished Persius, king of Macedon. He was the son of Æmilius mentioned in the note to Section I, who died at Cannæ.

‡ Coruncanian was (A. U. C. 474) consul along with Lavinus, who was defeated by Pyrrhus. Curius, surnamed Dentatus, was thrice consul. He finally defeated Pyrrhus, and drove him out of Italy. See more of him, Section XVI. It is of him Horace speaks—"incomptis Carum capillis Utilem bello."

¶ A commentator quotes the commencement of this celebrated speech, from Plutarch's life of Pyrrhus: "Hæberto I have regarded my blindness as a misfortune; but now Romans would to Heaven that I were deaf as well as blind; for then I should not have heard your shameful counsels and resolves, so ruinous to the glory of Rome!"

which was ten years after his first; and before this, he had been Censor. He must have been very old, therefore, in the war of Pyrrhus; as indeed, tradition represents him. Those, then, who say that old age has no share in the business of life, talk nonsense; like him who should affirm that a pilot has no hand in guiding a ship, because others climb the masts, run about the decks and bail the hold, while he sits calmly astern, holding the helm. True, he does not perform the offices of younger men; but he does what is far more important. Great affairs are managed not by corporeal strength or activity; but by prudence, weight of character and wisdom—which age, far from taking away, even increases. I have been soldier, military tribune, lieutenant-general and consul, in a variety of wars: do I seem to you idle and useless now, because I no longer command armies? I counsel the Senate what wars to wage, and how to wage them: I denounce hostilities in advance against Carthage, our inveterate foe, whom I shall ever dread until she be utterly destroyed.* May the God's reserve that glory for you, Scipio!—the glory of completing the unfinished exploit of your grandfather! This is the thirty-third year since his death: but all ages to come will cherish his memory. He died just before I became Censor, and nine years after my consulship, during which he was chosen consul the second time. Had he lived a century, would he have repined at being so old? He then practised no longer the bold sally, or the active leap, nor used the sword or javelin. His weapons were reason, wisdom and judgment; the possession of which by old men, (*Senes*,) caused our ancestors to term their chief council, the SENATE. The Lacedæmonians, like us, call their principal magistrates *SENES*, or old men. Look widely abroad—you will find the greatest states to have been overthrown by the young, and upheld or restored by the old: as in the play of Nævius the poet, it is asked and answered—

“Say how your mighty state so quickly fell?”

—“A swarm of upstart blockheads,—stripling babblers—Wrought the ruin.”

Rashness is ever a trait of youth; and prudence, of age.

—
VII.

But “the memory is impaired.” I believe so,

* It is well known, that long before the third and last Punic war, Cato harped incessantly upon the indispensable necessity to Rome, of destroying Carthage. He used to close every speech, no matter upon what subject, with an exclamation which has become proverbial—“*Delenda est Carthago!*”

if it be not exercised, or if the possessor is naturally dull. Themistocles at one time knew the name of every Athenian citizen. Think you, that when he grew old, he commonly greeted Aristides as “Lysimachus?” I not only know the present generation, but I knew their fathers and their grandfathers: nor do I fear any loss of memory by reading epitaphs;† for, in doing so, I regain my recollection of the dead. I never heard of an old man's forgetting where he had buried his treasure. He remembers everything that really interests him; who are his sureties—who his creditors, and who his debtors. Lawyers; Pontiffs; Augurs; Philosophers: what numberless details do they remember!

Old people retain their minds, if they only retain their industry and studious habits: and this truth holds good, not with the renowned and exalted alone, but in the calm of private life. Sophocles composed tragedies until extreme old age; and as he seemed in that pursuit to neglect his domestic affairs, his sons commenced a lawsuit, to have the control of his estate taken from him, as a dotard. At the trial, the old man read to the judges his latest tragedy, *Edipus Coloneus*, and asked them if that seemed the work of a dotard? The judges at once discharged him. Did age silence Homer, or Hesiod, or Simonides, or Stesichorus?‡—or Isocrates, or Gorgias, whom I mentioned, just now; or those princes of Philosophy, Pythagoras, Democritus, Plato, or Xenocrates, or Zeno, or Cleanthes, or the stoic Diogenes, whom you have seen at Rome? On the contrary, did not the devotion of each to his favorite pursuit, end only with life? Nay, leaving such divine themes of thought, I can mention rustic Romans of the Sabine region, (neighbors and friends of mine,) who personally superintend every important work on their farms—the sowing, the gathering, the housing. Indeed, this, in them, is no wonder: for not one of them is so old as not to reckon upon living a year, at least. Yet, some of their toils they know can never profit them.

“Trees they plant to shade and feed posterity,”

as one Statius says, in his “Young Comrades.” The farmer, however old when asked—“Whom he plants for?” answers unhesitatingly—“For the immortal gods, whose will it is, that what I received from my ancestors, I shall deliver to my successors.”

* It was a superstition among the Romans, that to read inscriptions upon tombs, weakened the memory. It prevailed also among the Jews, as appears by Buxtorf's “Religious Customs, &c., of the Jews.”—Barker.

† A vigorous and spirited poet of Himera, Sicily, 600 years B. C. He is commemorated by Horace, in Od. iv. 9. “Stesichorique graves Camænas.”

.VIII.

Cæcilius right truly says, of an old man looking forward to another life—"Age! if you have no other fault, you bring with you this very sufficient evil,—that he, who lives long, sees much that he would rather not see."

But he sees much also, that he likes: and youth, too, encounters many unwelcome things. Cæcilius has another more censurable remark—"I deem the greatest unhappiness of age to be, that it feels itself odious to the young." *Odious!* Agreeable, rather. For as old persons of good sense are charmed, and feel their burthen of age lightened by the respect and kindness of well disposed young people,—so youth delights in the precepts of Age, guiding to habits of virtue. Methinks, for example, I am as agreeable to you, as you are to me. Besides, you perceive that old age is not only exempt from sloth and languor, but is even busy and energetic: always doing or planning some work, suitable to the tenor of its past life. Need I tell you, that the aged still learn? Thus, we see Solon glorying in his verses, and declaring that he grew old amid daily accessions of knowledge! Thus I, too, near my life's close, have studied Greek; drinking it in, with all the eagerness of my long-felt thirst, to become familiar with the models you now hear me citing. And when I heard that Socrates played on the lute, I wished to do so too; for the ancients learned instrumental music. Certainly, in the language I have labored with success.

IX.

Nor do I now covet the strength of a young man—for *weakness* was another imputation upon old age—any more than in youth I craved the power of a bull or an elephant. What powers we have we should use, and do our best in every undertaking.

What can be more contemptible than the words of Milo, the Crotonian, who, in his latter years, looking at some champions engaged in the race, is said to have gazed at his own limbs and exclaimed with tears—"These are lifeless now!" It was you, driveller, and not your limbs, that were worthless. They, and your huge frame, not your real worth, made you famous. No such whining ever fell from Spurius Ælius, nor from Titus Coruncanius, of old; nor from Publius Crassus, in our day: men whose words were laws to their countrymen, and whose intellects remained clear till their latest breath. A mere orator, I am afraid, may wane

with age, since his talent is not one of pure mind, but of lungs and bodily strength. Yet, I know not how, the thrilling voice electrifies still, in advanced years. I have not lost it; and you see how aged I am. The old man's discourse is easy, quiet and graceful; often winning him an audience by its mild and polished eloquence. And if he cannot himself exemplify that charm, he can teach it to a Scipio and a Lælius.

And what is more delightful than age surrounded by studious and affectionate youth? We cannot deny that the old are vigorous enough to inform and guide the young—to train them in every branch of duty: and is there a nobler task? To me, Cneius and Publius Scipio, and your grandsires, Lucius Æmilius and P. Africanus, ever seemed blest in having a throng of noble youths around them: nor can any real master of usefulness and excellence be deemed unblest, however much his sinews may have withered. Indeed, decay proceeds far oftener from the vices of youth, than from mere old Age; for early lewdness and intemperance, hand over to age a broken down frame. In the discourse which, according to Xenophon, the great Cyrus uttered when extremely old and about to die, he declares that his last years were no more feeble than his youth had been. I remember that in my boyhood, Lucius Metellus (first a Consul, and then for 22 years High Priest,) enjoyed such vigor in the close of life, as left him no need or wish for youth. I need not speak of myself, though it would be like an old man, and quite allowable to do so.

X.

Do you not see in Homer, how frequently Nestor tells of his own exploits? He was then at thrice the usual length of human life; and, in thus telling the truth of himself, he incurred no charge of boastfulness, or of garrulity,—since, as the Poet observes, "words sweeter than honey flowed from his tongue." This captivating strain of eloquence called not for bodily strength: yet, the Grecian General-in-chief, wishes often for ten such as Nestor; never, for ten like Ajax. He doubted not, that if he had ten Nestors, Troy would quickly fall.

But to myself again: I am now in my eighty-fourth year. Would that I could make the boast of Cyrus! This, however, I can say, that although less vigorous now than when I was a soldier or a questor in the Punic war, or consul in Spain, or Military Tribune four years afterwards at Thermopylæ, under Acilius Glabrio,—still, as you perceive, Time has not entirely crushed or unnerved me. The Senate, the Forum,

my friends, clients and guests, call not in vain for my exertions. I never believed in that ancient and much lauded saying: "Be old soon, if you would be old long." On the contrary: I would rather be old for a shorter time, than be old prematurely. Accordingly, no person ever yet desired an interview with me, which I did not grant him. True, I am not so strong as either of you; but neither have you the powers of T. Pontius, the Centurion; yet, is he your superior? Whoever has a reasonable portion of strength, and exerts it to the best advantage, will feel no great need of more. Milo is said to have walked the race course at Olympia, carrying a live bull on his shoulders. Which would you rather have, strength like his, or a genius like that of Pythagoras? Employ the boon of bodily vigor well while it remains; when it is gone, do not bewail it, unless, indeed, young men should crave boyhood, and the middle-aged should covet youth. Life has a fixed course—Nature, a single and a plain path, to each period its own reasonable character is allotted; so that weakness in childhood, impetuosity in youth, a grave demeanor in settled manhood, and a mellow ripeness in old age, are perfectly natural, and ought to be regularly seen in their due succession. No doubt, Scipio, you know the habits of your grandfather's friend, Massinissa, who is now ninety years old. When he sets out to journey on foot, he never will mount a horse; nor when on horseback, will he dismount. No rain, no degree of cold, can make him cover his head: his body is of the most perfect firmness;* so that he still discharges in person, all his kingly duties. Exercise and temperance, therefore, can preserve some of one's original vigor, even in old age.

—
XI.

And have the aged no strength? It is not required of them. By law and usage, they are exempt from all duties that cannot be performed without it; and so far from being called on to do more than we can, we are not obliged to do even so much. It seems, however, that many old people are so infirm, as to be entirely incapable of discharging any duty whatsoever! But this is a defect of ill health, generally—not of age alone. How feeble was that son of P. Africanus, who adopted you! How puny, or rather how totally wanting, was his health! He would otherwise have been a second luminary in the Roman sky; for, to his father's greatness of mind, he joined

far greater learning. What wonder, then, if the aged are sometimes weak, when even the young cannot help being so? Old age, my young friends, must be resisted, and its failings remedied by constant exertion. Yes, we must struggle against it, as against a disease. We must pay strict attention to health—take moderate, but sufficient exercise—and use just so much food and drink as to recruit, and not overpower or impair our energies. Nor is the body alone to be relieved, but the mind and spirits much more. For age suffocates these, as the want of oil extinguishes a lamp. And while the body sinks under its lengthened toils, the mental faculties are refreshed by exercise. Cæcilius, when he mentions the 'dotards of comedy,' means the credulous, besotted and depraved, who have the vices not of mere old age, but of a slothful, spiritless, drowsy old age. As wantonness and lechery belong more to young men than to old, yet not to all the young, but only to the profligate,—so, that species of senile imbecility termed dotage, marks the silly, but not all the old. Appius Claudius, when aged and blind, ruled four sturdy sons and five daughters, with his immense household and numerous dependents: keeping his mind on the stretch, like a bent bow, and never languidly sinking beneath the burthen of time. He maintained not merely influence, but absolute sovereignty, over his family. His servants regarded him with awe, his children with reverence, and all with affection. The good usage and discipline of the olden time prevailed in his house. So dignified and respectable is age, when properly on its guard—when it becomingly maintains its own rights, and yields to no undue influence—when, to the last breath, it preserves its due authority. I like a young man who has some traits of age, and an old man with some characteristics of youth. Such a one may be corporeally aged—but mentally, never.

As to my own pursuits, my seventh book of *Origins** is now on hand; I collect memorials and remains of antiquity; I write out and retouch my speeches in the great causes wherein I have been an advocate;† compose tracts on the civil,

* Cato wrote seven books of *Antiquities*, or, as he entitled them, "*De Originibus*." Two of them related to the foundation of the cities of Italy; the other five to the history of Rome—particularly of the first and second Punic wars. He wrote, also, a treatise on military discipline, [*De Re Militari*,] and one upon country affairs, or Agriculture, [*De Re Rustica*,] besides more than 150 orations. His treatise, *De Re Rustica*, is the only one of his works that remains entire: of the rest, we have only fragments.—*Note to Langhorne's Plutarch: Life of Cato, vol. II., p. 333.*

† He was very eminent as an orator and advocate. His eloquence gained him so much influence and authority, that he was commonly called the Roman Demosthenes.—*Plut. Life of Cato, vol. II., p. 309.*

* *Siccitatem* is the word here translated *firmness*. For Gesner [*Lat. Thesaurus*] says, that "*dryness*" [*siccitus*] "in man's body, is an attribute of strength and vigor."

pontifical and augural laws; I dabble a good deal in Grecian literature;* and, like the Pythagoreans, to improve my memory, I revolve in mind every evening, what I have said, heard and done, that day. These are my intellectual exercises.—the gymnasia of my mind. Toiling in these pursuits, I have little need of bodily strength; I enjoy and serve my friends; I repair frequently to the Senate, and there offer thoughts long and deeply pondered,—sustaining them with mental, not corporeal power. Even if I could not do all these things, I could amuse myself on my couch, meditating them: but the hardy, temperate course of my life, enables me to do them. One who lives continually amid such studies and employments, does not perceive when old age creeps upon him; so gradually and insensibly does he wax old. He does not perish at once; but calmly dies away, through mere length of time.

XII.

Next comes the third imputation upon age; that it is devoid of pleasures. Glorious boon of years—if they do, indeed, free us from youth's besetting snare? My young friends, let me tell you a frequent saying of the renowned Archytas of Tarentum: which was repeated to me there when I was young, attending upon Fabius Maximus. Archytas used to say, that of all Nature's gifts to men, Pleasure was the most baneful; since, for its enjoyment, craving appetites were recklessly and unrestrainedly aroused; and thence came treasons, foreign conspiracies, and the overthrow of nations. In short, he held that the lust of pleasure incited to every crime, and impelled men to all profligacy: that to INTELLECT, Heaven's noblest boon to man, nothing is so fatal as pleasure, and that under the sway of Lust, or in the realm of Voluptuousness, Temperance can have no place—Virtue no home. To render this more clear, he used to say: "Imagine a man to be enjoying the most exquisite and exciting corporeal pleasure of which human faculties are capable. None can doubt that while this enjoyment continued, he could attend to nothing intellectual—could follow out no train of reasoning, or of thought." Hence Archytas concluded, that Pleasure is the most baleful of mischiefs; since if it were but sufficiently great and sufficiently prolonged, it would extinguish the light of Mind.

Nearchus, our Tarentine host, a steady friend of Rome, said he had heard from his forefathers,

*Cato learned Greek very late; yet he improved his eloquence somewhat by the study of Thucydides, but by Demosthenes very greatly.—*II. Plutarch, p. 367.*

that Archytas expressed these sentiments to C. Pontius, the Samnite—father to that Pontius, who vanquished our Consuls, Spurius Posthumus and Titus Veturius, at the Caudine Forks; and that Plato, the Athenian, was present at the conversation. In fact, Plato did visit Tarentum in the consulship of L. Camillus and Appius Claudius.

What think you, is my aim in quoting this language of Archytas? It is to show you, that if reason and wisdom cannot make us despise pleasure, we owe much gratitude to age for disinclining us to that which we ought to shun. Sensuality, the foe of Reason, clogs thought, dims the mental sight, and is utterly alien to Virtue. I reluctantly expelled the valiant Titus Flamininus' brother Lucius, from the Senate,* seven years after his consulship; but I deemed it necessary to set a mark upon licentiousness: for Lucius, when Consul in Gaul, had been persuaded by a mistress during a debauch, to behead a prisoner, who stood convicted of some great crime. Under the consulship of his brother Titus, (my predecessor,) Lucius escaped justice; but I, and Flaccus, my colleague, could not overlook a profligacy so atrocious and abandoned—uniting disgrace to the state, with personal infamy.

XIII.

From old men, who declared that they, when boys, had so heard from the aged, I have learned that Caius Fabricius, was accustomed to marvel greatly at a saying quoted in his presence, during his embassy to king Pyrrhus, by Cineas the Thessalian, from a professor of wisdom, at Athens, to the effect that—"Whatever we do, should have a view to pleasure." Manius Curius and Titus Coruncanius, on hearing this, wished that Pyrrhus and the Samnites might imbibe the doctrine, since it would be easy to subdue them, if they would abandon themselves to sensuality.† Curius was contemporary with Publius Decius, who, in his fourth consulate, had devoted himself for the republic five years before Curius was consul. Fabricius and Coruncanius too, had known Decius; and, as well from that heroic deed of his, as from the tenor of their own lives, must have seen and felt that there is a something

*The Censor had power to degrade and expel Senators or Knights, for vice or crime.

†By the laws of Rome at that time, capital punishment of a citizen was not permitted.

‡When some person once praised sensuality in the hearing of Antiochus, the first Cynic philosopher, he replied, "I pray God that the children of my enemies may have enough of it!"—*Diog. Laert. in Vita Antisth. - Fœnelon, Abrégé de la vie des Philosophes. 130.*

intrinsically noble and glorious, to be coveted for its own sake; a something which the truly exalted mind, contemning sensual pleasure, ever loves and pursues.

But why do I say thus much of sensuality? Because, so far from its being a reproach to Age, that it has no hankering for pleasures,—'tis its very greatest and crowning praise. Is it destitute of banquets, loaded tables and oft filled cups? Neither, then, is it troubled with drunkenness, indigestion and broken slumbers. But if some concession to Pleasure is indispensable—indeed, we cannot well resist her blandishments, she being, as Plato divinely remarks, the *bait of Vice*, that takes men as on a hook—Old Age may highly enjoy temperate repasts, though not excessive feasting. In my boyhood, I frequently saw, returning from evening entertainments the aged Caius Duilius, the son of that Marcus Duilius, who first vanquished the Carthaginians at sea. Caius used often to amuse himself with torches and music, in which no private man had before indulged: such latitude did his great name accord to him.

But why speak of others? I return to myself: In the first place, I have always had club-companions. Clubs were founded in my quæstorship, when the Mysteries of Cybele had been received from Crete.* With those friends, it was my custom to banquet moderately: yet still, there was a glow suited to that brisker period of my life. As time glided on, my whole character grew more gentle and sober. I measured the delight of our entertainments less by the sensual joys, than by the kindly intercourse they occasioned. Justly did our ancestors call the festive assemblage of friends, *convivium*; since it involved a *communio* of life, or *living together*: a better name than that given by the Greeks, who call it a *comotation*, and sometimes a *supping* together: as if they valued most, the grossest and least worthy part of such meetings.

XIV.

The charms of conversation make me delight in well-timed feasting parties, not only with my contemporaries—of whom few remain—but with persons of your age,—and especially with you. Thanks to Old Age! for having heightened my love of such intercourse, and taken away my appetite for meat and drink! If any one likes those grosser joys, however—for I mean not to declare uncompromising war upon Pleasure, of which perhaps a certain degree is natural and proper—even for those joys, methinks Age is not

without a zest. I delight, also, in those organized banquets, with masters presiding—as practised by our ancestors, in the pleasant discourse that prevails after the ancient fashion, while we drink; and in the cups themselves (as in Xenophon's *Symposium*) so nice, and all covered with dew—cooled in summer and warmed in winter. These pleasures I court among the Sabines, and I daily make one at some party of my neighbors, which we prolong, in various talk, till the latest possible hour of night.

"But," says a caviller, "pleasures have not that delicious, tickling joy, to the aged." Very true; but neither do the aged long for them; and the want of a thing is never painful, if you indulge no craving for it. When Sophocles, late in life, was asked if he gave the reins to love? he wisely replied, "The gods have ordered it better for me: I have made a glad escape from that passion, as from a harsh and furious master." To those who nurse a fondness for such joys, the want of them is irksome and torturing; but, to the satisfied and contented, the want is pleasant—er than the fruition—if, indeed, any one can be said to *want* what he does not desire. I maintain that, not to desire is more agreeable than to enjoy.* But grant that the spring-time of life relishes those pleasures more exquisitely. It first enjoys trifles, and then things which Old Age never craves, if it has them not. As, at the Theatre, the spectators in front are most entertained by Turpio Ambivius,† yet, the hindmost, also, are much amused, so Youth, eyeing Pleasure more closely, perhaps enjoys her more; but Age, too, finds enjoyment in a distant and rational contemplation of her charms. And how precious the satisfaction of living one's own master; no longer bound to the service of ambition, strife or hatred, or lust, or appetite of any kind! Surely, a tranquil old age, cheered and supported by a well-stored and an active mind, is among the happiest of conditions! We used to see Caius Gallus (your father's friend, Scipio,) well nigh perish in his eagerness to measure the earth and sky. How often did day overtake him in a task begun at night-fall! How often did night, when he had commenced at the dawn! How he delighted to warn us long before hand, of the sun's and moon's eclipses! Need I mention those who excelled in lighter, yet still refined and subtle pursuits? How Nævius rejoiced in his

* Goldsmith differs—

† A famous comedian.—*Tac. Oral.*

*Punic War!** Plautus in his *Clown*† and his *Cheat*!‡ And I have seen old Livius,§ who wrote a play and had it acted in the consulate of Cato and Tuditanus, six years before I was born, and he then lived till I was grown up. I need not mention the priesthood of P. Licinius Crassus and his devotion to the Civil Law; nor P. Scipio, who was made chief Pontiff within these few days. All these men we have seen, old as they are, eagerly thirsting for knowledge. Marcus Cethegus, called by Ennius the *marrow of Persuasion*—with what earnest zeal did we behold him train himself in speaking! Now what are the delights of banqueting, or of light amusements, or of loose women, compared with those noble pleasures?

Such are the pursuits of Literature. They wax useful and pleasant with the growing genius of their well-trained and wise votaries, agreeably to that just saying of Solon quoted before: 'Old age comes on with daily accessions of knowledge.' Of all pleasures, none can surpass those of the intellect.

—
XV.

I come now to the enjoyments of agriculture, to me, unspeakably charming. Never dulled or clogged by Age, these joys appear to me almost identified with a life of wisdom. For they rest upon and grow out of the EARTH; who never rebels against man, nor fails to return him, with usury, whatever she has received at his hands. Yet, it is not so much her fruitfulness that pleases me, as her power and wonderful nature. Taking the scattered seed into her soft and submissive bosom, she there confines it when harrowed in. Then, the moisture and her embrace having made it warm, she expands it, and draws forth its unfolding verdure. The green shoot, braced and upheld by fibrous roots, gradually increases, springs up into a pointed stalk, and, attaining its full size, is cased in sheaths; whence presently emerging, it shows the ear, regularly formed, and defended by a palisade of spikes against the beaks of little birds.

I will not dwell upon the setting, the growth, and the shooting of vines. My enjoyment of such things is absolutely boundless: you may judge, then, of the soothing pleasure they afford to my declining years. To pass over the wou-

drous vital energy of whatever springs from the ground—producing mighty trunks and branches from a tiny fig-seed, grape-stone, or the minutest germs of other fruits and trees—are not the results of *slips, plantings, twigs, live-roots* and *layers* enough to fill every contemplative mind with admiration? The vine, naturally so frail, and requiring support to keep it from the ground, embraces with its fingerlike tendrils, whatever prop it finds; and gliding in many a fitful vagary, is only restrained by the pruner's knife, from branching forth too luxuriantly in every direction. Early in Spring, the spared stocks have a *bud*, at each joint whence the twig proceeds. From this bud comes the grape, slowly appearing. Enlarged by the sun's heat, and by sap from the earth, it is at first very bitter to the taste; but ripening, it becomes sweet; and, in its vesture of leaves, enjoys a tempered warmth, while it is shielded from the burning rays. Can fruit be more luscious or more beautiful? Not its uses alone, but (as I said before) its cultivation and the study of its nature are pleasures to me; the props in orderly rows—the top-fastenings—the tying and training of the vines—the making *layers* of twigs—the pruning—the grafting! I need not enlarge on irrigation—on ditching or draining—or on repeated hoeings around the vines—which augment so vastly the ground's productiveness; nor on the benefit of manuring, since I have treated of that in my work on Farming, [*De Re Rustica*.] On this last point, the knowing Hesiod says not a word, though he wrote upon agriculture. But Homer, who I believe was many ages earlier,* represents Laertes as soothing his grief at his son's long absence, by tilling and *manuring* the ground.†

Nor are field-crops, meadows, groves and vineyards, the only gladdeners of rural life; so, too, are orchards and gardens, cattle-raising, the workings of bees and the endless variety of flowers. And besides the amusement of planting, there is *grafting*, than which, nothing is more curious in the whole art of husbandry.

—
XVI.

I might enumerate many other pleasures in agriculture; but methinks I have already been tedious on the subject. You will pardon me, how-

ever, at once, because I am far-gone in love for that pursuit, and because Old Age—that I may concede it to be not wholly faultless—is by nature somewhat garrulous. That was the pursuit to which Manius Curius, [Dentatus,] after triumphing over the Sabines, the Samnites, and king Pyrrhus, devoted the last period of his life. When I behold the farm-house of Curius, which stands near my own, I cannot sufficiently admire the moderation of the man, or the steadfast integrity of that age. The Samnites, bringing him a large sum of gold as he sat by his cottage fire, were sternly repelled: “I glory,” said he, “not in the possession of gold, but in ruling its possessors.” Could so noble a spirit fail to make age pleasing? But, not to leave my subject, I return to husbandmen.

Among them have been senators—aye, and aged Senators. L. Quinctius Cincinnatus was ploughing when he received the annunciation that he was chosen Dictator: and, by his mandate, in that office, his general of cavalry Servilius Ahala, slew Spurius Mælius, for attempting to usurp regal power. Curius, too, and other seniors, were in like manner summoned from their farms to the Senate Chamber: whence the summoners were called *viatores*, or pursuivants. Was their old age, then, to be pitied—beguiled and delighted as it was, with tilling the ground? For my part, I doubt if any old age can be happier, whether we regard the good which results—since agriculture benefits all mankind—or the pleasures I have recounted, and the exuberance of whatsoever tends either to nourish man, or to honor the Gods. And, as some persons love these physical enjoyments, I may, by conceding them, make my peace with sensual pleasure. A skilful and industrious farmer's wine and oil-closet, his larder, and all his homestead, are richly stored. Pork, lamb, kid, poultry; milk, cheese and honey, all abound. A garden, the farmers themselves term a second course of dainties. Then hunting and fowling, an employment for leisure hours, make all these viands more savory. Need I expatiate on the verdure of meadows, the symmetry of tree-rows, or the beauty of vineyards and olive groves? No; I must cut my panegyric short. Nothing can be richer for use, or comelier to the eye, than a well-managed farm: and its attractions, far from being impaired, are rendered more exquisite and more alluring, by old age. For where else can the aged more pleasantly enjoy the sunshine or the fireside, or be more healthfully cooled by water or by shade? The young, then, are welcome to their arms and horses, their club and ball, their running and swimming. Let them only leave to us old people, out of so many sports, our four sided and six-sided dice; nay, if they choose, not even

these: without any of them, Old Age can still be happy.

—
XVII.

Xenophon's writings are greatly to be prized, on many accounts. I pray you, continue to read them diligently. In his treatise entitled *The Economist*, [*Oeconomicus*—*Οικονομικός*,] on the art of preserving one's patrimony, how he showers praises upon agriculture! And, to show that in his eyes nothing was more princely than Husbandry, he there introduces Socrates, telling Critobulus, that when the great Lysander of Lacedæmon visited Sardis, with presents from the Allies to Cyrus the Younger, king of Persia, then towering in glory and power, no less than in mind, Cyrus, amongst other marks of civility and kindness to his guest, showed him a tract of ground carefully enclosed and skilfully planted. Lysander, after admiring the stateliness of the trees, all arranged by rows in *quincunxes*, the soil thoroughly tilled and cleared, and the flowers breathing fragrant odours, declared himself enraptured with the taste, skill and industry, of the person who had planned and directed the work. “It was I,” said Cyrus, “who arranged it all: the planning, the rows are all mine; even many of the trees, my own hands planted.” Lysander, eyeing the purple robes of Cyrus, his Persian ornaments of gems and gold, and the magnificence of his whole person, said: “Justly are you called happy; uniting as you do, wealth and power, with virtuous energy!”

Now, this happiness the aged may always enjoy. Age is no hindrance to our retaining various pursuits, but especially agriculture, till the very close of life. We are told that M. Valerius Corvus, prolonged his mortal career tilling the ground, until his hundredth year. Between his first and sixth consulates, there were forty-six years; honors, with him, filling as much of life as is usually thought to precede old age. And his last period was happier than the middle one, because it was less toilsome, and more influential. The very crest, the diadem of Age, is influence—weight of character. How much of it had Lucius Cæcilius Metellus! and how much had Atilius Calatinus, on whom was pronounced that unrivalled eulogy: “Countless nations agree, that he was the foremost man of all his country!” The well known line is carved upon his tomb. Just is his influence in whose praises all tongues unite! What a man was Publius Crassus, the late chief pontiff; and Marcus Lepidus, who succeeded him! Why speak of Paulus Æmilius, or Scipio Africanus? Or of Fabius Maximus, whom I have so often mentioned!

Authority dwelt, not only in their uttered opinions, but in each one's very nod. Age, especially when crowned with honors, has an influence more to be valued, than all Youth's pleasures of sense.

XVIII.

Recollect, however, that all my encomiums on Old Age, apply only to that Old Age, whose foundations were laid in youth. Hence it is a truth, (as I said once, with universal approval,) that it is a wretched age, which needs an advocate to defend it. Neither gray hairs nor wrinkles, can acquire influence, in a moment; it is the final fruit of a whole life well spent.

Even marks of respect that seem trivial and common-place, are, nevertheless, gratifying: such as being courteously saluted, sought for, consulted, given way to, offered a seat, attended abroad, and escorted home; tokens punctiliously observed among us, and in all other civilized communities. Lysander (whom I spoke of before) was wont to say, that Lacedæmon was the most becoming abode of Age; for that nowhere was it so honored; nowhere did it receive such tributes. Nay, there is a tradition, that in Athens, at a play, a very old man having entered the crowded Theatre, his countrymen would not give him a place; but when he approached the Lacedæmonian Ambassadors, who sat together in a space assigned them, they all rose at once, and admitted him to a seat among them. The whole assembly hereupon giving them rounds of applause, one of the number said: "The Athenians know what is right, but will not practise it.*"

In our College of Augurs, are many good regulations; but among the best is this: that the oldest always takes the lead in voting. Nor are the seniors preferred only to those who have surpassed them in the enjoyment of honor; but even to those actually invested with power.

And what corporeal pleasures are comparable to the advantages of high authority and influence? those who have used these noble advantages worthily, methinks have played out the drama of life, without failing, like unskilful performers, in the last act.

"But old people are restless, peevish, passionate and hard to please; nay, it may be said, covetous, also." I answer, these faults are chargeable to the individual's character—not to his age. Peevishness in him, however, and those other frailties, have some excuse; not a perfect, but yet an admissible one: he fancies himself de-

spised, mocked at, contemptuously treated: besides, to a sore and fragile body, every touch is painful. But to good principles and kindly feelings, everything is agreeable. This is daily seen in real life; and is exemplified on the stage, by those brothers in the *Adelphi*.† How churlish the one, how kind and gentle the other! Such is human nature: for every life, any more than all wine, is not soured by age. In old people, I like a well tempered seriousness; but harshness, never. As to covetousness in the aged, I am unable to comprehend it. For, can there be a greater absurdity, than to lay in more and more travelling provision, as less and less of our journey remains?

XIX.

There is yet a fourth alleged cause of vexation and disquiet to my present time of life: The near approach of Death.

Certainly, Death cannot be very far from Old Age. But pitiable, indeed, is the man, who in a long life, has failed to discover that Death is a despicable foe! For, evidently, if it annihilates the soul, we need not fear it: and, if it makes us immortal, it is a blessing to be coveted. No third alternative can be found. Then what have I to fear, if, after death, I am to be either happy or not unhappy?

But who is so foolish, however young, as to deem it certain that he will live, even through the present day? Indeed, Youth has many more chances of death, than Age has. The young take disease more readily; are more severely ill; and are cured with more pain. Thus few attain old age. If mankind generally attained it, they would live better and more wisely: for reason, understanding and wisdom, are in the old, without whom no community could subsist.

But I return to the subject of impending death. Should this be charged upon age, when you see that it is shared so equally by youth? In my noble son, and, Scipio, in your brothers who seemed so plainly marked out for the highest dignities, I saw, and keenly felt, that death is common to every age. "But the young man hopes what the old cannot: to live a great while." Then he hopes foolishly. For it is the height of folly to take doubt for certainty, and falsehood for truth. I grant the old man has no room for hope; but his condition is, on that very account, better than the young man's, since what the latter only hopes for, the old has already attained. The one wishes to live long, the other has actually done so. Yet, gracious Heaven! How

* The common version of the remark is, "The Athenians know what is right, but the Lacedæmonians practise it." And the old man is commonly made to utter it.

† One of the Comedies of Terence.

transitory, at most, is human life ! Grant it the extremest length. Let us count upon the age of the Tartessian king, Argauthonius, who (it is written) reigned at Cadiz eighty-five years, and lived one hundred and twenty : still, no duration can be termed long, which has a close. For, when the close comes, all the past has vanished, leaving only the treasured fruits of prudence, and the remembrance of good actions. Hours, days, months, years fleet away, never to return : while the future is veiled from our view. Every man must be contented with his allotted space of life : for, as a player needs not act entirely through the piece in order to please, provided the particular part he plays be approved ; so a wise man needs not live through the very last scene. A short life is long enough for the practice of honesty and useful virtue. If yours has been lengthened out, you have no more right to grieve than farmers have for the flight of Spring, or the coming of Summer and Autumn. Spring time is the type of youth, promising future fruits : the seasons that follow, are designed for mowing and gathering in the harvests. Now, the fruit, or harvest of age, is the memory, and the abundance of good actions and virtuous qualities.

All things are good, that accord with Nature : and what is more accordant with Nature, than for old men to die ? The young experience the same fate in despite of Nature : so that their death is like the smothering of a flame by a volume of water ; while the aged resemble an exhausted fire, going out spontaneously, without an effort. As green apples require force to pluck them from the tree, but if ripe and mellow, they fall of themselves ; so life, torn rudely from the young, drops away from the old, through mere ripeness. An end so pleasing to me, that in coming near to Death, I seem like a mariner in sight of land and just entering the haven, after a long, wearisome voyage.

XX.

All periods of life have their determinate close, except Old Age. But age lives on, and lives well, so long as it continues able to discharge the duties of its particular station, and to despise Death. Hence it is, sometimes more buoyant and stout-hearted than youth. This was the meaning of Solon's answer to the Tyrant Pisistratus, who demanded, 'On what hope he reposed, in braving him so audaciously ?' "I rely upon my Age," said Solon.

Life ends best, when, with the mind and all the faculties unimpaired, Nature herself undoes the work she has reared. As the builder of a house or ship most easily demolishes it, so Na-

ture, man's maker, puts the best close to his being. Recent workmanship is taken to pieces with difficulty, old, with ease.

The aged, then, have no cause, either to clasp their brief remnant of life with fondness, or to renounce it with levity. Pythagoras bids us not desert our sentry-post of existence, without orders from our General ; that is, God. The wise Solon, somewhere says, that he does not wish his death to occasion any wailing or grief among his friends. Yet, no doubt, he wished for their love. Ennius, I think, has better said,

"Let no vain tears bedew my funeral urn,
Nor kindred o'er my silent ashes mourn."

He justly thinks that Death, which wins us immortality, is no subject for sorrow. A dying man may have some consciousness of pain, though for a short time, especially if he is old. But after death, he has either pleasing sensations or none whatever.

From early youth, we should habituate ourselves to be fearless of death. Without this, no man can preserve his tranquillity. For die he inevitably must ; perhaps on this very day : and how, possibly, can he maintain a calm and steady mind, who is every hour trembling at the prospect of instant death ? A long discussion of this point is needless, when we recollect Lucius Brutus, who fell in freeing his country ; the two Decii, who spurred on their steeds to a voluntary death ; Marcus Atilius Regulus, self-surrendered to torture, rather than violate his faith plighted to an enemy ; the two Scipios resolved, even with their own lifeless bodies, to stop the progress of the Carthaginians ; your grandfather, Lucius Paulus Æmilius, who paid with his life for his colleague's rashness in the foul rout at Cannæ ; Marcus Claudius Marcellus, whose remains a most cruel foe honored with burial-rites ; and when we recollect, above all, the whole Legions of Rome that have marched with courage and alacrity to battle-fields, whence they counted upon no return. And should the aged and wise fear, what beardless and unlettered clowns have despised ?

It seems to me that the exhaustion of amusements and occupations must create a satiety of life. Boyhood has its favorite pursuits ; are they coveted by young men ? Youth also has its employments ; are these at all essential to that steady time of life, termed the *middle age* ? This last, too, has its tastes ; does old age covet them ? Finally, extreme age has some propensities and pursuits, which end at last, as those of each former stage had done ; and then, satiety of life brings on the full, ripe season of death.

XXI.

I see no reason why I should not fearlessly utter to you my thoughts and feelings about death; which, to my view, appears more and more agreeable, as I draw nearer to it. Those dear friends of mine, your illustrious fathers, yet live, as I believe; enjoying that existence, which alone deserves the name of Life. For, while engaged in this corporeal frame, we are burthened with inevitable and toilsome duties and functions: the soul is thrust down from its high home in Heaven, and buried, as it were, in earth: a place utterly unsuited to its divine, unperishing nature. But Providence has infused souls into human bodies, that there might exist beings to guard and till the earth, who, at the same time, contemplating the order of Heaven, might copy it in the plan, and in the even tenor of their own lives. Nor has reason or argument alone brought me to this belief; but the glorious example and weighty authority of the Princes of Philosophy also, have convinced me. I used to hear that Pythagoras and his followers, almost fellow-countrymen of ours, (and, indeed, formerly called the Italian Philosophers,) entertained no doubt that we had spirits extracted from the Divine, Universal Mind. I was firmly persuaded, too, of the doctrine which Socrates unfolded on the last day of his life, touching the Soul's immortality. He, who was pronounced by Apollo's oracle, the wisest of men. I need not multiply words. I am thoroughly convinced, from the speed of the Mind, from its boundless memory of the past and forecast of the future; from its innumerable turns of skill; its wide range of knowledge, and its multiform ingenuity, that the nature, comprising such faculties, cannot be mortal. And from the Mind's unceasing movement, without any extraneous spring of action—for it is purely self-moving—I infer that its motion will be endless; since it never can part from itself. Again: from the Mind's being uncompounded—having no admixture of aught unlike itself—I conclude it to be indivisible; and if so, it cannot perish. Finally, I deem it a strong proof of man's knowing many things before he is born; that boys, in prosecuting difficult studies, seize upon countless ideas, with a quickness which shows that those ideas are not then for the first time perceived, but are rather recalled to memory.

These are Plato's opinions.

XXII.

According to Xenophon, the Elder Cyrus, when about to die, spoke as follows:

"Think not, my dearest sons, that when I am gone hence, I shall cease to exist. During my stay here my soul has never been visible to you; yet, from my actions, you knew that it was in this body. Doubt not that it still exists, though you will not see it. The glory of great men would survive them but a little while, if their minds achieved nothing to make us preserve their memories. Never could I believe that the soul lives while in this perishing frame, but dies on escaping from it; nor that it becomes insensible when released from the senseless corpse. On the contrary, I hold that being freed from all mixture with the body—being a pure and perfect essence—the soul then becomes divinely wise; and, after its human parts have mouldered in death, sees other objects afar, and thoroughly sees whether each particle flies away. For all things return to the place whence they sprung. The soul alone is inviolable, whether present or departing.

"You perceive that nothing so much resembles death as sleep does. Now, the souls of people asleep, most clearly proclaim their own divine nature; for, unfettered then, and ranging at large, they give many foreshadowings of the future. Hence we may infer that they will be, when released entirely from the shackles of flesh.

"If all this is true, then cherish the memory of me, as immortal. But if my soul is to perish with my body—still, adoring the Gods who preserve and rule this beautiful Universe—hold me in pious and inviolate remembrance."

Thus spoke the dying Cyrus.

XXIII.

Let us now look nearer to ourselves. No man will convince me, Scipio, that your father Paulus Æmilius, or your grandsires Paulus and Africanus, or the father,* or the uncle† of Africanus, or the many illustrious men who might so easily be named, ever could have attempted their memorable deeds, had they not seen that Posterity was theirs. To boast a little of myself, as old men are wont, think you that I would have encountered such mighty toils, night and day, in peace and in war, had my fame been destined to the limits of my own life? Would it not have been far better to pass my time in ease and tranquillity, without labor or strife? But my spirit, indescritably lifting itself up, looked steadily for-

*The father of the Elder Africanus was Publius Scipio, who commanded in Spain when Hannibal's brother, Asdrubal, invaded it, early in the 2d Punic War.

†Cneius Scipio, brother of Publius.

ward to Posterity; as if sure of a long life hereafter. In truth, if our souls were not immortal, every good man's heart would not pant, as it does for an immortality of renown. Is there no significance in the fact, that each wisest man dies most contentedly—each silliest, most reluctantly? Think you not, that the spirit whose ken is widest and farthest, sees itself bound to a better existence; and that the duller spirit fails to see this? I am transported at the thought of beholding your fathers, whom I so cherished and loved, nor am I eager to see those only, whom I have personally known, but those also, of whom I have heard, and read, and written. When I set out thither, none shall hold me back; or boil me over again, like Pelias.* Nay, were some god to grant me the privilege of returning to childhood, and puling again in the cradle, I would positively refuse; and not consent, after having run my race, to be recalled from the goal to the starting place. For what solid pleasures does life contain? How full is it not, rather, of trouble! But grant that it has pleasures; they cloy, or else they are shortlived and unsatisfying. Not that I mean to complain of life, as many have done who pass for wise: I am not sorry to have lived, since my life has been such, that methinks I was not born in vain. No; I leave this stage of being as an inn, not as a home: for nature has given it for our transient accommodation; not as our dwelling place.

Glorious day, when I shall fly from this scene of confusion and disgust, to that Heavenly assemblage of spirits! For I shall go, not only to the worthies I spoke of just now, but to my own Cato,† the good and the pious; who should have incurred my ashes, instead of my rendering that sad duty to him. Yet, his spirit, still regarding me with constant love, has gone to those realms whither he knew that I should soon follow. To outward view, I bore my loss of him with fortitude. Not that I failed to grieve; but I consoled myself with the thought, that our parting would be only for a brief season.

For these reasons, Scipio,—for you said that you and Lælius had often marvelled at the fact—Old Age sits lightly upon me; and, far from being oppressive, is even agreeable.

If I mistake, in supposing the human soul immortal, it is a pleasing error, and one which I would not have wrested from me in this life. But if, as certain Minute Philosophers think, I

* Pelias was a king of Thessaly, uncle to Jason: and, when very old, was cut into pieces and boiled by his own daughters, under the delusive hope inspired by Jason's wife, Medea, that she would thereby restore his youth.

† Meaning his son Marcus, mentioned in section XIX.

shall be insensible after death; then I need not fear their ridicule for my error, since they also will be dead. Even if we are not to be immortal, still it is desirable that man should have his own time for annihilation. For Nature has her limit to life, as to all other things; and Age is the finishing of life, as of a play, of which we ought to avoid both weariness and satiety.

This is what I had to say of Old Age. May you attain it,—so as to prove, by your own experience, the truth of my testimony!

THE LADY GERALDINE.

BY SUSAN ARCHER TALLEY.

"Oh, wherefore is thy cheek so pale, and dimmed those eyes of thine?
And wherefore droop thy pearly lids, sweet Lady Geraldine?

Thou that wert mild as summer-waves that ripple on the shore—

Thou that wert as gay as summer flowers, when light winds swept them o'er?"

Still lowly bowed the graceful head and drooped the fringed lid,

And heavily on either lash the tear-drop hung unbid;
And sadder grew the pensive brow, and paler grew the cheek,

And though the lips essayed a smile no answer might they speak.

And thoughtfully the Baron gazed upon the lowly face,
And the mein that was so cold before, now wore a softer grace:

"I'll charm away this pensive mood—I'll win a smile of thine,—

I'll tell to thee a tale of love, sweet Lady Geraldine.

"There was a Knight,—I need not tell his name or his degree—

He loved a lady, proud, I ween, and beautiful as thee;
And long he sought to win a smile in tournament and hall,

But she had other loves than he, and smiled upon them all.

"He dreamed of her by night, and he mused on her by day,

But ever from his pleading gaze she coldly turned away:
He knew he might not win that heart—a heart as proud as thine."

"Faint heart ne'er won a lady fair," said Lady Geraldine.

"He saw her smile on all—and cold she was to him alone—

He might not win a gentle glance, nor e'en a kindly tone;—

No love might warm that careless heart,—a heart as cold as thine—"

"He might not know the lady's heart," said Lady Geraldine.

"The Knight went forth, and sought renown on distant battle field,
And dented was his iron helm, and cloven was his shield;
But in the thickest of the fray, his sword was seen to shine,
And still the name upon his lips, was "Lady Geraldine."

"Then in the flush of victory he sought that lady proud—
They told him that her heart and hand were to another vowed—

Oh, better had he perished on the fields of Palestine!—" Oh, better had he told his love," said Lady Geraldine.

Then earnestly the Baron gazed upon the blushing cheek,
And read the sweet confession there, the lips might never speak.

"Oh, he hath told his love—then say, what answer shall be mine?

Oh, tell me that thou lovest me, sweet Lady Geraldine!"

A smile is on the trembling lip—a tear within the eye—
The yielding of the lily hand was all that made reply;—
But happier of fair and brave, upon the Castled Rhine,
Are the Baron and his beauteous bride, the Lady Geraldine!

Richmond.

Sketches of the Flush Times of Alabama.

(Not found in Pickett's History.)

How the Times served the Virginians. Virginians in a new Country. The Rise, Decline and Fall of the Rag Empire.

The disposition to be proud and vain of one's country, and to boast of it, is a natural feeling, indulged or not in respect to the pride, vanity and boasting, according to the character of the native: but, with a Virginian, it is a passion. It inheres in him even as the flavor of a York river oyster in that bivalve, and no distance of deportation, and no trimmings of a gracious prosperity, and no pickling in the sharp acids of adversity can destroy it. It is a part of the Virginia character—just as the flavor is a distinctive part of the oyster—"which cannot, save by annihilating, die." It is no use talking about it—the thing may be right, or wrong:—like Falstaff's victims at Gadshill, it is past praying for: it is a sort of cocoa grass that has got into the soil, and has so matted over it, and so *fibred* through it, as to have become a part of it; at least there is no telling which is the grass and which the soil; and certainly it is useless labor to try to root it out. You may destroy the soil, but you can't root out the grass.

Patriotism with a Virginian is a noun personal. It is the Virginian himself and something over. He loves Virginia *per se* and *propter se*: he loves her for herself and for himself—because *she* is Virginia and—every thing else beside. He loves

to talk about her: out of the abundance of the heart the mouth speaketh. It makes no odds where he goes, he carries Virginia with him; not in the entirety always—but the little spot he came from is Virginia—as Swedenborg says the smallest part of the brain is an abridgment of all of it. "*Calum non animum mutant qui trans mare currunt*," was made for a Virginian. He never gets acclimated elsewhere; he never loses citizenship to the old Home. The right of expatriation is a pure abstraction to him. He may breathe in Alabama, but he lives in Virginia. His treasure is there and his heart also. If he looks at the Delta of the Mississippi, it reminds him of James River "low grounds;" if he sees the vast prairies of Texas, it is a memorial of the meadows of the Valley. Richmond is the centre of attraction, the *depot* of all that is grand, great, good and glorious. "It is the Kentucky of a place," which the preacher described Heaven to be to the Kentucky congregation.

Those who came many years ago from the borough towns, especially from the vicinity of Williamsburg, exceed, in attachment to their birth-place, if possible, the *émigrés* from the metropolis. It is refreshing in these coarser-monger times, to hear them speak of it:—they remember it when the old burg was the seat of fashion, taste, refinement, hospitality, wealth, wit, and all social graces: when genius threw its spell over the public assemblages and illumined the halls of justice, and when beauty brightened the social hour with her unmatched and matchless brilliancy.

Then the spirited and gifted youths of the College of old William and Mary, some of them just giving out the first scintillations of the genius that afterwards shone refulgent in the forum and the Senate, added to the attractions of a society gay, cultivated and refined beyond all example—even in the Old Dominion. A hallowed charm seems to rest upon the venerable city, clothing its very dilapidation in a drapery of romance and of serene and classic interest: as if all the sweet and softened splendor which invests the "Midsummer Night's Dream" were poured in a flood of mellow and poetic radiance over the now quiet and half "deserted village." There is something in the shadow from the old college walls, cast by the moon upon the grass and sleeping on the sward, that throws a like shadow soft, sad and melancholy upon the heart of the returning pilgrim who saunters out to view again, by moon light, his old *Alma Mater*—the nursing mother of such a list and such a line of statesmen and heroes.

There is nothing presumptuously froward in this Virginiaism. The Virginian does not make broad his phylacteries and crow over the poor

Carolinian and Tennesseian. He does not reproach him with his misfortune of birth-place. No, he thinks the affliction is enough without the triumph. The franchise of having been born in Virginia, and the prerogative founded thereon, are too patent of honor and distinction to be arrogantly pretended. The bare mention is enough. He finds occasion to let the fact be known and then the fact is fully able to protect and take care of itself. Like a ducal title, there is no need of saying more than to name it: modesty then is a becoming and expected virtue: forbearance to boast is true dignity.

The Virginian is a magnanimous man. He never throws up to a Yankee the fact of his birth-place. He feels on the subject as a man of delicacy feels in alluding to a rope in the presence of a person, one of whose brothers "stood upon nothing and kicked at the U. S.," or to a female indiscretion, where there had been scandal concerning the family. So far do they carry this refinement, that I have known one of my countrymen, on occasion of a Bostonian owning where he was born, generously protest that he had never heard of it before. As if honest confession half obliterated the shame of the fact. Yet he does not lack the grace to acknowledge worth or merit in another, wherever the native place of that other: for it is a common thing to hear them say of a neighbor, "he is a clever fellow, *though he did come from New Jersey or even Connecticut.*"

In politics the Virginian is learned much beyond what is written—for they have heard a great deal of speaking on that prolific subject, especially by one or two Randolphs and any number of Barbour's. They read the same papers here they read in Virginia—the *Richmond Enquirer* and the *Richmond Whig*. The democrat stoutly asseverates a fact, and gives the *Enquirer* as his authority with an air that means to say, *that settles it*: while the whig quoted Hampden Pleasants with the same confidence. But the faculty of personalizing every thing which the exceeding social turn of a Virginian gives him, rarely allowed a reference to the paper *eo nomine*; but made him refer to the editor: as "Ritchie said" so and so, or "Hampden Pleasants said" this or that. When two of opposite politics got together, it was amusing, if you had nothing else to do that day, to hear the discussion. I never know a debate that did not start *ab urbe condita*. They not only went back to first principles, but also to first times; nor did I ever hear a discussion in which old John Adams and Thomas Jefferson did not figure—as if an interminable dispute had been going on for so many generations between those disputatious personages: as if the quarrel had begun before time, but was not to end with it. But the strangest part of it to me was, that

the dispute seemed to be going on without poor Adams' having any defence or champion; and never waxed hotter than when both parties agreed in denouncing the man of Braintree as the worst of public sinners and the vilest of political heretics. They both agreed on one thing and that was to refer the matter to the Resolutions of 1798-99; which said Resolutions, like Goldsmith's "Good-Natured Man," arbitrating between Mr. and Mrs. Croaker, seemed so impartial that they agreed with both parties on every occasion.

Nor do I recollect of hearing any question debated that did not resolve itself into a question of constitution—strict construction, &c.,—the constitution being a thing of that curious virtue that its chief excellency consisted in not allowing the government to do any thing; or in being a regular prize fighter that knocked all laws and legislators into a cocked hat, except those of the objector's party.

Frequent reference was reciprocally made to "gorgons, hydras, and chimeras dire," to black cockades, blue lights, Essex junctos, the Reign of Terror, and some other mystic entities—but who or what these monsters were, I never could distinctly learn; and was surprised, on looking into the history of the country, to find that, by some strange oversight, no allusion was made to them.

Great is the Virginian's reverence of great men, that is to say, of great Virginians. This reverence is not Unitarian. He is a Polytheist. He believes in a multitude of Virginia Gods. As the Romans of every province and village had their tutelary or other divinities, besides having divers national gods, so the Virginian of every county has his great man, the like of whom cannot be found in the new country he has exiled himself to. This sentiment of veneration for talent, especially for speaking talent,—this amiable propensity to lionize men, is not peculiar to any class of Virginians among us: it abides in all. I was amused to hear "old Culpeper," as we call him, (by nick-name derived from the county he came from,) declaiming in favor of the Union. "What, gentlemen," said the old man, with a sonorous swell—"what, burst up this glorious Union! and who, if *this* Union is torn up, could write another. No body except Henry Clay and J— S. B.— of Culpeper—and may be they wouldn't—and what then would you do for another?"

The greatest compliment a Virginian can ever pay to a speaker, is to say that he reminds him of a Col. Broadhorn or a Capt. Smith, who represented some royal-named county some forty years or less in the Virginia House of Delegates; and of whom, the auditor, of course, has heard, as he made several speeches in the capitol at Richmond. But the force of the compliment is

somewhat broken, by a long narrative, in which the personal reminiscences of the speaker go back to sundry sketches of the Virginia statesman's efforts, and recapitulations of his sayings, interspersed *par parenthèse*, with many valuable notes illustrative of his pedigree and performances; the whole of which, given with great historical fidelity of detail, leaves nothing to be wished for except the point, or rather, two points, the gist and the period.

It is not to be denied that Virginia is the land of orators, heroes and statesmen; and that, directly or indirectly, she has exerted an influence upon the national councils nearly as great as all the rest of the States combined. It is wonderful that a State of its size and population should have turned out such an unprecedented quantum of talent, and of talent as various in kind as prodigious in amount. She has reason to be proud, and the other States, so largely in her debt, (for from Cape May to Puget's Sound she has colonized the other States and the territories with her surplus talent,) ought to allow her the harmless privilege of a little bragging. In the showy talent of oratory has she especially shone. To accomplish her in this art, the State has been turned into a debating society, and while she has been *talking* for the benefit of the nation, as she thought, the other, and, by nature, less favored States, have been *doing* for their own. Consequently, what she has gained in reputation, she has lost in wealth and *material aids*. Certainly the Virginia character has been less distinguished for its practical than its ornamental traits, and for its business qualities than for its speculative temper. *Cui bono* and utilitarianism, at least until latterly, were not favorite or congenial enquiries and subjects of attention to the Virginia politician. What the Virginian was upon his native soil, that he was abroad: indeed, it may be said that the *amor patriæ*, strengthened by absence, made him more of a conservative abroad than he would have been if he had staid at home; for most of them here would not, had they been consulted, have changed either of the old Constitutions.

It is far, however, from my purpose to treat of such themes. I only glance at them to show their influence on the character as it was developed on a new theatre.

Eminently social and hospitable, kind, humane and generous is a Virginian, at home or abroad. They are so by nature and habit. These qualities and their exercise develop and strengthen other virtues. By reason of these social traits, they necessarily become well-mannered, honorable, spirited, and careful of reputation, desirous of pleasing, and skilled in the accomplishments which please. Their insular position and sparse

population, mostly rural, and easy but not affluent fortunes kept them from the artificial refinements and the strong temptations which corrupt so much of the society of the old world and some portions of the new. There was no character more attractive than that of a young Virginian, fifteen years ago, of intelligence, of good family, education and breeding.

It was of the instinct of a Virginian to seek society: he belongs to the gregarious, not to the solitary division of animals; and society can only be kept up by grub and gab—something to eat, and, if not something to talk about, talk. Accordingly they came accomplished already in the knowledge and the talent for these important duties.

A Virginian could always get up a good dinner. He could also do his share—a full hand's work—in disposing of one after it was got up. The qualifications for hostmanship were signal—the old Udaller himself, assisted by Claud Halleo, could not do up the thing in better style, or with a heartier relish, or a more cordial hospitality. In *petite* manners—the little attentions of the table, the filling up of the chinks of the conversation with small fugitive observations, the supplying the hooks and eyes that kept the discourse together, the genial good humor, which, like that of the family of the good Vicar, made up in laughter what was wanting in wit—in these, and in the science of getting up and in getting through a picnic, or chowder party, or fish fry, the Virginian, like Eclipse, was first, and there was no second. Great was he too at mixing an apple toddy, or mint julep, where ice could be got for love or money; and not deficient, by any means, when it came to his turn to do honor to his own fabrics. It was in this department that he not only shone, but outshone, not merely all others, but himself. Here he was at home indeed. His elocution, his matter, his learning, his education, were of the first order. He could discourse of every thing around him with an accuracy and a fulness which would have put Coleridge's or Mrs. Ellis's table talk to the blush. Every dish was a text, horticulture, hunting, poultry, fishing—(Isaac Walton or Daniel Webster would have been charmed and instructed to hear him discourse piscatory-wise,)—a slight divergence in favor of fox-chasing and a detour towards a horse-race now and then, and continual parentheses of recommendation of particular dishes or glasses—Oh! I tell you if ever there was an interesting man it was he. Others might be agreeable, but he was fascinating, irresistible, not-to-be-done-without.

In the fulness of time the new era had set in—the era of the second great experiment of independence: the experiment, namely, of credit

without capital, and enterprise without honesty. The Age of Brass had succeeded the Arcadian period when men got rich by saving a part of their earnings, and lived at their own cost and in ignorance of the new plan of making fortunes on the profits of what they owed. A new theory, not found in the works on political economy, was broached. It was found out that the prejudice in favor of the metals, (brass excluded,) was an absurd superstition; and that, in reality, any thing else, which the parties, interested in giving it currency, chose, might serve as a representative of value and medium for exchange of property; and as gold and silver had served for a great number of years as representatives, the republican doctrine of rotation in office required they should give way. Accordingly it was decided that Rags, a very familiar character, and very popular and easy of access, should take their place. Rags belonged to the school of progress. He was representative of the then Young America. His administration was not tame. It was very spirited. It was based on the Bonapartist idea of keeping the imagination of the people excited. The leading fiscal idea of his system was to democratize capital, and to make, for all purposes of trade, credit and enjoyment of wealth, the man that had no money a little richer, if any thing, than the man that had a million. The principle of success and basis of operation, though inexplicable in the hurry of the time, is plain enough now: it was faith. Let the public believe that a smutted rag is money, it is money: in other words, it was a sort of financial biology, which made, at night, the thing conjured for, the thing that was seen, so far as the patient was concerned, while the fit was on him—except that now a man does not do his trading when under the mesmeric influence: in the *Flush Times* he did.

This country was just settling up. Marvelous accounts had gone forth of the fertility of its virgin lands; and the productions of the soil were commanding a price remunerating slave labor as it had never been remunerated before. Emigrants came flocking in from all quarters of the Union, especially from the slave-holding States. The new country seemed to be a reservoir, and every road leading to it a vagrant stream of enterprise and adventure. Money, or what passed for money, was the only cheap thing to be had. Every cross-road and every avocation presented an opening—through which a fortune was seen by the adventurer in near perspective. Credit was a thing of course. To refuse it—if the thing was ever done—were an insult for which a bowie-knife were not a too summary or exemplary a means of redress. The State banks were issuing their bills by the sheet, like a patent steam printing-press its issues; and

no other showing was asked of the applicant for the loan than an authentication of his great distress for money. Finance, even in its most exclusive quarter, had thus already got, in this wonderful revolution, to work upon the principles of the charity hospital. If an overseer grew tired of supervising a plantation and felt a call to the mercantile life, even if he omitted the compendious method of buying out a merchant wholesale, stock, house and good will, and laying down, at once, his bull-whip for the yard-stick—all he had to do was to go on to New York, and present himself in Pearl Street with a letter avouching his citizenship, and a clean shirt, and he was regularly given a through ticket to speedy bankruptcy.

Under this stimulating process prices rose like smoke. Lots in obscure villages were held at city prices; lands, bought at the minimum cost of government, were sold at from thirty to forty dollars per acre, and considered dirt cheap at that. In short, the country had got to be a full ante-type of California, in all except the gold. Society was wholly unorganized: there was no restraining public opinion: the law was well nigh powerless—and religion scarcely was heard of except as furnishing the oaths and *technics* of profanity. The world saw a fair experiment of what it would have been, if the fiat had never been pronounced which decreed subsistence as the price of labor.

Money, got without work, by those unaccustomed to it, turned the heads of its possessors, and they spent it with a recklessness like that with which they gained it. The pursuits of industry neglected, riot and coarse debauchery filled up the vacant hours. "Where the carcass is, there will the eagles be gathered together;" and the eagles that flocked to the south-west, were of the same sort as the *black eagles* the Duke of Saxe Weimar saw on his celebrated journey to the Natural Bridge. "The cankers of a long peace and a calm world,"—there were no Mexican wars and Filibuster expeditions in those days—gathered in the villages and cities by scores.

Even the little boys caught the taint of the general infection of morals: and I know one of them—Jim Ellett by name—to give a man ten dollars to hold him up to bet at the table of a faro-bank. James was a fast youth; and I sincerely hope he may not fulfil his early promise, and some day be assisted up still higher.

The groceries—*vulgice*—doggeries, were in full blast in those days, no village having less than a half-dozen all busy all the time: gaming and horse racing were polite and well patronised amusements. I knew of a Judge to adjourn two courts, (or court twice,) to attend a horse race

at which he officiated judicially and ministerially, and with more appropriateness than in the judicial chair. Occasionally the scene was diversified by a murder or two, which though perpetrated from behind a corner, or behind the back of the deceased, whenever the accused chose to stand his trial, was always found to be committed in self-defence, securing the homicide an honorable acquittal at the hands of his peers.

The old rulers of business and the calculations of prudence were alike disregarded, and profligacy, in all the departments of the *crimen falsi*, held riotous carnival. Larceny grew not only respectable, but genteel, and ruffled it in all the pomp of purple and fine linen. Swindling was raised to the dignity of the fine arts. Felony came forth from its covert, put on more seemly habiliments and took its seat with unabashed front in the upper places of the synagogue. Before the first circles of the patrons of this brilliant and dashing villainy, blunt honesty felt as abashed as poor Halbert Glendinning by the courtly refinement and supercilious airs of Sir Pierce Shafton.

Public office represented, by its incumbents, the state of public morals with some approach to accuracy. Out of sixty-six receivers of public money in the new States, sixty-two were discovered to be defaulters; and the agent, sent to look into the affairs of a peccant office-holder in the south-west, reported him minus some tens of thousands, but advised the government to retain him, for a reason one of *Æsop's fables* illustrates: the agent ingeniously surmising that the appointee succeeding would do his stealing without any regard to the proficiency already made by his predecessor; while the present incumbent would probably consider, in mercy to the treasury, that he *had* done something of the pious duty of providing for his household.

There was no petit larceny: there was all the difference between stealing by the small and the "operations" manipulated, that there is between a single assassination and an hundred thousand men killed in an opium war. The placeman robbed with the gorgeous magnificence of a Governor-General of Bengal.

The man of straw, not worth the buttons on his shirt, with a sublime audacity, bought lands and negroes, and provided times and terms of payment which a Wall street capitalist would have to re-cast his arrangements to meet.

Oh, Paul Clifford and Augustus Tomlinson, philosophers of the road, practical and theoretical! if ye had lived to see those times, how great an improvement on your ruder scheme of distribution would these gentle arts have seemed; arts whereby, without risk, or loss of character, or the vulgar barbarism of personal violence, the

same beneficial results flowed, with no greater injury to the superstitious of moral education!

With the change of times and the imagination of wealth easily acquired came a change in the thoughts and habits of the people. "Old times were changed—old manners gone." Visions of affluence, such as crowded Doctor Samuel Johnson's mind, when advertising a sale of Thrall's Brewery, and casting a soft sheep's eye towards Thrall's widow, thronged upon the popular fancy. Avarice and hope joined partnership. It was strange how the reptile parts of humanity, as at a faro table, warmed into life beneath their heat. The *cacoethes accrescendi* became epidemic. It seized upon the universal community. The pulpits even were not safe from its insidious invasion. What men anxiously desire they willingly believe; and all believed a good time was coming—nay, had come.

"Commerce was king"—and Rags, Tag and Bobtail his cabinet council. Rags was treasurer. Banks, chartered on a specie basis, did a very flourishing business on the promissory notes of the individual stockholders ingeniously substituted in lieu of cash. They issued ten for one, *the one* being fictitious. They generously loaned all the directors could not use themselves, and were not choice whether Bardolph was endorser for Falstaff, or Falstaff borrowed on his own proper credit, or the funds advanced him by Shallow. The stampede towards the golden temple became general: the delusion prevailed far and wide that this thing was not a burlesque on commerce and finance. Even the directors of the banks began to have their doubts whether the intended swindle was not a failure. Like Lord Clive, when reproached for extortion to the extent of some millions in Bengal, they exclaimed, after the bubble burst, "When they thought of what they had got, and what they might have got, they were astounded at their own moderation."

The old capitalists for a while stood out. With the Tory conservatism of cash in hand, worked for, they could not reconcile their old notions to the new regime. They looked for the thing's ending, and then their time. But the stampede still kept on. Paper fortunes still multiplied—houses and lands changed hands—real estate seasawed up as morals went down the other end of the plank—men of straw, corpulent with bank bills, strutted past them on 'Change. They began, too, to think there might be something in this new thing. Peeping cautiously, like hedgehogs out of their holes, they saw the stream of wealth and adventurers passing by—then, looking carefully around, they inched themselves half way out—then, sallying forth and snatching up a morsel, ran back; until, at last, grown more bold, they ran out too with their hoarded store,

in full chase with the other unclean beasts of adventure. They never got back again. Jonah's gourd withered one night, and next morning the vermin that had nestled under its broad shade were left unprotected, a prey to the swift retribution that came upon them. They were left naked, or only clothed themselves with cursing, (the specie circulation of the banks,) as with a garment. To drop the figure: Shylock himself couldn't live in those times, so reversed was every thing. Shaving paper and loaning money at a usury of fifty per cent., was for the first time since the Jews left Jerusalem, a breaking business to the operator.

The condition of society may be imagined:—vulgarity—ignorance—fussy and arrogant pretension—unmitigated rowdiness—bullying insolence, if they did not rule the hour, seemed to wield unchecked dominion. The workings of these choice spirits were patent upon the face of society; and the modest, unobtrusive, retiring men of worth and character, (for there were many, perhaps a large majority of such,) were almost lost sight of in the hurly-burly of those strange and shifting scenes.

Even in the professions were the same characteristics visible. Men dropped down into their places as from the clouds. No body knew who or what they were, except as they claimed, or as a surface view of their characters indicated. Instead of taking to the highway and magnanimously calling upon the wayfarer to stand and deliver, or to the fashionable larceny of credit without prospect or design of paying, some unscrupulous horse-doctor would set up his sign as "Physician and Surgeon," and draw his lancet on you, or fire at random a box of his pills into your bowels, with a vague chance of hitting some disease unknown to him, but with a better prospect of killing the patient, whom or whose administrator he charged some ten dollars a trial for his workmanship.

A superannuated justice or constable in one of the old States was metamorphosed into a lawyer; and though he knew not the distinction between a *fee tail* and a *female*, would undertake to construe, off-hand, a will involving all the subtleties of *uses and trusts*.

But this state of things could not last forever: society cannot always stand on its head with its heels in the air.

The Jupiter Tonans of the White House saw the monster of a free credit prowling about like a beast of apocalyptic vision, and marked him for his prey. Gathering all his bolts in his sinewy grasp, and standing back on his heels, and waving his wiry arm, he let them all fly hard and swift upon all the hydra's heads. Then came a crash as "if the ribs of Nature broke," and a

scattering like the bursting of a thousand magazines, and a smell of brimstone as if Pandemonium had opened a window next to earth for ventilation—and all was silent. The beast never stirred in his tracks. To get down from the clouds to level ground, the Specie Circular was issued without warning, and the splendid lie of a false credit burst into fragments. It came in the midst of the dance and the frolic—as Tam O' Shanter came to disturb the infernal glee of the warlocks and to disperse the rioters. Its effect was like that of a general creditor's bill in the chancery court, and a marshalling of all the assets of the trades-people. Gen. Jackson was no fairy; but he did some very pretty fairy work, in converting the bank bills back again into rags and oak leaves. Men worth a million were insolvent for two millions: promising young cities marched back again into the wilderness. The ambitious town plat was re-annexed to the plantation, like a country girl taken home from the city. The frolic was ended, and what head-aches and feverish limbs the next morning! The retreat from Moscow was performed over again, and "Devil take the hindmost" was the tune to which the soldiers of fortune marched. The only question was as to the means of escape and the nearest and best route to Texas. The sheriff was as busy as a militia adjutant on review day; and the lawyers were mere wreckers earning salvage. Where are ye now my ruffling gallants? Where now the braw clothes and watch chains and rings and fine horses? Alas! for ye—they are glimmering among the things that were—the wonder of an hour! They live only in memory, as unsubstantial as the promissory notes ye gave for them. When it came to be tested, the whole matter was found to be hollow and fallacious. Like a sum cyphered out through a long column, the first figure an error, the whole and all the parts were wrong throughout the entire calculation.

Such is a charcoal sketch of the interesting region—now inferior to none in resources and the character of its population—during the *FLUSH TIMES*; a period constituting an episode in the commercial history of the world—the reign of humbug and wholesale insanity, just overthrown in time to save the whole country from ruin. But while it lasted, many of our countrymen came into the South-West in time to get "a benefit." The *auri sacra fames* is a catching disease. Many Virginians had lived too fast for their fortunes, and naturally desired to recuperate: many others, with a competency, longed for wealth; and others again, with wealth, yearned—the common frailty—for still more. Perhaps some friend or relative, who had come out, wrote back flattering accounts of the El Dorado, and fired with

dissatisfaction those who were doing well enough at home, by the report of his real or imagined success; for who that ever moved off was not "doing well" in the new country, himself or friends being chroniclers?

Superior to most of the settlers in elegance of manners and general intelligence, it was the weakness of the Virginian to imagine he was superior too in the essential art of being able to hold his hand and make his way in a new country, and especially *such* a country, and at *such* a time. What a mistake that was! The times were out of joint. It was hard to say whether it were more dangerous to stand still or to move. If the emigrant stood still, he was consumed, by no slow degrees, by expenses: if he moved, ten to one he went off in a galloping consumption by a ruinous investment. Expenses then—necessary articles about three times as high, and extra articles still more extra-priced—were a different thing in the new country from what they were in the old. In the old country, a jolly Virginian, starting the business of free living on a capital of a plantation and fifty or sixty negroes, might reasonably calculate, if no ill luck befel him, by the aid of a usurer and the occasional sale of a negro or two, to hold out without declared insolvency, until a green old age. His estate melted, like an estate in chancery, under the gradual thaw of expenses; but in this fast country, it went by the sheer cost of living—some *poker* losses included—like the fortune of the confectioner in California, who failed for \$100,000 in the six months keeping of a candy-shop. But all the habits of his life, his taste, his associations, his education—every thing—the trustiness of his disposition—his want of business qualifications—his sanguine temper—all that was Virginian in him, made him the prey, if not of imposture, at least of unfortunate speculations. Where the keenest jockey often was bit, what chance had *he*? About the same that the verdant Moses had with the venerable old gentleman, his father's friend, at the Fair, when he traded the Vicar's pony for the green spectacles. But how could he believe it? how *could* he believe that that stuttering, grammarless Georgian, who had never heard of the resolutions of '98, could beat him in a land trade? "Have no money dealings with my father," said the friendly Martha to Lord Nigel, "for, idiot though he seems, he will make an ass of thee." What a pity some monitor, equally wise and equally successful with old Trapbois' daughter, had not been at the elbow of every Virginian! "Twad frae monie a blunder free'd him—an foolish notion."

If he made a bad bargain, how could he expect to get rid of it? He knew nothing of the elaborate machinery of ingenious chicane,—such

as feigning bankruptcy—fraudulent conveyances—making over to his wife—running property—and had never heard of such tricks of trade as sending out coffins to the graveyard with negroes inside, carried off by sudden spells of imaginary disease, to be "resurrected," in due time, grinning, on the banks of the Brazos.

The new philosophy, too, commended itself to his speculative temper. He readily caught at the idea of a new spirit of the age having set in, which rejected the laws of Poor Richard as being as much out of date as his almanacs. He was already, by the great rise of property, compared to his condition under the old-time prices, rich; and what were a few thousands of debt, which two or three crops would pay off, compared to the value of his estate? (He never thought that the value of property might come down, while the debt was a fixed fact.) He lived freely, for it was a liberal time, and liberal fashions were in vogue, and it was not for a Virginian to be behind others in hospitality and liberality. He requested credit and security, and, of course, had to stand security in return. When the crash came, and no "accommodations" could be had, except in a few instances, and in those on the most ruinous terms, he fell an easy victim. They broke by neighborhoods. They usually endorsed for each other, and when one fell—like the child's play of putting bricks on end at equal distances, and dropping the first in the line against the second, which fell against the third, and so on to the last—all fell; each got broke as security, and yet few or none were able to pay their own debts! So powerless of protection were they in those times, that the witty H. G. used to say they reminded him of an oyster, both shells torn off, lying on the beach, with the sea-gulls screaming over him; the only question being, *which* should "gobble him up."

There was one consolation—if the Virginian involved himself like a fool, he suffered himself to be sold out like a gentleman. When his card-house of visionary projects came tumbling about his ears, the next question was, the one Webster plagiarised—"Where am I to go?" Those who had fathers, uncles, aunts, or other like dernier resorts in Virginia, limped back, with feathers moulted and crestfallen, to the old stamping ground, carrying the returned Californian's fortune of \$10,000—six bits in money, and the balance in experience. Those who were in the condition of the prodigal, (barring the father, the calf—the fatted one I mean—and the fiddle,) had to turn their accomplishments to account; and many of them having lost all by eating and drinking, sought the retributive justice from meat and drink, which might, at least, support them in poverty. Accordingly, they kept tavern, and

made a barter of hospitality, a business, the only disagreeable part of which was receiving the money, and the only one I know of for which a man can eat and drink himself into qualification. And while I confess I never knew a Virginian, out of the State, to keep a bad tavern, I never knew one to draw a solvent breath from the time he opened house, until death or the sheriff closed it.

Others again got to be, not exactly overseers, but some nameless thing, the duties of which were nearly analogous, for some more fortunate Virginian, who had escaped the wreck, and who had got his former boon companion to live with him on board, or other wages, in some such relation that the friend was not often found at table at the dinings given to the neighbors, and had got to be called Mr. Flournoy instead of Bob, and slept in an out house in the yard, and only read the *Enquirer* of nights and Sundays.

Some of the younger scions that had been transplanted early, and stripped of their foliage at a tender age, had been turned into birches for the corrective discipline of youth. Yes; many, who had received academical or collegiate educations, disregarding the allurements of the highway—turning from the gala-day exercise of ditching—scorning the effeminate relaxation of splitting rails—heroically led the Forlorn Hope of the battle of life, the corps of pedagogues of country schools—*academies*, I beg pardon for not saying; for, under the Virginia economy, every cross-road log-cabin, where boys were flogged from B-a-k-e-r to Constantinople, grew into the dignity of a sort of runt college; and the teacher vainly endeavored to hide the meanness of the calling beneath the sonorous *sobriquet* of Professor. "Were there no wars?" Had *all* the oysters been opened? Where was the regular army? Could not interest procure service as a deck-hand on a steamboat? Did not stagedriver, with a contract for running at night, through the prairies in mid-winter, want help, at board wages and sweet lying in the loft, when off duty, thrown in? What right had the Dutch Jews to monopolize *all* the peddling? "To such vile uses may we come at last, Horatio." The subject grows melancholy. I had a friend on whom this catastrophe descended. Tom Edmundson was a buck of the first head—gay, witty, dashing, vain, proud, handsome and volatile, and, withal, a dandy and lady's man to the last intent in particular. He had graduated at the University, and had just settled with his guardian and received his patrimony of ten thousand dollars in money. Being a young gentleman of enterprise, he sought the alluring fields of South-Western adventure, and found them in this State. Before he well knew the condition of his exchequer, he had

made a permanent investment of one-half of his fortune in cigars, Champagne, trinkets, huggies, horses, and current expenses, including some small losses at poker, which game he patronised merely for amusement; and found that it diverted him a good deal, but diverted his cash much more. He invested the balance, on private information kindly given him, in "*Choctaw Floats*;" a most lucrative investment, it would have turned out, but for the facts: 1. That the Indians never had any title; 2. The white men who kindly interposed to act as guardians for the Indians did not have the Indian title; and 3dly. The land, left subject to entry, if the "*Floats*" had been good, was not worth entering. "These imperfections off its head," I know of no fancy stock I would prefer to a "*Choctaw Float*." "Brief, brave and glorious" was "Tom's young career." When Thomas found, as he did shortly, that he had bought \$5,000 worth of moonshine, and had no title to it, he honestly informed his landlord of the state of his "*fiscality*," and that worthy kindly consented to take a new buggy, at half-price, in payment of the old balance. The horse, a nick-tailed trotter, Tom had raffled off; but omitting to require cash, the process of collection resulted in his getting the price of one chance—the winner of the horse magnanimously paying his subscription. The rest either had gambling offsets, or else were not prepared just at any one particular, given moment, to pay up, though always ready, generally and in a general way.

Unlike his namesake, Tom and his landlady were not—for a sufficient reason—very gracious; and so, the only common bond, Tom's money, being gone, Tom received "notice to quit" in regular form.

In the burly burly of the times, I had lost sight of Tom for a considerable period. One day, as I was travelling over the hills in Greene, by a cross-road, leading me near a country mill, I stopped to get water at a spring at the bottom of a hill. Clambering up the hill, after remounting, on the other side, the summit of it brought me to a view, through the bushes, of a log country school-house, the door being wide open, and who did I see but Tom Edmundson, dressed as fine as ever, sitting back in an arm-chair, one thumb in his waistcoat armhole, the other hand brandishing a long switch, or rather pole. As I approached a little nearer, I heard him speak out: "Sir—Thomas Jefferson, of Virginia, was the author of the Declaration of Independence—mind that. I thought every body knew that—even the Georgians." Just then he saw me coming through the bushes and entering the path that led by the door. Suddenly he broke from the chair of state, and the door was slammed to,

and I heard some one of the boys, as I passed the door, say—"Tell him he can't come in—the master's sick." This was the last I ever saw of Tom. I understand he afterwards moved to Louisiana, where he married a rich French widow, having first, however, to fight a duel with one of her sons, whose opposition could not be appeased, until some such expiatory sacrifice to the manes of his worthy father was attempted: which failing, he made rather a *lame* apology for his zealous indiscretion—the poor fellow could make no other—for Tom had unfortunately fixed him for visiting his mother on crutches the balance of his life.

One thing I will say for the Virginians—I never knew one of them, under any pressure, extemporize a profession. The sentiment of reverence for the mysteries of medicine and law was too large for a deliberate quackery; as to the pulpit, a man might as well do his starving without the hypocrisy.

But others were not so nice. I have known them to rush, when the wolf was after them, from the counting-house or the plantation, into a doctor's shop or a law office, as if those places were the sanctuaries from the avenger:—some pretending to be doctors that did not know a liver from a gizzard, administering medicine by the guess, without knowing enough of pharmacy to tell whether the stuff exhibited in the big-bellied blue, red and green bottles at the show-windows of the apothecaries' shops, was given by the drop or the half-pint.

Divers others left, but what became of them, I never knew any more than they knew what becomes of the sora after frost.

Many were the instances of suffering; of pitiable misfortune, involving and crushing whole families; of pride abased; of honorable sensibilities wounded; of the provision for old age destroyed; of the hopes of manhood overcast; of independence dissipated, and the poor victim, without help, or hope, or sympathy, forced to petty shifts for a bare subsistence, and a ground-scurf for what, in happier days, he threw away. But there were too many examples of this sort for the expenditure of a useless compassion; just as the surgeon after a battle grows case-hardened, from an excess of objects of pity.

My memory, however, fixes itself on one honored exception, the noblest of the noble, the heat of the good. Old Major Willis Wormley had come in long before the *new era*. He belonged to the old school of Virginians. Nothing could have torn him from the Virginia he loved, as Jacopi Focari, Venice, but the marrying of his eldest daughter, Mary, to a gentleman of Alabama. The Major was something between, or made of about equal parts, of Uncle Toby and

Mr. Pickwick, with a slight flavor of Mr. Micawber. He was the soul of kindness, disinterestedness and hospitality. Love to every thing that had life in it, burned like a flame in his large and benignant soul; it flowed over in his countenance and glowed through every feature, and moved every muscle in the frame it animated. The Major lived freely, was rather corpulent, and had not a lean thing on his plantations: the negroes; the dogs; the horses; the cattle; the very chickens, wore an air of corpulent complacency, and bustled about with a good-humored rotundity. There was more laughing, singing and whistling at "Holywood," than would have set up a dozen Irish fairs. The Major's wife had, from a long life of affection, and the practice of the same pursuits, and the indulgence of the same feelings and tastes, got so much like him, that she seemed a feminine and modest edition of himself. Four daughters were all that remained in the family—two had been married off—and they had no son. The girls ranged from sixteen to twenty-two, fine, hearty, whole-souled, wholesome, cheerful lasses, with constitutions to last, and a flow of spiritlike mountain springs—not beauties, but good house-wife girls, whose open countenances, and neat fingers, and rosy cheeks, and laughing eyes, and frank and cordial manners, made them, at home, abroad, on horse-back or on foot, at the piano or discoursing on the old English books, or Washington Irving's sketch book, a favorite in the family ever since it was written, as entertaining and as well calculated to fix solid impressions on the heart, as any four girls in the country. The only difficulty was, they were so much alike, that you were put to fault which to fall in love with. They were all good house-wives, or women, rather. But Mrs. W., or Aunt W., as we called her, was as far ahead of any other woman in that way, as could be found this side of the Virginia border. If there was anything good in the culinary line that she couldn't make, I should like to know it. The Major lived on the main stage road, and if any decently dressed man ever passed the house after sundown, he escaped by sheer accident. The house was greatly visited. The Major knew every body, and every body knew the Major. The stage coach couldn't stop long; but in the hot summer days, about noon, as the driver tooted his horn at the top of the red hill, two negro boys stood opposite the door, with trays of the finest fruit, and a pitcher of cider for the refreshment of the wayfarers. The Major himself being on the look-out, with his hand over his eyes, bowing—as he only could bow—vaguely into the coach, and looking wistfully, to find among the passengers, an acquaintance whom he could prevail upon to get out and stay a week

with him. There wasn't a poor neighbor to whom the Major had not been as good as an insurer, without premium, for his stock, or for his crop; and from the way he rendered the service, you would think he was the party obliged—as he was.

This is not, in any country I have ever been in, a money-making business; and the Major, though he always made good crops, must have broke at it long ago, but for the fortunate death of a few Aunts, after whom the girls were named, who, paying their several debts of nature, left the Major the means to pay his less serious but still weighty obligations.

The major—for a wonder, being a Virginian—had no partizan politics. He could not have. His heart could not hold any thing that implied a warfare upon the thoughts or feelings of others. He voted all the time for his friend, that is, the candidate living nearest to him, regretting, generally, that he did not have another vote for the other man.

It would have done a Camanche Indian's heart good to see all the family together—grandchildren and all—of a winter evening, with a guest or two, to excite sociability a little—not company enough to embarrass the manifestations of affection. Such a concordance—as if all hearts were attuned to the same feeling—the old lady knitting in the corner—the old man smoking his pipe opposite—both of their fine faces radiating in the pauses of the laugh, the jest, or the caress, the infinite satisfaction within.

It was enough to convert an Abolitionist to see the old Major when he came home from a long journey of two days to the county town: the negroes running in a string to the buggy; this one to hold the horse, that one to help the old man out, and the others to inquire how he was; and, to observe the benignity with which—the kissing of the girls and the old lady hardly over—he distributed a piece of calico here, a plug of tobacco there, or a card of *town* ginger-bread to the little snow-balls, that grinned around him: what was given being but a small part of the gift, divested of the kind, cheerful, rollicking way the old fellow had of giving it.

The Major had given out his autograph, (as had almost every body else,) as endorser on three several bills of exchange, of even tenor and date, and all maturing at or about the same time. His friend's friend failed to pay as he or his firm agreed, the friend himself did no better, and the Major, before he knew anything at all of his danger, found a writ served upon him, and was told by his friend that he was dead broke, and all he could give him was his sympathy: the which, the Major as gratefully received as if it was a legal tender and would pay the debt. The Ma-

jor's friends advised him he could get clear of it: that notice of protest not having been sent to the Major's post office, released him: but the Major wouldn't hear of such a defence: he said *his* understanding was that he was to pay the debt if his friend didn't; and to slip out of it by a quibble, was little better than pleading the gambling act. Besides, what would the lawyers say? And what would be said by his old friends in Virginia, when it reached their ears that he had plead want of notice, to get clear of a debt, when every body knew it was the same thing as if he had got notice. And if this defence were good at law, it would not be in equity; and if they took it into chancery, it mattered not what became of the case, the property would all go, and he never could expect to see the last of it. No, no; he would pay it, and had as well set about it at once.

The rumor of the Major's condition spread far and wide. It reached old N. D., "an angel," whom the Major had "entertained," and one of the few that ever travelled that road. He came, post haste, to see into the affair; saw the creditor; made him, upon threat of defence, agree to take half of the amount, and discharge the Major; advanced the money, and took the Major's negroes,—except the house-servants,—and put them on his Mississippi plantation to work out the debt.

The Major's heart pained him at the thought of the negroes going off: he couldn't witness it; though he consoled himself with the idea of the discipline and exercise being good for the health of sundry of them who had contracted sedentary diseases.

The Major turned his house into a tavern—that is, changed its name—put up a sign, and three weeks afterwards, you couldn't have told that anything had happened. The family were as happy as ever—the Major never having put on airs of arrogance in prosperity, felt no humiliation in adversity: the girls were as cheerful, as bustling and as light-hearted as ever, and seemed to think of the duties of hostesses as mere bagatelles, to enliven the time. The old Major was as profuse of anecdotes as ever, and never grew tired of telling the same ones to every new guest; and yet, the Major's anecdotes were all of Virginia growth, and not one of them under the legal age of 21. If the Major had worked his negroes as he had those anecdotes, he would have been able to pay off the bills of exchange without any difficulty.

The old lady and the girls laughed at the anecdotes, though they must have heard them at least a thousand times, and knew them by heart; for the Major told them without the variations: and the other friends of the Major laughed too:

indeed, with such an air of thorough benevolence, and in such a truly social spirit did the old fellow proceed "the tale to unfold," that a Cassius like rascal that wouldn't laugh, whether he saw anything to laugh at or not, ought to have been sent to the Penitentiary for life—half of the time to be spent in solitary confinement.

Editor's Table.

We find in a recent number of "To-Day," a very excellent literary journal of Boston, some judicious remarks on the forthcoming monthly Magazine of Mr. Putnam, in the course of which occurs the following passage.

"In the next place, the magazine should be free from any exhibition of sectional or local feelings. Such prejudices in literary matters are particularly out of place. We think, that, for some reasons, the city of New York is the best place for the publication of an American magazine. But it should be distinctly kept in mind, that it really is an American magazine, and not a New York magazine. James Fenimore Cooper used to insist that the people of New York, with reasons enough for an honest pride in their city, were proud of the wrong things. New York is not, and cannot be, to this country, what London is to the British empire. We feel sure that the really patriotic inhabitants of that city rejoice with us, that no such absolute centralization of opinion can take place here. It is one of the best features of our institutions, that no man, in any part of the country, feels himself, as a provincial, of less weight than the citizen of a metropolis. Now, while this is so, it is simply absurd for the people in any one city to talk of their "Broadway," of their theatres, of their concerts, of opinions and phases of life among them, as if these gave the law to the country, and regulated the feelings of the people. It is absurd for a journal in one place to adopt a systematic disparagement of the authors of another place, as if they were as such inferior. Excellence in literature is absolute; and any attempts to measure it by a local standard are founded in error. We hope, that, whoever may be entrusted with the conduct of this new American magazine will have really a whole American heart, and will not allow its pages to be disfigured by any of those local prejudices which have heretofore almost invariably characterized journals of literary pretensions emanating from the city of New York."

It is scarcely necessary for us to say that in every word of this we heartily concur, and yet for the life of us, we could not read the paragraph without a smile. The fact is so well known that it need hardly be stated, that of all places on this globe of ours, Boston is *par excellence* the very home of literary prejudices. For years past, a *coterie* of very amiable and highly cultivated gentlemen, living within cry of Harvard Uni-

versity, have been engaged in the innocent occupation of puffing each other, every three months, in the North American Review, varying the monotony of these pleasant labours with an occasional "snub" of the literary pretensions of some other less-enlightened quarter of the country, and at stated intervals meeting together to eat good dinners and "with one voice about the space of two hours" to cry out "Great is Diana of the Ephesians," mighty and learned is this Boston of our building, what other city shall attain unto the glory thereof? It has been a favorite theory with them that pure English could not possibly be written by any other than a Harvard man, and so much were they possessed of the notion (a Yankee notion) of their literary supremacy, that they modestly styled their city "the Athens of America." Mr. Webster once used the phrase in the presence of John Randolph. "Very possibly it may be the American Athens," said the orator of Roanoke, "but it has never been my good fortune to meet with any of the Athenians."

In venturing these remarks, we know we offend against the feelings of some who do not recognize the right of such "outside barbarians" as ourselves, to be heard in the Court of Literature at all, and who consider our rude way of expressing our opinions, in

*A tongue not learned by Isis
Nor studied by the Cam,*

quite as barbarous as the jargon poor Hood heard in the Rotterdam market-place. Nevertheless, we speak out, and snap our fingers at the learned Thebans who sit in banco at Boston, determined, as long as the court is held there, to stand *in contumaciam* and ask no favors.

We are not insensible of the high literary claims that Boston possesses, and no journal has been more prompt than the Messenger to applaud the noble services of the Prescotts and Everetts and Ticknors, (whose fame belongs to the country) to the cause of Letters. It is proper, also, for us to declare that, so far as we have remarked the course of "To Day," that journal has been free from narrow and local prejudices. But it seemed to us so funny to read a lecture against exclusiveness by a Bostonian, that we could not help making a note of it. We shall next expect to hear of Tom Hyer inveighing against "Cruelty to Animals," or Mrs. Harriet Beecher Stowe laying down the law of Love to One's Neighbour.

—
Bayard Taylor, on his way back from his African pilgrimage, thus writes from Florence, con-

cerning the Statue of Henry Clay designed for this City—

"HART, the sculptor, is engaged on his statue of Henry Clay, and some busts. He has a number of orders, and his studio wears a busy look. The statue of Clay, which he has been commissioned by the ladies of Virginia to execute, pleased me by its thorough simplicity. It represents the great Statesman in the act of addressing an assembly; the position is natural and graceful, and the face earnest and animated. It cannot fail to be a most successful work. Mr. HART has invented a very beautiful instrument for "pointing" busts and figures in the marble, whereby a piece of sculpture can be completed in half the time formerly requisite. He has even gone so far as to point a bust from the living head. The effect of this invention will be, to enable the sculptor to get his idea out of the rough block in half the time and with half the labor heretofore required."

And of Galt, a young Virginia Sculptor of great promise, he says

"GALT the sculptor, has just completed a Bacchante, which strikes me as a work of unusual merit. It is a lovely, laughing female head, crowned with vine leaves—not riotous nor bacchanalian in the degraded modern sense, but beaming, joyous, and breathing of the delight of pure physical existence."

Apropos of this, there is now on exhibition at the rooms of the Historical Society, in the Athenæum building, an exquisite bust of *Psyche*, from the chisel of this gentleman. The face is perfectly Grecian, its expression purely intellectual and the execution of the whole in the highest degree pleasing. We unite with the editors of the Richmond Enquirer, in a feeling of pride that so beautiful a work of art has been wrought by a native and citizen of Virginia.

We believe it was Dr. Johnson who said he liked a good hater. Upon the principle of having all things approach as nearly as possible to perfection, we like a good grumbler. And if the following letter does not show that we have found one, we will agree to every thing that the writer alleges. We give it entire, with the exception of its date and signature.

"MR. JNO. R. THOMPSON:

"Please send me the July No. of the Messenger, as I have not as yet received it. And I would say—I, in all humility, venture the opinion, that you would benefit your work much, by stirring up your writers. The useful matter your Messenger contains, is not deep and thrilling enough; nor seldom does it contain that which is very interesting—nor is the general tenor of its style, sufficiently chaste and ornamental. Any book written throughout in a plain, matter-of-fact style, soon grows tedious, and finally disgusting.

"Yours with respect."

Pleasant correspondent that! Mark the quiet and friendly manner in which he informs us that

we are neither deep nor thrilling nor interesting nor chaste nor ornamental, and observe with how charming a suavity he intimates that we are likely soon to become tedious and disgusting. It is excellent grumbling, indeed. Why Dogberry himself did not state the offences of his two culprits more succinctly—

"D. Pedro.—Officers, what offence have these men committed?

Dogb.—Marry, Sir; they have committed false report; moreover, they have spoken untruths; secondarily, they are slanderers; sixthly and lastly, they have belied a lady; thirdly, they have verified unjust things; and, to conclude, they are lying knaves."

We thank our correspondent and querulous subscriber for his kind suggestions and the commendable style in which he has expressed them, and call upon our contributors to be straightway more lively and entertaining and instructive and ornate in their articles than they have ever been before.

Some months ago, we saw, in the "Gossip" of the Southern Literary Gazette, this item—

"The following is a modern rendering of a pretty epigram from the Italian—

"When you were born, those who stood by
Smiled glad, while you were crying,
So live that all around shall cry
And you may smile, when dying."

We marked the epigram with a "query" at the time of reading it, and have since discovered its origin. It is not from the Italian, but from the *Persian*, and was thus rendered by Sir William Jones—

On parent knee, a naked, new-born child,
Weeping thou sat'st, while all around thee smil'd,
So live, that sinking in thy last long sleep,
Pleas'd thou may'st smile, whilst all around thee weep.

To those curious persons who make collections of queer advertisements, we commend this, from the Richmond Dispatch—

"More Men's Wives in Scarlet muslin, just received and for sale by
NASH & WOODHOUSE."

To such as had not heard of Mr. Thackeray's book, the original of the above must have been somewhat of a puzzle.

We are indebted to the gifted lady editor of the "Southern Ladies' Book,"—Miss L. Virginia Smith—for the first number of that monthly publication. Miss Smith is associated with Wm. T. Leonard, Esq., of New Orleans, in the edi-

torial management of the work, which we trust will soon find its way to every Southern household. The table of contents embraces an agreeable variety of original and selected articles in prose and verse—the greater portion of the poetry being from Miss Smith's own pen. The Southern Ladies' Book will always be welcomed by us the more cordially for such graceful and touching utterances of the Western Muse.

In a speech delivered at Faneuil Hall, within a year past, Mr. Webster introduced this quotation—

Ye solid men of Boston, drink no strong potations,
Ye solid men of Boston, make no long orations.

Much inquiry was made, at the time, as to the paternity of the lines, and we believe the point was never settled. They occur in an "American Song," contained in a volume which we can scarcely think ever came under Mr. Webster's observation—The *Lyra Urbanica* of Captain Charles Morris, late of the Life Guards of His Majesty George IV. Captain Morris wrote very happy and witty verses, and was one of those "good fellows" who lent a charm to the society of Carlton House in the palmy days of its splendor. The Song itself, which has less merit than most of the Captain's effusions, referred to a well-known anecdote of the younger Pitt, during his Premiership. One day, the Prime Minister went to dine with Jenkinson, afterwards Lord Liverpool, who lived in the neighborhood of London. He was accompanied by Chancellor Thurlow and Henry Dundas, and returning, after several bottles a piece, the trio galloped through the turnpike gate at Wimbledon without stopping to pay the toll. The gate-keeper, rushing out, fired at them with a blunderbuss loaded with slugs, and they made a narrow escape with their lives. The song is supposed to be sung by a Yankee Captain to his Boston friends in narration of the blunderbuss affair, which he had heard on one of his transatlantic voyages. The moral, reserved for the last verse, is thus expressed—

Solid men of Boston, banish strong potations,
Solid men of Boston, make no long orations,
Solid men of Boston, go to bed at sundown,
And never lose your way, like the loggerheads of London.

It was not long before this satirical *jeu d'esprit* was in every body's mouth, and it was even quoted by Burke and Sheridan, in Pitt's presence in the House of Commons. One night Burke, in allusion to Sheridan's intemperate habits, introduced the first two lines of the above, but not with accuracy, reciting them as Mr. Webster did,

more than fifty years afterwards. Sheridan, who was never off his guard, observed in reply that the injunction against long drinkings and speakings was not the only moral precept in that system of ethics alluded to. He would remind the gentleman of another passage—

He went to Daddy Jenky, by Trimmer Hal attended,
Good luck! in such company how his morals must be mended.

Daddy Jenky was Jenkinson and Trimmer Hal was Harry Dundas, and the quotation was significant of some overtures made, about that time, by Burke to the ministry.

The fact that Mr. Webster spoke the lines about the "Solid Men of Boston" just as Mr. Burke did, and that neither of them was true to the text, would indicate that the great American orator, who was an intense student of the great English orator but never a large reader of frivolous poetry, borrowed this very felicitous couplet from Mr. Burke's speeches, without having ever seen the *Lyra Urbanica* at all.

Notices of New Works.

THE HISTORY OF HENRY ESMOND, Esq. Colonel in the Service of Her Majesty Queen Anne. Written by himself. By W. M. THACKERAY. New York: Harper & Brothers. [From A. Morris, 97 Main Street.

This book is not so much a novel as a history, and it is not merely a history of Colonel Henry Esmond, as its name implies, but of the age of Queen Anne, executed in a manner the most charming and picturesque. We do not recollect to have read anywhere, the grand narrative of Ramillies and Blenheim, in language so noble and perspicuous. The professed historians of that remarkable age, have not succeeded in setting before us in so vivid a light, its characters and events, and it may be doubted if Marlborough's greatness in the field which the muse of Addison embalmed in undying verse, has ever been so justly appreciated by his admirers, as by our gallant Colonel, who could pourtray also the darker traits of his nature. As for the circle of wits and statesmen in which Colonel Henry Esmond moved, we certainly never hoped to be brought so near it, nor had we supposed it possible that the dry bones of Dick Steele and Dean Swift, my lord Bolingbroke and "the famous Mr. Joseph Addison," could have been tricked out in periwig and small clothes, and made to live and talk over again for our benefit, so naturally as they do in these pages. Steele, as introduced here, is glorious. The rollicking dragoon, the Latin scholar translating a suspicious MS. for his less erudite captain, the kind hearted friend, the careless spendthrift, and the hen-pecked husband, in each and all of these phases of character, he appears to the life. He jostles against us after his third bowl of punch, we recognise his laugh at the mess-table, and we seem distinctly to overhear that maudlin conversation with Mrs. Steele, in which he reminds her that there is a "distinction officer the res

roob," who will catch every word of her curtain Lecture, if she carries it on so loudly. Of Steele as a literary man, we have, too, occasional glimpses. The allusion to his first work—The Christian Hero—points finely the antithesis he exhibited of a moralist on paper and a profligate in practice, and recalls the line of the Latin poet—*Video meliora Proboque, deteriora sequor*—which seems to have been written by Steele himself in the person of Ovid. As a historical portraiture, the figure which the Pretender cuts in Colonel Esmond's narrative has, perhaps, never been exceeded, while the imaginary explanation of how his own folly lost him the crown of England, evinces in the author a rare power in the highest range of art. All the accessories to these pictures—the scenery, the costumes, the habitudes—are in the best keeping, and in our judgment, place Mr. Thackeray at the very head of that class of novelists of which Sir Walter Scott is considered the Coryphæus. Macaulay has said that, whoever would know King James must look for one half of his character in Hume and the other half in the Fortunes of Nigel. We borrow the form of expression, and declare that he who wishes to make himself acquainted with the age of Queen Anne, must find one half in Macaulay's History of England, and the other half in Thackeray's History of Colonel Esmond.

It is interesting to observe everywhere in this novel, skilfully as it is done, the author's individuality, and to detect, under the quaint masquerade of the English Colonel, the sharp but good-humored countenance of that Knight of the Free Lance, who has knocked over the booths of our modern Vanity Fair, and punched on the heads the Snobs of the Nineteenth Century. Esmond is Thackeray still. All the little satiric touches—such as the quiet fling at the painted old Viscountess, when, on seeing Esmond in his uniform, she said red had always been the color worn by the Esmonds, that she wore it all her life in her cheeks, and the passage where Frank, the real dependent promises his assistance through life to Harry the real Marquis—and all the deeper and keener stabs of satire, from the democratic prolegomena to the last scene presented us in the life of Mistress Beatrix, are characteristic of the hand that stuck a bodkin through Major Pendennis and transfixed Becky Sharp. Into that far away region of shapes and shadows, back to which we look with feelings of superstitious awe and unreasoning admiration, the satirist has gone with his stinging wit, his strong, practical sense and his generous hatred of shams, (and his human affections too,) and stripped from the grand old humbugs that reign there, the robes which so long have shrouded their deformities, while he has not been reluctant to acknowledge and display such graces of the heart as he has discovered in his journeying.

Of the fictitious portion of the work, we think very highly, though by many, it will be considered inferior to either of his other novels—Vanity Fair and Pendennis. We must give a brief outline of the love story, if only for the purpose of introducing with greater effect, one or two extracts. The hero, then, Henry Esmond, finds himself at an early age in a great castle with a lord and lady, the painted Viscountess, who suddenly disappear for political reasons, (the lord being soon after killed at the battle of the Boyne,) leaving their little charge in the family mansion, which is presently taken possession of by another lord and his lady—Lord and Lady Castlewood, under whose protection Esmond grows up. Esmond's position is an equivocal one, as he is thought to be an illegitimate child, and he therefore feels the deepest gratitude for the kindness with which he is treated by both his superiors. The boy, on reaching years of discretion, develops an intellect much beyond that of lord or lady, and thereby he acquires a decided influence over the household. My lord

respects him, and my lady adores him. An adoration far more absorbing and constant however, she cherishes for her husband, until by habitual cruelty and neglect and beastly intoxication, he degrades the idol below the reverence of the worshipper. As my lord's image is withdrawn from the heart of my lady, Esmond's, unconsciously to her, takes its place. The youth, meanwhile, has fallen in love with Beatrix, the daughter, who, with her brother Frank, has been under his instruction. Lord Castlewood is soon slain in a duel, and this tragical event revives in the widow all the idolatrous attachment of her younger days. Towards Esmond, she constantly evinces an affection as touching and sacred as that of a mother. But the sad vixen Beatrix can not be persuaded to smile on the young tutor, and he very sensibly determines to conquer love by absence, and goes off to the wars where he is shortly joined by Frank, who has assumed his father's title of Lord Castlewood. Esmond soon discovers the proofs of his mother's marriage and papers entitling him to the estate and rank of his young pupil—the facts he had previously learned from the former lord when dying from the wound received in the duel—but these proofs and papers he suppresses, unwilling to dash the worldly prosperity of his noble benefactors. Young Frank, therefore wears the title, and Lady Castlewood inhabits the mansion, nor does Esmond ever enlighten them on the subject of his rights. Returning from Marlborough's victories with the eclat of triumph, he is again fired with *la belle passion* for Beatrix, who, as lady of honor to Queen Anne, has been jilting barons, earls and marquises, and has become hetrothed to a Duke. Beatrix, brilliant coquette and thorough woman of the world, laughs at him. But the Duke is killed, and Beatrix seems cured of her levity by sorrow, and we begin to have hopes of Esmond, when the licentious Pretender comes in to compass the fall of that radiant maiden. With Beatrix's dishonor passes away the blind devotion of Esmond. His heart-strings had all along been twined around the lovely and excellent Lady Castlewood, but little older than himself, and that affection, half filial as it was, now changes into the sentiment of manly love. And the book closes with the assurance given the reader, that having emigrated to Virginia after the scenes therein described, he had enjoyed many years of the purest domestic happiness, on the banks of the Potomac, as the husband of his first charmer's mother.

The character of Lady Rachel Castlewood, is one of the noblest in fiction. Amelia Sedley, the ladies declared to be a fool, and with Helen Pendennis they were by no means satisfied. Mr. Thackeray, they said, was a woman-hater, and abused the sex. Oh, most exquisite *amende*—my lady Rachel, where have we found a more loveable creature than thou art! Thy very weaknesses endear thee to us as setting forth thy humanity. What a self-sacrifice was that, when, thy lord killed, and thy children only too wilful, thou repressed thy rising affection for Esmond and bade Beatrix make him happy!

And now for an extract. Read this and see how touchingly our satirist can describe the wreck of a love. It refers to the estrangement between Rachel and her first lord—

"'Twas easy for Harry to see, however much his lady persisted in obedience and admiration for her husband, that my lord tired of his quiet life and grew weary, and then testy, at those gentle bonds with which his wife would have held him. As they say the grand Lama of Thibet is very much fatigued by his character of divinity, and yawns on his altar as his bonzes kneel and worship him, many a home-god grows heartily sick of the reverence with which his family-devotees pursue him, and sighs

for freedom and for his old life, and to be off the pedestal on which his dependents would have him sit for ever, while they adore him, and ply him with flowers and hymns and incense and flattery;—so, after a few years of his marriage, my honest Lord Castlewood began to tire; all the high-flown raptures and devotional ceremonies with which his wife, his chief priestess, treated him, first sent him to sleep, and then drove him out of doors; for the truth must be told, that my lord was a jolly gentleman with very little of the august or divine in his nature, though his fond wife persisted in revering it—and besides, he had to pay a penalty for this love, which persons of his disposition seldom like to defray: and, in a word, if he had a loving wife, had a very jealous and exacting one. Then he wearied of this jealousy: then he broke away from it; then came, no doubt, complaints and recriminations; then, perhaps, promises of amendment not fulfilled; then upbraidings not the more pleasant, because they were silent, and only sad looks and tearful eyes conveyed them. Then, perhaps, the pair reached that other stage which is not uncommon in married life when the woman perceives that the god of the honeymoon is a god no more; only a mortal like the rest of us—and so she looks into her heart, and lo! *vacua sedes et inania arcana*. And now, supposing our lady to have a fine genius and a brilliant wit of her own, and the magic spell and infatuation removed from her which had led her to worship as a god a very ordinary mortal—and what follows! They live together, and they dine together, and they say 'my dear' and 'my love' as heretofore; but the man is himself, and the woman herself: that dream of love is over, as everything else is over in life; as flowers and fury, and griefs and pleasures are over.

"You shouldn't say that papa is not fond of mamma," said the boy, at this confession. 'Mamma never said so; and mamma forbade you to say it, Miss Beatrix.'

"'Twas this, no doubt, that accounts for the sadness in Lady Castlewood's eyes, and the plaintive vibrations of her voice. Who does not know of eyes, lighted by love once, where the flame shines no more? of lamps extinguished, once properly trimmed and tended? Every man has such in his house. Such mementos make our splendidest chambers look blank and sad; such faces seen in a day cast a gloom upon our sunshine. So oaths mutually sworn, and invocations of heaven, and priestly ceremonies, and fond belief, and love, so fond and faithful, that it never doubted but that it should live forever, are all of no avail (toward making love eternal: it dies, in spite of the bans and the priest; and I have often thought there should be a visitation of the sick for it; and a funeral service and an extreme unction, and an *abi in pace*. It has its course, like all mortal things—its beginning, progress and decay. It buds and it blooms out into sunshine, and it withers and ends. Strephon and Chloe languish apart; join in a rapture; and presently you hear that Chloe is crying, and Strephon has broken his crook across her back. Can you mend it so as to show no marks of rupture? Not all the priests of Hymen, not all the incantations to the gods can make it whole!"

Here is a bit of sprightliness to relieve the pathos of what has just been given. It is the interview between Esmond and Beatrix, after his first return from the wars, and before the beauty had entered the Queen's service—

"This laughing colloquy took place in the hall of Walcote House: in the midst of which is a staircase that leads from an open gallery, where are the doors of the sleeping chambers: and from one of these, a wax candle in her hand, and illuminating her, came Mistress Beatrix—

the light falling indeed upon the scarlet ribbon which she wore, and upon the most brilliant white neck in the world.

"Esmond had left a child, and found a woman, grown beyond the common height, and arrived at such a dazzling completeness of beauty, that his eyes might well show surprise and delight at beholding her. In hers there was a brightness so lustrous and melting, that I have seen a whole assembly follow her as if by an attraction irresistible: and that night the great Duke was at the play-house after Ramillies, every soul turned and looked (she chanced to enter at the opposite side of the theatre at the same moment) at her, and not at him. She was a brown beauty—that is, her eyes, hair, and eyebrows and eyelashes, were dark; her hair curling with rich undulations, and waving over her shoulders; but her complexion was as dazzling white as snow in sunshine, except her cheeks, which were of a still deeper crimson. Her mouth and chin, they said, were too large and full, and so they might be for a goddess in marble, but not for a woman whose eyes were fire, whose look was love, whose voice was the sweetest love song, whose shape was perfect symmetry, health, decision, activity, whose foot, as it planted itself on the ground, was firm but flexible, and whose motion, whether rapid or slow, was always perfect grace—agile as a nymph, lofty as a queen—now melting, now imperious, now sarcastic—there was no single movement of hers but was beautiful. As he thinks of her, he who writes feels young again, and remembers a paragon.

"So she came, holding her dress with one fair rounded arm, and her taper before her, tripping down the stair to greet Esmond.

"She hath put on her scarlet stockings and white shoes," says my lord, still laughing. 'O, my fine mistress! is this the way you set your cap at the Captain!' She approached, shining smiles upon Esmond, who could look at nothing but her eyes. She advanced holding forward her head, as if she would have him kiss her as he used to do when she was a child.

"Stop," she said, 'I am grown too big! Welcome, cousin Henry!' and she made him an arch courtesy, sweeping down to the ground almost, with the most gracious bend, looking up the while with the brightest eyes and sweetest smile. Love seemed to radiate from her. Harry eyed her with such a rapture as the first lover is described as having by Milton.

"*N'est ce pas?*" says my lady, in a low, sweet voice, still hanging on his arm.

"Esmond turned round with a start and a blush, as he met his mistress's clear eyes. He had forgotten her, wrapt in admiration of the *filia pulchrior*.

"Right foot forward, toe turned out, so: now drop the courtesy, and show the red stockings, 'Trix. They've silver clocks, Harry. The dowager sent 'em. She went to put 'em on,' cries my lord.

"Hush, you stupid child!" says Miss, smothering her brother with kisses; and then she must come and kiss her mamma, looking all the while at Harry, over his mistress's shoulder. And if she did not kiss him, she gave him both her hands, and then took one of his in both hands, and said: 'Oh, Harry, we're so, so glad you're come!'"

What a tableau have we here, made up of mother and daughter—my Lady in love with Esmond and Esmond in love with Beatrix—

"Who was it taught you to dance, Cousin Beatrix?" says the Colonel.

"She laughed out the air of a minuet, and swept a low courtesy, coming up to the recover with the prettiest little foot in the world pointed out. Her mother came in as

she was in this attitude; my lady had been in her closet having taken poor Frank's conversion in a very serious way; the madcap girl ran up to her mother, put her arms round her waist, kissed her, tried to make her dance, and said: 'Don't be silly, you kind little mamma, and cry about Frank turning Papist. What a figure he must be with a white sheet and a candle walking in a procession bare-foot!' And she kicked off her little slippers (the wonderfulest little shoes with wonderful tall red heels, Esmond pounced upon one as it fell close beside him,) and she put on the drollest little *moue*, and marched up and down the room holding Esmond's cane by way of taper. Serious as her mood was, Lady Castlewood could not refrain from laughing; and as for Esmond he looked on with that delight with which the sight of this fair creature always inspired him; never had he seen any woman so arch, so brilliant and so beautiful.

"Having finished her march, she put out her foot for her slipper. The Colonel knelt down: 'If you will be Pope I will turn papist,' says he; and her holiness gave him gracious leave to kiss the little stockinged foot before he put the slipper on.

"Mamma's feet began to pat on the floor during this operation, and Beatrice, whose bright eyes nothing escaped, saw that little mark of impatience. She ran up and embraced her mother, with her usual cry of, 'O you silly little mamma: your feet are quite as pretty as mine,' says she: 'they are, cousin, though she hides 'em: but the shoemaker will tell you that he makes for both off the same last.'

"'You are taller than I am, dearest,' says her mother, blushing over her whole sweet face—'and—and it is your hand, my dear, and not your foot he wants you to give him, and she said it with a hysteric laugh, that had more of tears than laughter in it; laying her head on her daughter's fair shoulder, and hiding it there. They made a very pretty picture together, and looked like a pair of sisters—the sweet simple matron seeming younger than her years, and her daughter, if not elder, yet somehow, from a commanding manner and grace which she possessed above most women, her mother's superior and protectress."

We could go on giving extracts from the story, with great satisfaction to ourselves, for many pages, had we space for them, and we wish very much we could squeeze all of those sketches in Indian ink, of Swift and Marlborough and Oxford and Bolingbroke, which illustrate the political and historical portion of the work.

We can give but one—that of Marlborough—in which the great captain appears somewhat differently from the newly dead Wellington as lamented in the columns of the English journals—

"Our chief, whom England and all Europe, saving only the Frenchmen, worshiped almost, had this of the god-like in him, that he was impassible before victory, before danger, before defeat. Before the greatest obstacle or the most trivial ceremony; before a hundred thousand men drawn in battalin, or a peasant slaughtered at the door of his burning hovel; before a carouse of drunken German lords, or a monarch's court, or a cottage-table, where his plans were laid, or an enemy's battery, vomiting flame and death, and strewn corpses around about him—he was always bold, calm, resolute, like fate. He performed a treason or a court-bow; he told a falsehood as black as Styx, as easily as he paid a compliment or spoke about the weather. He took a mistress, and left her; he betrayed his benefactor, and supported him, or would have murdered him, with the same calmness always, and having no more remorse than Clotho, when she weaves the thread, or Lachesis, when she cuts it. In the hour of battle I have heard the Prince of Savoy's

officers say, the Prince became possessed with a sort of warlike fury; his eyes lighted up; he rushed hither and thither, raging; he shrieked curses and encouragement, yelling and harking his bloody war-dogs on, and himself always at the first of the hunt. Our Duke was as calm at the mouth of the cannon, as at the door of a drawing-room. Perhaps he could not have been the great man he was, had he had a heart either for love or hatred, or pity or fear, or regret or remorse. He achieved the highest deed of daring, or deepest calculation of thought, as he performed the very meanest action of which a man is capable; told a lie, or cheated a fond woman, or robbed a poor beggar of a half penny with a like awful serenity and equal capacity of the highest and lowest of our nature.

"His qualities were pretty well known in the army, where there were parties of all politics, and of plenty of shrewdness and wit; but there existed such a perfect confidence in him as the first captain of the world, and such faith and admiration in his prodigious genius and fortune, that the very men whom he notoriously cheated of their pay the chiefs whom he used and injured—for he used all men, great and small, that came near him, as his instruments alike, and took something of theirs, either some quality or some property—the blood of a soldier it might be, or a jeweled hat, or a hundred thousand crowns from a king, or a portion out of a starving sentinel's three farthings; or (when he was young) a kiss from a woman, and the gold chain off her neck, taking all he could from woman or man, and having, as I have said, this of the god-like in him, that he could see a hero perish or a sparrow fall, with the same amount of sympathy for either. Not that he had no tears; he could always order up this reserve at the proper moment to battle; he could draw upon tears or smiles alike, and whenever need was for using this cheap coin. He would cringe to a shoe-black, as he would flatter a minister or a monarch; be haughty, be humble, threaten, repeat, weep, grasp your hand, or stab you, whenever he saw occasion. But yet those of the army, who knew him best and had suffered most from him, admired him most of all; and as he rode along the lines to battle, or galloped up in the nick of time to a battalion reeling from before the enemy's charge or shot, the fainting men and officers got new courage as they saw the splendid calm of his face, and felt that his will made them irresistible."

We must here dismiss Mr. Thackeray for this present, hoping that he may long live to write novels as full of manly reason and ennobling sentiment as the "History of Henry Esmond, Esq., Colonel in the service of her majesty, Queen Anne."

WITCHCRAFT: *A Tragedy in Five Acts.* By CORNELIUS MATHEWS. London: David Bogue. 1852.

Whatever may be said of the recent efforts of America in other walks of literature, it cannot be denied that our play-wrights have achieved very great success. The tragedies of Boker has given him an enviable fame on both sides of the Atlantic as a dramatist, and have been enacted, as the bills say, "to enthusiastic audiences" in London and Liverpool, as well as in New York and Philadelphia. Mr. Simms' "Norman Maurice," first published in this magazine, has gone through several editions, and fixed the author's reputation at the same high mark as a writer for the stage as it had previously been as a poet and novelist. The neat little publication now under our eye, establishes the claims of another author—Mr. Cornelius Mathews—to the honors of dramatic composition. "Witchcraft" is a powerfully written tragedy, deriving its

effect from the delineation of human passions in an age of deep excitement and tragic incident. The early history of Massachusetts is invested with a haze which is in the highest degree favorable to the purposes of the imaginative author, and Hawthorne has availed himself finely of this adventitious interest in that weird production—*The Scarlet Letter*. Mr. Mathews betrays a like perception of the peculiar fitness of such an atmosphere for the characters of romance, in selecting the period of the witch-mania for the time of his tragedy. The plot of the story turns on the filial devotion of the hero, Gideon Bodish, to his mother, who is burned as a witch, and the struggle between this sentiment and his love for Susanna Prache, who is induced to testify against the accused by the wily suggestions of a rival of Gideon—one Jarvis Dane. Jarvis causes Susanna to believe that if the mother could be torn from the son, his affections would centre without abatement upon herself, and upon her evidence, the sacrifice is decreed. The son, however, cleaves to the mother, even in martyrdom, and dies branding the murderers with their guilt. The action of the piece is very spirited and the dialogue sinks and swells with the occasion, rising at times to nervous and impassioned poetry, and always relieved from baldness by the quaint phraseology of the age which Mr. Mathews has most happily caught. Altogether ignorant, as we profess ourselves to be, of stage effect, our opinion as to the adaptation of this tragedy for performance is worth nothing, and yet we feel confident that passages of it, well sustained on the boards, would be highly successful, while the fiery energy of Gideon, expressed in the bold language placed in his mouth, could not fail to communicate itself to the listener. We are indebted to the author for a copy of this drama, which has not yet appeared in an American edition.

Messrs E. H. Butler & Co. of Philadelphia, have issued some magnificent volumes for the holidays, which will vie for exquisite typography and elegant illustration, with the finest books of the London publishers. "The Lays of Ancient Rome" is really a gem in its way. The work is a faithful copy of the splendid edition of the Longmans, and, having compared the two, we do not hesitate to say that the American volume is in no respect inferior to the English. One additional attraction it has in the spirited steel engraving of the author. The designs are mostly from the antique, and are in beautiful harmony with the subject matter. Mr. Macaulay's numerous admirers will rejoice to procure so rich an edition of the "Lays of Ancient Rome," in which poems the author's wealth of imagery and pomp of diction are, perhaps, as wonderfully displayed as in any other of his writings.

The Lyrics of the Heart and other Poems, By Alaric A. Watts, is the title of another sumptuous gift-book from the same press. No large collection of the sweet effusions of this graceful poet, has ever before been published in America, and the value of the present one is enhanced by the numerous engravings which it contains.

As a thing for presentation, no work in the English language will continue to find favor with all classes, longer than the *Melodies* of Tommy Moore. Messrs. Butler & Co. have therefore exhibited excellent taste in bringing out a new edition of these famous lyrics. Upon them alone the fame of the author might securely rest. In the humble cottage and the luxurious boudoir their musical lapses have been sung for years by the fairest maidens of two great nations, and orators have quoted their fiery sentiments of patriotism in parliament and congress whenever the cause of Freedom has been assailed.

In the *Records of Woman*, *Songs of the Affection*, &c.,

&c., by Mrs. Hemans, the admirers of that lady will find a volume worthy, in point of style and finish, of its contents. For ourselves, never having intensely affected Mrs. Hemans' poetry, we like the "Records of Woman" less than either of the other publications of Messrs. Butler & Co. which we have mentioned. That she possessed a poetic sensibility and a very happy versification is undeniable, but we think these gifts might have employed more agreeably than in letting the English people know, in every number of the New Monthly Magazine, how supremely miserable was the poetess. That her sorrow was melodious did not furnish a sufficient reason for running it into stereotypes for the public. Nevertheless, Mrs. Hemans wrote some enchanting verses, which may be found, royally printed, prettily embellished and bravely bound up in the volume before us.

Friendship's Offering, an annual of long standing, came to us with the foregoing volumes. It is made up of pleasant reading from various authors, English and American. All who like mezzotint illustrations, will find it to their taste as a holiday gewgaw.

A. Morris, 97 Main Street, has the Christmas publications of Messrs. Butler & Co. for sale.

THE GIFT FOR ALL SEASONS: Illustrated by Steel Engravings. New York: D. Appleton and Company, 200 Broadway. 1853. [From Nash & Woodhouse, 139 Main Street.

This is one of the old-fashioned "annuals"—that exceedingly trifling class of books to which our grandmothers—peace be with them!—took with so much fervor. Gilt, morocco, gold edges and "steel engravings:"—that is pretty much all which the most careful research will find in the present "Gift." We hope such gifts will go out of fashion:—that the young gentlemen now growing up will refrain from buying them, and that the young ladies will refuse peremptorily to receive them. When a splendidly bound volume is laid upon our table, we instinctively resolve not to investigate the literary portion, and only look at it a second time when the engravings are original and good. In the case of "the Gift," we are sorry to say this is not the case. Burns wanders here with his Highland lassie beside that gigantic wheat-field, as of old—those young gentlemen gather around the damsel playing the guitar as in former years: the affectionate matron bids her warrior farewell as in the ancient days:—thus the engravings are not new. The literary portion of the work is chiefly of English origin—but not on that account good. "Lady Emmeline Stuart Wortley" writes some bad verses—very bad: *ex. gr.*

"In pale hours of evening often, thoughts grow calm and feelings soften;

Memory's reign beginneth then:

Spirit stars then 'gin their shining with those proud ones that are living

Yon cerulean, mystic Plain!"

Mr. Bacon, the publisher in "Pendennis," complains that the nobility don't write well—that even the "Hedgingcourt" of Popjoy "fell dead." If this is a specimen, we agree with Bacon. But why should we have taken the pains to caution the public against this *deja vu* in books' clothing. It will be bought for its glitter like many other things; and after all, if people will buy "annuals," they may as well purchase "The Gift." It is nearly as good as the rest of its species.

THE HOMES OF AMERICAN AUTHORS, *Comprising Anecdotal, Personal, and Descriptive Sketches.* Illustrated by Nineteen Fine Engravings on Steel, &c., &c. New York: G. P. Putnam & Co. 1853. [For sale by A. Morris, 97 Main Street.

Who does not think, upon turning over the leaves of this delightful volume, how much better is such a testimonial to the country's intellect, than that showy tribute to female vanity—The Book of Home Beauty—and how much worthier of the soft incense of praise are the authors of a great nation than the belles of a great city? We therefore deem Mr. Putnam's 'crack book' of the present season, entitled to far higher consideration than that of the last season. In republican America, where no Court Circle exists—giving laws to provincial society—no "earthly paradise of Ormolu," into which the million would stake their lives to be admitted—we do not care to read of the graces and accomplishments of any aristocratic set of beauties, but what man or woman who has been charmed by the Sketch Book into a feeling of personal regard for its author, or has learned to know Kennedy in Swallow Barn, or acquired from the Twice Told Tales an interest in anything relating to Hawthorne, will not be delighted with the *ana* given in "The Homes of American Authors"?

The Sketches contained in the volume are written with ease and elegance. "The Howadji" makes himself known here in his picturesque, Tennysonian sentences;—we recognize elsewhere in the book the finished and thoughtful manner of Tuckerman;—Griswold contributes to it a paper marked with his characteristic excellence, and Bryant gracefully appears in the description of the woodland haunt of his brother poet—William Gilmore Simms. We are disappointed in not finding in the work portraits of Simms and Kennedy, no satisfactory presentments of their fine faces having ever been given to the public. There are, however, very exquisite steel engravings of Irving, Cooper and Everett, and scattered throughout the entire work are numerous tinted illustrations on wood, and facsimiles of manuscripts. These latter seem to us singularly unfortunate as specimens of the author's autographs. Few men, who ever learned to sign their names, have written more legibly and beautifully than Mr. Everett or Mr. Kennedy—the latter's handwriting we consider the very perfection of caligraphy—yet from the facsimiles in this volume, both these gentlemen would appear to have acquired the art of penmanship on Dogberry's plan who told us that "to write and read comes by nature." Surely the engraver must have picked out the worst leaf in the "Oration at Niblo's" and "Horse Shoe Robinson" for copying.

Altogether, we think "The Homes of American Authors" one of the pleasantest and prettiest books it has been our good fortune to meet with for many a day.

KATHAY: *A Cruise in the China Seas.* By W. HASTINGS MACAULAY. New York: G. P. Putnam & Co., 10 Park Place. 1852.

We see no good reason why this volume should have been published,—as it contains nothing new, and relates to a cruise which was singularly devoid of interest—unless it be to show that American midshipmen are taught, among other things, to write the English language with sufficient correctness. Mr. Macaulay certainly is not a suggestive writer, and the only praise we could give him would be of a negative character—that he has not filled his book with mere nonsense nor deviated from the pro-

priety of a gentleman in his style. But if "a cruise to the China Seas" is productive of no more excitement to others than it was to Mr. Macaulay, we say with the author of Locksley Hall—

Better fifty years of Europe than a cycle of Cathay.

THE LIFE OF BERNARD PALISSY, OF SAINTES, *His labors and discoveries of Art and Science, with an Outline of his Philosophical Doctrines, &c.* By HENRY MORLEY. In Two Volumes. Boston: Ticknor, Reed, and Fields. 1853. [From A. Morris, 97 Main Street.

Bernard Palissy, of Saintes, was an enthusiastic potter of the Sixteenth Century, who from the business of glass-painting in early life, turned his attention to the ancient art of pottery, and occasionally wrote books, which still survive with some of his vases, to rescue his name from oblivion. Mr. Morley's volumes, however, are likely to perpetuate the memory of Palissy far more certainly than his writings, which were of no supereminent merit, or his porcelain which will one day or other be cracked; just as the autobiography of Cellini will last longer than the most exquisite of his gold or silver images. The work has attracted a large share of attention in England, for its curious details of art three hundred years ago, and is likely to be popular in this country, in the beautiful reprint of Messrs. Ticknor, Reed and Fields.

DISCOVERY AND EXPLORATION OF THE MISSISSIPPI VALLEY: *With the Original Narratives of Marquette, Membri, Hennepin and Anastase Douay.* By JOHN GILMARTY SHEA. Redfield, Clinton Hall. New York. 1852. [From J. W. Randolph, 121, Main Street.

Mr. Shea is entitled to the thanks of all lovers of historical literature, for this timely and valuable contribution, to that branch of learning. By diligent research among the records of the past, and careful investigation of original manuscripts he has been enabled to present a full and satisfactory account of the early settlement of the Mississippi Valley such as has never before appeared. The life of Marquette, one of the first explorers of that region, and the narratives of the missionaries in La Salle's expedition which are given in the volume, are alone worthy of attentive consideration. The book is handsomely printed and contains facsimiles of Marquette's map and some of the documents relating to the period of the exploration.

SELECT BRITISH ELOQUENCE: *Embracing the best Speeches entire of the Most Eminent Orators of Great Britain for the last two Centuries; with Sketches of their Lives, an Estimate of their Genius, and Notes, Critical and Explanatory.* By CHAUNCEY A. GOODRICH, D. D. Professor in Yale College. New York: Harper & Brothers, Publishers. 1853. 8vo. pp. 947. [From A. Morris, 97 Main Street.

A voluminous and promising title-page, every word of which the reader will find fulfilled in the book itself. The speeches given are the very best that have been made in England from the time of Charles I. to the present day, and given without abridgment. The Biographical Sketches are quite full and satisfactory, and show the hand of the careful and accomplished scholar in their preparation.

Among them is a paper on the illustrious unknown Junius—prefacing some extracts from his celebrated Letters which, though never spoken, are properly included by Professor Goodrich among the best specimens of British Eloquence. Considered as a whole, this book is deserving of great favor with the public, and will no doubt meet with it.

THE BOOK OF THE HEART; OR LOVE'S EMBLEMS.
Illustrated by Thirty-three Steel Engravings. New York: D. Appleton & Company, 200 Broadway. 1853.
[From Nash & Woodhouse, 139 Main Street.]

The publishers have succeeded well in what they have here undertaken—in 'getting up' a pretty volume for Christmas centre-table service. The engravings are certainly very fine, and there are twice as many of them as we usually see in the annuals and holiday publications. The binding of the copy before us is full morocco, richly gilt, embossed with tasteful designs. The letter press is well enough in its way, but has a look as if it had been 'done' by some clever hand with especial reference to the plates, and for the purpose of bringing them all into use. Any body who wishes to make a handsome present to "somebody," cannot do better than to purchase "The Book of the Heart, or *Love's Emblems*."

FRANK FREEMAN'S BARBER SHOP: A Tale. By REV. BARNARD HALL, D. D. Illustrated by Rush B. Hall. New York: Charles Scribner, 145 Nassau Street. 1852. [From Nash & Woodhouse, 139 Main Street.]

We mean so disrespect to the author of this volume, and no irreverence to the dignity he bears, when we say that if we were called on to give the meaning of D. D. after his name, we should write it 'devilish dull,'—for we have not been punished with the perusal of a stupider piece of trash in a twelve-month. There is neither sense nor wit in its three hundred and forty-one pages, and we would advise the Rev. Mr. Hall in future, to confine himself to the pulpit where he may perhaps figure very respectfully. The illustrations are good and give us better scenes than can be gathered from the text.

KNICK-KNACKS, from an Editor's Table. By L. Gaylord Clark. New York, D. Appleton & Co. 1852.

Who is not familiar with the pathos, the humor, drollery, wit, fun, and feeling of every kind; "from grave to gay, from lively to severe," which the Editor of the Knickerbocker has from time to time served upon his table, for the edification and enjoyment of his readers? The fragments of these feasts are here gathered together: but they are no broken victuals—they form a banquet of rich variety, where the epicure may please his fastidious taste by selection, or the gourmand may indulge his catholic appetite without limit. We confess that we belong to the latter class; for, beginning with that beautiful and touching "Gossip about Children," we read straight on for some 200 pages; recognizing by the way many old acquaintances, that we were glad to meet again. From among the *facetiae*, we must find room for one reminiscence of JARVIS the painter, whose *bonhomie* and convivial talent are freshly remembered in our city.

"A mercurial yet misanthropic Frenchman, who, to 'save himself from himself,' used often to call upon Jar-

vis, had an 'Old Master,' a wretched daub, whose greatest merit was its obscurity. Being ignorant of the hoax which had been played upon him in its purchase, he set a great value upon it, and invited Jarvis to come to his room and examine it. Jarvis did so: and to prevent giving its possessor pain, he avoided the expression of an opinion 'upon the merits,' but advised the owner to have it cleaned; it being 'so dirty that one might easily mistake it for a very ordinary painting.' Some four or five days afterward the Frenchman called upon the painter; and, the moment he entered his apartment, he exclaimed: 'Ah! Monsieur JARVES, I 'ave some'sing to tell you! My graënd picture is des-roy!' no wors a d—n any more! I get ze man to clean him; ver' good; he wash him all out wis ze turpentine! Ah! if I could only catch him! I would kick him *plenty*!' 'Heavens,' exclaimed Jarvis, 'can it be possible that that great picture is *spoiled*? You must have been in a towering passion, when it came home in that condition.' 'No, no, Monsieur,' replied the Frenchman, in a lachrymose, pitiful tone; 'I am not strong man to be angry—I was *sick*!'"

We commend this little volume to the public. Every man will find something in it to like, if he can "read priar" at all. For the solace of a dull or weary hour, when one desires to be soothed with sad thoughts, or enlivened with merry ones, we know no better prescription than a few pages of "Old Knick."

PICTURES FROM ST. PETERSBURG. By Edward Jermann. Translated from the Original German, by Frederick Hardman. New York: G. P. Putnam and Co., 10 Park Place. 1852.

This is an entertaining account of travel in the dominions of his Imperial Highness, the Czar, written in a spirit of seeming impartiality, and presenting much useful information of Russian manners and customs. If Herr Jermann speaks truthfully, the great Bear is not after all as untractable or terrible a beast as he has been represented. If he sends off, now and then, a score of amiable and educated subjects to the mines of Siberia, he looks carefully to the moral and physical necessities of those left at home. And while a ukase confiscating private property occasionally beggars some unlucky fellow, who has been handling his pen with too little caution (like children playing with edge-tools,) every means is employed by the Emperor to elevate the general condition of his great nation. According to the following, however, we should think the order of nobility in Russia but a better sort of slavery—

"Although the Russian, great or small, lofty or humble, is before his Czar (like we other mortals before God), neither more nor less than nothing, yet these nonentities have a political classification, and are duly divided into nobles, burghers, and peasants. The nobles are free, that is to say, as free as any one can be in Russia; the noblest cannot marry according to his heart's choice, if that choice does not chime in with the Czar's good pleasure; or, if he desires to go to Italy, and the Czar strikes out the word 'Naples' on his passport, and inserts 'Tobolek,' the horses, against their master's will, gallop eastward instead of south-west—such is the instinct of Russian horses. Or if by chance he desires to serve in the cavalry of the guard, and the Czar sends him aboard a sloop of war, he sails upon the ocean instead of riding on horse-back, and does so without a word of objection or complaint, because it is the Master's will. Such things happen very rarely; but they *may* happen; and when they *do*, they happen *de jure* as well as *de facto*, for the Czar's will is the Russian's law."
